[Unfair Competition Prevention Act] Tokyo District Court, 2022 (Wa) No. 4104 <Nakashima> Does Not Qualify as an “Indication of Goods or Business”!

Original Ameblo publication: 2024-04-30

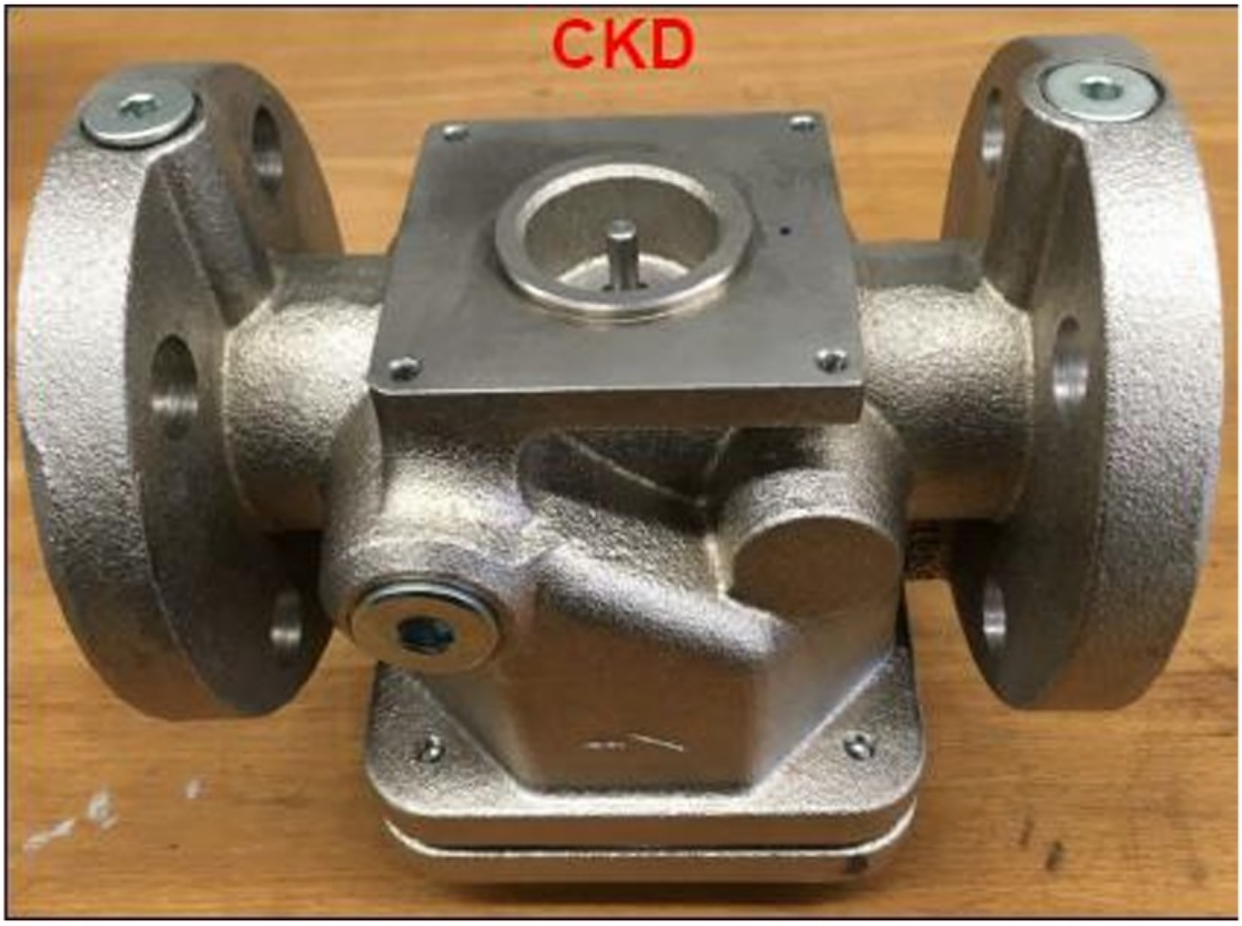
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12850339290.html

[Unfair Competition Prevention Act] Tokyo District Court, 2022 (Wa) No. 4104 <Nakashima>

Gas valves sold exclusively for more than 20 years

In the circumstances of this case, transactions do not focus on their shape.

⇒ Does not qualify as an “indication of goods or business”!



Even if a product configuration has secondary meaning, it does not qualify as an indication of goods or business under Article 2(1)(i) of the Unfair Competition Prevention Act if it does not serve to indicate origin in the relevant transactions.

[Article] Civil Code Tort Law as a Supplement to Unfair Competition Law (2023, Professor Tatsuhiro Ueno)

Original Ameblo publication: 2024-04-30

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12850339567.html

[Article] Civil Code Tort Law as a Supplement to Unfair Competition Law (2023, Professor Tatsuhiro Ueno)

Since the Supreme Court’s North Korea decision, no court decision has recognized a tort where protection is unavailable under intellectual property law.

⇒ One possible view is that situations requiring legal protection, such as imitation of product configurations, domains, and shared data with limited access, have been addressed through legislation.

Tokyo District Court, 2017 (Wa) No. 22010 <Yamada> = Appeal, IP High Court, 2020 (Ne) No. 10038 <Otaka> [… Air-Conditioned Clothing]

Original Ameblo publication: 2024-05-01

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12850474762.html

Tokyo District Court, 2017 (Wa) No. 22010 <Yamada> = Appeal, 2020 (Ne) No. 10038 <Otaka> [… Air-Conditioned Clothing]

<Indirect infringement> "Only" requirement satisfied

"A mode of use involving no harness-type safety belt at all is not contemplated as an economic, commercial or practical use"

<Prior use right> Denied

A prototype was tried on within the company, but it was unclear whether immediate working was possible

(Excerpt from the judgment)

<Indirect infringement>

The defendant's air-conditioned clothing catalog states that "garment only" products are "garments only for use as a spare while washing or for people who already own fans, batteries, etc." Products 3 and 6 are described as "air-conditioned clothing exclusively for wearers of full-harness safety belts. The lanyard can be brought out through the back. Of course, air will not escape. …" In view of these descriptions and other circumstances, Products 3 and 6 should be found to be sold for wearing harness-type safety belts. A mode of use involving no harness-type safety belt at all cannot be regarded as an economic, commercial or practical use; therefore, they should be found to be used only for manufacturing the accused products, which are articles embodying the registered utility model.

<Prior use right>

Even though a hand-drawn diagram of the configuration of air-conditioned clothing compatible with a full harness was prepared, a prototype was made, and it was tried on within the company, it is not necessarily clear that the defendants were in a position to work it immediately. … The defendants began manufacturing and selling the accused products in May, 2016, more than a year after the prototype was made and tried on in March and April, 2015. In light of this as well, at the filing date, at least, it cannot be said that the defendants' intention to work immediately the business relating to the accused products embodying the device had been expressed in an objectively recognizable manner and to an objectively recognizable extent. …

Tokyo District Court, 2020 (Wa) No. 8642 [PCSK9]

Original Ameblo publication: 2024-05-05

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12850981052.html

Tokyo District Court, 2020 (Wa) No. 8642 [PCSK9]

(Patentee’s argument)

Although EGFa-mimic antibodies could not be obtained at the filing date, it is not required to provide means for solving a problem that did not exist at the time of filing.

(Judgment)

The specification does not disclose “the configuration of means for solving … a problem to be solved in the future,” so the support and enablement requirements are violated

* The support and enablement requirements also become an issue when something unknown at the filing date but falling within the claims is discovered after filing.

⇒ This is an unavoidable problem, but can it be addressed through a disclaimer claim?

(The judgment has not been published, so this is unclear, but since it was an infringement action, the accused product may have been an “EGFa-mimic antibody.”)

(Note) The statement in parentheses above reflects the explanation in the original article as of May 5, 2024.

* Curiously, under the doctrine of equivalents, infringement can be asserted against things that became known after the filing date; although the fourth requirement applies, support and enablement are not questioned with respect to the equivalent.

I have doubts about this point and consider this judgment to have exposed that contradiction. In other words, if the original claim language did not encompass “EGFa-mimic antibodies,” there would be room to assert the doctrine of equivalents against them; yet if it does encompass them, this results in a violation of the support and enablement requirements.

(Even if the claim were narrowed now by a disclaimer, would the fifth requirement bar equivalence? Or, since there are many cases in which equivalence was allowed despite narrowing to avoid support- or enablement-requirement violations, might there still be a chance?)

IP High Court, 2022 (Gyo-Ke) No. 10082 [Antibodies Relating to PIVKA-II] <Shoji> ⇛ Clarity Requirement Satisfied

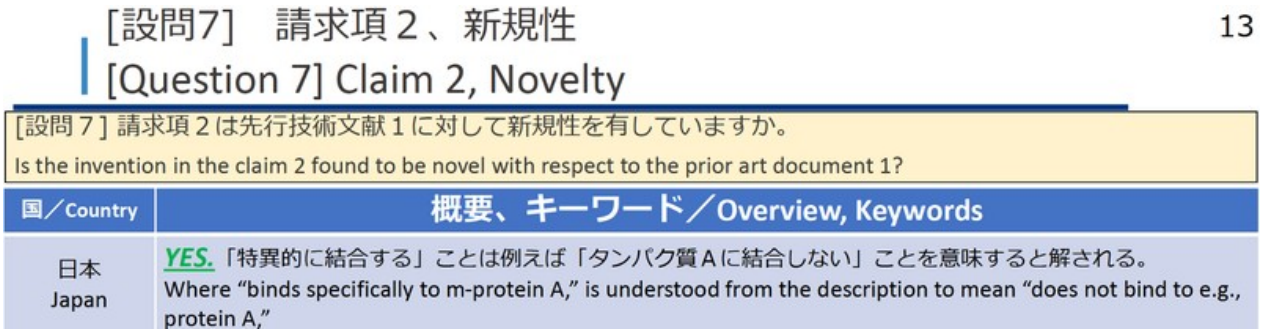
Original Ameblo publication: 2024-05-06

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12851115255.html

2022 (Gyo-Ke) No. 10082 [Antibodies Relating to PIVKA-II] <Shoji>

⇒ Clarity requirement satisfied

(The support and enablement requirements and inventive step were also upheld, and the challenge under the extended prior-application rule was rejected.)



A person skilled in the art would understand “specifically recognizes and binds to PIVKA-II” to mean that the binding protein’s reactivity varies depending on the presence or absence of a specific structural site containing Glu at position 6 and/or 7 of PIVKA-II.

The claim language “specifically recognizes and binds to PIVKA-II” was construed as “an antibody having higher affinity for PIVKA-II, a variant of normal prothrombin, than for normal prothrombin.”

Cf. Page 13 of the 2023 Judicial Symposium on Intellectual Property: this differs from Japan’s interpretation of “specifically binds” as “for example, does not bind to others”!?

[設問7] 請求項２、新規性 13

[Question 7] Claim 2, Novelty

[設問７] 請求項２は先行技術文献１に対して新規性を有していますか。

Is the invention in the claim 2 found to be novel with respect to the prior art document 1?

国／Country	概要、キーワード／Overview, Keywords
日本 Japan	YES.「特異的に結合する」ことは例えば「タンパク質Ａに結合しない」ことを意味すると解される。 Where “binds specifically to m-protein A,” is understood from the description to mean “does not bind to e.g., protein A,”

[Statistics] Trends in Numbers of Patent Invalidation Trials and Oppositions: Invalidation Decisions (Including Partial Invalidation) Just under 20%

Original Ameblo publication: 2024-05-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12851247423.html

[Statistics] Trends in Numbers of Patent Invalidation Trials and Oppositions

From 2018 through 2022, the annual number of requests for patent invalidation trials ranged from 97 to 159, with an annual average of 119.2.

Of the 626 final dispositions by the Trial and Appeal Department shown in the table for that period, 106 granted the request, including partial grants, representing approximately 16.9%.

For that period, 159 final dispositions involved withdrawal or abandonment, representing approximately 25.4%. In 2022 alone, 41 of the 115 final dispositions involved withdrawal or abandonment, representing approximately 35.7%.

⇒ Only cases linked to infringement litigation remain, and they are withdrawn upon settlement.

From 2018 through 2022, the annual number of patent oppositions, counted by patent right, ranged from 1,029 to 1,322, with an annual average of 1,151.8.

Of the 5,555 final dispositions by the Trial and Appeal Department shown in the table for that period, counted by patent right, 628 were revocation decisions, including partial revocation, representing approximately 11.3%.

* Reasonable, given that correction requests are made?

[Unfair Competition Prevention Act] Osaka High Court, 2022 (Ne) No. 2081 <Morisaki>

Original Ameblo publication: 2024-05-09

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12851525538.html

[Unfair Competition Prevention Act] Osaka High Court, 2022 (Ne) No. 2081 <Morisaki>

Even if consumers distinguish types such as stick floats and conical floats by their product configurations, they do not select “floats” on the basis of minute differences in configuration. For a float’s product configuration to have “special distinctiveness,” it “must have an unusual configuration far removed from other floats.”

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92074.pdf

[Trademark] IP High Court, 2023 (Gyo-Ke) No. 10030 “Kuruntto Maegami Curler” <Hibiku Shimizu> ⇛ No Distinctiveness (Falls under Trademark Act Article 3(1)(iii))

Original Ameblo publication: 2024-05-10

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12851617918.html

[Trademark] 2023 (Gyo-Ke) No. 10030 “Kuruntto Maegami Curler” <Hibiku Shimizu>

⇒ No distinctiveness (falls under Trademark Act Article 3(1)(iii))

(Excerpt from the judgment)

It is appropriate to find that the word “kuruntto” in the mark, placed immediately before “maegami” (“bangs”), … is ordinarily perceived by the consumers and others concerned as indicating “the state of (bangs) being curved into a round shape.”

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92351.pdf

[Design] Tokyo District Court, 2022 (Wa) No. 17015 [Lidded Tray for Steam Cooking] <Shibata>

[Trademark] IP High Court, 2023 (Gyo-Ke) No. 10141 “Chizai Jitsumu Online” <Miyasaka> ⇛ No Distinctiveness

Original Ameblo publication: 2024-05-15

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12852270768.html

[Trademark] 2023 (Gyo-Ke) No. 10141 “Chizai Jitsumu Online” <Miyasaka>

Classes 9, 41 and 45 ⇒ No distinctiveness

<Applicant’s arguments>

① None of the more than 40,000 intellectual-property professionals use the mark

② Merely indirectly indicates characteristics of the goods and services

③ A coined word

④ The examples of use cited in the trial decision also indicate source

⑤ Like a periodical’s title, it indicates source as well as content

<Excerpts from the judgment>

① The trademark applicant’s argument that “none of the more than 40,000 intellectual-property professionals use the mark”

⇒ In view of the meanings of “chizai jitsumu” (“intellectual property practice”) and “online” and the general circumstances of marks with “online” appended at the end, the applied-for mark is found to be perceived as indicating the quality of goods or services. Although evidence of third-party use could further support this finding, the absence of third-party use does not affect it.

② The trademark applicant’s argument that it “merely indirectly indicates characteristics of the goods and services”

③ The trademark applicant’s argument that it is “a coined word”

⇒ Consumers perceive the applied-for mark as meaning “something providing information on intellectual property practice online.” Even if there is some breadth in its content, it is still understood as indicating the quality of goods or services and cannot be called a coined word without a definite meaning.

④ The trademark applicant’s argument that “the examples of use cited in the trial decision also indicate source”

⇒ Except for examples in which the words before “online” themselves function as source identifiers, the examples in Appendix 2 are not found to be used in a manner that is perceived as a source identifier by the addition of “online.” The social media post in Exhibit Ko 3 concerning “Jinja Bukkaku Online” (“Shrines and Temples Online”) in Example 16 does not affect this finding.

⑤ The trademark applicant’s argument that “like a periodical’s title, it indicates source as well as content”

⇒ Periodicals such as newspapers and magazines, unlike books authored by individuals, are mainly edited and published continuously by particular newspaper companies or publishers. Their content varies by newspaper company or publisher (including publication of articles with little connection to the title). They thus have trading circumstances different from other goods: even where a title indicates quality or content, it can serve as a source identifier. (The June 16, 1932, judgment of the Great Court of Cassation cited by the plaintiffs is understood to have the same purport.)

Apart from electronic periodicals that are digitized versions of such periodicals, there is insufficient evidence to find that the designated goods and services of the application have the same trading circumstances as periodicals.

For example, designated services ⑩ and ⑪ involve providing videos and the like online. Internet video-posting and sharing services, represented by YouTube, generally allow anyone to post videos easily. Therefore, limitations such as “concerning intellectual property” and “different content provided periodically or successively on each occasion” do not establish trading circumstances equivalent to those of periodicals such as newspapers and magazines.

The plaintiffs refer to discussions of broadcast program titles in the revision of the Trademark Examination Guidelines and argue that goods and services concerning “programs” for which it is clear that “different content is provided periodically or successively on each occasion” are equivalent to periodicals. However, online provision of videos and the like includes diverse content and characteristics. Even considering the current situation in which some “broadcast programs” are also provided online, the trading circumstances cannot be found equivalent to those of broadcast programs themselves.

Further, among periodically issued electronic publications concerning intellectual property (designated goods ⑤), those corresponding to books authored by individuals cannot immediately be equated with periodicals such as newspapers and magazines.

It is true that, with recent advances in electronic and communications technologies, information content and its means of transmission have expanded and diversified, and the boundaries between traditional goods and services such as “periodicals” from newspaper companies and publishers and “broadcast programs” from television and radio stations, and other information content transmitted online, are also changing. Nevertheless, this does not mean that the trading circumstances concerning “periodicals” formed over many years of traditional trade are immediately established for the provision of videos and the like online.

Appendix 2. List of marks with “Online” at the end — English translation

Example 1. 国語辞典ＯＮＬＩＮＥ — Japanese Dictionary ONLINE

Type; operator, etc.: Website; Jitenon Co., Ltd..

Content (explanation): A dictionary website where the readings and meanings of words can be looked up.

Evidence, etc.: Ko 29-1; Otsu 15.

Example 2. 電卓オンライン — Calculator Online

Type; operator, etc.: Website; unknown.

Content (explanation): A certified platform for people who need to perform basic to advanced calculations online. We provided a 100% free online calculator.

Evidence, etc.: Ko 29-2; Otsu 17.

Example 3. 漢字辞典ＯＮＬＩＮＥ — Kanji Dictionary ONLINE

Type; operator, etc.: Website; Jitenon Co., Ltd..

Content (explanation): A kanji dictionary website where radicals, stroke counts, readings, stroke order, meanings, and other matters can be looked up.

Evidence, etc.: Ko 29-3; Otsu 16.

Example 4. 小児科オンライン — Pediatrics Online

Type; operator, etc.: Website; KidsPublic Inc..

Content (explanation): A remote health and medical consultation service established to realize a society in which no child, or adult protecting children, is isolated.

Evidence, etc.: Ko 29-4.

Example 5. メディカルオンライン — Medical Online

Type; operator, etc.: Website; Meteo Inc..

Content (explanation): A members-only comprehensive medical and health-care website providing a broad range of information, including searches and full-text viewing of medical literature and information on pharmaceuticals, medical devices, and medical-related services.

Evidence, etc.: Ko 29-5.

Example 6. 慶應オンライン — Keio Online

Type; operator, etc.: Website; Keio University.

Content (explanation): An internet service limited to graduates (alumni) of Keio University.

Evidence, etc.: Ko 29-6.

Example 7. 読売新聞オンライン — Yomiuri Shimbun Online

Type; operator, etc.: Website; Yomiuri Shimbun Group.

Content (explanation): A digital service for subscribers to the Yomiuri Shimbun.

Evidence, etc.: Ko 29-7; Otsu 46.

Example 8. 東洋経済ＯＮＬＩＮＥ — Toyo Keizai ONLINE

Type; operator, etc.: Website; Toyo Keizai Inc..

Content (explanation): An information distribution platform centered on independently reported economic news. It is operated through collaboration with many journalists, writers, and organizations, in addition to Toyo Keizai reporters responsible for individual industries.

Evidence, etc.: Ko 29-8.

Example 9. ＰＲＥＳＩＤＥＮＴ Ｏｎｌｉｎｅ — PRESIDENT Online

Type; operator, etc.: Website; President Inc..

Content (explanation): A comprehensive information website operated by President Inc. It delivers various information, mainly original articles by the President Online editorial department and articles reprinted from the magazine President (published twice a month).

Evidence, etc.: Ko 29-9.

Example 10. クロワッサンＯＮＬＩＮＥ ― Croissant ONLINE

Type; operator, etc.: Website; Magazine House Co., Ltd..

Content (explanation): …Online media operated by the magazine Croissant. Lifestyle media primarily targeting women in their forties and fifties, covering health, cooking, fashion, cosmetics, interiors, storage, money, and other subjects.

Evidence, etc.: Ko 29-10; Otsu 47.

Example 11. ＦＡＮＣＬ ＯＮＬＩＮＥ（ファンケルオンライン） ― FANCL ONLINE

Type; operator, etc.: Website; FANCL Corporation.

Content (explanation): A website operated by FANCL Corporation or its agent. It is full of convenient, beneficial information useful for beauty and health, and products handled by FANCL can be ordered on the spot.

Evidence, etc.: Ko 29-11.

Example 12. ジッセン！オンライン ― Jissen! Online

Type; operator, etc.: Website; SO Technologies Co., Ltd..

Content (explanation): “Practical” knowledge and know-how can be learned from instructors active at the forefront of digital marketing, and can therefore be used immediately for in-house training, study sessions, and the like.

Evidence, etc.: Ko 29-12.

Example 13. 月刊総務オンライン ― Gekkan Somu Online

Type; operator, etc.: Website; Gekkan Somu Co., Ltd..

Content (explanation): …A platform providing various services to people in general affairs departments, for whom a strategic perspective is required, centered on practical information and information useful for organizational management.

Evidence, etc.: Ko 29-13; Otsu 48.

Content (explanation): With the wish that people pay more attention to companies' investor relations, we mainly upload videos reading financial-results materials.

Evidence, etc.: Ko 35-2.

Example 18. 地政学オンライン — Geopolitics Online

Type; operator, etc.: YouTube channel; unknown.

Content (explanation): Unknown.

Evidence, etc.: Ko 35-3.

Example 19. ひろしま助産師オンライン — Hiroshima Midwives Online

Type; operator, etc.: YouTube channel; Hiroshima Midwives Association, general incorporated association.

Content (explanation): This year, we changed our annual seminars on preparing for pregnancy and other subjects to online seminars, and increased the number of types from one to four! They will be streamed for a limited period!

Evidence, etc.: Ko 35-4.

Example 20. 総合型選抜対策オンライン — Comprehensive Selection Preparation Online

Type; operator, etc.: YouTube channel; unknown.

Content (explanation): Unknown.

Evidence, etc.: Ko 35-5.

Example 21. マンスリー・マジック・レッスン・オンライン — Monthly Magic Lesson Online

Type; operator, etc.: Website; unknown.

Content (explanation): Unknown.

Evidence, etc.: Otsu 5.

Example 22. Fashion Biz Study オンライン — Fashion Biz Study Online

Type; operator, etc.: Website; unknown.

Content (explanation): Fashion Biz Study is a place to learn the skills required for the fashion business. Online courses.

Evidence, etc.: Otsu 6.

Example 23. 適正取引講習会オンライン — Fair Transactions Workshop Online

Type; operator, etc.: Website; Small and Medium Enterprise Agency.

Content (explanation): A fair transactions workshop for learning experimentally how to transact at appropriate prices. Practical live-streamed seminar.

Evidence, etc.: Otsu 7.

Example 24. スタディーオンライン — Study Online

Type; operator, etc.: Website; unknown.

Content (explanation): A service through which video lessons can be taken over the internet. While at home, you can take lessons just like those at a cram school…

Evidence, etc.: Otsu 8.

Example 25. ラーニングＯＮＬＩＮＥ — Learning ONLINE

Type; operator, etc.: Website; MORI ART MUSEUM.

Content (explanation): The Mori Art Museum holds …learning programs in various formats, including symposiums…. “MAM Digital” delivers these through the website …and other means.

Evidence, etc.: Otsu 9.

Example 26. 政府広報オンライン — Government Public Relations Online

Type; operator, etc.: Website; Cabinet Office.

Content (explanation): We deliver government measures and information you want to know to your daily life.

Evidence, etc.: Otsu 10.

Example 27. 文化遺産オンライン — Cultural Heritage Online

Type; operator, etc.: Website; Agency for Cultural Affairs.

Content (explanation): A portal website about Japan’s cultural heritage operated by the Agency for Cultural Affairs.

Evidence, etc.: Otsu 11.

Example 28. 数値地図（国土基本情報）オンライン — Digital Maps (Basic Geospatial Information) Online

Type; operator, etc.: Website; Japan Map Center, general incorporated foundation.

Content (explanation): Digital maps (basic geospatial information) are provided online over the internet in two-dimensional mesh units….

Evidence, etc.: Otsu 12.

Example 29. Educational Video Online

Type; operator, etc.: Website; Maruzen Publishing Co., Ltd..

Content (explanation): A distribution service for medical and nursing video teaching materials.

Evidence, etc.: Otsu 13.

[Right of Publicity] Tokyo District Court, 2023 (Wa) No. 70056 <Nakashima> * Infringement of the Right of Publicity Established

Original Ameblo publication: 2024-05-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12852378350.html

[Right of Publicity] Tokyo District Court, 2023 (Wa) No. 70056 <Nakashima> Infringement of the Right of Publicity Established

"The plaintiff is widely recognized … as the legendary cabaret-club hostess who earned the most in Japan … the plaintiff's name or likeness … has customer-attracting power that promotes the sale of goods and the like"

"The acts fall within the second category of the Pink Lady judgment and infringe the right of publicity"

(Excerpt from the judgment)

Despite the court's request for clarification, the defendants have not contested whether the acts fall within the three categories in the Pink Lady judgment, but the court will examine the matter below for completeness.

According to the foregoing background facts and factual findings, the plaintiff's name and likeness have customer-attracting power that promotes sales of goods and the like. Considering the manner in which the name and likeness were displayed and other circumstances, and the fact that the brand value of Enrike was placed at the forefront across all services provided by the defendants, it is appropriate to find that the defendants attached the plaintiff's name or likeness to their trade names, marks, web pages and domain names to differentiate their services from those of other businesses of the same kind through that customer-attracting power: Enrike Kukan in its interior-design and related business, Enrike Style in its aesthetic-salon operation and related business, and Enrike Staff in its worker-dispatch and related business.

Accordingly, the defendants' use of the plaintiff's name or likeness falls within the second category of the Pink Lady judgment and infringes the right of publicity.

IP High Court, 2013 (Gyo-Ke) No. 10089 [Total Parenteral Nutrition Infusion Preparation in a Two-Chamber Container] <Misao Shimizu>

Original Ameblo publication: 2024-05-17

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12852510705.html

2013 (Gyo-Ke) No. 10089 [Total Parenteral Nutrition Infusion Preparation in a Two-Chamber Container] <Misao Shimizu>

* Applying high-pressure steam sterilization causes vitamin decomposition

⇒ A disincentive exists

⇒ Inventive step recognized

Since the amount decomposed differs for each type of vitamin, the amount of each vitamin must be adjusted, creating a separate technical problem.

(Excerpt from the judgment)

… Even if high-pressure steam sterilization of infusion preparations is well known … there is no motivation to apply it to the cited invention. Rather, given the common general technical knowledge that vitamins generally decompose readily through heat and light, high-pressure steam sterilization … after adding a multivitamin preparation could decompose the vitamins and prevent sufficient achievement of the acidosis-prevention effect. Thus there is a disincentive to high-pressure steam sterilization. … Thermal stability varies among vitamins, and the amounts decomposed by high-pressure steam sterilization differ. Accordingly, to achieve the original objective of adequate replenishment of electrolytes and nutrients, simply increasing the dosage of Neolamin Multi V is insufficient; the amount of each type of vitamin must be adjusted, which can only be regarded as a separate technical problem. It is generally difficult to envisage performing high-pressure steam sterilization despite the creation of such a new technical problem.

[Unfair Competition Prevention Act Article 2(1)(i) / Criminal] Nagoya District Court, December 16, 2022 <Checkered Pattern (Demon Slayer)>

Original Ameblo publication: 2024-05-18

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12852690966.html

[Unfair Competition Prevention Act Article 2(1)(i) / Criminal] Nagoya District Court, December 16, 2022 <Checkered Pattern (Demon Slayer)>

"When combining four or more types, there are countless choices … selecting similar patterns … is itself … highly unlikely to occur unless they are intentionally selected with knowledge of the work"

Cf. The two-color patterns received decisions of refusal under Trademark Act Article 3(1)(vi)

(Excerpt from the judgment)

First, examining Patterns A through C, each individual pattern merely selects one or two colors and applies them to traditional patterns or generally used decorative designs such as checkered, hemp-leaf and scale patterns. They cannot be said to possess special distinctiveness.

In contrast, Patterns D through F each select three colors. Pattern D itself combines a tortoiseshell pattern and a plain area, with two particular colors assigned to the tortoiseshell pattern and one to the plain area. Pattern E is a gradation of three particular colors, characterized also by their particular order within the gradation and the large proportion of white. Pattern F is characterized by a flame pattern expressed through a particular order of three colors and the shape of the boundary between the yellow and adzuki-bean-colored portions. In addition to these characteristics, research into traditional Japanese and kimono patterns revealed no patterns similar to Patterns D through F (Witness G), and these patterns have individually been registered as trademarks. Taking these matters together, Patterns D through F are found to possess special distinctiveness individually.

Further, as stated in (2) above, "KMT" merchandise comprises a wide variety of products and in many instances each product is commercialized with multiple variants. Thus, even if a combination of the patterns contains patterns that are not specially distinctive individually, at least the combination of Patterns A through D includes Pattern D, which is individually specially distinctive. Moreover, even if Patterns A through C individually are merely combinations of simple colors and simple patterns, there are countless ways to choose and combine four such patterns arbitrarily. The probability of arbitrarily selecting only Patterns A through D from among them is therefore extremely low, and combining Patterns A through D cannot be said to restrict others' freedom to use colors and shapes.

Taken together, these circumstances establish that the combination of Patterns A through D possesses special distinctiveness. Accordingly, the combination of six patterns formed by adding Patterns E and F naturally possesses special distinctiveness as well.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91740.pdf

Tokyo District Court, 2018 (Wa) No. 28931 [Laser Processing Apparatus] <Shibata> ⇛ Article 102(2) Inapplicable, Article 102(1) Applicable

Original Ameblo publication: 2024-05-19

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12852747265.html

Tokyo District Court, 2018 (Wa) No. 28931 [Laser Processing Apparatus] <Shibata>

* The plaintiff manufactured and sold a product (SD engine) corresponding to part of the defendant's product (SD apparatus).

⇒ Article 102(2) inapplicable

⇒ Article 102(1) applicable

★ Always plead paragraph (1) in the alternative as well

* Did the court generally reject cumulative application of Article 102(1) and (3)!?

(Excerpt from the judgment)

(2) Application of Patent Act Article 102(2)

The presumption in Patent Act Article 102(2) … can be said to presuppose a relationship in which, absent the infringer's acts of patent infringement, the patentee could have earned the profits obtained by the infringer through those acts or profits of the same nature. Accordingly, where there is categorically no relationship in which the patentee could have earned profits of the same nature as those obtained by the infringer through patent infringement even if the infringement had not occurred, the basis for applying that Article is lacking.

In this case, the plaintiff manufactures and sells SD engines …, but does not manufacture or sell SD apparatuses. An SD engine is a component of an SD apparatus; customers for SD engines are manufacturers of semiconductor manufacturing equipment, whereas customers for SD apparatuses are semiconductor manufacturers. … The plaintiff merely manufactures and sells SD engines corresponding to components used in the manufacture, etc. of SD apparatuses embodying the inventions, and does not sell SD apparatuses. Thus, even without the defendant's patent infringement, the plaintiff would not have been able to sell SD apparatuses equipped with SD engines in place of the defendant. The defendant's profits in this case are profits from selling SD apparatuses. Even absent the defendant's infringement of the patent rights, it cannot be found that the plaintiff could have earned profits of the same nature as those from selling such SD apparatuses. Thus there is categorically no relationship in which the plaintiff could have earned the profits obtained by the defendant through patent infringement. Accordingly, the basis for applying Patent Act Article 102(2) is lacking in this case. …

(3) Application of Patent Act Article 102(1)

The "articles that [the patentee, etc.] could have sold if there had been no infringement" in Patent Act Article 102(1) need only be the patentee's products whose sales volume is affected by the infringement. The plaintiff patentee sells its engines, which are SD engines. Since an SD engine was necessary for an SD apparatus, the defendant's sales of SD apparatuses affect the sales volume of the plaintiff's engines. Accordingly, there is a basis for applying Patent Act Article 102(1) in this case. …

… Patent Act Article 102(1) presumes the patentee's damages through the paragraph as a whole, including its individual items, and paragraph (3) of the same Article is not applied in addition to paragraph (1).

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92821.pdf

[Unfair Competition Prevention Act Article 2(1)(iii)] Tokyo District Court, 2021 (Wa) No. 25324 <Shibata> ⇛ Substantially Identical Configurations; Configuration Imitation Found!!

Original Ameblo publication: 2024-05-20

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12852882011.html

[Unfair Competition Prevention Act Article 2(1)(iii)] 2021 (Wa) No. 25324 <Shibata>

⇒ Configuration imitation found because the configurations were substantially identical!!

Plaintiff's goods: ¥17,800–19,800

Defendant's goods: ¥1,980–3,980

The shapes are almost identical.

The rear zipper and hooks and the width of the shoulder straps are trivial differences that are noticed only when pointed out.

[Article] Monosodium Glutamate Case / Tokyo District Court, September 24, 2020 (2016 (Wa) No. 25436) (Yuki Hirai, Patent, September 2021 issue)

Original Ameblo publication: 2024-05-21

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12853008951.html

[Article] Monosodium Glutamate Case / Tokyo District Court, September 24, 2020 (2016 (Wa) No. 25436) (Yuki Hirai, Patent, September 2021 issue)

For goods transferred abroad by an overseas affiliate, an “offer for transfer” was also found because the Japanese defendant had jointly conducted sales activities in Japan with that affiliate.

⇒ In the damages analysis, the overseas affiliate’s profits were also evaluated as the Japanese defendant corporation’s marginal profits (Article 102(2))!

https://jpaa-patent.info/patent/viewPdf/3871

（2）しかし，ここで数字を単純化した以下のような設例を考えた場合，一般的な考え方に従えば，被告が譲渡行為によって得た被告製品1個あたりの限界利益は，10円（120円［売上額］－100円［仕入額］－10円［経費額］＝10円［限界利益額］）となるはずである。これに対して，本判決の算定方法によれば，限界利益額は50円（120円［売上額］－60円［CJインドネシア経費］－10円［被告経費額］＝50円［限界利益額］）となる。

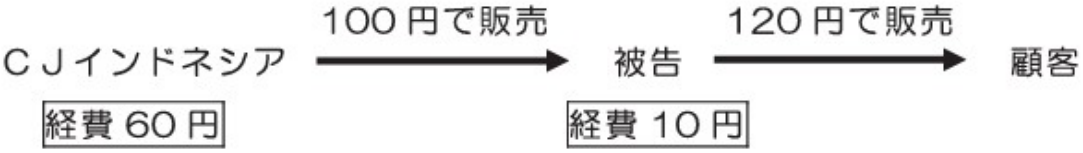

図5　数字を単純化した設例

（3）本判決は，実質的にはCJインドネシアから被告への譲渡に係るCJインドネシアの限界利益額を，被告に対して請求していることになる。上記設例で言えば，CJインドネシアから被告への譲渡に係る限界利益は，40円（100円［売上額］－60円［経費額］＝40円［限界利益額］）となる。本判決の算定では，，本来的な被告の限界利益額である10円に，このCJインドネシアの限界利益である40円を加えた，計50円が被告販売分に係る限界利益として評価されていることになる。

English translation of the excerpt and Figure 5

(2) However, when considering a hypothetical example with simplified figures as set out below, under the usual approach, the marginal profit obtained by the defendant through the transfer per unit of the defendant's product should be JPY 10 (JPY 120 [sales amount] − JPY 100 [purchase amount] − JPY 10 [expenses] = JPY 10 [marginal profit]). In contrast, under the calculation method in this judgment, the marginal profit is JPY 50 (JPY 120 [sales amount] − JPY 60 [CJ Indonesia's expenses] − JPY 10 [defendant's expenses] = JPY 50 [marginal profit]).

Figure 5. Hypothetical example with simplified figures. CJ Indonesia (expenses: JPY 60) sells to the defendant for JPY 100. The defendant (expenses: JPY 10) sells to the customer for JPY 120.

(3) In substance, this judgment results in a claim against the defendant for CJ Indonesia’s marginal profit from the transfer from CJ Indonesia to the defendant. In the hypothetical example above, the marginal profit from the transfer from CJ Indonesia to the defendant is JPY 40 (JPY 100 [sales amount] − JPY 60 [expenses] = JPY 40 [marginal profit]). In the calculation in this judgment, CJ Indonesia’s marginal profit of JPY 40 is added to the defendant’s original marginal profit of JPY 10, and the total of JPY 50 is assessed as the marginal profit from the units sold by the defendant.

[Article] Trademark Rights and Territoriality (Yoshiyuki Tamura, Patent, December 2023 Issue)

IP High Court, 2023 (Gyo-Ke) No. 10009 [Wastepaper Processing Apparatus] <Hibiku Shimizu>

Original Ameblo publication: 2024-05-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12853895453.html

2023 (Gyo-Ke) No. 10009 [Wastepaper Processing Apparatus] <Hibiku Shimizu>

The fact that the invention and the cited invention have the same purpose was used as the reason for treating the difference as a design matter.

(Other differences were held obvious by combining the primary and secondary cited inventions because they had the same purpose. Parallel reasoning was adopted for design matters and combinations.)

(Excerpt from the judgment)

In the cited invention, the “estimated recycling duration” is displayed on the display unit as a warning to the user when, for example, it is shorter than the “operating duration” set by the user. (According to paragraph [0054] of Ko 1, such a warning is intended to alert the user that operation will continue after the raw material stored in the raw-material storage unit has been used up.) Adopting a technique that displays the “estimated recycling duration” as such a warning and adopting one that displays the “scheduled operation-end time” differ only in displaying a duration rather than a clock time. It is appropriate to find that these are design matters that a person skilled in the art could select as appropriate by exercising ordinary creative ability as means of achieving the same purpose. …

[U.S. Patents] Par v. Hospira (2020, CAFC) * Literal Infringement Affirmed on Appeal; Equivalents Addressed in the Alternative Below

Original Ameblo publication: 2024-05-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12853895740.html

[U.S. Patents] Par v. Hospira (2020, CAFC): Claim Language “about 6 to 8 mg/mL”

⇒ The Federal Circuit affirmed literal infringement; the district court had also found infringement under the doctrine of equivalents in the alternative.

① Using “about” with a numerical range avoids a strict interpretation of the boundaries

② The extent to which “about” can expand a numerical range is what a person skilled in the art would regard as reasonable

③ …

https://openlegalcommunity.com/what-is-about/

[2026 editorial clarification] The Federal Circuit affirmed the finding of literal infringement, applying the claim term “about” to the numerical range. It did not decide infringement under the doctrine of equivalents; the district court had reached that issue only in the alternative. This appellate decision should not be cited as holding that infringement under the doctrine of equivalents was established.

[U.S. Patents] Cohesive v. Waters (2008, CAFC): Numerical Range Construed Broadly!

Original Ameblo publication: 2024-05-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12853895948.html

[U.S. Patents] Cohesive v. Waters (2008, CAFC)

The claim language requiring an average diameter “greater than about 30 μm” was construed to mean either (1) greater than 25.434 μm, or (2) greater than 23.044 μm and a particle diameter sufficiently large to ensure that the column is capable of attaining turbulent flow.

⇒ Reversed the district court’s summary judgment that 25 μm did not satisfy the claim.

★ The summary judgment of no literal infringement for the 25 μm columns was reversed and remanded, with the numerical range construed broadly. The summary judgment of no infringement under the doctrine of equivalents was affirmed.

IP High Court, 2021 (Ne) No. 10086 [Lamp] <Honda> ≒ First Instance, Osaka District Court, 2017 (Wa) No. 1390: Prior Use Right Established

Original Ameblo publication: 2024-06-06

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12855106770.html

2021 (Ne) No. 10086 [Lamp] <Honda> ≒ First Instance, Osaka District Court, 2017 (Wa) No. 1390

⇒ Having found variation in the prior-use products, the court recognized the adjustable range as the scope of the prior use right.

* The court mentioned that products worked before the filing date could be encompassed by the patented invention!

⇒ A prior use right is established even without recognition of the parameter

* This judgment has been described as recognizing prior use rights flexibly, and that may be true, but it can also be regarded as consistent with past case law.

① No court decision has required recognition of the parameter for a prior use right in a parameter invention.

In 2017 (Ne) No. 10090 [Pharmaceutical] <Takabe>, the court also noted in dictum that the prior user had not controlled the numerical value (moisture content), but Judge Takabe herself explains in an article that the judgment did not require recognition of the numerical value (moisture content).

https://jpaa-patent.info/patent/viewPdf/4366

② Although this was in the context of the completion of a publicly worked "invention," the Tokyo District Court, 2012 (Wa) No. 11800 [Polyimide Film] <Takano>, held as follows: while repeatability is necessary to say that an "invention" publicly worked has been completed, repeatability was satisfied in that case and public working was recognized. In that case, it was not necessary to have targeted the numerical values of the patented invention. ⇒ The present judgment (Lamp case) likewise identifies the range of variation of the prior-use products and finds that it falls entirely within the numerical range of the patented invention.

"... An 'invention' under Patent Act Article 2(1) is a highly advanced creation of technical ideas utilizing a law of nature. It therefore requires that a person skilled in the art be able to obtain the same result by repeatedly working the created technical subject matter, that is, that it be repeatable (Supreme Court, 1998 (Gyo-Tsu) No. 19 …). The defendant … manufactured 28 prior products falling within the technical scope of the prior invention, and the prior invention was repeatable, so it is clear that the defendant … had completed the prior invention. Certainly, as shown in the attached table, even within a single lot of the prior products, αMD was sometimes below 10 ppm/°C, or αTD was below 3 ppm/°C or above 7 ppm/°C. However, from the entire purport of the oral argument, this is found to have been merely because the defendant did not know the content of Invention 1 and was not targeting αMD of at least 10 ppm/°C and αTD of at least 3–7 ppm/°C. …

The plaintiff argues that the above transfers were for jointly developing polyimide film for COF and that the parties were subject to mutual confidentiality obligations. However, … an article submitted to an industry journal by Toray Industries, Inc., one of the copper-clad laminate manufacturers …, is found to state that a polyimide film with αTD lower than αMD is suitable for COF. In light of this fact, it is difficult to believe that the defendant and the copper-clad laminate manufacturers were subject to mutual confidentiality obligations."

③ Once a prior use right is established, past case law has been very flexible concerning its scope. Except for “encroachment” (2020 (Ne) No. 10004 [Light Irradiation Apparatus] <Otaka> = Osaka District Court, 2017 (Wa) No. 7532 <Sugiura>), modifications within the patented invention’s scope have been held to fall within the scope of prior use rights in the great majority of cases.

https://www.takaishihideki.com/_files/ugd/324a18_7d066756d0994288a8ad244cb6a66bd0.doc?dn=3%EF%BC%A8%EF%BC%B4%E3%80%80Rev.%E7%AC%AC%E4%B8%80%E6%B3%95%E8%A6%8F%EF%BC%88%E5%85%88%E4%BD%BF%E7%94%A8%E6%A8%A9%E3%80%802015%E5%B9%B4%EF%BC%89.doc

(Excerpt from the judgment / 2021 (Ne) No. 10086 [Lamp])

[Claim 1] … A lamp satisfying the relationship $y \geq 1.09x$, where y (mm) is the full width at half maximum of the luminance distribution obtained when the light of each of the plurality of LED chips passes through the outermost boundary of the lamp, and x (mm) is the spacing between the light-emission centers of adjacent LED chips.

… When the y/x values for the two LEDs positioned 25th and 50th from the left were measured for all 24 of the appellee’s 403W products, the 25th LED from the left had a minimum of 1.303, a maximum of 1.388, and mean-value 3σ values of 1.281 and 1.397, while the 50th LED from the left had a minimum of 1.297, a maximum of 1.381, and mean-value 3σ values of 1.272 and 1.403. Industrial products vary in quality for various reasons even when produced through the same production process, and the same is understood to hold for lighting fixtures. As described above, the appellee’s 403W products likewise exhibit variation in their numerical ranges. In addition, one commonly adopted quality-control method is understood to compare product inspection results with the required quality standard and keep the difference (manufacturing error) within three standard deviations (3σ). … In light of these matters, the measured y/x values of the appellee’s 403W products were approximately 1.27–1.38. As for 3σ, which takes ordinary manufacturing error into account, although the quality standard required of the 403W products is unknown, the measured mean can be regarded as that standard in light of ordinary control methods, and the y/x values of the appellee’s 403W products can be found to have been approximately 1.27–1.40. …

In light of the foregoing, the range of y/x values from above 1.4 to 1.7 or above 1.7, constituting the invention embodied in the 403W product, is a range that the appellee had realized by appropriately adjusting x and had brought under its own control. … Further, suppressing the dot-like appearance of LED lighting, which is the problem of each Invention 1, was a problem known to persons skilled in LED lighting before the priority date. Persons skilled in the art can be said to have manufactured lighting fixtures without a dot-like appearance through trial and error, without using the parameter at issue. Under such technological circumstances, where a mathematical formula is used to define an invention of a “product,” products worked or prepared for working before filing (the priority date) may fall within the technical scope defined by the formula of an invention subsequently filed and patented. The establishment of a prior use right should therefore not be denied merely because the appellee did not recognize the parameter at issue. …

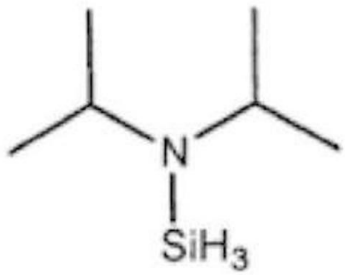
IP High Court, 2022 (Gyo-Ke) No. 10097 [Aminosilane] <Honda>

Original Ameblo publication: 2024-06-10

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12855558148.html

2022 (Gyo-Ke) No. 10097 [Aminosilane] <Honda>

Even if a substance's name appears in a reference, disclosure is not recognized unless a person skilled in the art can work it without trial and error



⇒ The mere ability to generalize a reaction formula is insufficient

= 2022 (Gyo-Ke) No. 10091 <Shoji>, 2022 (Wa) No. 9716 <Shibata> [5-Aminolevulinic Acid Phosphate]

1. Claims (Claim 1)

An aminosilane represented by the following formula.

[Chemical Formula 1]

2. Excerpts from the judgment

(1) Novelty

"... At least in chemistry, it may be possible to write a chemical formula or name of a chemical substance formally regardless of whether a method for its manufacture or other acquisition has been found. Accordingly, for a publication to disclose the technical idea constituting an invention of a chemical substance, it should generally be required not merely to disclose the substance's structure, but also to contain a description sufficient to understand its manufacturing method or another means of obtaining it. Where the publication does not contain a description sufficient to understand its manufacturing method or another means of obtaining it, a person skilled in the art encountering the publication must be able to find such a method on the basis of common general technical knowledge at the time of the patent application, without exercising creative ability through thought, trial and error, or the like. …

Although Ko 1 can be said substantially to state 'diisopropylaminosilane,' the name of a chemical substance corresponding to the formula 'SiH3[N(C3H7)2],' it contains no description sufficient to understand a manufacturing method or another means of obtaining it.

… Even if the reaction formula could be generalized, it cannot be found that a person skilled in the art could immediately understand how to synthesize compounds falling within its subordinate concepts, or that such methods were common general technical knowledge. …

Accordingly, 'diisopropylaminosilane' cannot be identified as the chemical substance of an invention described in Ko 1, constituting an 'invention described in a publication' under Patent Act Article 29(1)(iii). …

Even compounds that appear at first sight to be encompassed by the organic aminosilanes of the Ko 1 and Ko 1′ inventions are understood not to be encompassed by the organic aminosilanes of those inventions as inventions described in a publication if they do not satisfy the above prerequisite."

(2) Inventive step

"As examined above … although it was known before the priority date that dimethylaminosilane and diethylaminosilane could be manufactured, it was not known that diisopropylaminosilane could be manufactured or obtained. Even for a person skilled in the art with ordinary creative ability, it cannot be said to have been easy before the priority date to obtain the diisopropylaminosilane of Invention 1."

3. Some observations

This judgment denied qualification as a cited invention because, although the reference named the substance, a person skilled in the art could not work it without trial and error. It is consistent with the recent Tokyo District Court judgment, 2022 (Wa) No. 9716, "5-Aminolevulinic Acid Phosphate" <Presiding Judge Shibata>, and IP High Court judgment, 2022 (Gyo-Ke) No. 10091, "5-Aminolevulinic Acid Phosphate" <Presiding Judge Shoji>, and is important in practice.

In this case, the reference named the substance (the aminosilane of the invention), but a person skilled in the art at the priority date could not obtain or manufacture it without trial and error, so disclosure of the aminosilane in the reference was not recognized, or its qualification as a cited invention was denied.

Not only this judgment but also numerous other decisions require, for disclosure of a cited invention in a reference to be recognized, that a person skilled in the art be able to work (obtain or manufacture) the configuration, etc. of the invention without trial and error, on the basis of the reference's disclosure and common general technical knowledge. Applied to this case, at least a person skilled in the art must have been able to obtain or manufacture the invention's "aminosilane" without trial and error.

However, since the state of the art at the priority date made obtaining or manufacturing the invention's "aminosilane" difficult, novelty was recognized even though the reference named the substance. Inventive step was also recognized because a person skilled in the art at the priority date could not manufacture the compound. One should always bear in mind that, as in this case, even where a publicly known reference names the compound of the invention in words, it may be possible to argue that a person skilled in the art could not obtain or manufacture it without trial and error at the state of the art at the priority date. (This is akin to the requirement, for microorganism inventions, to deposit the microorganism under the "Budapest Treaty on the International Recognition of the Deposit of Microorganisms for the Purposes of Patent Procedure," adopted in 1977, and make samples available upon request (Articles 27-2 and 27-3 of the Regulations under the Patent Act), because a person skilled in the art cannot necessarily obtain or culture the microorganism.)

In other words, at the state of the art on the filing date (priority date), a person skilled in the art could not obtain or manufacture the compound without trial and error, but the patent specification's disclosure enabled that person to manufacture it without trial and error (at least after publication of the application). This explains why novelty was not denied despite the invention's "aminosilane" being named in a publicly known reference, and why the enablement and support requirements were not at issue.

This situation is also useful when considering the different reference dates under the doctrine of equivalents. The third requirement concerns the ease of replacing the invention's configuration with the configuration of the accused product or process at the time of its manufacture or other relevant act. The fourth requirement, by contrast, is that the accused product or process was neither identical to nor easily conceivable from the prior art at the time of the patent application; the subject of the assessment is also different. Satisfaction of both requirements therefore cannot be explained solely by a change in the obviousness of the same subject matter between filing and manufacture.

However, according to the general proposition adopted in numerous decisions, including this one, even where a compound's name appears in a publicly known reference, novelty and inventive step are not immediately denied unless it can be proved that, at the state of the art on the filing date (priority date), a person skilled in the art could manufacture the compound without trial and error. Thus the first person to succeed in manufacturing a particular compound as part of a mixture can be granted a patent without isolating it and can enforce the right against someone who works a mixture containing that compound after filing. (This issue arose directly in the "5-Aminolevulinic Acid Phosphate" judgment cited above, rather than in the present judgment. That case involved an invention of a new substance made by converting known 5-aminolevulinic acid into a "phosphate," while the compound "5-aminolevulinic acid phosphate" itself was expressly named in a publicly known reference. For an invention whose technical significance is the first successful manufacture of the "phosphate," there may be debate over whether granting a patent as a product invention, rather than a manufacturing-method invention, strikes the proper balance, and whether it is appropriate to allow enforcement against an alleged infringer who manufactures, etc. a mixture containing the compound using a method other than the manufacturing method actually invented.)

(Note) Article 66(1) of the Patent Act provides that a patent right becomes effective upon registration of its establishment. Accordingly, a patent right can be enforced only after registration.

On this point, there may also be debate in relation to the public domain in a case such as the IP High Court judgment, 2007 (Gyo-Ke) No. 10378 [Crystalline Azithromycin Dihydrate]. The court held that the issue was whether, on the basis of the common general knowledge before the priority date, a person skilled in the art could understand that the cited reference described an identical product, rather than whether an identical product had in fact existed before that date; it did not find a lack of novelty. In light of that reasoning, if a substance is not in fact new and the inventor is merely the first to notice it, does granting a patent as a product invention strike the proper balance, and is it appropriate to allow enforcement against an alleged infringer who continues manufacturing and selling the prior art (= a product that in fact contained the substance although nobody had noticed it)?

Osaka District Court, 2019 (Wa) No. 5620 [… Power Generation Control System] <Takemiya>

Original Ameblo publication: 2024-06-11

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12855682326.html

Osaka District Court, 2019 (Wa) No. 5620 [… Power Generation Control System] <Takemiya>

* Only the defendant can change the settings.

⇒ An accused product configured for dedicated use satisfies the “only” requirement.

“To change a specification once set, the only option is for the defendant … to perform the work using special tools and send the reconfigured device to the site”

(Excerpt from the judgment)

… Performing configuration work on the programs for Specifications ① through ③ installed in the accused product unlocks and activates one of the programs, but nobody other than defendant Field Logic can perform that work. To change a specification once set, the only option is for defendant Field Logic to perform the work using special tools and send the reconfigured device to the site. … Accused Product ②, in which the program for Specification ② was actually running, … is found to be used in the defendant’s system. It is impossible to continue using Accused Product ② while using it with the program for Specification ① or ③ operating; such use therefore cannot be called another use of Accused Product ②. … Indirect infringement under item (i) of that Article is established. …

Osaka District Court, 2021 (Wa) No. 4920 [Functional Water] <Takemiya> * Intention behind Numerical Values of Products in Public Use Not at Issue

Original Ameblo publication: 2024-06-12

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12855815046.html

Osaka District Court, 2021 (Wa) No. 4920 [Functional Water] <Takemiya>

* The intention behind the numerical values of the publicly used products was not at issue.

* An invention reciting a function in the claims lacked novelty due to public use (analyzed like a use)

"The (old product) has a function of maintaining the freshness of fresh fish and was sold primarily for maintaining fish freshness"

(Excerpt from the judgment)

[Claim 1] "… the function is … at least one of maintaining the freshness of seafood or meat, aging seafood or meat, regulating plant growth, extending the life of cut flowers, regulating the flowering of cut flowers, exterminating pests, controlling Anisakis, antimicrobial activity, antiviral activity, reducing fecal odor, lowering blood pressure, raising body temperature, and improving the oral environment …"

The defendant provided one of the stored bottles … to Tosoh Analysis and Research Center, Ltd. The Center … analyzed it and found a weight-average molecular weight of 4.5×10^4. … Mugen Nanasei FISH (無限七星ＦＩＳＨ) has a function of maintaining the freshness of fresh fish and was sold primarily for maintaining fish freshness. Further, the evidence … and the entire purport of the oral argument establish that the ingredients of the old ATW sold by Liberal to the defendant were labeled "polymerized amine, water." …

[United States] Salazar v. AT&T Mobility LLC (CAFC, April 5, 2023)

Original Ameblo publication: 2024-06-14

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12856060548.html

[United States] Salazar v. AT&T Mobility LLC (CAFC, April 5, 2023)

“a microprocessor” means one or more

⇒ As a general rule, “said microprocessor” refers back to “a microprocessor” and retains its non-singular meaning.

Convolve decision: “a …” and “the …” must perform all steps

Varma decision: “a …” means one request

⇒ In this case, at least one microprocessor must be capable of performing all the recited functions.

* The choice between “a” and “said” depends on the claim as a whole; this decision does not establish a general rule against using “said.”

IP High Court, 2022 (Gyo-Ke) No. 10003 [Method for Preventing Adhesion of Marine Organisms] <Kanno>

Original Ameblo publication: 2024-06-17

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12856435347.html

2022 (Gyo-Ke) No. 10003 [Method for Preventing Adhesion of Marine Organisms] <Kanno>

* The secondary cited invention itself solves the problem of the primary reference and presupposes the use of a chlorine agent. There is therefore no motivation to replace the primary reference's available-chlorine-generating agent with chlorine dioxide and then additionally combine the secondary cited invention.

"The Ko 5 invention … itself solves … the problem of the Ko 1 invention …, so … there is no motivation … to combine the Ko 5 invention … with the Ko 1 invention."

<Decisions to the same effect>

2021 (Gyo-Ke) No. 10082 [Electrically Insulated Cable] <Shoji>

* Although the problem is common, the cited invention has already solved it by other means.

⇒ No motivation to further combine a secondary reference

= 2007 (Gyo-Ke) No. 10238

= 2012 (Gyo-Ke) No. 10328

= 2016 (Gyo-Ke) No. 10103

= 2017 (Gyo-Ke) No. 10013

(Excerpt from the judgment)

The Ko 5 invention … presupposes the problem that adding a chlorine agent in the Ko 1 invention generates trihalomethanes, and adopts the solution of dispersing a hydrogen peroxide agent at a particular concentration in an industrial seawater cooling system in advance and then adding a chlorine agent at a particular concentration; moreover, it specifies … for each particular concentration. … Thus the Ko 5 invention itself solves the above problem of the Ko 1 invention and presupposes use of a chlorine agent. Accordingly, a person skilled in the art cannot be said to have motivation to replace the available-chlorine-generating agent of the Ko 1 invention with chlorine dioxide and then additionally combine the Ko 5 invention. Furthermore, the Ko 5 reference does not contemplate adding chlorine dioxide and thus does not disclose a particular concentration ratio for chlorine dioxide. Therefore, a person skilled in the art could not easily have conceived of the numerical range at issue in Difference 1 by combining the Ko 1 invention with the Ko 5 reference.

[Patents] Joint Ownership of Patent Rights and Unilateral Granting of Non-Exclusive Licenses (Comparison of Countries)

Original Ameblo publication: 2024-06-22

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12857130830.html

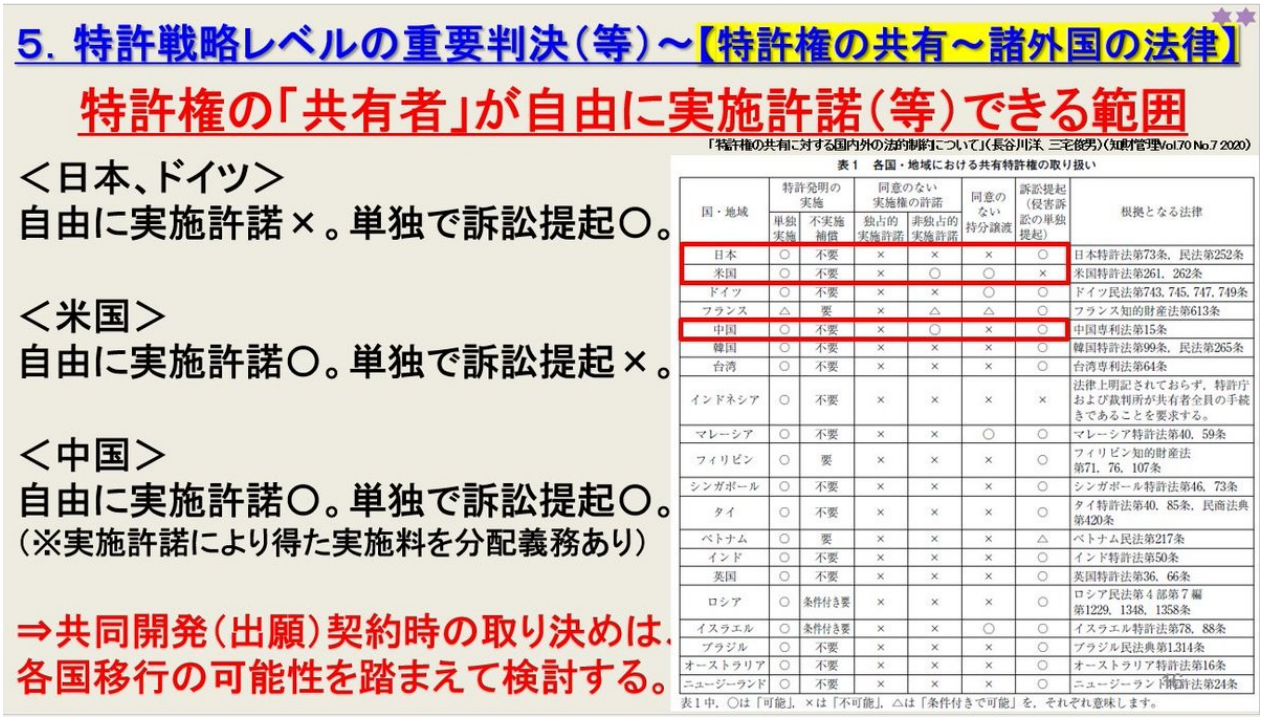
[Patents] Joint Ownership of Patent Rights and Unilateral Granting of Non-Exclusive Licenses (Comparison of Countries)

<Japan> No freedom to grant licenses

<Germany> Permitted with majority consent (majority by size of shares; limited to proper administration and use; BGB Section 745(1))

<United States> Freedom to grant licenses

No statutory provision on licensing to third parties (35 U.S.C. § 262 provides for the co-owners' own practice; licensing to third parties rests on case law: Ethicon, 135 F.3d 1456 (Fed. Cir. 1998)).



A co-owner cannot grant a license unilaterally if the co-owners have agreed otherwise.

<China> Freedom to grant licenses (non-exclusive licenses absent an agreement; Patent Law, Article 14)

* Obligation to distribute royalties received from licensing

<France> Non-exclusive licenses permitted, subject to equitable compensation of co-owners not working the invention and prior notice with an offer to assign the share; within three months of the notice, other co-owners may oppose by acquiring that share (IP Code, Article L613-29(c)).

English translation of the 2020 comparative slide

5. Important judgments (and other matters) at the patent-strategy level — Joint ownership of patent rights: laws of various countries.

Extent to which a “co-owner” of a patent right may freely grant licenses and take other actions.

<Japan, Germany> Freedom to grant licenses: no. Bringing an action alone: yes.

<United States> Freedom to grant licenses: yes. Bringing an action alone: no.

<China> Freedom to grant licenses: yes. Bringing an action alone: yes. *There is an obligation to distribute royalties obtained through licensing.

⇒ Arrangements in joint development (application) agreements should take account of the possibility of proceeding in each country.

Table 1. Treatment of jointly owned patents in each country or region (2020 chart)

Symbols: ○ = permitted; × = not permitted; △ = conditionally permitted. “Compensation” means compensation for a co-owner not working the patented invention.

Japan: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patent Act, Article 73; Civil Code, Article 252.

United States: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ○; assignment of a share without consent: ○; bringing an infringement action alone: ×. Legal basis: Patent Act, Sections 261 and 262.

Germany: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ○; bringing an infringement action alone: ○. Legal basis: Civil Code, Sections 743, 745, 747 and 749.

France: Working alone: △; compensation: Required; exclusive licensing without consent: ×; non-exclusive licensing without consent: △; assignment of a share without consent: △; bringing an infringement action alone: ○. Legal basis: Intellectual Property Code, Article 613.

China: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ○; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patent Law, Article 15.

South Korea: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patent Act, Article 99; Civil Act, Article 265.

Taiwan: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patent Act, Article 64.

Indonesia: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ×. Legal basis: Not expressly provided by statute; the Patent Office and courts require action by all co-owners..

Malaysia: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ○; bringing an infringement action alone: ○. Legal basis: Patents Act, Sections 40 and 59.

Philippines: Working alone: ○; compensation: Required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Intellectual Property Code, Sections 71, 76 and 107.

Singapore: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patents Act, Sections 46 and 73.

Thailand: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patent Act, Sections 40 and 85; Civil and Commercial Code, Section 420.

Vietnam: Working alone: ○; compensation: Required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: △. Legal basis: Civil Code, Article 217.

India: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patents Act, Section 50.

United Kingdom: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patents Act, Sections 36 and 66.

Russia: Working alone: ○; compensation: Conditionally required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Civil Code, Part IV, Section VII, Articles 1229, 1348 and 1358.

Israel: Working alone: ○; compensation: Conditionally required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ○; bringing an infringement action alone: ○. Legal basis: Patents Law, Sections 78 and 88.

Brazil: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Civil Code, Article 1314.

Australia: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patents Act, Section 16.

New Zealand: Working alone: ○; compensation: Not required; exclusive licensing without consent: ×; non-exclusive licensing without consent: ×; assignment of a share without consent: ×; bringing an infringement action alone: ○. Legal basis: Patents Act, Section 24.

[Article] “Determining Unreasonableness” in Providing Reasonable Benefits under Employee Invention Rules (Tatsuro Fujita, Chizai Kanri, Vol. 74, No. 1, 2024)

Tokyo District Court, 2013 (Wa) No. 21383 (February 18, 2015): Judgment

Osaka District Court, 2022 (Wa) No. 9521 [Thermoplastic Resin Composition]: Numerical Limitation — Rounding Argument Rejected, No Equivalence

Original Ameblo publication: 2024-06-26

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12857582824.html

Osaka District Court, 2022 (Wa) No. 9521 [Thermoplastic Resin Composition]

* Rounding was not allowed and the claim was not satisfied. No equivalence either

<Rounding argument>

"For significant figures … whether to use decimal places or, even for integers, the tens or hundreds place varies by field and purpose of use. … The defendant's UVA has a molecular weight of 699.91848 … and does not … have a molecular weight of 700 or more. …"

<Doctrine of equivalents>

For a numerically limited invention … in which setting a particular numerical value has significance, the patent is considered to have been granted by limiting the invention to technology within that numerical range. Accordingly, absent special circumstances, the limitation of the technical scope by that numerical value constitutes an essential part of the patented invention ⇒ No equivalence

(Excerpt from the judgment)

<Rounding argument>

… The plaintiff points out that, for UVA represented by the same molecular formula as the defendant's UVA, catalogs, other patent publications, etc. sometimes give its molecular weight as 700 … . However, there are also examples using "699.9" or "699.92" …, so it cannot be found to be common general technical knowledge among persons skilled in the art to round the calculated molecular weight of UVA to an integer. (The plaintiff itself admits that whether significant figures are expressed as integers, decimal places, or even tens or hundreds for integers varies by field and purpose of use.) … Accordingly, the defendant's UVA has a molecular weight of 699.91848 and is not a UVA with a "molecular weight of 700 or more" under Elements 1B and 6B. …

<Doctrine of equivalents>

… The essential part of the inventions is found to lie in enabling the provision of a resin composition with excellent heat resistance at the high temperature of 110°C or more, suppression of foaming and bleed-out during high-temperature molding, and reduction of problems caused by UVA volatilization, through the discovery that a UVA having a hydroxyphenyltriazine skeleton and a molecular weight of 700 or more is compatible with a thermoplastic acrylic resin having a ring structure in its main chain. … For an invention that limits its technical scope numerically (a numerically limited invention) and in which setting that numerical value has significance, the patent is considered to have been granted by limiting the invention to technology within that numerical range. Accordingly, absent special circumstances, the numerical limitation of the technical scope should be understood to constitute an essential part of the patented invention. The above examination shows that setting the molecular weight at "700 or more" has technical significance, and no such special circumstances are apparent in this case.

IP High Court, 2023 (Gyo-Ke) 10057 [Spray Products] <Honda>

Original Ameblo publication: 2024-07-01

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12858278372.html

HP: https://www.takaishihideki.com/single-post/ameblo-12858278372-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12858278372-ja

IP High Court, 2023 (Gyo-Ke) 10057 [Spray Products] <Honda>

Examples were added at the time of filing Priority Application 2 for a compound that had been recited in the claims of the Priority Application 1 specification but for which no examples had been provided.

⇒ The claim to priority based on Priority Application 1 was upheld.

The Priority Application 1 specification explained that the compound shared a common mechanism with another compound described in the examples in Specification 1.

* The Artificial Nipple case involved an application filed by another party during the priority period. Had the intervening act instead been another party's public working or publication, it would probably have raised an issue of partial priority, as in the Brunnian Link case.

* In the United States as well, Ian Frazer v. Richard Schlegel (CAFC, August 20, 2007) recognized the effect of priority and the applicant's status as the first inventor for an invention in an application claiming Paris Convention priority in which examples had been added, even though another party had filed an application within the priority period. (Patent, 2024, Vol. 77, No. 7, p. 153)

(Excerpts from the court's reasoning)

… Although the only examples described in the specification and other documents of Priority Application 1 are spray products containing EBAAP as the insect-repellent ingredient, and examples relating to spray products containing icaridin as the insect-repellent ingredient were added in the specification and other documents of Priority Application 2 …, those examples are concrete examples of working Corrected Invention 1 at issue and can also be understood as confirmatory descriptions of concrete examples of working the invention whose defining features had been recited in Claim 1 or 2 of the claims of Priority Application 1. They therefore cannot be said to introduce new technical matters in relation to the technical matters disclosed in the specification and other documents of Priority Application 1. …

In addition to the background art, problem, and means for solving the problem relating to Corrected Invention 1 at issue, the specification and other documents of Priority Application 1 describe the mechanism underlying the effects of the invention and the technical significance of each constituent feature. It can also be understood that these apply in common to EBAAP, p-menthane-3,8-diol, and icaridin. In other words, it is recognized that the specification and other documents of Priority Application 1 set out the technical content of Corrected Invention 1 at issue, including the portion in which the insect-repellent ingredient is icaridin, in a sufficiently concrete and objective form that a person having ordinary knowledge in the relevant technical field (a person skilled in the art) could repeatedly work the invention and achieve its intended technical effects.

“Dr. Martens' Yellow Stitching”

[Trademark] IP High Court, 2023 (Gyo-Ke) 10003 <Honda>

⇒ Lost

The position mark lacks distinctiveness.

The only evidence concerned products that were black apart from the stitching, so Article 3(2) was also not satisfied.

[Unfair Competition Prevention Act] IP High Court, 2023 (Ne) 10048 <Miyasaka>

⇒ Won

Well-known status and similarity under Article 2(1)(i) of the Unfair Competition Prevention Act: satisfied

Unlike the first-instance court, the court treated it as an “indication of goods or business” in combination with other features!!

IP High Court, 2023 (Gyo-Ke) 10020 [Steel Pipe Pile Pier] <Honda>

Original Ameblo publication: 2024-07-02

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12858354238.html

HP: https://www.takaishihideki.com/single-post/ameblo-12858354238-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12858354238-ja

IP High Court, 2023 (Gyo-Ke) 10020 [Steel Pipe Pile Pier] <Honda>

*Although the specification described only examples under particular conditions, the court held, in light of the problem addressed by the invention, that "a person skilled in the art can … take other conditions into account and appropriately incorporate the above technical concept to solve the problems addressed by each invention at issue."

⇒ Support requirement: satisfied

*The court rejected obviousness of locally increasing strength at particular locations.

⇒ Inventive step: satisfied

(Excerpts from the court's reasoning)

<Support requirement: satisfied>

The defendant argues that the specification merely states that verification was performed through seismic response analysis (simulation) under particular conditions (number of rows of steel pipe piles, water depth, ground structure, wall thickness and diameter of the steel pipe piles), and that it cannot be understood that adopting the numerical range for curvature φp would solve the problem under different conditions as well. Naturally, the ground and other circumstances where steel pipe pile piers are installed vary, and their performance must be verified by an appropriate method suited to the circumstances. What the specification discloses, however, is the technical concept of locally using steel pipe piles having deformation capacity of at least a specified value only at portions of the piles where the generated curvature is large in the underground portions of at least the piles positioned facing the landward side. When actually conducting performance verification such as seismic response analysis, a person skilled in the art who encounters this disclosure can take other conditions into account and appropriately incorporate that technical concept to solve the problems addressed by each invention at issue. Thus, the mere fact that only results under particular conditions are described does not provide a reason to conclude that the inventions fail to satisfy the support requirement….

<Inventive-step requirement: satisfied>

(Difference 3A) The "steel pipe piles" of Invention 3 are such that "among the steel pipe piles constituting the row of steel pipe piles, portions where the generated curvature is large in the underground portions of at least the steel pipe piles positioned facing the landward side, where the curvature arising in the piles in response to an external force is large, satisfy the relationship $\varphi p \geqq 5.65 \times 10^{-3}/D$ between the diameter D of the steel pipe piles and the curvature φp corresponding to their fully plastic moment, while the other portions of the underground portions of the steel pipe piles have lower deformation capacity than those

portions," whereas it is unclear whether the "steel pipe piles 9" of the invention in Exhibit Ko 1 have that configuration. …

…Even if ordinary design practice could involve progressively increasing the strength of steel pipe piles based on seismic response analysis results without using the curvature condition formula, it cannot be said that this would naturally lead further to locally placing high-strength steel pipe piles only at portions where the generated curvature is large. At least, it must be said that it is difficult to conclude that the configurations relating to Difference 3A or 3B could have been readily conceived.

IP High Court, 2022 (Gyo-Ke) 10127 [Celecoxib] <Miyasaka> (Second judgment) — Correction satisfies support; clarity not satisfied

Original Ameblo publication: 2024-07-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12858605429.html

HP: https://www.takaishihideki.com/single-post/ameblo-12858605429-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12858605429-ja

IP High Court, 2022 (Gyo-Ke) 10127 [Celecoxib] <Miyasaka> (Second judgment)

***The correction satisfied the support requirement. Clarity: not satisfied**

"Even when attempting to apply common general technical knowledge, there is not even a clue as to which characteristics should be considered in deciding …." Before even considering impossible or impractical circumstances … clarity is lacking.

(Excerpt from the court's reasoning)

…The specification does not describe what action of the pin mill achieves the low cohesiveness and reportedly improved blend uniformity of "celecoxib particles milled in a pin mill." It is therefore also unclear whether these properties are achieved by impact mills generally, or only by those impact mills sharing some characteristic with a pin mill. Consequently, it must be said that, even when attempting to apply common general technical knowledge, there is not even a clue as to which characteristics should be considered in deciding whether a particular impact mill is an "impact mill such as a pin mill" within the pin-mill limitation at issue. …Before even considering impossible or impractical circumstances, …the manufacturing method itself recited in the claims lacks clarity….

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92858.pdf

IP High Court, 2023 (Ne) 10071 [Chip Fuse] <Miyasaka> — No equivalence

Original Ameblo publication: 2024-07-05

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12858729219.html

HP: https://www.takaishihideki.com/single-post/ameblo-12858729219-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12858729219-ja

IP High Court, 2023 (Ne) 10071 [Chip Fuse] <Miyasaka>

⇒ **Doctrine of equivalents: not established** (same result as the first-instance Osaka District Court judgment, 2021 (Wa) 10032)

"There is ample motivation to apply to the invention in Exhibit Otsu 1 the configuration of the invention in Exhibit Otsu 3 in which 'the fuse element portion and external electrodes are formed of an integral metal.'"

⇒ The fourth requirement was applied using the same logic as inventive step.

*The first-instance Osaka District Court judgment, 2021 (Wa) 10032 <Takemiya>, is important in holding that equivalence can be established even when some claim elements are absent.

⇒ The conclusion was no equivalence (second requirement not satisfied). The case became a battle of experiments, and identical functions and effects were not found.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92795.pdf

IP High Court, 2023 (Gyo-Ke) 10046 [Liquid Cleansing Agent for Removing Keratin Plugs] <Miyasaka>

Original Ameblo publication: 2024-07-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12858971879.html

HP: https://www.takaishihideki.com/single-post/ameblo-12858971879-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12858971879-ja

IP High Court, 2023 (Gyo-Ke) 10046 [Liquid Cleansing Agent for Removing Keratin Plugs] <Miyasaka>

*In assessing inventive step, a disclaimer claim was equated with an affirmative numerical limitation.

Cf. IP High Court, 2022 (Gyo-Ke) 10125: addition of new matter

*“Excluding those having 0–10 vol%”

⇒ It suffices to examine whether adopting more than 10 vol% could have been readily conceived.

*The infringement action, IP High Court, 2022 (Ne) 10029 <Otaka> = first-instance Tokyo District Court judgment, 2020 (Wa) 22071 <Kokubu>, found a violation of the support requirement.

(Excerpt from the court's reasoning)

…The limitation “excluding those having 0–10 vol%” in the disclaimer configuration at issue defines the range obtained by “excluding those having 0–10 vol%” from “0–100 vol%.” Ultimately, it means nothing other than a range of “more than 10 vol%” (“incorporating more than 10 vol%”). Accordingly, in assessing the obviousness of the configuration, it suffices to examine whether a rationale can be established that a person skilled in the art could readily have conceived of making the amount of surfactant incorporated in the invention in Exhibit Ko 1 “more than 10 vol%” (“incorporating more than 10 vol%”). …The position might be different if the numerical limitation in the disclaimer configuration had a remarkable effect, but the invention at issue is not found to be such an invention.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92623.pdf

IP High Court, 2023 (Gyo-Ke) 10054 [Protective Member] <Shoji> — Different from the premise of the publicly worked invention ⇛ Inventive step satisfied

Original Ameblo publication: 2024-07-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12858973126.html

HP: https://www.takaishihideki.com/single-post/ameblo-12858973126-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12858973126-ja

IP High Court, 2023 (Gyo-Ke) 10054 [Protective Member] <Shoji>

Contrary to the “premise” of the publicly worked invention (Exhibit Ko 8), “It can be said that providing a grip portion on the safety cover for carts (protective member) of the invention in Exhibit Ko 8 is not contemplated at all.”

⇒ Inventive step: satisfied

+The statement of the president of the manufacturer of the publicly worked product was also ineffective: priority was given to the objective understanding derived from the brochure.

[U.S./Lanham Act—False Advertising] Supreme Court No. 12-761, POM v. COCA-COLA (June 12, 2014)

Original Ameblo publication: 2024-07-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12859099740.html

HP: https://www.takaishihideki.com/single-post/ameblo-12859099740-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12859099740-ja

[U.S./Lanham Act—False Advertising] Supreme Court No. 12-761, POM v. COCA-COLA (June 12, 2014)

The Lanham Act false-advertising claim concerning the food and beverage label at issue is not precluded by the FDCA (Federal Food, Drug, and Cosmetic Act) or FDA (Food and Drug Administration) regulations. The statutes serve different purposes and complement each other.

The FDCA's express pre-emption provision concerning state law does not preclude this claim under the Lanham Act, another federal statute. The decision does not establish a general rule that one federal statute can never preclude claims under another.

IP High Court, 2022 (Gyo-Ke) 10110 [Steel Pipe Sheet Pile Quay] <Miyasaka> — Obviousness of a mathematical formula at issue

Original Ameblo publication: 2024-07-09

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12859226993.html

HP: https://www.takaishihideki.com/single-post/ameblo-12859226993-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12859226993-ja

IP High Court, 2022 (Gyo-Ke) 10110 [Steel Pipe Sheet Pile Quay] <Miyasaka>

***The issue was the obviousness of a mathematical formula.**

⇒ Inventive step: satisfied

"Exhibit Ko 1 … merely shows that a configuration relating to the formula for ρ … is theoretically possible … it is not found that deriving the formula for ρ … was easy … and this does not negate the inventive step of the configuration relating to the formula for ρ, which is a numerically limited invention."

*For parameter/numerically limited inventions, merely showing that a mathematical formula is theoretically possible cannot negate inventive step!!

(Excerpt from the court's reasoning)

In light of the common general technical knowledge at the time of the patent application …, it is difficult to find that an object satisfying the formula for ρ could reasonably have been designed using steel with a higher yield strength than SKY490 without using that formula; the existence of such an abstract possibility does not negate the inventive step of the configuration relating to the formula for ρ, which is a numerically limited invention. Figure 6.9 of Exhibit Ko 1 is found to apply irrespective of whether the piles are steel sheet piles or steel pipe sheet piles, just as the graph in Figure 2 applies to steel pipe sheet piles. However, this merely indicates that a steel pipe sheet pile quay satisfying the configuration relating to the formula for ρ is theoretically possible. It is not found that a person skilled in the art could readily have derived the formula for ρ from the graph in Figure 6.9 …, and this does not negate the inventive step of the configuration relating to the formula for ρ, which is a numerically limited invention.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92832.pdf

Osaka District Court, 2003 (Wa) 10959 [Aluminum-Based Sputtering Target Material] <Yamada>

Original Ameblo publication: 2024-07-10

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12859340371.html

HP: https://www.takaishihideki.com/single-post/ameblo-12859340371-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12859340371-ja

Osaka District Court, 2003 (Wa) 10959 [Aluminum-Based Sputtering Target Material] <Yamada>

To determine whether a target material satisfies a numerical limitation, if it is homogeneous, satisfaction can be proved by observing part of the microstructure of the product concerned, some of the products, or offcuts.

(However, this was in the context of a prior-use invention.)

Cf. IP High Court, 2023 (Ne) 10026

(Excerpt from the court's reasoning)

…To determine whether a target material satisfies …, it is sufficient to observe the microstructure of a portion, without observing its entire surface…. Furthermore, where multiple target materials are manufactured using the same manufacturing method and conditions, whether … is satisfied by the other target materials as well can be determined from the observation of some of them. Moreover, if offcuts generated during manufacture can be said to have a microstructure substantially homogeneous with that of target materials manufactured from the same parent rolled plate, observations of those offcuts can be used to determine whether … is satisfied by the target materials manufactured from that same parent rolled plate…. This is because, in industrial practice, observing the microstructure over the entire surface area of target materials that become products … using an optical microscope must be considered practically impossible in the first place. Moreover, observing a target material's microstructure with an optical microscope involves destructive inspection, including polishing its surface …; performing such inspection on a product before shipment would make it unshippable. Thus, it should be understood that observing only part of the surface of some of the multiple final products manufactured using the same method and conditions suffices for microstructural observation. …Even offcuts, insofar as their microstructure is substantially homogeneous with that of the target material that became the product, do not differ in essence from samples obtained from the product target material. Accordingly, observing such offcuts can also be used to determine whether … is satisfied by the final-product target material….

IP High Court, 2023 (Ne) 10026 [Belt for a Shoe Press] <Miyasaka> (First instance: Osaka District Court, 2017 (Wa) 4178)

Original Ameblo publication: 2024-07-11

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12859462217.html

HP: https://www.takaishihideki.com/single-post/ameblo-12859462217-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12859462217-ja

IP High Court, 2023 (Ne) 10026 [Belt for a Shoe Press] <Miyasaka>

(First instance: Osaka District Court, 2017 (Wa) 4178)

The appellant argues that Ra of 2.0 μm or less "over the entire length" of the drainage groove is unrealistic. However, the claims contain no language that should be interpreted to include cases in which some portions exceed 2.0 μm or the average value is 2.0 μm or less.

(Excerpt from the first-instance Osaka District Court judgment, 2017 (Wa) 4178)

Claim element 2B provides "characterized in that the surface roughness of the wall surface of the drainage groove is 2.0 μm or less in terms of arithmetic average roughness (Ra)," and the other claim elements likewise impose no limitation on the extent, proportion, or the like for which the surface roughness must be 2.0 μm or less. Specification 2 also contains no statement limiting the extent or proportion for which the surface roughness must be 2.0 μm or less, or describing conditions under which the same functions and effects as those obtained at 2.0 μm or less are achieved even where the surface roughness exceeds 2.0 μm. Accordingly, it is appropriate to construe "the surface roughness of the wall surface of the drainage groove is 2.0 μm or less in terms of arithmetic average roughness (Ra)" in claim element 2B literally as requiring that the wall surface roughness be 2.0 μm or less in terms of arithmetic average roughness (Ra) over the entire length of the drainage groove….

IP High Court, 2023 (Gyo-Ke) 10024 [Applicator for Applying a Transcutaneous Analyte Sensor] <Hibiku Shimizu>

*Even though not stated in the specification, the evidence shows that water vapor transmission rate is expressed either per hour or per day.

⇒ Adding "/24h" to the unit and limiting the water vapor transmission rate to a daily basis does not add new technical matter!??

(Excerpt from the court's reasoning)

…The evidence establishes that water vapor transmission rate is normally expressed on a one-hour or 24-hour (one-day) basis. On that premise, it is self-evident to a person skilled in the art that "less than 10 grams/100 in^2 or preferably less than 1 gram/100 in^2" in Invention 2 of the application means either "less than 10 grams/100 in^2/h or preferably less than 1 gram/100 in^2/h" or "less than 10 grams/100 in^2/24h or preferably less than 1 gram/100 in^2/24h"…. Converting "less than 10 grams/100 in^2/h or preferably less than 1 gram/100 in^2/h" to a 24-hour basis gives "less than 240 grams/100 in^2/24h or preferably less than 24 grams/100 in^2/24h." Thus, amended Invention 2 defines water vapor transmission rate within a range identical to or narrower than that recited in the claims for Invention 2. Moreover, nothing indicates that this limitation has any technical significance. Accordingly, the amendment cannot be said to have added new technical matter concerning Invention 2.

IP High Court, 2023 (Gyo-Ke) 10011 [Device for Remotely Operating a Mobile Terminal] <Miyasaka> — Disclaimer claim lacks inventive step

Original Ameblo publication: 2024-07-17

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12860214337.html

HP: https://www.takaishihideki.com/single-post/ameblo-12860214337-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12860214337-ja

IP High Court, 2023 (Gyo-Ke) 10011 [Device for Remotely Operating a Mobile Terminal] <Miyasaka>

***Disclaimer claim: inventive step not satisfied**

The claim was amended to read “images displayed on a mobile terminal (excluding images captured by a camera).”

⇒ A matter stated in an independent claim of the cited reference was excluded as an “essential feature of the cited invention,” but the argument was rejected.

(Excerpt from the court's reasoning)

Regarding Difference 2 (the images displayed in the cited invention are captured by a camera), the plaintiff argues that “image capture” of the display screen of the terminal display unit is an essential feature of the cited invention and there is no motivation to replace it.

However, nothing in Cited Reference 1 (Exhibit Ko 1) suggests that “image capture,” namely capturing images with a camera, is an essential feature of the cited invention.

Further, according to Cited Reference 2 (Exhibit Ko 2), cited by the JPO decision, and the examples of well-known technology added by the defendant in this action (Exhibits Otsu 1 and 2), as of the application's priority date, miracast—a technology using wireless communication to display images shown on the screen of a mobile terminal such as a smartphone on another device's screen—was widely used in smartphones as a standard in android 4.2. It is also found that outputting smartphone screens via miracast to in-vehicle monitors or car-navigation screens was routinely done. The significance of the “image capture unit 252” in the cited invention is that “by displaying the display screen of the mobile terminal 110 captured by the image capture unit 252 directly on the device display unit 258, the user can recognize the display screen of the mobile terminal 110 as it is” (Exhibit Ko 1, [0081]). In terms of the function of “displaying the display screen of the mobile terminal 110 directly on the device display unit 258,” namely the effect of “enabling the user to recognize the display screen of the mobile terminal 110 as it is,” the “image capture unit 252” and the above technologies such as miracast can be said to have this in common.

Accordingly, using well-known technology such as miracast in place of the “image capture unit 252” in the cited invention to provide a configuration having “a display unit (22) displaying images displayed on a mobile terminal (excluding images captured by a camera),” namely the configuration relating to Difference 2, is something a person skilled in the art could readily have conceived.

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12860459429-ja

Tokyo District Court, 2020 (Wa) 29523 [Heat-Shielding Structure Using Uneven Material] <Kokubu>

***Acting as the substantive point of contact ⇒ Aiding established**

"AA posted examples of heat-shielding sheet installation on its website and induced BB to request the work at issue…. …AA's representative … had been informed by the defendant of the specific method of installing the heat-shielding sheets…."

(Excerpt from the court's reasoning)

AA posted examples of heat-shielding sheet installation on its website, induced BB to request the work at issue, and entered into a construction contract with BB. It can therefore be said to have been the substantive point of contact for that work in relation to BB as the client. Moreover, AA's representative not only visited the construction site with the defendant's representative to confirm the scope of the work, but had also been informed by the defendant of the specific method of installing the heat-shielding sheets. AA can therefore be assessed as having performed the administrative tasks required for smooth execution of the work while recognizing that the defendant's heat-shielding structure would be created by that work. …It is appropriate to find that AA at least aided the conduct.

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12860637127-ja

Tokyo District Court, 2021 (Wa) 18262 [Women's Clothing] <Kokubu>

*The sixth edition of Kojien lists two meanings for “tomoni”: (1) “as one; together; in company; likewise,” and (2) “simultaneously.”

⇒ The defendant (alleged infringer) argued that, where Kojien lists two meanings, the first is the more common. This was rejected, and the court construed “tomoni” in the patented invention as meaning (2), “simultaneously.”

⇒ Claim limitation satisfied (patentee prevailed)

“There is insufficient evidence to find that the sixth edition of Kojien adopted an editorial policy of listing widely used general meanings first. Moreover, …the specific examples of ‘connecting members’ in the specification … are incompatible with the defendant's … interpretation….”

(Excerpt from the court's reasoning)

Regarding “tomoni” in claim element D, the defendant argues that, because dictionaries list meanings beginning with those widely used in general, the term should … mean “as one; together; in company; likewise,” the first meaning listed in the sixth edition of Kojien. However, the order in which meanings are given priority is considered to depend on each dictionary's editorial policy, and …there is insufficient evidence to find that the sixth edition of Kojien adopted a policy of listing widely used general meanings first. Moreover, …none of the specific examples of “connecting members” in the specification permit adjustment of the connection width unless the connection between the connecting members is released, and thus they are incompatible with the defendant's proposed interpretation of “tomoni”….

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12860831203-ja

Osaka District Court, 2021 (Wa) 10586 [No-Wash Rice Retaining Umami and Nutrients]

"Because rice is a natural product, even within the same variety, different growing environments produce individual differences in the rice grains …; even when milled under identical conditions, the extent of milling differs from grain to grain."

⇒ Results of other experiments cannot be relied on.

⇒ Claim limitations not satisfied

(⇒ No appeal)

(Excerpt from the court's reasoning)

…Because rice is a natural product, even within the same variety, different growing environments produce individual differences in the size of each cell layer and the constituents contained in each grain, and it is found that, even when milled under identical conditions, the extent of milling differs from grain to grain. Accordingly, even if starch-staining tests (the Exhibit Ko 7 and Ko 30 tests) confirmed that no aleurone cell layer remained on the surface of grains of the defendant's products (Miyagi-grown Tsuyahime Haiga Ichiban harvested in 2020 and 2021), this cannot be taken as a premise when examining the results of the Exhibit Ko 82 test conducted on another defendant product (Miyagi-grown Tsuyahime Haiga Ichiban harvested in 2022). …Whether each test conducted by the plaintiff is considered individually or the tests are considered together, in either case they are insufficient … to establish that the subaleurone cell layer is exposed on the surface of the rice grains of the defendant's products.

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12860831474-ja

IP High Court, 2022 (Ne) 10055 [Specified Heat-Treated Meat Products] <Shoji>

***Although not stated in the specification, it was possible to recognize that one of two measurement methods should be used.**

⇒ Numerical limitation satisfied!!

“A person skilled in the art recognizes that the SCI method is … strongly affected by the gloss of the packaging … and is therefore … inappropriate … and could recognize that the SCE method should be used.”

(Excerpt from the court's reasoning)

The difference between measurements obtained by the SCE and SCI methods arises from whether specular reflection is included in the measured value. It is generally known that highly glossy substances produce stronger specular reflection…. Since visual inspection of meat and similar products covered with packaging often shows that the packaging is glossy, a person skilled in the art would recognize that the SCI method is inappropriate: it would be strongly affected by the gloss of the packaging and would yield absorbance different from that corresponding to the proportion of myoglobin in the measured object. …Taking into account the significance of the invention and this common general technical knowledge, a person skilled in the art could recognize that the SCE method should be used when measuring absorbance through packaging as the basis for calculating the proportion of myoglobin in roast beef in the invention.

Tokyo District Court, 2020 (Wa) 25891 <Shibata>

= IP High Court, 2023 (Ne) 10015 <Hibiku Shimizu>

[… Filter Cigarette]

*Claim language was construed based on a line break immediately before claim element I in the claims and the presence or absence of the word “said.”

⇒ It means that mainstream smoke does not substantially contact the smoke-modifying agent before reaching the mouth end.

⇒ Claim limitation not satisfied

(Excerpt from the court's reasoning)

Claim element I provides that “mainstream smoke passes through without substantially contacting the smoke-modifying agent.” Regarding the location on the cigarette of the “smoke-modifying agent” that the mainstream smoke does not contact, the claims have a line break immediately before “mainstream smoke passes through without substantially contacting the smoke-modifying agent” in element I, separating it from the statements in elements A through H. Nor is there language, such as “said smoke-modifying agent,” limiting the smoke-modifying agent in element I to the configuration described in other claim elements. Accordingly, the claims can be understood as separately describing, through the configurations in elements A through H and the configuration in element I, the configuration of the “cigarette” (element J). Thus, on the wording of the claims, “mainstream smoke passes through without substantially contacting the smoke-modifying agent” in element I can be understood to mean that, in the cigarette of the invention, mainstream smoke generated in the tobacco rod does not substantially contact a smoke-modifying agent before reaching the mouth end.

Tokyo District Court, 2020 (Wa) 25892 [Smoking Article] <Shibata>

Based on Kojien, “mating end” is construed as “having a definite shape, with the two mating ends having complementary shapes that cause them to fit together with almost no gap.” All disclosures in the specification are consistent with this.

⇒ Claim limitation not satisfied

(Excerpt from the court's reasoning)

According to the ordinary meanings of the words in … Kojien (seventh edition), “mating end” is understood to mean an end having a definite shape, with the two mating ends each having complementary shapes and fitting together by virtue of those shapes with almost no gap. …

The specification states that the mating end of the cartridge and the mating end (receiving end) of the control housing fit together. As an embodiment, the cartridge is inserted into the receiving chamber of the control housing, so they can be said to have complementary shapes; …this accords with the above ordinary meaning of “mating.” On the other hand, although the specification … and other passages contain descriptions, none states that a part merely contacting or approaching the end face of the cartridge's mating end constitutes the “receiving end” of the control housing. Nor is there any statement suggesting that “mating” is used in a sense different from the above … ordinary meaning. …

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12861679761-ja

Tokyo District Court, 2022 (Wa) 2049 [Packaging Container] <Sugiura>

*Based on the dictionary meaning and the specification, “bottom panels forming said bottom portion” was narrowly construed to mean members closing the underside of the tubular packaging container.

The plaintiff argued that the bottom portion's shape-retaining function should be considered, but this was rejected because it was not described in the specification.

⇒ Claim limitation not satisfied

(Excerpt from the court's reasoning)

“Bottom portion” means the portion constituting the “bottom,” while “bottom” has meanings including “(1) the lower part of a hollow object or container,” and “(2) the underside of an object; bottom surface; also the lower layers of accumulated material” (Exhibit Otsu 1). Thus, the “bottom portion” in Invention 1 is something that the tubular portion of the “packaging container” has together with an opening, and is understood as the “lower part,” namely the bottom, of the tubular structural portion. Moreover, insofar as the tubular structural portion functions as a “container” (a vessel for holding things; a receptacle), its “bottom portion” is understood to refer to the portion closing the underside of the tubular packaging container. …

The specification likewise indicates that the “bottom portion” is at the lower end of the enclosing portion constituting the tubular portion of the packaging container, forms the packaging container together with the upper opening, and is the bottom of the tubular structural portion functioning as a container; it is understood to refer to the portion closing the underside of the tubular packaging container. The “bottom panels” form such a “bottom portion” and are understood to mean members closing the underside of the tubular packaging container when it is formed into a container.

[Right of Publicity] Tokyo District Court, 2023 (Wa) 3171 <Nakashima>

The photographs were used on a website introducing affiliated talent to show that affiliation and supplement information about the individuals.

⇒ They were not used as goods or the like, to differentiate goods or the like, or as advertisements for goods or the like.

⇒ No infringement of the right of publicity

In prior litigation, the talent whose exclusive contract had been terminated disputed their contractual status, and the agency continued displaying the photographs until the judgment against the talent became final.

⇒ At least, there was no sufficient evidence that the mental distress exceeded the limits of what should be tolerated under socially accepted norms; therefore, the allegation of infringement of portrait rights was not accepted.

IP High Court, 2020 (Gyo-Ke) 10033 [Removal of Undesirable Components from an Oil Composition] <Tsuruoka>

Original Ameblo publication: 2024-08-03

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12862350584.html

HP: https://www.takaishihideki.com/single-post/ameblo-12862350584-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12862350584-ja

IP High Court, 2020 (Gyo-Ke) 10033 [Removal of Undesirable Components from an Oil Composition] <Tsuruoka>

*The well-known degumming or water-washing treatment could remove hydrophilic impurities as in step (b) of Invention 7, and a skilled person was motivated to apply it to the invention in Exhibit Ko 2.

⇒ The configuration corresponding to the difference in Invention 7 was obvious (likewise for Invention 10).

"Invention 7 … does not differ from … treatment with an aqueous fluid … in that it can separate and remove at least some of the impurities from the oil."

(Excerpt from the court's reasoning)

It is found that, as of the priority date, both performing degumming before deacidification by alkali refining in oil refining … and, as one common degumming method, contacting an oil composition with an aqueous fluid such as water or steam to separate and remove hydrophilic impurities including hydrated gums from the oil were well-known technologies. Further, …as of the priority date, degumming or washing with water before deacidification by distillation (physical refining) was well known, and …it was also well known that proteinaceous compounds are removed by contacting an oil composition with an aqueous fluid such as water or steam and then separating it. …Thus, step (b) of Invention 7 must be said to be no different from the above degumming or water-washing treatment using an aqueous fluid such as water or steam, in that it can separate and remove from the oil at least some hydrophilic impurities, including proteinaceous compounds. …

Exhibit Ko 2 states that the oil may be pretreated before the stripping step…. …Furthermore, …given that degumming or water washing using an aqueous fluid such as water or steam before stripping was well known, a person skilled in the art would naturally have been motivated to perform such degumming or water washing before the stripping treatment in the invention in Exhibit Ko 2, thereby separating and removing at least some hydrophilic impurities from the oil.

[U.S.] Skinny Labels and “Induced Infringement,” June 2024 <CAFC> Amarin v. Hikma

Reversal of the district court’s grant of the motion to dismiss ⇒ The case may proceed in the district court.

Skinny labels for generic drugs and “induced infringement.” Even where a generic drug has been approved with the cardiovascular (CV) indication carved out and its label does not expressly state that indication, labeling and promotional statements may implicate both noninfringing and infringing uses. In this case, the court considered the plaintiff’s allegations about the following labeling, statements, and advertising as a whole and held that they plausibly stated a claim for induced infringement sufficient for the case to proceed.

<1> Amarin alleged that the patient population described in the label’s “Clinical Studies” section overlapped with the population covered by the patented CV indication.

<2> Hikma touted sales figures for Vascepa in its press releases, and Amarin alleged that Hikma knew those sales were largely attributable to the CV indication.

<3> Amarin alleged that Hikma advertised the product under the broad category “Hypertriglyceridemia.”

IP High Court, 2018 (Ne) 10043 [Factor IX/Factor IXa Antibodies and Antibody Derivatives] <Mori>

*The limitations were held not satisfied even though some measured values fell within the invention's numerical range.

Functional claim

⇒ Invention defined by a numerical range

⇒ The reasons included that "it is considered difficult to ensure identity between a biosimilar … and the original drug."

(Excerpt from the court's reasoning)

Considering …the description in the specification as well as …the wording of the claims for each invention, it is found that a person skilled in the art would understand that, among the several evaluation methods, when a chromogenic assay (FVIII assay) is performed, antibodies or derivatives falling within the inventions are those showing a measured-value-to-background ratio of at least 3 (ratio to the negative control). It is therefore appropriate to find that "increases procoagulant activity" means that, when a chromogenic assay is performed, the ratio to the negative control exceeds 3. …

Taking into account also the fact that, generally for biologics, their complex molecular structures and distinctive manufacturing processes make it difficult to ensure identity between biosimilars (follow-on biologics: products similar to an already approved original biologic by demonstrating similarity in quality characteristics, efficacy, and safety through direct or head-to-head comparison) and original drugs, even if some values exceed 3, the above experimental results, in which values are below 3 in many cases, do not permit a finding that the appellee's product falls within the technical scope of the inventions.

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12862892981-ja

Tokyo District Court, 2021 (Wa) 10171 [Folding Table] <Kokubu>

*Even the corresponding portion of the specification imposed no limitation on the “separation-biasing means” beyond describing it as biasing means “for separating the two leg members from one another.”

⇒ The court rejected the defendant’s argument that, because the limitation was functional, its scope was restricted to the structures disclosed in the specification or their equivalents.

⇒ Literal claim limitation satisfied

(Excerpt from the court's reasoning)

…From the above wording of element C, the “separation-biasing means” is found to mean means disposed on the “underside of the tabletop,” capable of biasing “two leg members” located “at positions facing each other across the axis about which the tabletop member rotates” in directions “separating them from one another.” …

On this point, the defendant argues that element C is a so-called functional claim and its technical scope is therefore limited to structures identical to those disclosed in the specification or their equivalents. However, the claims impose no such limitation as the defendant asserts on the “separation-biasing means.” Nor does the portion of the specification considered to correspond to element C impose any limitation beyond stating that it is biasing means “for separating the two leg members from one another” ([0009]). Accordingly, the defendant's argument cannot be accepted.

[Trademark] IP High Court, 2023 (Gyo-Ke) 10067 <Honda> Separating and assessing the essential part of a composite mark

⇒ The “O!Oi” part of the registered mark was compared with the cited mark and found similar (Trademark Act Article 4(1)(xi)). (Decision maintaining registration set aside)

Registered mark “5252byO!Oi” (individual)

Cited mark “OIOI” (Marui)

登録商標

引用商標

(Excerpts from the court's reasoning)

As stated in Part 2, 1(1) above, the mark at issue consists of the numerals, Roman letters, and exclamation mark “5252byO!Oi” written horizontally in one continuous line in black Gothic type, in the same size and at equal intervals. However, “by” is widely used and familiar in Japan as an English preposition indicating, through the usage “by XXX,” that “the source of the goods or services is XXX.” Considering also that “by” is lowercase, the mark as a whole can be said to be configured so that the “O!Oi” following “by” independently attracts the viewer's attention. Moreover, whereas “5252” merely lists numerals and has no particular distinctiveness, “O!Oi,” though using Roman letters, is not a word recorded in dictionaries. Although it may give rise to pronunciations “oh-oi” or “oh-oh-eye,” its pronunciation is not uniformly determined because it uses an exclamation mark. The alternation of circles and vertical lines gives it a visually striking impression, making it a distinctive element that can be understood as either a coined word or a design. In addition, given that, as stated above,

“by XXX” is widely used and familiar as indicating that “the source of the goods or services is XXX,” the “O!Oi” placed after “by” must be said to give a strong and dominant impression as a source identifier within the mark's composition. Thus, although it is only part of the mark, “O!Oi” is found to perform the source-identifying function of the mark as a whole. It must therefore be permissible to extract this portion as the essential part of the mark and compare only this portion (hereinafter the “essential part at issue”) with another person's mark to assess similarity.

The essential part at issue gives rise to no particular concept, whereas Cited Mark 3 gives rise to the concept of “Marui's logo”; their concepts can therefore hardly be called identical.

Next, the essential part at issue may give rise to “oh-oi” or “oh-oh-eye,” while Cited Mark 3 may give rise to “oh-eye-oh-eye,” “oi-oi,” and “Marui.” Although the pronunciations differ strictly because the essential part includes “!”, they share many sounds and must be considered reasonably similar.

Regarding appearance, both the essential part at issue and Cited Mark 3 comprise four letters or symbols in Gothic type, and both have “O” as the first and third characters. Different letters or symbols appear as the second character (“!” versus “I”) and fourth character (“i” versus “I”), but their shapes are similar in that each consists of either a single vertical line or a single vertical line and a dot on its extension. In addition, the arrangement, including the spacing between characters, is close. Thus, although there are differences on close examination, the two appearances must be said to be confusable when observed separately at different times and places.

In addition to the foregoing, the designated goods of both the mark at issue and the cited marks are fashion/apparel-related goods or items worn by ordinary consumers, and their traders and consumers therefore include the general public. The essential part at issue gives rise to no particular concept. The possible pronunciations of the essential part and Cited Mark 3 are not identical but are reasonably similar, and neither can readily be said to have a single definite pronunciation; pronunciation is therefore unlikely to be decisive as a source identifier for traders and consumers. Ordinary consumers are considered to pay attention primarily to the appearance of the goods or logos in identifying the source of apparel, fashion goods, and wearable items. Considering these matters together, the mark at issue has an essential part whose pronunciation is reasonably similar to Cited Mark 3 and whose appearance is confusable with it. Even allowing for the fact that the overall composition is not identical to Cited Mark 3, if both marks are used for the designated goods of the mark at issue, the possibility that traders and consumers will mistake their sources cannot be excluded, and a likelihood of misidentification and confusion as to the source of the goods is found.

Accordingly, when the impressions, memories, and associations given to traders and consumers are considered together and the marks are examined as a whole in light of the actual trading circumstances of the goods, the mark at issue is found similar to Cited Mark 3.

[Trademark] IP High Court, 2023 (Ne) 10011 “バレナイ二重” (Undetectable Double Eyelids) Case <Hibiku Shimizu> — Appeal: Dissimilar; First Instance: Not Use as a Trademark

Original Ameblo publication: 2024-08-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12863825783.html

HP: https://www.takaishihideki.com/single-post/ameblo-12863825783-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12863825783-ja

[Trademark] IP High Court, 2023 (Ne) 10011 “バレナイ二重” (Undetectable Double Eyelids) Case <Hibiku Shimizu>

Plaintiff's mark (two lines)

“バレない [Barenai; undetectable; mixed katakana and hiragana]

ふたえ [Futae; double eyelids; hiragana]”

Defendant's mark (two lines)

“バレナイ [Barenai; undetectable; katakana]

二重 [Futae; double eyelids; kanji]”

⇒ The appellate court dismissed the appeal on the ground of dissimilarity. The first-instance court dismissed the claims on the ground that the signs were not used as trademarks (Trademark Act Article 26(1)(vi)).

⇒ The dismissal of the plaintiff’s claims was upheld.

被告標章１及び２

原告商標２

Image labels: top, Defendant Marks 1 and 2; bottom, Plaintiff’s Trademark 2.

(Excerpts from the court's reasoning)

<Similarity>

Even if the mark at issue and the defendant's marks perform a source-identifying function, the expressions “バレないふたえ” and “バレナイ二重” (both meaning “undetectable double

eyelids”) themselves are commonplace expressions concerning the quality and efficacy of the cosmetics at issue. Their source-identifying function must therefore be said to be quite limited. …

In addition, …taking into account also the manner in which the mark at issue and the defendant's marks are used, it is appropriate to find that consumers of the cosmetics generally identify the source of the goods (the cosmetics at issue) by the specific manner of external indications capable of identifying source (visible letters, patterns, colors, and the like) on the goods or their packaging.

“In light of these actual trading circumstances, in assessing similarity between the mark at issue and the defendant's marks, the manner of external presentation of the source identifier specifically used on the goods (the cosmetics at issue) or their packaging—namely similarities and differences in the appearance of the source identifier (trademark)—is relatively more important than similarities and differences in pronunciation and concept, as giving consumers a stronger and more dominant impression.”

Further, “while the mark at issue and the defendant's marks give rise to identical pronunciations and concepts, their appearances differ enough not to be confusable to consumers viewing the cosmetics. Considering these circumstances together as a whole, in light also of the explanation in subsection A above, even if the mark at issue and the defendant's marks are used on the same goods (the cosmetics at issue), a likelihood of misidentification or confusion as to source cannot be found. It is therefore appropriate to assess the defendant's marks as not similar to the mark at issue, at least insofar as they are used for the cosmetics at issue.”

<Trademark Act Article 26(1)(vi) (quotation from the first-instance judgment)>

(1) The evidence (as cited) and the entire purport of oral argument establish the following facts. A. Examples of “ばれない,” “バレない,” and “バレナイ” (all read barenai). (a) “ばれない” (barenai) is formed by adding the negative auxiliary “ない” (nai) to the verb “ばれる” (bareru). “ばれる” (bareru) means the exposure of a secret, lie, or wrongdoing, so “ばれない” (barenai) means that a secret or the like is not exposed. Although “ばれない,” “バレない,” and “バレナイ” differ in writing—hiragana only, a combination of hiragana and katakana, or katakana only—the meaning does not differ with the form of writing. (b) Internet search results show that advertisements for cosmetic procedures creating double eyelids and cosmetics for forming double eyelids use expressions such as “No one will know your double eyelids are artificial,” “Hard-to-detect double eyelids,” “Natural double eyelids that no one will notice!?,” “Absolutely undetectable! How to create natural double eyelids,” “Tips for going undetected,” “How to create truly undetectable double eyelids,” “Undetectable double eyelids,” and “Undetectable, non-swelling double-eyelid surgery” (Exhibits Ko 16 and Otsu 2–5). A webpage introducing double-eyelid cosmetics and the like in a ranking format entitled “[Expert-supervised] 15 popular recommended eyelid glues [including options for students and undetectable ones!]” (Exhibit Hei 3) also states, “Many of you are probably worried that people around you will notice your eyelid glue,” and “You want to keep people from realizing you are using it! If being hard to detect matters most, we recommend fiber or film-forming eyelid glue.” Further, descriptions of double-eyelid-shaping cosmetics other than the plaintiff's and defendant's products include “Undetectable, surgery-level double eyelids” (Exhibit Hei 1-1), “Undetectable! No shine!” (Exhibits Hei 1-2 and 1-3), “Undetectable even with your eyes closed!” (Exhibit Hei 1-4), “Hard to detect

even when closed!” (Exhibit Hei 1-5), “Undetectable double-eyelid shaping with ultrafine fiber” (Exhibit Hei 1-6), and “Undetectable!! Surgery-style makeup” (Exhibit Hei 1-7). In addition to double-eyelid cosmetics, “Undetectable! Easy! Natural-looking finish!” is used to describe nose-contouring cosmetics (Exhibit Hei 2-1), “undetectable artificial nails” to describe artificial nails (nail tips) (Exhibits Hei 2-2 and 2-3), and “undetectable lift” to describe cosmetic cheek procedures (Exhibit Hei 2-4). B. Manner of use of the defendant's marks on its products. According to the evidence (Exhibit Ko 5), the packaging of Defendant Product 1 has a black heart-shaped figure occupying approximately the upper half of its front. Within that figure, the top row contains the underlined words “Long-lasting hold,” and the middle contains Defendant Mark 1, both in pink, the packaging's base color. At the bottom of the figure, “Liquid type” appears in black on a green band, and a black circle attached to the left end of that band contains the word “Fine brush” and an illustration of a brush tip in green. In addition, the upper-left portion of the lower packaging has the two-line wording “Eye Catching” and “Beauty” (the “t” in “Beauty” is designed as a cross whose left and lower arms are longer than its right and upper arms); the center-left lower portion has “FUTAE” and “LIQUID” on two lines; and the right lower portion has “#Eye-area illusion makeup.” Through a transparent window between these lower indications, the body of Defendant Product 1 is visible, bearing “Eye Catching” and “Beauty” in the same arrangement as in the upper-left portion of the lower packaging (however, the evidence is insufficient to establish that this indication is visible through the window for all Defendant Product 1 items). On the back, there are “Eye Catching” and “Beauty” in the same arrangement as on the front, “FUTAE LIQUID” in a single continuous line, and wording including “Eye Catching Beauty Futae Liquid (double-eyelid cosmetics),” but no Defendant Mark 1. Next, the evidence (Exhibit Ko 6) shows that the packaging of Defendant Product 2 has a black heart-shaped figure occupying approximately the upper half of its front. Within it, the top row contains the underlined words “Long-lasting hold,” and the middle contains Defendant Mark 2, both in yellow, the packaging's base color. At the bottom, “Tape type” appears in black on a blue-violet band, and a black circle attached to the band's left end contains a water-drop illustration in its upper portion, with the word “Water” in black inside it and “Apply with” in blue-violet below it. In addition, the upper-left portion of the lower packaging has “Eye Catching” and “Beauty” in the same arrangement as on Defendant Product 1; the center-left lower portion has “FUTAE” and “MESH TAPE” in the same arrangement as on Defendant Product 1; and the right lower portion has “#Eye-area illusion makeup.” (No lettering is visible on the body of Defendant Product 2 through the transparent window between these lower indications.) On the back are “Eye Catching” and “Beauty” in the same arrangement as on the front, “FUTAE MESH TAPE” in a single continuous line, and wording including “Eye Catching Beauty Futae Mesh Tape (single-sided double-eyelid-forming tape),” but no Defendant Mark 2. (2) Manner of use of the defendant's marks, etc. A. Given the products' functions and sales channels (the parties do not dispute that these are physical stores and online retail), the relevant consumers are appropriately regarded as consumers generally, not limited to young women. The defendant's argument on this point cannot be accepted. B. Considering together the indications on the fronts and backs of the packaging found in (1)B above, ordinary consumers appear to recognize the product names as “Eye Catching Beauty FUTAE LIQUID” and its Japanese rendering “アイキャッチングビューティ ふたえリキッド” (Eye Catching Beauty Futae Liquid) (Defendant Product 1), and “Eye Catching Beauty FUTAE MESH TAPE” and its Japanese rendering “アイキャッチングビューティ　ふたえメッシュテープ” (Eye Catching Beauty Futae Mesh Tape) (Defendant Product 2). By contrast, based on the findings in (1), the defendant's marks are understood as follows. “ばれない,” “バレない,” and “バレナイ” all mean that a secret or the like is not exposed, regardless of their written form. In advertising double-eyelid cosmetics of the kind to which the defendant's products belong, and cosmetic procedures for forming double eyelids, many combinations of “ばれない” (barenai) or similar wording with “二重” (double eyelids) are used as expressions understood to describe the efficacy of the cosmetics or procedures, or the nature of the services—namely that others will not readily notice that single eyelids have been made into double eyelids—or as catchphrases promoting such efficacy. Furthermore, for beauty-related goods and

services other than double-eyelid cosmetics, such as other cosmetics and cosmetic surgery, “ばれない” (barenai) and similar words are also used not infrequently as explanations that others will not notice the use of the cosmetics or procedures, or as catchphrases promoting that effect. This is understood as an attempt by providers to promote effects meeting the desire of many consumers of beauty-related goods and services that others not readily realize that the condition has been created artificially and intentionally using those goods or services, and that the resulting appearance be viewed as natural. Given the widespread use of “ばれない” (barenai) and similar words in beauty-related goods and services, ordinary consumers of double-eyelid cosmetics would normally recognize and understand the defendant's marks, combining “バレナイ” and “二重,” as explanations of the products' efficacy—cosmetics whose use to form double eyelids is not readily exposed to others—or as catchphrases promoting that efficacy. This is all the more so considering that, on the packaging, the defendant's marks are positioned between wording such as “Long-lasting hold” and “Liquid type” (Defendant Product 1) or “Tape type” (Defendant Product 2), and that other indications recognizable as the product names are present. This remains true even allowing for the stylization of the lower part of the character “二” in “二重” (double eyelids) in the defendant's marks, which appears to have two upward hooks at its left end. For these reasons, ordinary consumers of the defendant's products understand the defendant's marks as descriptions or catchphrases concerning the products' efficacy, and the marks are not found to function as identifiers distinguishing goods or indicating source.

[Trademark] IP High Court, 2009 (Gyo-Ke) 10075 <Nakano> — “太極柔力球” (Taiji Rouliqiu) Case: No Distinctiveness; Article 4(1)(xvi) Applies

Original Ameblo publication: 2024-08-17

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12863940154.html

HP: https://www.takaishihideki.com/single-post/ameblo-12863940154-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12863940154-ja

[Trademark] IP High Court, 2009 (Gyo-Ke) 10075 <Nakano>

Registered mark “太極柔力球” (Taiji Rouliqiu)

For the designated services “planning, managing, or holding Taiji Rouliqiu events,” “providing sports facilities for Taiji Rouliqiu,” “providing amusement facilities for Taiji Rouliqiu,” and “renting sports equipment for Taiji Rouliqiu” (Class 41), distinctiveness is lacking (Trademark Act Article 3(1)(iii)).

—As of the registration decision, distinctiveness as indicating the trademark owner's activities was not recognized.

Use on “sports equipment used for teaching tai chi” (Class 28) gives rise to a likelihood of misleading consumers as to the quality of the goods; use for certain designated services other than Taiji Rouliqiu services, among others, gives rise to a likelihood of misleading consumers as to the quality of the services (Trademark Act Article 4(1)(xvi)).

(Case summary and excerpts from the judgment, translated into English)

<Trademark Act Article 3(1)(iii)>

(1) Marks listed in Article 3(1)(iii) of the Trademark Act are considered to lack the requirements for registration because they describe or indicate the place of production, place of sale, or other characteristics of goods, and anyone would wish to use them as necessary and appropriate indications in trade. Allowing one particular person exclusive use would therefore be inappropriate in the public interest. In addition, they are commonly used indications that in many cases lack the ability to distinguish one's goods from those of others and cannot function as trademarks (see Supreme Court, Third Petty Bench, April 10, 1979, Collection of Judgments in Civil Cases No. 126, p. 507 [Hanrei Jiho No. 927, p. 233]).

(2) Based on evidence submitted by the parties, the court found that Taiji Rouliqiu was devised as a new sport (the activity at issue) in China in 1991 by A, an associate professor at the Jinzhong College of Shanxi Medical University (assistant professor at Shanxi Provincial Health School); that it is a racket-and-ball sport incorporating tai chi movements; and that it was practiced both competitively by hitting a ball across a net on a court and as a performance to musical accompaniment. Regarding its spread in China, the court found that nationwide instructor training courses were held from 1994 to 1996, that Taiji Rouliqiu was an official event at the Third National Workers' Games in 1996, and that an interview with A appeared in the People's Daily. It also found that, from 2002 onward, the Chinese Senior Citizens' Sports Association held training courses promoting it as a sport for older people and organized national tournaments. The court assessed it as clear that the activity had become established as a sport in China by the registration decision date, August 10, 2004. Regarding its spread in Japan, the court found that Plaintiff X2 received instructor training and obtained coaching qualifications in 2002, introduced it in a Sakai municipal citizens' course, conducted training at the Kanaoka Park Gymnasium in Sakai, and established the Taiji Rouliqiu Promotion Association in August 2003. It further found that the defendant's citizen-exchange delegation to China participated in celebrations in Beijing marking the 25th anniversary of the Japan–China Treaty of Peace and

Friendship, where the activity was demonstrated. The court assessed the activity as having been known in Japan as a Chinese-born sport under the name “Taiji Rouliqiu” by August 10, 2004, the registration decision date.

(3) As of the registration decision date, August 10, 2004, “Taiji Rouliqiu,” the mark at issue, was generally used in China as the name of the sport referring to the activity, and the activity was also known in Japan as a sport originating in China under the name “Taiji Rouliqiu.” Even the facts found above do not permit a conclusion that, as of that date, the mark had distinctiveness as indicating Plaintiff X2's activities. Therefore, for the designated services “planning, managing, or holding Taiji Rouliqiu events,” “providing sports facilities for Taiji Rouliqiu,” “providing amusement facilities for Taiji Rouliqiu,” and “renting sports equipment for Taiji Rouliqiu,” the mark indicates the quality of those goods or services in a manner in common use and consists solely of such an indication (Trademark Act Article 3(1)(iii)); the JPO decision to that effect cannot be said to be erroneous.

<Trademark Act Article 4(1)(xvi)>

As of the registration decision date, August 10, 2004, “Taiji Rouliqiu,” the mark at issue, was generally used in China as the name of the sport referring to the activity, and in Japan the activity was also known as a Chinese-born sport under that name. Accordingly, use of the mark on its designated goods “sports equipment used for teaching tai chi” gives rise to a likelihood of misperception of the quality of the goods. Further, among its designated services, use for “teaching arts, sports, or knowledge relating to tai chi instruction,” and for “planning, managing, or holding sporting events; providing sports facilities; providing amusement facilities; renting sports equipment” other than “planning, managing, or holding Taiji Rouliqiu events; providing sports facilities for Taiji Rouliqiu; providing amusement facilities for Taiji Rouliqiu; renting sports equipment for Taiji Rouliqiu,” can be said to give rise to a likelihood of misperception of the quality of services (Trademark Act Article 4(1)(xvi)). The JPO decision to that effect cannot be said to be erroneous.

[Unfair Competition Prevention Act Article 2(1)(i)] IP High Court, 2023 (Ne) 10048 <Miyasaka> “Dr. Martens” Case — Special Distinctiveness Found

Original Ameblo publication: 2024-08-18

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12864063883.html

HP: https://www.takaishihideki.com/single-post/ameblo-12864063883-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12864063883-ja

[Unfair Competition Prevention Act Article 2(1)(i)] IP High Court, 2023 (Ne) 10048 <Miyasaka> “Dr. Martens” Case

***Special distinctiveness found ⇒ Rights holder prevailed**

Cf. IP High Court, 2023 (Gyo-Ke) 10003 <Honda> denied distinctiveness of the yellow-stitching position mark, citing, among other things, other companies' products with yellow stitching in the same position.

⇒ Under the Unfair Competition Prevention Act, numerous commonalities with the defendant's products beyond yellow stitching were asserted, and “special distinctiveness” was recognized for the combination. <<*This does not mean that different approaches were taken to trademark distinctiveness and special distinctiveness under the Unfair Competition Prevention Act!!>>

(Excerpt from the court's reasoning)

As found above, the “1460 8-hole boots” (leather boots), sold in Japan as products of the appellee's “Dr. Martens” brand, are found, in most of their models, to have the following features of appearance: yellow welt stitching (feature (a)), sole edges ((b)), heel loops ((c)), sole patterns ((d)), a sloping heel portion of the outsole ((e)), a rounded forepart of the shoe ((f)), Puritan stitching ((g)), and eight eyelets ((h)). … As stated above, the appellee's products are found to have conspicuous characteristics differing from other goods of the same kind and to exert strong source-identifying power, particularly in three respects: feature (a) (yellow welt stitching), feature (b) (sole edges), and feature (c) (heel loops). Further, when viewed as a whole in combination with features (d) through (h), which individually cannot be called particularly distinctive, they can be said to possess conspicuous characteristics entirely absent from other goods of the same kind (boots). In other words, the appellee's products having all the above features (a) through (h) are found to possess so-called special distinctiveness.

Image columns, from left to right: Appellee’s products; Appellant Product 1; Appellant Product 2.

IP High Court, 2020 (Gyo-Ke) 10144 [Infusion Preparation Containing Sulfur-Containing Compounds and Trace Metal Elements] <Honda> — Not “Obviousness upon Obviousness”

Original Ameblo publication: 2024-08-24

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12864780215.html

HP: https://www.takaishihideki.com/single-post/ameblo-12864780215-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12864780215-ja

IP High Court, 2020 (Gyo-Ke) 10144 [Infusion Preparation Containing Sulfur-Containing Compounds and Trace Metal Elements] <Honda>

Difference A concerns the “composition of the solution.”

Difference B concerns the “contents and manner of storage.”

⇒ The two differ in technical perspective.

⇒ Even if the differences are identified separately, **this is not “obviousness upon obviousness.”**

(*The ultimate conclusion was that inventive step was satisfied.)

(Excerpt from the court's reasoning)

…The defendant argues that Differences A1-1 and B1-1 should not be identified separately. However, Difference A1-1 concerns the composition of the amino-acid-containing solution, while Difference B1-1 concerns what is contained in a container stored in one chamber of a multichamber infusion container and how that container is stored. The two thus differ in technical perspective. The points relied upon by the defendant merely constitute circumstances supporting the view that the configurations of the corrected inventions relating to Differences A1-1 and B1-1 should be understood as part of a cohesive technical concept constituting one cited invention….

<<⇒ Ultimately neither difference was obvious; inventive step satisfied.>>

IP High Court, 2021 (Gyo-Ke) 10129 [… Composition for Cleaving Target DNA] <Kanno>

Adding a nuclear localization signal to the Cas9 polypeptide (Difference 2) follows naturally and simultaneously from attempting to apply the cited invention's CRISPR/Cas system to eukaryotic cells (Difference 1).

⇒ Not “obviousness upon obviousness”!! (Not two stages)

(Excerpt from the court's reasoning)

…Because a nuclear localization signal is a conventional means of transferring proteins into the nuclei of eukaryotic cells, when seeking to apply the cited invention's CRISPR/Cas9 system to eukaryotic cells—namely to transfer the Cas9 polypeptide into their nuclei—it is entirely natural to adopt a means for transferring it into the nucleus. Adding a nuclear localization signal to the Cas9 polypeptide follows naturally and simultaneously from attempting to apply the cited invention's CRISPR/Cas system to eukaryotic cells. Thus, adding the nuclear localization signal is not a further modification made on the premise of a CRISPR/Cas9 system already applied to eukaryotic cells, and does not constitute so-called “obviousness upon obviousness.”

IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transfer System] <Shoji> — Not “Obviousness upon Obviousness”

Original Ameblo publication: 2024-08-26

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12865028860.html

HP: https://www.takaishihideki.com/single-post/ameblo-12865028860-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12865028860-ja

IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transfer System] <Shoji>

One of the matters actually disclosed in a publicly available reference was selected for comparison.

*Even if a mental operation of selecting and presenting a refrigerant combination relevant to the difference was involved, this merely selected the same term as in the claimed invention.

⇒ Not “obviousness upon obviousness”

(Excerpt from the court's reasoning)

> The plaintiffs argue that the JPO decision, at the stage of identifying well-known matters, made an estimate or inference by selecting R32 from multiple exemplified refrigerants and did not objectively identify “well-known matters”; that, after encountering the claimed invention, it selected from multiple listed refrigerants the same configuration as the claimed invention, impermissibly introducing an obviousness assessment into the identification of the cited invention; and that, because its findings involved assumptions or inferences at the stage of identifying well-known technology and then an assessment of whether differences between the claimed and cited inventions could be rationalized, this constituted impermissible so-called obviousness upon obviousness…. …
>
> However, …Cited References 2 and 11 are found to actually describe combinations of each of the multiple listed primary-side refrigerants with carbon dioxide, and the combination of R32, one of those refrigerants, with carbon dioxide is one of the combinations actually described. Identification of a cited invention is performed so as to enable error-free comparison with and assessment of the claimed invention. Since Difference 1 identifies that the primary-side refrigerant is R32 in the claimed invention but propane in the cited invention, selecting a combination with R32 as the primary-side refrigerant is naturally appropriate as a refrigerant combination relevant to Difference 1. Even if a mental operation of selecting and presenting a combination relevant to Difference 1 is involved, this merely selects a combination relevant to the difference from the reference's description by searching for the same specific term, “R32,” used in the claimed invention's elements. This cannot be regarded as an estimate, inference, or assumption departing from the reference's disclosure, nor can it be said to be an obviousness assessment.

HP: https://www.takaishihideki.com/single-post/ameblo-12865900106-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12865900106-ja

Tokyo District Court, 2022 (Wa) 22517 <Shibata>

[Toilet Roll (First Patent)]

*For the double-embossed defendant products, “the embossing on the front and back does not necessarily overlap, and coincidence of the embossing edges is not guaranteed.” The court therefore held that the embossing edges could not be identified and the embossing depth could not be established.

⇒ Claim limitation not satisfied

[Roll Product Package (Second Patent)]

*The court denied only the third requirement of equivalence (obviousness of substitution at the time of manufacture) and the fifth requirement!!

“In the defendant products …, only the central part of the slit is arcuate upward, and its basic shape differs from the configuration of Invention 2….”

(Excerpts from the court's reasoning)

<Claim element> 1B: The embossing depth of said embossing is 0.05–0.40 mm.

Even assuming the embossing is approximately square, the longest portion a in Specification 1 is not necessarily the length of its horizontal side …, and the location at which the measured sectional curve is obtained to measure embossing depth under the plaintiff's measurement method is not necessarily the location shown in Specification 1. … The one-shot images of each defendant product … show …that the embossing edges of the products cannot be clearly located. …The defendant products cannot necessarily be said to have an embossing edge fr of the kind presupposed by Invention 1. …

Given the nature of embossing in toilet rolls, some variation in the shapes of individual embossings can be expected. However, the embossing depth D in Invention 1 is measured on toilet rolls for which an embossing height profile on the X–Y plane can be obtained …and the embossing edge fr and its longest portion a can be located, after obtaining sectional curves as in Figure 5(b) and Figure 6. The invention states that its effect is achieved in toilet rolls whose embossing depth D, measured in this manner, has specified numerical values. Each defendant product is ordinary two-ply double embossing formed by ply-bonding without specifically adjusting the relative positions of the embossing protrusions and depressions on the sheets…. In such double-embossed toilet rolls, the embossing applied respectively to the front and back does not necessarily overlap, and the edges are not guaranteed to coincide. As a result, the embossing edges are unclear; displacement of protrusions and depressions can also cause interference and produce embossing of indistinct shape. According to the Exhibit Ko 51 report, in each defendant product, a local maximum of upward-convex

curvature in the sectional curve is found at the center of a portion identified by the plaintiff as embossing, among other things. It is therefore not necessarily clear whether that embossing has the depressed shape envisaged for measuring embossing depth D in Invention 1. Nor can it necessarily be said that the embossing height profile on the X–Y plane permits identification of the embossing edge fr and its longest portion a. Thus, even if ten embossings are selected and measured on each defendant toilet roll having such embossing, and a particular depth D is calculated as their average, it cannot be said that the embossing depth D in Invention 1 has been measured.

Original Ameblo publication: 2024-09-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12866149667.html

HP: https://www.takaishihideki.com/single-post/ameblo-12866149667-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12866149667-ja

IP High Court, 2023 (Gyo-Ke) 10091 [Barrier Laminate] <Miyasaka>

*For a difference concerning a numerical limitation, the court held that technical significance and obviousness of the configuration are not directly linked.

*From a cited invention demonstrating technical significance through three elements (carbon, oxygen, silicon), the numerical ranges for only two elements (carbon, silicon) could not be extracted.

⇒ Revocation decision set aside

(Excerpts from the court's reasoning)

The invention …provides a surface-coating layer containing a resin material having polar groups with excellent adhesion between a polypropylene film and a deposited film, thereby preventing interlayer separation. It also provides, on the deposited film, a barrier-coating layer made of a resin composition of a metal alkoxide and a water-soluble polymer, including cases where a silane coupling agent is used together with them, thereby preventing cracks in the deposited film. Further, it sets the ratio of silicon atoms to carbon atoms at the surface of the barrier-coating layer within a specified range so as to suppress deterioration of gas-barrier properties even during boiling or retort treatment. It thus has the technical significance of providing a barrier laminate for boiling or retort use with high gas-barrier properties. According to the specification, the upper limit of the silicon-to-carbon ratio (Si/C) is set from the standpoint of suppressing deterioration of gas-barrier properties even when the laminate is bent, while the lower limit is set from the standpoint of suppressing such deterioration even when it is heated…. Therefore, Difference 1-3, concerning whether the laminate is for boiling or retort use, and Difference 1-2, concerning the numerical range of the silicon-to-carbon ratio, should be considered together. …

Even if a person skilled in the art contemplated using the food-packaging material of the invention in Exhibit Ko 3 for boiling or retort applications, the ratio of metal atoms among the atoms constituting the overcoat layer in Exhibit Ko 4 is unrelated to whether gas-barrier properties are maintained upon heating. Moreover, Exhibit Ko 4 states the opposite of Exhibit Ko 3 regarding the ratio of carbon to metal atoms and the brittleness of the film. Given these matters, it is unreasonable to derive motivation to focus, within the laminate of Exhibit Ko 4 concerning an outer covering for vacuum insulation material—which differs in both technical field and layered structure from the invention in Exhibit Ko 3—on the descriptions of the overcoat and inorganic layers in the overcoat-coated film, and to refer to the ratio of metal atoms to carbon atoms in the overcoat layer (number of metal atoms/number of carbon atoms) for application to the invention in Exhibit Ko 3. The decision's assessment is erroneous. …

The defendant argues that the Si/C numerical range has no particular technical significance, and that, considering also that it was publicly known, as in Exhibit Ko 4, to examine numerical ranges using “Si/C” for the common technology concerning layered structure, a person skilled in the art could readily have adopted the configuration of the invention relating to Difference 1-2 in the invention in Exhibit Ko 3 by referring to Exhibit Ko 4. …

…However, concerning (1) above, …it cannot immediately be said that there is no technical significance. In the first place, whether technical significance is substantiated and whether a configuration is obvious are not directly linked issues.

Regarding (2) above, merely because the …numerical range of the invention in Exhibit Ko 3 encompasses “at least 0.90 and no more than 1.60,” the numerical range of Invention 1, there is no reasonable basis or technical necessity for extracting only carbon and silicon from Exhibit Ko 3's disclosure, which demonstrates a certain technical significance through numerical ranges of carbon, oxygen, and silicon.

Table 1 of Exhibit Ko 4 discloses …a value within the numerical range of Invention 1, but the table does not show film properties or indicate that this Si/C ratio is superior to other parts-by-mass values outside the range of Invention 1. It therefore cannot be said that a person skilled in the art would focus on that value. Moreover, merely because Exhibit Ko 4—which has no more in common with Exhibit Ko 3 than being “an invention concerning a layered structure”—describes examining numerical ranges using “Si/C,” it cannot be said that a person skilled in the art could readily have adopted the configurations relating to Differences 1-2 and 1-3 by referring to Exhibit Ko 4.

[China] Supreme People's Court, (2016) Zui Gao Fa Xing Zai No. 41, “Daiichi Sankyo Case”

Markush-form claims are construed under a generalization approach.

⇒ Deletion of arbitrary alternatives raises the issue of uncertainty. The principle is that amendment of a Markush-form claim must not give rise to a group of compounds or an individual compound having new properties and functions, while the circumstances of the individual case must also be considered.

Cf. In Europe, the question is whether the subject matter remaining after deletion of alternatives is within the original disclosure; deletion may be permissible.

⇒ Strengthen dependent claims and disclosure of specific combinations with China and Europe in mind.

https://ipc.court.gov.cn/zh-cn/news/view-14.html

Osaka District Court, 1998 (Wa) 7191 [Ink Tube for a Writing Instrument] *A case in which adding another substance to an otherwise infringing accused product resulted in noninfringement!!

Original Ameblo publication: 2024-09-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12866686154.html

HP: https://www.takaishihideki.com/single-post/ameblo-12866686154-en

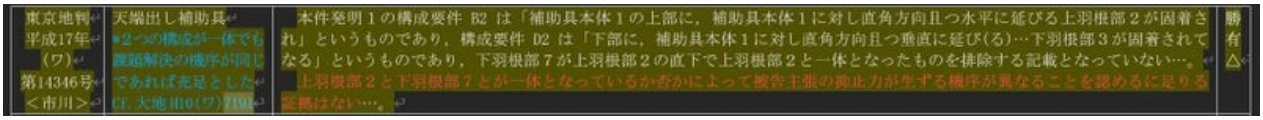
Japanese version: https://www.takaishihideki.com/single-post/ameblo-12866686154-ja

Osaka District Court, 1998 (Wa) 7191 [Ink Tube for a Writing Instrument] *A case in which adding another substance to an otherwise infringing accused product resulted in noninfringement!!

*Without a gelling agent the limitation was satisfied, but adding a gelling agent resulted in non-satisfaction.

In light of the purpose of the claimed utility-model device (a backflow-preventing agent), gelled polybutene was found to be a different substance from polybutene before gelation.

⇒ “The backflow-preventing agent is polybutene” not satisfied



Cf. Tokyo District Court, 2005 (Wa) 14346

(Excerpts from the court's reasoning)

…Although the polybutene in the backflow-preventing agent of the accused product is gelled by a gelling agent, it continues to exist as polybutene within the gelling agent's three-dimensional network. There is therefore some room to view it as having the configuration of the device at issue, “the backflow-preventing agent consists of polybutene.” …

Polybutene gelled by a gelling agent is found normally to exhibit high viscosity, while, as ink flows out during writing, the shear rate of the backflow-preventing agent increases, lowering its apparent viscosity so that it follows the ink. …

From the standpoint of its use as a backflow-preventing agent, it is inappropriate to divide polybutene gelled by a gelling agent into “addition of the gelling agent (or the network structure of the gelling agent)” and “polybutene,” and treat the former as a merely additional configuration. Pure polybutene and polybutene gelled by a gelling agent should be considered different substances. Accordingly, the accused product, whose backflow-preventing agent consists of polybutene gelled by a gelling agent, must be said not to have the configuration of the device at issue, “the backflow-preventing agent consists of polybutene.”

Comparison table: Tokyo District Court, 2005 (Wa) 14346 [Top-Level Setting Aid] <Ichikawa>

*The claim limitations were held to be satisfied even where two configurations were integrated, provided that the mechanism for solving the problem was the same.

Cf. Osaka District Court, 1998 (Wa) 7191.

Claim element B2 of Invention 1 states that “an upper wing portion 2 extending horizontally and perpendicular to the aid body 1 is fixed to the upper portion of the aid body 1,” while claim element D2

states that “a lower wing portion 3 extending vertically and perpendicular to the aid body 1 … is fixed to the lower portion.” The wording does not exclude a lower wing portion 7 positioned directly beneath and integrated with upper wing portion 2….

There is insufficient evidence to establish that the mechanism generating the restraining force asserted by the defendant differs depending on whether upper wing portion 2 and lower wing portion 7 are integrated….

Table notation: 勝 (“win”); 有 (literally, “present”); △.

[Europe] EPO Decision T 61/14

*For a parameter invention to satisfy the sufficiency-of-disclosure requirement under Article 83 EPC, throughout the entire claimed range, not only the method of measuring the parameter but also the method of adjusting it must be described in the application as filed, or be practicable by a person skilled in the art based on common general technical knowledge at filing.

When a parameter is claimed, its method of adjustment must be disclosed | Reflections on European IP Practice (hasegawa-ip.com)

[U.S.] July 2023 <CAFC> In re Float’N’Grill LLC — Reissue Application

Original Ameblo publication: 2024-09-12

Tokyo District Court, 2018 (Wa) 1130 [Printed Retroreflective Sheeting] <Tanaka>

Original Ameblo publication: 2024-09-14

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12867551138.html

HP: https://www.takaishihideki.com/single-post/ameblo-12867551138-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12867551138-ja

Tokyo District Court, 2018 (Wa) 1130 [Printed Retroreflective Sheeting] <Tanaka>

*Although no comparative examples outside the numerical range were provided, the support requirement was satisfied.

(The appellate judgment, IP High Court, 2021 (Ne) 10084 <Miyasaka>, also found the support requirement satisfied.)

The specification's statement that “at least 0.15 mm² is preferable because moldability is excellent …, and no more than 30 mm² is preferable because … interlayer adhesion strength is not reduced” contributed!!

(Excerpts from the court's reasoning)

Paragraph [0030] states: “An area of at least 0.15 mm² for an independent printed region is preferable because moldability is excellent and hue adjustment is easy, while an area of no more than 30 mm² is preferable because it does not reduce the interlayer adhesion strength of the two layers sandwiching the printed layer (2) around the printed region.” A person skilled in the art encountering this disclosure would understand that, if the area of a printed layer for improving or adjusting the hue of a retroreflective sheet is too small, the benefit of hue adjustment cannot be obtained, so a certain size is necessary. They would also understand that, if the area of a printed layer having poor adhesion is too large, interlayer adhesion strength decreases, so the printed layer must be sufficiently small. Accordingly, the technical significance of the invention can be understood even without examples comparing printed-region areas below 0.15 mm² or above 30 mm²….

The appellate judgment, IP High Court, 2021 (Ne) 10084 <Miyasaka>, also found the support requirement satisfied.

“The problem addressed by the invention can be said to be providing retroreflective sheeting with improved hue by solving, through an extremely simple and inexpensive method, the prior-art shortcomings of poor weather resistance and water resistance arising when a continuous printed layer is provided to improve hue in triangular-pyramidal cube-corner retroreflective sheeting, vapor-deposited triangular-pyramidal cube-corner retroreflective sheeting, and the like. Although it cannot be denied that conditions other than whether the printed regions are continuous or separate could affect solution of this problem, the support requirement does not demand exhaustive coverage of those conditions and effects. A person skilled in the art, comparing the claims of the patent and the specification, would be able to recognize that the invention is described as one contributing to solution of the above problem.”

[U.S.] January 2020 <CAFC> 946 F.3d 1367, Eko Brands v. Adrian Rivera

In a partial dissent, Judge Reyna criticized the construction importing a negative limitation excluding “broad, thin mesh” as unsupported. The majority upheld the construction and the finding of non-infringement.

According to that dissent, the specification does not mention mesh, let alone broad, thin mesh, and contains no disclosure supporting the exclusion.

(The dissent observed that the mesh exclusion came from a feature of Eko’s accused product.)

[U.S.] January 2013 <CAFC> 502 Fed. Appx. 971, Ernie Ball v. Earvana

Claim 1, which included a limitation that the arrangement "does not form a sinusoidal arc …," was held indefinite under former 35 U.S.C. § 112, second paragraph.

The problem was that the curve through the intonation portions was not uniquely specified: the same arrangement could be depicted with sinusoidal or non-sinusoidal curves. The holding did not rest merely on the absence of a definition of "sinusoidal."

HP: https://www.takaishihideki.com/single-post/ameblo-12868714473-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12868714473-ja

IP High Court, 2023 (Gyo-Ke) 10013 [Method of Manufacturing a Pole Housing] <Hibiku Shimizu>

"There is motivation to apply … Well-Known Matter 1." "There is motivation to apply Well-Known Matter 2 …." "A person skilled in the art could readily have conceived … by applying Well-Known Matters 1 and 2 to the cited invention."

⇒ Inventive step: not satisfied. "Obviousness upon obviousness" was not treated as an issue.

(Excerpts from the court's reasoning)

(5) Application of Well-Known Matter 2 to the cited invention …

…The cited invention belongs to the technical field of pole housings for electric motors, and Well-Known Matter 1 belongs to the technical field of cylindrical covers and the like used in electric motors, or motors using such covers. On the other hand, …Well-Known Matter 2 is also found to belong to the technical field of tubular housings and the like used in electric motors, or motors using such housings. Accordingly, the cited invention as modified by Well-Known Matter 1, on the one hand, and Well-Known Matter 2, on the other, share the same technical field. …Because Well-Known Matter 1 presupposes forming a stepped portion at the end of a motor housing, the cited invention as modified by it naturally raises the need to consider how to form that stepped portion. This can be called a problem inherent in the cited invention as modified by Well-Known Matter 1. …Well-Known Matter 2 presents a specific method (use of a press apparatus) for forming a stepped portion at the end of a tubular member. It can therefore be said to be a means (technology) capable of solving the above …problem naturally inherent in the cited invention as modified by Well-Known Matter 1. …

For these reasons, it is appropriate to find that there was motivation to apply Well-Known Matter 2 to the cited invention as modified by Well-Known Matter 1.

IP High Court, 2022 (Gyo-Ke) 10131 [Heat Exchanger Using Thermally Conductive Knitted Wire Fabric] <Honda>

*Merely reciting the functions and effects produced by a configuration does not narrow the claim.

= IP High Court, 2021 (Gyo-Ke) 10090 [Spray Product and Spraying Method] <Otaka>

“Selecting metal as the material for … is a routine material selection by a person skilled in the art…. It is also routine, when forming a metal member, to form it integrally by casting or welding.”

⇒ Inventive step: not satisfied

Obviousness upon obviousness was not treated as an issue.

(Excerpt from the court's reasoning)

Since a person skilled in the art could readily have provided the cited invention with configurations A through C of the claimed invention, configurations D and F would naturally also be satisfied accordingly…. Configuration D specifies the function achieved by having configurations A through C. Because configuration C does not specify what physical components are included in the “device requiring heat dissipation or heat absorption,” whatever components are contained inside the cited invention's “heat pipe 4 having a heat-generating portion” does not affect identification of the common features and differences concerning configuration C, or the obviousness assessment, and likewise does not affect the assessment of configuration D. …Because configuration F does not specify a comparison standard, “rapidly conducting generated heat over the shortest distance to the largest heat-dissipating surface” in configuration F is a function of a device having configurations A through C, not an action defined by comparison with any standard. …

IP High Court, 2021 (Ne) 10084 [Printed Retroreflective Sheeting] <Miyasaka> — First Raised on Appeal: Rejected as Untimely

Original Ameblo publication: 2024-09-26

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12868946802.html

HP: https://www.takaishihideki.com/single-post/ameblo-12868946802-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12868946802-ja

IP High Court, 2021 (Ne) 10084 [Printed Retroreflective Sheeting] <Miyasaka>

(1) The lack-of-inventive-step arguments (i) and (ii), first advanced on appeal, were rejected as untimely!!

(i) The primary reference asserted at first instance + a different secondary reference

(ii) An argument changing the interpretation of the primary reference asserted at first instance (the identification of the primary cited invention)

*The judgment does not make clear whether these were asserted in the statement of reasons for appeal.

(2) *The support requirement does not demand exhaustive coverage of every condition and effect that could influence solution of the problem.

“The problem addressed by the invention can be said to be providing retroreflective sheeting with improved hue by solving, through an extremely simple and inexpensive method, the prior-art shortcomings of poor weather resistance and water resistance arising when a continuous printed layer is provided to improve hue in triangular-pyramidal cube-corner retroreflective sheeting, vapor-deposited triangular-pyramidal cube-corner retroreflective sheeting, and the like. Although it cannot be denied that conditions other than whether the printed regions are continuous or separate could affect solution of this problem, the support requirement does not demand exhaustive coverage of those conditions and effects. A person skilled in the art, comparing the claims of the patent and the specification, would be able to recognize that the invention is described as one contributing to solution of the above problem.”

⇒ Support requirement: satisfied

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92685.pdf

IP High Court, 2023 (Gyo-Ke) 10011 [Device for Remotely Operating a Mobile Terminal] <Miyasaka>

[Patent/Civil Code] Tokyo District Court, 2022 (Wa) 19222 <Kokubu> — Analogous Application of Civil Code Article 94(2)

Original Ameblo publication: 2024-09-30

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12869448646.html

[Patent/Civil Code] Tokyo District Court, 2022 (Wa) 19222 <Kokubu>

An unauthorized assignment of the right to obtain a patent, followed by successive assignments of the patent right

⇒ The plaintiff bore responsibility for creating a false appearance.

(1) Partly caused by the plaintiff's own internal circumstances and conduct

(2) Left unaddressed for four years despite knowledge

(3) Left unaddressed for another six months after the judgment finding the shareholders' resolutions nonexistent became final

+ The defendants acted in good faith and without negligence.

⇒ Civil Code Article 94(2) applied by analogy

(Excerpts from the court's reasoning)

(2) Whether the requirements for analogous application of Civil Code Article 94(2) are satisfied in this case

A. The plaintiff's responsibility for creating the false appearance

(a) The evidence cited below and the entire purport of oral argument establish the following facts.

a. D, as an employee of Total Life Factory, was planning with Eternal Co., Ltd. a business manufacturing and selling the “Afloat” hair-treatment iron. H (hereinafter “H”), who supported the plan, established the plaintiff on October 11, 2011 for that business (Exhibits Ko 1 and 26).

b. A, as an assistant at Total Life Factory, handled the company's customer service and administration under D's instructions (Exhibit Ko 26; plaintiff's representative).

c. Around 2014, H decided to resign as the plaintiff's representative and transfer the plaintiff's shares to Total Life Factory in order to concentrate on the business of Grace Co., Ltd., which H managed.

D therefore asked A to become the plaintiff's representative. A assumed that position around June of that year, and the appointment was registered.

As for the plaintiff's shares, to avoid a direct transfer from H to Total Life Factory, a business partner of Grace Co., Ltd., it was decided to transfer them through A. On June 11, it was contractually agreed, in documentation prepared by D, that the shares would be

transferred first from H to A and then from A to Total Life Factory. (Exhibit Ko 26; plaintiff's representative)

d. D and E assigned the right to obtain a patent for the invention to the plaintiff on November 16, 2014, and the plaintiff filed the application on April 6, 2015. A remained the plaintiff's representative at least until around June 11 of that year. (Exhibits Ko 3–5 and 7)

e. On July 15, 2015, A convened an extraordinary shareholders' meeting asserting that A was a shareholder of the plaintiff. The meeting adopted resolutions removing D as a director and appointing A as a director and representative director (Shareholders' Resolution (1)); those matters were registered on July 22. A also convened an extraordinary shareholders' meeting on July 30, which adopted a resolution appointing B as a director (Shareholders' Resolution (2)); that appointment was registered on July 31. (Exhibits Ko 7 and 8) D learned around that month that those registrations had been made. D was not acquainted with B (Exhibit Ko 26; plaintiff's representative).

f. On August 18, 2015, A entered into Assignment Agreement (1) with B and prepared, in the name of the plaintiff's representative director, a deed assigning to B the right to obtain a patent for the invention (the Assignment Deed) (Exhibit Ko 6).

g. On March 1, 2016, A convened an extraordinary shareholders' meeting, which adopted a resolution dissolving the plaintiff and appointing attorney F as its representative liquidator (this resolution, together with Shareholders' Resolutions (1) and (2), is hereinafter referred to as the “Shareholders' Resolutions at Issue”). Those matters were registered on March 14 (Exhibits Ko 7 and 8).

h. On April 19, 2016, attorney F, as the plaintiff's representative liquidator, applied for a payment order against D seeking damages, alleging, among other things, that D had misappropriated the plaintiff's deposits. The application proceeded to ordinary litigation (hereinafter the “Damages Action”). The validity of the Shareholders' Resolutions at Issue became an issue in that action. (Exhibit Ko 26)

i. By November 29, 2016, D had learned that the right to obtain a patent for the invention had been transferred to B. D asked patent attorney L of SOCO IP LAW FIRM, who had represented the plaintiff in the patent application (hereinafter “patent attorney L”), about the application's status. L informed D that the applicant had been changed from the plaintiff to B and, correspondingly, the application representative had been changed to Kyoto International Patent Office, a patent professional corporation (Exhibit Ko 30; plaintiff's representative).

j. Examination of the patent application was requested on April 6, 2018, a decision to grant was issued on February 14, 2019, and B obtained registration establishing the patent right on May 17, 2019 (Exhibit Ko 5; Exhibits Otsu 1 and 2).

By around that month, D knew that B had obtained registration of the patent right through the above course of events (plaintiff's representative).

k. In the Damages Action, the Tokyo District Court rendered a judgment dismissing the action as inadmissible on October 11, 2019. An appeal was filed, but the Tokyo High Court dismissed it on March 19, 2020, and that judgment became final (Exhibit Ko 26; plaintiff's representative).

l. D subsequently asked attorney F to hand over documents concerning the plaintiff. Because F did not comply, D brought an action against the plaintiff in 2021 seeking a declaration that the Shareholders' Resolutions at Issue did not exist. Despite being duly summoned, the plaintiff did not appear at the oral hearing. On July 20, 2021, the Tokyo District Court granted D's claim, and the judgment became final on August 5, 2021. (Exhibits Ko 7, 8, and 26; plaintiff's representative)

m. Following finalization of the judgment in item l, registrations dated August 30, 2021 recorded, among other things, that the judgment declaring nonexistent the resolution removing D as a director had become final and that D's status as a director had been restored. Further, on September 29, 2021, the registration dated July 15, 2015 of D's departure from office was canceled ex officio, and restoration of D's status as representative director was registered (Exhibit Ko 7).

n. On February 1, 2022, B and Reizvoll entered into Assignment Agreement (2), and on April 8, 2022, Reizvoll and the defendant entered into Assignment Agreement (3) (Exhibit Ko 4; Exhibits Otsu 5 and 10; entire purport of oral argument).

(b) As stated in (a)b through d, A, as an assistant at Total Life Factory, handled customer service and administrative tasks under D's instructions. At D's request, A became representative director around June 2014 and remained the plaintiff's representative director at least until around June 11, 2015. Moreover, H, the plaintiff's founder, decided to transfer the plaintiff's shares through A to Total Life Factory. On June 11, 2014, it was contractually agreed, in documentation prepared by D, that the shares would be transferred first from H to A and then from A to Total Life Factory. A also used those contractual arrangements in becoming the plaintiff's representative director through Shareholders' Resolution (1).

As stated in (a)e and f, A convened an extraordinary shareholders' meeting on July 15, 2015, at which Shareholders' Resolution (1) appointing A as representative director was adopted. On August 18, 2015, A and B entered into Assignment Agreement (1), assigning B the right to obtain a patent for the invention.

Accordingly, A's execution of Assignment Agreement (1) arose from the conduct of H, a shareholder of the plaintiff, and D, said to be its true representative. The plaintiff's own

internal circumstances and conduct must therefore be said to have played a substantial role in creating the false appearance that B held the patent right.

(c) Further, as stated in (a)e and h, by around July 2015 D knew that registrations had been made removing D as a director, appointing A as a director and representative director, and appointing B as a director. In the Damages Action, too, the validity of the Shareholders' Resolutions at Issue, which included appointing A and B as directors and the like, was disputed.

Moreover, according to (a)e and i and the entire purport of oral argument, by November 29, 2016 at the latest, D knew that the right to obtain a patent for the invention had been transferred to B, with whom D was unacquainted and who appeared to cooperate with A; that the applicant had been changed from the plaintiff to B; and that the application representative had correspondingly been changed to Kyoto International Patent Office.

Further, as stated in (a)j, examination was requested on April 6, 2018, a decision to grant was issued on February 14, 2019, and B obtained registration establishing the patent right on May 17, 2019. D also knew of this course of events.

Thus, D, said to be the plaintiff's true representative, knew by around July 2015 that A had taken steps such as having A appointed the plaintiff's representative director. By November 29, 2016, D also knew that the right to obtain a patent had been assigned to B, whom D did not know and who appeared to cooperate with A.

Nevertheless, as stated in (a)k and l, even after the appeal in the Damages Action was dismissed on March 19, 2020, D did not bring an action seeking a declaration of nonexistence of the Shareholders' Resolutions at Issue until 2021. The entire purport of oral argument also establishes that D took no other measures, such as other contentious or noncontentious proceedings or approaches to B.

(d) Further, as stated in (a)l, even after the plaintiff obtained a favorable judgment on July 20, 2021 in the action seeking a declaration of nonexistence of the Shareholders' Resolutions at Issue and that judgment became final on August 5, 2021, until the patent right was transferred from B to Reizvoll on February 1, 2022, the plaintiff took neither legal measures, such as demanding that B complete registration of transfer of the patent right or seeking a provisional disposition prohibiting transfer, nor other measures, such as contacting B to request return of the patent registration to the plaintiff or that registration not be transferred to others (plaintiff's representative; entire purport of oral argument).

(e) As explained above, the plaintiff's own internal circumstances and conduct were part of the reason A entered into Assignment Agreement (1) and created the false appearance that B was the patentee. Moreover, although D, said to be the plaintiff's true representative, knew by November 29, 2016 at the latest that this false appearance existed, D did not bring an action seeking a declaration of nonexistence of the Shareholders' Resolutions at Issue or

take similar steps for approximately four years, until 2021. Further, even after the judgment declaring those resolutions nonexistent became final on August 5, 2021, no measures were taken against B during the approximately six months before B transferred the patent right to Reizvoll.

In these circumstances, the plaintiff must be found to bear, for creating the false appearance, responsibility so serious as to be equivalent to having actively participated in creating it or having deliberately left it unaddressed despite knowing of it.

(f) In response, the plaintiff argues that its (D's) conduct after the judgment declaring the Shareholders' Resolutions at Issue nonexistent became final on August 5, 2021 was unobjectionable: the court-commissioned registration was not completed until around mid-October, and after the judgment became final it was difficult to envisage B further transferring the patent right, so the plaintiff was seeking the documents from attorney F.

However, by August 5, approximately six years had already elapsed since Assignment Agreement (1), and B was unacquainted with D and appeared to cooperate with A. Once the judgment declaring the resolutions nonexistent became final, there was therefore a strong need promptly to take legal measures against B, such as demanding completion of registration of transfer of the patent right.

Further, as stated in (a)k and l, even after the judgment dismissing the Damages Action became final, attorney F did not comply with D's request for documents. F, who was regarded as the plaintiff's representative liquidator in the action seeking a declaration of nonexistence of the resolutions, also failed to attend the oral hearing despite being duly summoned. Given F's responses and litigation conduct, even after the judgment declaring the resolutions nonexistent became final, it was not reasonable to expect F to comply with D's request for the documents.

In addition to those circumstances, the plaintiff could have demanded the documents from F while simultaneously pursuing a demand against B for registration of transfer of the patent right. Accordingly, the plaintiff's argument that there was nothing wrong with its (D's) conduct after the judgment became final on August 5, 2021 cannot be accepted.

(g) The plaintiff further argues that B was a party to the unlawful takeover of the plaintiff, and that B's patent attorney would be expected to act according to B's wishes and would not cooperate with D. Thus, even if D had approached B or B's patent attorney, it would not have helped remove the false appearance and might even have been counterproductive.

However, first, there is insufficient evidence to establish that B personally was a party to an unlawful takeover of the plaintiff. Moreover, since D never contacted B, there was no indication of how B would respond, and it is unreasonable to conclude categorically that approaching B would not have removed the false appearance or would have been counterproductive. Further, if B or B's patent attorney did not respond to D's approach, that

would simply mean that B and D disputed ownership of the patent right. In that event, D should promptly have brought an action seeking a declaration of nonexistence of the Shareholders' Resolutions at Issue or taken similar steps.

Accordingly, that argument of the plaintiff cannot be accepted.

B. The defendants' good faith and absence of negligence

(a) The evidence cited below and the entire purport of oral argument establish the following facts.

a. Around May 2021, G, the defendant's employee in charge, received a request from the defendant's development department to investigate patents relating to a hair iron under development. G discovered the patent and asked a patent attorney firm to conduct a freedom-to-operate investigation into whether the hair iron fell within the invention's technical scope and whether grounds for invalidity existed (Exhibit Otsu 9; witness G).

b. The investigation in item a concluded that the defendant's hair iron under development fell within the invention's technical scope but that grounds for invalidity existed. The defendants therefore decided both to request an invalidation trial and to negotiate with B for assignment of the patent right, entrusting the negotiations to a patent attorney (Exhibits Otsu 6 and 9; witness G).

c. The patent attorney engaged under item b negotiated with B. On February 1, 2022, B visited the patent attorney firm to which that attorney belonged, and B and Reizvoll entered into Assignment Agreement (2) (Exhibit Ko 4; Exhibits Otsu 5, 9, and 10; witness G; entire purport of oral argument).

d. At the time of execution of Assignment Agreement (2), G had received no report from the patent attorney engaged under item b of suspicious circumstances concerning Reizvoll's entering into that agreement (witness G).

(b) As stated in items a through d above, G asked a patent attorney belonging to a patent attorney firm to conduct a freedom-to-operate investigation and negotiate with B for assignment of the patent right. The attorney arranged for Assignment Agreement (2) to be concluded on February 1, 2022, and G received no report from the attorney of suspicious circumstances concerning its conclusion.

In addition to these circumstances, as of February 1, 2022, when Assignment Agreement (2) was executed, more than six years and five months had elapsed since Assignment Agreement (1), yet its validity was not then expressly disputed. Taking this into account as well, it is appropriate to find that, at the time of Assignment Agreement (2), the defendants were in good faith and without negligence regarding the fact that B had not acquired the right to obtain a patent for the invention and did not hold the patent right.

(c) In response, the plaintiff argues that the defendants must have known, by checking the plaintiff's commercial register, that A was not its representative on August 18, 2015, when Assignment Agreement (1) was executed, and thus knew that B did not hold the patent right.

However, the evidence (witness G) and the entire purport of oral argument establish that the defendants did not check the plaintiff's commercial register. Nor does all the evidence establish that the defendants knew that A was not the plaintiff's representative as of August 18, 2015. The plaintiff's argument therefore lacks its premise and cannot be accepted.

Accordingly, it is not established that the defendants knew B did not hold the patent right.

(d) The plaintiff also identifies the following suspicious circumstances: (1) it is extremely unusual, as with this patent, for an individual applicant and patentee not to be the inventor; (2) it is highly unnatural for the plaintiff, a corporation practicing the invention for which it applied, to assign the right to obtain a patent to B, an individual; (3) while A used a seal bearing the plaintiff's name and A's position as representative director on the April 22, 2015 “Certificate for Application of the Exception to Loss of Novelty,” A used a different personal seal on the Assignment Deed; (4) it is highly unnatural for the plaintiff corporation, only four months after filing, to assign to B, an individual, the right to obtain a patent for an invention it was itself practicing; and (5) neither B individually nor the security and maintenance company B apparently represented was engaged in a hair-iron business, making assignment by the plaintiff to such a B unnatural. On these grounds, the plaintiff argues that the defendants had a duty to verify whether A had authority to represent the plaintiff on August 18, 2015.

However, whether it is unnatural that the applicant and patentee was an individual (B) different from the inventor (point (1)), or that the plaintiff corporation assigned the right to obtain a patent to B four months after filing despite practicing the invention (points (2) and (4)), must be assessed in light of the plaintiff's internal circumstances. The defendants were not in a position to know the plaintiff's internal circumstances explained in A(b) above. In those circumstances, it would have been difficult to question the validity of Assignment Agreement (1) and the appearance created by the JPO registration based on it.

As for use of A's personal seal on the Assignment Deed (point (3)), relatively small companies may use a representative's personal seal when entering into contracts. This does not immediately entail that the validity of Assignment Agreement (1) and the appearance of the JPO registration based on it should have been questioned.

Nor does the fact that B was not engaged in a hair-iron business (point (5)), by itself, negate a need for B to acquire from the plaintiff the right to obtain a patent for the invention.

In addition to these circumstances, as explained in (b), the validity of Assignment Agreement (1) had not been expressly disputed for more than six years and five months after its execution, and the appearance that B was the patentee had persisted for a substantial

period. Even considering all the suspicious circumstances identified by the plaintiff together, they cannot be said to establish a duty on the defendants to question the validity of Assignment Agreement (1) and the JPO registration based on it, and to verify whether A had authority to represent the plaintiff as of August 18, 2015.

Accordingly, that argument of the plaintiff cannot be accepted.

(3) Summary

For these reasons, it is appropriate to construe Civil Code Article 94(2) as applying by analogy in this case, with the result that the plaintiff cannot assert against the defendant that it holds the right to obtain a patent for the invention.

For Patent Attorney Oral-Examination Candidates — Questions on Legislative Purpose (Patents)

Original Ameblo publication: 2024-10-03

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12869897875.html

For Patent Attorney Oral-Examination Candidates — Questions on Legislative Purpose (Patents)

⇒ Likewise, memorize ten purposes each for designs and trademarks.

• Encouragement of inventions + development of industry

• Legal stability

• Prevention of unforeseen disadvantage to third parties

• Guaranteeing an opportunity to defend

• International harmonization

• Speed (resolution in a single proceeding)

• Fairness

• Balance between disclosure and exclusive rights (equity)

• Balance between rights holders and the public's freedom to practice inventions (equity)

• Alleviating difficulty of proof: presumptions of damages, document-production orders, inspection by a court-appointed expert

• Protecting trade secrets: confidentiality orders, restrictions on inspection and copying, in-camera proceedings

• Excluding double patenting

• Ensuring rational decisions

(Purpose of the patent system)

Grant an exclusive right in exchange for disclosure of the invention.

Encourage inventions and thereby contribute to the development of industry.

(Amendment)

(1) Ensure sufficient disclosure of the invention from the outset and fairness of treatment between applications with insufficient disclosure and applications with sufficient disclosure from the outset.

(2) Prevent unforeseen disadvantages to third parties who acted on the basis of the scope of the invention disclosed at filing.

(Patent Act Article 39)

Exclude double patenting under the principle of one patent per invention.

(Patent Act Article 29-2)

Also take account of avoiding a situation in which appropriate and prompt processing of later applications becomes impossible.

The purpose of requiring reasons in trial decisions (Patent Act Article 157(2)(iv)) is to ensure careful, fair, and appropriate decisions and assist in deciding whether to appeal.

(Patent Act Article 101(ii): indirect infringement involving products indispensable to solving the problem addressed by the invention)

Wholly enjoining the production, transfer, etc. of such products and ordering their destruction accords with the purpose of Patent Act Article 101(ii), which extends the effect of the patent right to acts highly likely to lead to infringement even where multipurpose products are concerned.

(Prior-use right)

The purpose of the system is to achieve fairness between the patentee and a person who had previously practiced the patented invention.

= Adjustment of interests

(Patent Act Article 77(4))

It provides that an exclusive licensee may grant a nonexclusive license to another person with the patentee's consent, on the premise that granting such a license to a third party does not affect the exclusive licensee's exclusive license.

(Patent Act Article 102(2))

Purpose: alleviate the difficulty of proving the amount of damages.

Purpose of the system of confidentiality orders

= Protect parties' trade secrets disclosed in litigation.

(Patent Act Article 167: after a trial decision becomes final and binding, the parties and intervenors may not request another invalidation trial on the same facts and evidence.)

Achieve resolution of disputes in a single proceeding between the same parties.

(Patent Act Article 157(2): requires reasons in the written trial decision)

Ensure rationality and the like in trial decisions, restrain arbitrariness, and eliminate the risk of findings not based on objective evidence (technical materials) or decisions lacking logical reasoning.

(Patent Act Article 134(2), main clause: when an amendment to the trial request is permitted, a copy of the amendment must generally be served on the respondent, who is given an opportunity to file an answer.)

Guarantee the opposing party an opportunity to defend.

[U.S.] May 2024, In re Bystolic (Second Circuit Court of Appeals)

Original Ameblo publication: 2024-10-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12869949108.html

[U.S.] May 2024, In re Bystolic (Second Circuit Court of Appeals)

A large and unjustified reverse payment in a pharmaceutical patent settlement may be subject to antitrust scrutiny under the rule of reason, but is not automatically unlawful. In this case, the court affirmed dismissal because the plaintiffs failed plausibly to allege that the payments were unjustified or unexplained.

—Comparison with litigation costs and the value of goods and services is important.

*An issue that often warrants consideration in Japan as well, including outside the pharmaceutical field!!

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12870330677.html

[U.S./Design Patent] May 2024, CAFC en banc, LKQ v. GM Global Tech.

The court overturned the 40-year-old Rosen-Durling test (which required a primary reference “basically the same” as the claimed design when assessing design-patent obviousness), holding that the obviousness standard in the Supreme Court's 2007 KSR decision applies.

Changing Design-Law Orthodoxy: En Banc CAFC Adopts a More Flexible Standard for Design-Patent Obviousness — Open Legal Community

IP High Court, 2023 (Gyo-Ke) 10084 and 10089 [Electric Impact Tightening Tool] <Hibiku Shimizu>

Original Ameblo publication: 2024-10-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12870330748.html

IP High Court, 2023 (Gyo-Ke) 10084 and 10089 [Electric Impact Tightening Tool] <Hibiku Shimizu>

The primary reference states that its embodiment may be applied to outer-rotor and inner-rotor types.

⇒ In the outer-rotor type, arranging multiple magnets along the outer circumferential side of the stator (the inner circumferential side of the rotor) to hold them was well-known technology.

⇒ Inventive step: not satisfied

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93258.pdf

IP High Court, 2021 (Ne) 10086 [Lamp] <Honda> *Prior-use right established

Original Ameblo publication: 2024-10-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12870330915.html

IP High Court, 2021 (Ne) 10086 [Lamp] <Honda> *Prior-use right established

*For a numerically limited invention, products after design changes were also held within the scope of the prior-use right.

⇒ After finding the variation of the prior-use products (slightly broader than the actual prior-used articles), the court identified the range permitting appropriate adjustment as the range of identity covered by the prior-use right.

⇒ A prior-use right is established even without recognition of the parameter.

“There are no circumstances indicating that Kanaden … participated through joint research or otherwise …; given that … in April 2012, when delivery to Kanaden occurred … the product was already being sold to the public …, it is difficult to regard delivery … to Kanaden as presupposing … a duty of confidentiality.”

⇒ Public working: novelty not satisfied

[Claim 1] …A lamp satisfying the relationship y ≧ 1.09x, where y (mm) is the full width at half maximum of the luminance distribution obtained when light from each of the multiple LED chips passes through the outermost enclosure of the lamp, and x (mm) is the distance between emission centers of adjacent LED chips.

(Excerpts from the court's reasoning)

…For all 24 of the appellee's 403W products, y/x was measured for the 25th and 50th LEDs from the left. For the 25th LED, the minimum was 1.303, the maximum 1.388, and the mean-value 3σ limits were 1.281 and 1.397; for the 50th, the minimum was 1.297, the maximum 1.381, and the mean-value 3σ limits were 1.272 and 1.403. Industrial products exhibit quality variation due to various causes even when produced in the same process, and the same can be said of lighting fixtures. As noted, each of the appellee's 403W products showed numerical variation. It is also understood that one commonly adopted quality-control method compares inspection results with the required quality standard and keeps the difference (manufacturing error) within three standard deviations (3σ)…. In light of these matters, the measured y/x values of the appellee's 403W products were approximately 1.27–1.38. For 3σ, taking ordinary manufacturing error into account, although the required quality standard for the 403W product is unknown, ordinary control methods would treat the measured mean as that standard; the products' y/x values can therefore be found to have been approximately 1.27–1.40. …

In light of the foregoing, the range of y/x extending above 1.4 to 1.7 or beyond 1.7 in the invention embodied in the 403W product was a range the appellee had achieved by appropriately adjusting x and controlled as its own. …Further, reducing the grainy appearance of LED lighting, the problem addressed by each Invention 1, was known to persons skilled in LED lighting before the claimed priority date. They can be said to have manufactured lighting fixtures without that grainy appearance through trial and error without using the parameter at issue. In such technical circumstances, where a formula is used to define a product invention, a product practiced or prepared for practice before filing (the claimed priority date) may fall within the technical scope defined by the formula of an invention subsequently filed and patented. The appellee's lack of recognition of the parameter at issue should therefore not negate establishment of a prior-use right. …

IP High Court, 2023 (Gyo-Ke) 10056 [Hydrophilic Filtration During Manufacture of a Vaccine Adjuvant] <Hibiku Shimizu>

Original Ameblo publication: 2024-10-11

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12870814041.html

IP High Court, 2023 (Gyo-Ke) 10056 [Hydrophilic Filtration During Manufacture of a Vaccine Adjuvant] <Hibiku Shimizu>

Identification of the cited invention: inventive step not satisfied

Step (III) in the primary reference can be viewed as a step provided for convenience because there are cases in which the adjuvant is combined with an antigen solution and cases in which it is not; in the latter case, the step is not technically essential.

(Excerpt from the court's reasoning)

Step (III) asserted by the intervenor (filling large bottles with bulk adjuvant emulsion) can be viewed as a step provided for convenience because the adjuvant emulsion may or may not be combined with an antigen solution. At least in the latter case, undergoing that step cannot be said to be technically essential. Accordingly, performing the first and second filtration steps consecutively in the invention described in Exhibit Ko 11 does not in any way conflict with that invention's technical concept…. Thus, the first and second filtration steps of that invention cannot be said to be separate steps incapable of consecutive performance, and …the intervenor's argument cannot be accepted.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92860.pdf

Tokyo District Court, 2019 (Wa) 24736 [… Air-Conditioned Clothing] <Kokubu>

Original Ameblo publication: 2024-10-12

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12870994669.html

Tokyo District Court, 2019 (Wa) 24736 [… Air-Conditioned Clothing] <Kokubu>

A person skilled in the art encountering the publicly worked invention would recognize the problem of "tying a pair of adjustment cords to the desired length."

⇒ The adjustment method is well known in the clothing field.

⇒ The fact that air-conditioned clothing itself is an innovative technology does not support inventive step.

⇒ Inventive step: not satisfied

IP High Court, 2023 (Ne) 10086 [5-Aminolevulinic Acid Phosphate] <Miyasaka>

*Merely naming a substance in a reference does not disclose the invention unless the reference enables a skilled person to practice it without thought or trial and error requiring creative ability.

⇒ Novelty and inventive step: satisfied

"For a person who invents a manufacturing method or the like after the patent application, interests are adjusted with those of the patentee through an award establishing a nonexclusive license (Article 92 of the same Act)."

(Excerpts from the court's reasoning)

The appellant argues that, for a substance-patent invention whose compound is expressly identified in a publicly available reference and whose technical significance lies in having made the compound for the first time, the compound itself is publicly known, so the invention should be deemed to lack novelty. Alternatively, if it has novelty, because its technical significance lies in having made the compound, its technical scope should be limited to products made by the manufacturing method actually invented by the inventor or to isolated high-purity compounds. However, this cannot be accepted for the following reasons.

A. Given that an invention is a creation of a technical idea (see Patent Act Article 2(1)), for a product invention to be described in a publication distributed before filing (Article 29(1)(iii)), the publication must disclose not only the invention's configuration but also its technical idea sufficiently for a person skilled in the art encountering it to implement that idea based on common general technical knowledge at filing without exercising creative ability through thought, trial and error, or the like.

Particularly where the product is a new chemical substance, finding a manufacturing method or other means of obtaining it is often difficult. Thus, for the technical idea to be disclosed in a publication, generally the publication must not merely disclose the substance's constitution but describe enough to permit understanding of its manufacturing method. Where it does not, a person skilled in the art encountering the publication must be able to discover a manufacturing method or other means of obtaining it based on common general technical knowledge at filing, without exercising creative ability through thought, trial and error, or the like.

Here, the cited reference, a publicly available publication, contains no description of a manufacturing method for 5-aminolevulinic acid phosphate. Nor do the papers in Exhibits Otsu 16–18 establish that a person skilled in the art could have found a manufacturing method or other means of obtaining it based on common general technical knowledge at

filing. (The foregoing is the same as Part 3, 3(1)B of the “Facts and Reasons” in the original judgment [p. 14 onward].)

B. By contrast, the specification not only discloses the constitution of 5-aminolevulinic acid phosphate ([0009], [0014]–[0016]) but also contains sufficient description for a person skilled in the art to understand its manufacturing method ([0007], [0019]–[0028], [0034]–[0036]). This discloses the technical idea of the invention, an invention of a new chemical substance, sufficiently for a person skilled in the art to practice it; its technical significance is not limited to a mere manufacturing method.

Where a patent is granted for a product invention, the patent right extends to any product identical in structure, characteristics, and the like, regardless of its manufacturing method (see Supreme Court, Second Petty Bench, June 5, 2015, 2012 (Ju) 1204, Minshu Vol. 69 No. 4, p. 700).

C. For persons who were manufacturing or otherwise practicing at the time of the patent application, as the appellant points out, adjustment of interests with the patentee is achieved through a nonexclusive license by prior use (Patent Act Article 79). For persons who invent a manufacturing method or the like after the application, it is achieved through an award establishing a nonexclusive license (Article 92).

IP High Court, 2023 (Gyo-Ke) 10034 [Method of Manufacturing a Raised-Fiber Sheet] <Hibiku Shimizu>

*Usurped application established (JPO decision set aside)

The true inventor's statement: pile length 2–3 mm

Claim 4 specifies 3–10 mm, so the statements are consistent.

Even if the usurping applicant devised various refinements to the dyeing process, none was included in the claims.

⇒ Could adding “the configuration devised by the usurping applicant” through correction have complicated the issue?

*Since patentability existed even without “the configuration devised by the usurping applicant,” perhaps this would merely become a violation of the joint-application requirement. If patentability were recognized only after adding that configuration through correction, the invention might have been solely that of the inventor named in the publication. A judgment offering lessons on points to consider when filing alone for an invention involving others!!

IP High Court, 2023 (Gyo-Ke) 10069 [Soldering Apparatus] <Hibiku Shimizu> — Inventive-Step Assessment and Scope of Res Judicata

Original Ameblo publication: 2024-10-21

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12872054956.html

IP High Court, 2023 (Gyo-Ke) 10069 [Soldering Apparatus] <Hibiku Shimizu>

*Inventive-step determinations: distinguish res judicata concerning Invention 4 from the binding effect concerning Invention 1 and related claims.

Concerning Invention 1 and related claims, although there were points the first judgment did not decide, inventive step is a legal determination based on identification of the invention and cited invention and their common features and differences.

The binding effect of the first judgment prevents the trial examiners from finding different facts and making a different determination.

"In light of the purpose of the Supreme Court Grand Bench judgment of March 10, 1976 …, res judicata attaches not to the absence of illegality in the trial decision generally, but to the absence of illegality in the decision on inventive step based on the invention (publicly known technology) described in the particular reference examined in the patent invalidation trial."

(Excerpts from the court's reasoning)

In light of the purpose of the Supreme Court Grand Bench judgment of March 10, 1976 (1967 (Gyo-Tsu) 28), Minshu Vol. 30 No. 2, p. 79, it is appropriate to understand that the res judicata effect of a judgment dismissing a claim in an action to set aside a decision in a patent invalidation trial concerning inventive step attaches not to the absence of illegality in that decision generally, but to the absence of illegality in its determination of inventive step based on the invention (publicly known technology) described in the particular reference examined in the invalidation trial.

Applying this to the present case, as found above, the first judgment (the portion dismissing the plaintiff's claim; the same applies below) held that Invention 4 could not be said to have been readily invented before filing by a person skilled in the art based on the cited invention in Exhibit Ko 1. It upheld the first trial decision to the same effect and dismissed the plaintiff's claim. Because that judgment subsequently became final, the absence of illegality in the first trial decision, which held that Invention 4 could not be said to lack inventive step based on the cited invention in Exhibit Ko 1, must be regarded as conclusively established with res judicata effect.

The issue here is the illegality of the present trial decision, not the first trial decision. However, the plaintiff's assertion in this action that Invention 4 lacks inventive step based on the cited invention in Exhibit Ko 1 (Ground for Cancellation 3), and that the portion of the present decision denying lack of inventive step is unlawful, substantively seeks a different

determination on the part concerning illegality of the first trial decision that is subject to res judicata (the determination that inventive step cannot be denied on the basis of the same cited invention). This must be regarded as impermissible.

IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transfer System] <Shoji> — Design Matters and Motivation

Original Ameblo publication: 2024-10-22

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12872170863.html

IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transfer System] <Shoji>

***Design matters and motivation**

"Where the claimed invention is reached by adopting, in the primary cited invention, design changes or design matters accompanying the concrete application of technology for solving its problem, adoption of such **design changes or design matters … permits a finding of obviousness even without particular motivation"**

(Excerpts from the court's reasoning)

B. Whether there is motivation to apply well-known technology to the primary cited invention

(a) Whether motivation was assessed

The plaintiffs argue that, even when something is regarded as a design matter based on well-known matters, the mere fact that it is well known does not permit omission of consideration of whether obviousness can be rationalized (including whether there is motivation to apply it or any teaching away). Because the JPO decision did not make these assessments, they argue that its determination is erroneous (Part 3, 3, [Plaintiffs' Arguments], (2)A above).

In principle, affirming obviousness of the claimed invention requires motivation to combine the primary cited invention with an invention described in a secondary reference or with well-known technology. However, where the claimed invention is reached by adopting design changes or design matters accompanying the concrete application of technology to solve the primary invention's problem, adopting them is merely an exercise of the ordinary creative ability of a person skilled in the art. Obviousness should therefore be recognized even without particular motivation. As stated in (1) and (2) above, applying to the cited invention the configurations of the claimed invention relating to Differences 1 and 2 is merely an exercise of ordinary creative ability and can be regarded as a design matter; obviousness is recognized even without a showing of particular motivation for that application.

Moreover, as stated in (1) and (2), the problem addressed by the cited invention can be solved by adopting its means of solution, and there are no circumstances indicating that applying the configurations relating to Differences 1 and 2 would prevent solution of that problem. Thus, there is no teaching away from their application. The JPO decision identified the plaintiffs' teaching-away arguments and rejected them (section 6(3)B [pp. 26–27 of the decision]), and no error is found in that determination. As explained, particular motivation is

not required to recognize the obviousness of Differences 1 and 2, but the plaintiffs' arguments are examined below for completeness.

(b) Whether the technical fields are related

The plaintiffs contend that, when assessing the relationship between technical fields, each technology must not be generalized. They argue that, whereas the claimed invention concerns a multisplit air-conditioning system for buildings, the cited invention focuses on a problem peculiar to a pair-type system and concerns a two-cylinder rotary compressor. Because their specific technical fields differ, motivation to combine other technology with the cited invention to arrive at the claimed invention is extremely weak (Part 3, 3, [Plaintiffs' Arguments], (2)B above).

However, as stated in 3(2)C, the claimed invention is not limited to a multisplit system for buildings, nor does it specify the concrete structure of the medium pressurizer or the like. Further, as stated in (2), the cited invention's problem is not peculiar to a pair-type system. The plaintiffs' argument therefore cannot be accepted at the level of its premise.

Osaka District Court, 2021 (Wa) 2873 [Apparatus for Dehairing Blocks of Edible Livestock Meat] — Damages: Noncompliance with a Document-Production Order

Original Ameblo publication: 2024-10-23

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12872297200.html

Osaka District Court, 2021 (Wa) 2873 [Apparatus for Dehairing Blocks of Edible Livestock Meat]

A document-production order was issued to calculate damages under Patent Act Article 102(2), but the defendant did not produce the documents.

⇒ “Under the plaintiff's assertions, the profit margin on ten defendant machines would exceed 60%, which can hardly be called reasonable.”

⇒ The defendant's marginal profit rate was found to be approximately 31%.

★Document-production orders are rarely issued on issues concerning whether the claim limitations are satisfied.

★On damages, document-production orders are often issued when defendants do not produce documents voluntarily.

⇒ Even if the defendant further disobeys the order and refuses production, the court is authorized, but not required, to deem the plaintiff's assertions true; as this case shows, the amount of damages asserted by the plaintiff is not necessarily awarded.

IP High Court, 2022 (Gyo-Ke) 10057 and 10054 [Lamp] <Honda> — Support Requirement Satisfied

Original Ameblo publication: 2024-10-25

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12872532550.html

IP High Court, 2022 (Gyo-Ke) 10057 and 10054 [Lamp] <Honda>

In light of the common general technical knowledge that residuals exist between a linear approximation and measured data, a person skilled in the art can understand that even samples falling slightly short of the stated effect in the specification provide “approximately the desired” luminance uniformity and can solve the invention's problem.

⇒ Support requirement: satisfied

(Excerpts from the court's reasoning)

A person skilled in the art encountering the specification would recognize that …if the parameter satisfies 1.09 < y/x, the problem of suppressing graininess can be solved. On the other hand, the parameter in each invention defined by the corrected claims appropriately specifies lower and upper limits of y/x within 1.09 < y/x, and further specifies ranges of x (claims 5–8). Thus, it can be understood that the …inventions define a range in which luminance uniformity is approximately 85% or higher. …

The plaintiff argues that a person skilled in the art could not recognize from the experimental results that the problem can be solved, because Figure 7A includes samples …whose luminance uniformity does not reach 85% at y = 1.09x. However, …a person skilled in the art understands the inventions in light of the common general technical knowledge at filing that residuals exist between a linear approximation and measured data. Regarding samples 10, 13, and the like identified by the plaintiff, that knowledge permits understanding that approximately the desired luminance uniformity is obtained and the problems of the inventions can be solved.

Tokyo District Court, 2021 (Wa) 15964 [Elastoplastic Hysteretic Damper] <Shibata>

*The fact that every example had a feature was one reason for a restrictive interpretation.

"The problem … to be solved … exists where inputs from multiple directions are contemplated…. Every example described in the specification involves … inputs from multiple directions…."

⇒ Claim limitation not satisfied

(Excerpt from the court's reasoning)

…The problems addressed by the inventions arise where inputs from multiple directions, rather than a single direction, are contemplated. The specification describes the above … significance of the inventions, and every example is found to involve inputs from multiple directions that can be accommodated by adopting the configuration of Invention 1. No other part of the specification describes accommodating input from a single direction. From these descriptions and the wording of elements G and H, it is appropriate to construe the damper of Invention 1 as a damper used in portions of structures and the like where inputs from multiple directions are contemplated, receiving inputs from multiple directions at its shear portion and capable of accommodating them.

IP High Court, 2023 (Ne) 10071 [Chip Fuse] <Miyasaka>

Claim 3 was first asserted after the first-instance court disclosed its preliminary assessment.

⇒ Intended to circumvent the fourth requirement of equivalence, which had been an issue from the outset

Adding an invention under another claim of the same patent as a cause of action is not an amendment of the action, but a means of attack or defense.

⇒ Rejected as untimely

★This directly relates to the extremely important issue of the scope of res judicata!!

*The first-instance Osaka District Court, 2021 (Wa) 10032, treated the addition of the asserted basis for the claim as an amendment adding a claim and disallowed it because it would significantly delay the proceedings (Code of Civil Procedure Article 143(1), proviso, and (4)).

Cf. IP High Court, 2023 (Gyo-Ke) 10069 [Soldering Apparatus] <Hibiku Shimizu>

*The binding effect of the first judgment extends to factual findings concerning the differences!!

⇒ Perhaps it is somewhat harsh to require the petitioner who obtained a finding of invalidity of Invention 1 and the like in the first JPO decision to advance, in the prior lawsuit, arguments that the decision did not address….

⇒ Even the party that prevailed before the JPO must make alternative arguments, or the binding effect may prevent it from raising them in the second lawsuit.

Cf. IP High Court, **2005 (Gyo-Ke) 10179 [Fashion Hair-Enhancement Appliance] <Mimura>***A case upholding a patent-revocation decision after switching the primary and secondary references: “Making arguments different from the trial or revocation decision regarding common features and differences … or combinations … does not … immediately go beyond the framework of comparison with publicly known facts examined and decided in the trial or patent opposition….”

Cf. **[Article] Transcript of a Lecture by Former Judge Shiotsuki (Patent, 2011)**

Q: Where two invalidity grounds are asserted in a trial, and the decision finds Ground A established but rejects Ground B, issuing a decision of invalidity

A: “Since the two grounds for invalidity have been decided in the JPO decision, I consider that it may be possible to examine and decide both grounds in the action to set aside that decision, within the framework of the 1976 Supreme Court Grand Bench judgment.”

(Note) In the record of Judge Shiotsuki’s lecture (Patent, Vol. 64, No. 15 (2011)), the original wording of this answer is: “Since the two grounds for invalidity have been decided in the trial decision, I consider that it may be possible to examine and decide both grounds in the action to set aside that decision, within the framework of the 1976 Supreme Court Grand Bench judgment.”

IP High Court, 2023 (Gyo-Ke) 10069 [Soldering Apparatus] <Hibiku Shimizu>

Original Ameblo publication: 2024-11-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12874115556.html

IP High Court, 2023 (Gyo-Ke) 10069 [Soldering Apparatus] <Hibiku Shimizu>

*The binding effect of the first judgment extends to factual findings concerning the differences!!

⇒ Perhaps it is somewhat harsh to require the petitioner who obtained a finding of invalidity of Invention 1 and the like in the first JPO decision to advance, in the prior lawsuit, arguments that the decision did not address….

⇒ Even the party that prevailed before the JPO must make alternative arguments, or the binding effect may prevent it from raising them in the second lawsuit.

(Excerpt from the court's reasoning)

Admittedly, …the first judgment did not decide the matters the plaintiff identifies as Grounds for Cancellation 1 and 2 in this action (whether the portions corresponding to the configuration at issue among the configurations of Invention 1 and the like relating to Differences 2 or 4 constitute substantial differences)…. However, the inventive-step assessment of Invention 1 and the like based on the cited invention in Exhibit Ko 1 is a legal determination made on the basis of identification of those inventions and the cited invention, and the resulting common features and differences. …Because binding effect extends to factual findings and legal determinations necessary to derive the judgment's operative part, the first judgment's binding effect also extends to the factual findings concerning differences between Invention 1 and the like and the cited invention in Exhibit Ko 1 that formed the premise for its legal determination denying lack of inventive step…. Accordingly, when assessing inventive step based on the same cited invention in Exhibit Ko 1, the trial examiners were not permitted by the first judgment's binding effect to find different facts and make a different determination. The present trial decision, rendered in accordance with that binding effect, is lawful.

IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transfer System] <Shoji> — Relationship between Identification of the Cited Invention and Addition of New Matter

Original Ameblo publication: 2024-11-10

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12874480718.html

IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transfer System] <Shoji>

*An optional additional configuration not essential to solving the cited invention's problem may be disregarded in identifying that invention!!

⇒ Parallel to addition of new matter!?

Disclosure of the invention in the new-matter context and disclosure of the cited invention in the novelty/inventive-step context can be considered parallel. The standard in this judgment is the same as for new matter.

However, because inventive step involves the range of what is obvious, this does not mean the conclusions are the same.

*Each specifically enumerated alternative in a cited reference is disclosed.

(Excerpts from the court's reasoning)

…Although the embodiment in Cited Reference 1 can be understood as a pair-type system as described above, claim 1 specifies the compressor configuration constituting the means for solving the problem (one of the two cylinders can switch between compression and noncompression operation), but does not specify concrete configurations such as the number of indoor heat exchangers. Nor does the detailed description suggest that the problem-solving means and concrete configurations such as the number of indoor heat exchangers are inseparably linked. In light of these claim and specification statements, concrete configurations such as the number of indoor heat exchangers 270 are not essential to solving the problem but are optional additions, and the invention described in Cited Reference 1 is not found limited to a pair-type system. Accordingly, the JPO decision did not err in identifying simply “indoor heat exchanger 270,” without specifying their number or the like, based on that reference….

…

…Where primary-side refrigerants are specifically enumerated, as in Cited References 2 and 11, rather than presented in the form of a general formula, combinations of each listed refrigerant with carbon dioxide are found to be actually described in parallel. The publication therefore permits identification of a configuration expressing a concrete technical idea for a particular alternative consisting of a combination of one primary-side refrigerant and carbon dioxide…. …

IP High Court, 2023 (Gyo-Ke) 10098 [Laundry Detergent Composition] <Shoji>

*The component is of low importance.

—No particular technical significance in the numerical range

⇒ A design matter!

“A component positioned as optional … was not highly important …; the examples did not achieve better deodorizing effects than other examples …”; no “particular technical significance”

(Excerpt from the court's reasoning)

…The specification indicates that component (G), meaning “a surfactant other than component (A),” is positioned as an optional component and was not highly important. Further, for G-2, G-2′, and G-3 included in component (G) specified in Invention 1, the examples using them did not achieve superior deodorizing effects compared with other examples in the deodorizing-effect evaluation. Thus, no particular technical significance is found in specifying component (G) as general formula (I) or (II) in Invention 1. At least, examining the nonionic surfactant (component (G)) content within the range in the invention in Exhibit Ko 1 and setting it at “20–25 mass%” is found to be a design matter for a person skilled in the art.

IP High Court, 2022 (Gyo-Ke) 10003 [Method of Preventing Attachment of Marine Organisms] <Kanno>

*No motivation to combine the secondary cited invention with the primary reference to address a problem of the primary reference that the secondary cited invention has already solved

"…These are examples of the invention in Exhibit Ko 5 … and presuppose a diffuser …; a person skilled in the art would not … simply apply only the numerical values for the chlorine dioxide concentration after the conversion at issue and the hydrogen peroxide concentration in Examples 16 to 20 to the invention in Exhibit Ko 1 … without a diffuser."

⇒ Inventive step: satisfied

(Excerpt from the court's reasoning)

The invention in Exhibit Ko 5 …presupposes the problem that adding a chlorine agent in the invention in Exhibit Ko 1 generates trihalomethanes, and adopts the solution of first dispersing a hydrogen-peroxide agent at a specified concentration in an industrial seawater-cooling system and then adding a chlorine agent at a specified concentration. It also provides …regarding those specified concentrations…. Thus, the invention in Exhibit Ko 5 itself solves the above problem of the invention in Exhibit Ko 1 and presupposes use of a chlorine agent. A person skilled in the art therefore cannot be said to have motivation to replace the available-chlorine-generating agent in the invention in Exhibit Ko 1 with chlorine dioxide and additionally combine it with the invention in Exhibit Ko 5. Moreover, Exhibit Ko 5 does not contemplate adding chlorine dioxide and therefore does not disclose a particular concentration ratio for it. Accordingly, a person skilled in the art could not readily have conceived the numerical range at issue within Difference 1 by combining the invention in Exhibit Ko 1 with Exhibit Ko 5.

IP High Court, 2023 (Gyo-Ke) 10019 [Method of Treating Atopic Dermatitis by Administering an IL-4R Antagonist] <Miyasaka>

Original Ameblo publication: 2024-11-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12876631434.html

IP High Court, 2023 (Gyo-Ke) 10019 [Method of Treating Atopic Dermatitis by Administering an IL-4R Antagonist] <Miyasaka>

The only difference from the primary reference (a clinical-trial protocol) is whether it is a medicine or an investigational drug.

⇒ The Phase 2 success rate for allergic diseases is 33%.

⇒ A person skilled in the art cannot be said to understand, without waiting for the trial results, that the investigational drug is necessarily therapeutically effective.

⇒ Inventive step: satisfied

*For medical-use patents, when to file during clinical trials requires consideration in relation to the support requirement. One would like to file early and claim priority in several stages, but clinical trials last more than a year, so this is always difficult.

https://yorozuipsc.com/blog/510019

“The above mechanism of action is that mAb1, one of the antibodies at issue, binds to IL-4R and blocks IL-4 signaling. In the patients at issue who received mAb1, the clinical symptoms of atopic dermatitis improved and the biomarkers of atopic dermatitis also decreased. It is therefore clear that a person skilled in the art can understand that the other antibodies and fragments at issue—the 32 types other than mAb1, which are anti-IL-4R antagonist antibodies—also have similar functions and effects. The plaintiff’s observation that the pharmacological test results disclosed in the specification concern only mAb1 does not alter the above findings and conclusions.”

⇒ Support requirement: satisfied

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93292.pdf

IP High Court, 2023 (Gyo-Ke) 10146 [Label Insertion Apparatus] <Honda>

Original Ameblo publication: 2024-11-30

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12877133845.html

IP High Court, 2022 (Gyo-Ke) 10011 [Electrical Device Formed from Very Low Resistance Material] <Shoji>

Obtaining the Josephson effect at resistivity within the claimed numerical range contradicts common general technical knowledge at filing.

⇒ The specification or other application documents must contain test results or the like substantiating that such a phenomenon can occur.

⇒ Enablement requirement: not satisfied

(Excerpt from the court's reasoning)

"…Given that it was common general technical knowledge at the original filing date that a Josephson junction uses two conductors that are superconductors, obtaining the Josephson effect with resistivity in the above range even when the conductor's resistance is not zero is a phenomenon contrary to that knowledge. Accordingly, unless the specification and other application documents describe test results or the like substantiating that such a phenomenon can occur, a person skilled in the art would not recognize that the claimed inventions can be practiced…."

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91802.pdf

IP High Court, 2022 (Gyo-Ke) 10059 [Glass] <Kanno>

Original Ameblo publication: 2024-12-02

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12877134847.html

IP High Court, 2022 (Gyo-Ke) 10059 [Glass] <Kanno>

*A desirable numerical range was claimed.

⇒ In this case, the claimed range was selected from desirable ranges disclosed in the specification, and the support requirement was satisfied even though its endpoints did not coincide with the disclosed endpoints.

“It suffices that the upper and lower limits in the claim are values within the numerical range stated in the specification.”

*The court identified the problem addressed by the invention, which comprises physical-property and composition requirements, as distinct from the physical-property requirements themselves. It therefore held that recognition of a high probability that glass meeting the composition requirements would also meet all the physical-property requirements was unnecessary.

(*Distinguished from IP High Court, 2016 (Gyo-Ke) 10189!!)

(Excerpts from the court's reasoning)

[Claim 1] …Glass that is an oxide glass having (B) a liquidus temperature of 1140°C or lower, (C) a glass-transition temperature of 672°C or higher, (D) a refractive index nd of 1.825–1.850, and (E) an Abbe number νd of 41.5–44 …

…The upper limit “0.828” in element A⑦ is below “0.85,” the most preferred upper limit in Table 2 of paragraph [0026] of the specification, and can therefore also be called a preferred upper limit…. Similarly, the upper limit “0.50” in element A⑫ is below “0.6,” the most preferred upper limit in Table 22 of paragraph [0063], and can also be called a preferred upper limit…. The invention is found merely to claim a desirable numerical range from the range described in the specification. Thus, it cannot be said that the support requirement fails unless the claimed upper and lower limits match those in the specification; it is sufficient that the upper and lower limits are values within the disclosed numerical range. …

…If a person skilled in the art can understand that, based on the component-adjustment methods explained in the specification and starting with the reference examples, ordinary trial and error in the optical-glass field can lead to a concrete composition satisfying all elements of Invention 1, that invention falls within the scope recognized as capable of solving the problem in light of the detailed description's statements or suggestions, or common general technical knowledge at filing.

The plaintiff argues, among other things, that …some glasses meet the composition requirements but not the physical-property requirements, and that it is impossible to find a correlation between satisfaction of the two sets of requirements….

However, the invention's problems are …to reduce the proportions of Gd, Ta, and Yb in the glass composition, provide glass with excellent thermal stability, and provide glass suitable for machining, in order further to enhance the usefulness of high-refractive-index, low-dispersion glass. It seeks to solve these problems by adopting a configuration satisfying both the composition and physical-property requirements.

Accordingly, the composition and physical-property requirements cannot be said to stand in a problem-and-solution relationship. It is therefore unnecessary to recognize a

relationship in which glass defined by the composition requirements is highly likely to satisfy all physical-property requirements, including glass-transition temperature. The invention claims glass satisfying both sets of requirements; it does not state that, throughout all numerical ranges of the composition requirements, any glass satisfying them also satisfies the physical-property requirements. Any glass satisfying the composition requirements but not the physical-property requirements is simply outside the claims. Moreover, considering the numerical ranges described as preferred in the specification and the reasons for their selection, the ranges of the composition requirements cannot be found excessively broad. …

(The plaintiff also argues that the criterion stated in another IP High Court judgment [Exhibit Ko 7] should govern support here: “A person skilled in the art must recognize, from the statements or suggestions in the detailed description or common general technical knowledge at filing, that the optical glass defined by the composition requirements is highly likely to satisfy the physical-property requirements.” However, compliance with the support requirement must be determined in relation to the invention's problem. That judgment identified the problem as “providing optical glass with specified optical constants, high refractive index and high dispersion, and a small partial-dispersion ratio.” It is inappropriate to apply unchanged to this case the reasoning given as a case-specific determination concerning a different problem in a different invention.)

Original Ameblo publication: 2024-12-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12877384905.html

IP High Court, 2022 (Gyo-Ke) 10018 [Pressure-Sensitive Transfer Adhesive Tape] <Kanno>

"Configured to be capable of causing paper tearing"

⇒ Clarity: satisfied (Almost tautological!?)

"Understood as configured 'to be capable of causing paper tearing'…. Even if … the occurrence rate and conditions … are not specified …, third parties are not exposed to unforeseen loss…."

(Excerpt from the court's reasoning)

…Taking the specification and drawings together, "paper tearing" in Invention 1 can be understood as the phenomenon in which, when the adhesive layer of an adhesive product is peeled off, the surface layer of paper adheres to the adhesive and the paper ruptures in its thickness direction. The defining limitation "configured to be capable of causing paper tearing" in Invention 1 can be understood as referring, among "pressure-sensitive transfer adhesive tapes" satisfying the other elements, to those configured "to be capable of causing paper tearing"…. Thus, even if …the occurrence rate or conditions are not specified, the claims are not so unclear as to expose third parties to unforeseen loss. …There is no need to add an interpretive condition that the paper tears "in a state visible to an ordinary user."

Tokyo District Court, 2020 (Wa) 22071 [Liquid Cleansing Agent for Removing Keratin Plugs] <Kokubu>

Original Ameblo publication: 2024-12-11

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12878219145.html

Tokyo District Court, 2020 (Wa) 22071 [Liquid Cleansing Agent for Removing Keratin Plugs] <Kokubu>

*Although the problem section was amended, an abstract problem was not accepted.

⇒ Support requirement: not satisfied

"This is not affected … by the fact that, during prosecution …, an amendment deleted the wording 'made to solve the above problem.'"

(Excerpts from the court's reasoning)

…Paragraph [0006] merely states that the invention's purpose is "to provide a liquid cosmetic capable of extracting proteins," and says nothing about the presence or amount of surfactant or its effect on protein extraction. However, in the specification, [0006] and [0005] are positioned as descriptions of the "Problem to Be Solved by the Invention." Paragraph [0005] states: "Because surfactants can burden the skin and cause roughness or the like, a method using no surfactant or an extremely small amount of surfactant was sought." It is therefore reasonable to interpret the purpose in [0006] as premised on solving the prior-art problem described in [0005]. …

The invention's problem cannot be understood merely as providing a liquid cosmetic capable of extracting proteins; it is providing such a cosmetic capable of extracting proteins even without surfactant or with only a very small amount of surfactant….

IP High Court, 2021 (Gyo-Ke) 10006 [X-Ray Inspection Apparatus] <Kanno>

Original Ameblo publication: 2024-12-14

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12878638981.html

IP High Court, 2021 (Gyo-Ke) 10006 [X-Ray Inspection Apparatus] <Kanno>

*The problems of the primary and secondary references were understood abstractly and found identical.

⇒ Obvious

"Cited Reference 2 … does not disregard cost…. Even if Cited Invention 1 is an apparatus for a product-manufacturing site and Cited Reference 2 … contemplates use in medical inspection equipment, the amount spent … is not directly linked to the technical field."

⇒ Inventive step: not satisfied

(Excerpts from the court's reasoning)

The technical matters in Cited Reference 2 use substance-specific highly absorbed X-rays to inspect for drugs concealed in baggage or the human body, or contraband such as explosives and ivory. They therefore concern not only human-body inspection but also X-ray baggage inspection for hidden objects…. Thus, the technical field of Cited Invention 1, an X-ray detection apparatus inspecting foreign matter in food and the like, and the field of Cited Reference 2's technical matters, concerning medical or baggage inspection, are related as fields using X-ray inspection apparatuses…. …Cited Invention 1 and those technical matters have close relationships and commonalities in technical field, problems addressed, and functions …, providing strong motivation to combine them….

…Even if Cited Invention 1, being a foreign-matter inspection apparatus checking for metal and other foreign matter in workpieces on a conveyor path, is equipment for a product-manufacturing site, while Cited Reference 2 directly contemplates medical inspection equipment, the extent of expenditure is not directly linked to the technical field. Disregarding the nature of the products, the scale of the manufacturing site, and the products' sales channels, it cannot naturally be said that all manufacturing-site equipment need only be low-performance, that persons skilled in the art pay no attention to improving performance, or that they have no interest in technology for medical inspection equipment….

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-90649.pdf

IP High Court, 2020 (Gyo-Ke) 10134 [System for Controlling Distribution and Viewing of Digital Art over the Internet and for Image Formation] <Mori>

Original Ameblo publication: 2024-12-15

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12878750393.html

IP High Court, 2020 (Gyo-Ke) 10134 [System for Controlling Distribution and Viewing of Digital Art over the Internet and for Image Formation] <Mori>

*Different technical fields ⇒ Inventive step satisfied

(Excerpts from the court's reasoning)

…Whereas the technology in Exhibit Ko 3 concerns a peer-to-peer system …, the cited invention can perform complex tasks including content ingestion, automatic publishing, distribution, storage, and monetization, and is understood as a method that itself actively performs content ingestion, distribution, and the like. The technology in Exhibit Ko 3 and the cited invention must therefore be said to differ in technical field to a non-negligible extent. Merely because they fall within the broad field of “methods for transmitting and receiving data among transmitting clients, receiving clients, and servers,” it is difficult to find that applying the technology in Exhibit Ko 3 to the cited invention would be obvious without considering their relationships or the like at all. Nor is any other statement in Exhibit Ko 3 found to motivate or suggest applying its technology to the cited invention.

“In Exhibit Ko 2 …, display 110 is treated solely as an external device connected to … display controller 105, and there is no description … of acquiring any information…. It cannot be found that information about display quality or the like is included.”

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-90508.pdf

IP High Court, 2019 (Gyo-Ke) 10120 [Oil-Cooled Screw Compressor] <Tsuruoka>

Original Ameblo publication: 2024-12-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12878881346.html

IP High Court, 2019 (Gyo-Ke) 10120 [Oil-Cooled Screw Compressor] <Tsuruoka>

***A general problem**

***No teaching away: failure to prove the "facts" underlying the alleged teaching away**

"…Even if it bypasses …, compressor 10 is not found to become nonfunctional. Nor is there a basis for concluding that changing the configuration in this way … would substantially increase the number of liquid-pipe joints."

(Excerpts from the court's reasoning)

…A person skilled in the art would recognize that the problem of reverse thrust force (a reverse-thrust load state) arises …in screw compressors generally, and could recognize that it also arises in the invention in Exhibit Ko 1…. Thus, for that invention too, …motivation arises to provide an unpressurized path to eliminate reverse-thrust loading and solve that problem…. Accordingly, even if Exhibit Ko 1 does not directly mention the technical problem of reverse thrust force (a reverse-thrust load state) or its elimination, motivation arises to provide an unpressurized path in that invention to solve the problem….

…

The defendant argues that providing a path that does not pass through pressurizing pump 140 or cavity 134 would cause liquid supplied to thrust piston chamber 60 to bypass filter 146, allowing foreign matter …to reach that chamber and cause clogging or other problems, ultimately causing compressor 10 to malfunction; it therefore asserts …a teaching away…. However, even if the liquid supplied to thrust piston chamber 60 bypasses filter 146, most foreign matter will eventually pass through and be removed by the filter as liquid repeatedly circulates through the compressor. If necessary, the configuration can also be changed so that liquid passes through a filter before the pump, allowing both pressurized and unpressurized liquid to pass through the filter. Compressor 10 therefore cannot be found to become nonfunctional. Nor is there a basis for concluding that such a change would substantially increase the number of liquid-pipe joints outside the compressor.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-90385.pdf

IP High Court, 2020 (Gyo-Ke) 10110 [Method of Strengthening Blood Vessels] <Kanno>

IP High Court, 2020 (Gyo-Ke) 10032 [Imaging Apparatus] <Kanno>

Original Ameblo publication: 2024-12-18

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12879064177.html

IP High Court, 2020 (Gyo-Ke) 10032 [Imaging Apparatus] <Kanno>

*Claiming an effect ⇒ A difference, because the cited invention does not achieve that effect

⇒ Inventive step: satisfied

(Excerpts from the court's reasoning)

Even if the imaging apparatus is …rotated …into a state parallel to …the horizontal plane …, although use of the first and second inclinations can be read from the disclosure, it does not disclose detecting pitch-direction inclination and using it for the determination. …

The “inclination detector” that “detects” “inclination in the pitch direction” in Invention 1 can be understood as an inclination detector detecting the degree of tilt of the imaging apparatus about its horizontal axis. …By contrast, …the first and second inclinations measured in Exhibit Ko 1 do not calculate pitch-direction inclination, namely the degree of tilt about the apparatus's horizontal axis, except where that axis is parallel to the horizontal plane. …This is a difference, not a common feature.

IP High Court, 2015 (Gyo-Ke) 10095 [Fuel-Consumption Reduction Device for an Internal Combustion Engine] <Shitara>

Original Ameblo publication: 2024-12-27

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12880154027.html

IP High Court, 2015 (Gyo-Ke) 10095 [Fuel-Consumption Reduction Device for an Internal Combustion Engine] <Shitara>

*It is …common general technical knowledge …that infrared absorption bands for a water-vapor layer also exist in the …wavelength regions.

⇒ Which infrared wavelength absorption band to use to improve engine combustion efficiency is a design matter a person skilled in the art may appropriately select.

(Excerpt from the court's reasoning)

It is …common general technical knowledge in fields using infrared or near-infrared light …that infrared absorption bands for a water-vapor layer exist not only at approximately 2.4–3.4 μm, but also at approximately 1.33–1.5 μm and approximately 1.8–2.0 μm. Thus, which absorption band of infrared light to use to improve engine combustion efficiency (reduce fuel consumption) is a design matter a person skilled in the art aware of that knowledge may appropriately select. A person skilled in the art encountering Cited Reference 1 is also found to have motivation to use an absorption band at approximately 1.33–1.5 μm, namely in the near-infrared region, to improve engine combustion efficiency (reduce fuel consumption).

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-85706.pdf

IP High Court, 2014 (Gyo-Ke) 10186 [Circular Knitting of Elastic Fabric Containing Elastomeric Yarn] <Shimizu>

Original Ameblo publication: 2024-12-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12880267810.html

IP High Court, 2014 (Gyo-Ke) 10186 [Circular Knitting of Elastic Fabric Containing Elastomeric Yarn] <Shimizu>

The upper draw-ratio limit of 2.5 times in the claimed invention was not particularly high at filing.

*The cited invention uses a close value (2.7 times) for the same parameter (draw ratio).

⇒ The cited invention is not at a limiting value.

—A design matter

(Excerpt from the court's reasoning)

Assuming ordinary yarn is used, the upper draw-ratio limit of 2.5 times in the claimed invention was not particularly high at filing, regardless of yarn thickness (Exhibit Otsu 5). Indeed, Example 1 of the cited reference …selects a draw ratio of 2.7 times to achieve commercially acceptable shrinkage at 44 dtex, a decitex value within the claimed invention. Thus, there is no technical difficulty in setting a draw ratio of no more than 2.5 times, smaller than 2.7 times. Accordingly, the shrinkage envisaged by the cited invention was not a limiting value under the state of the art at filing. There is no teaching away from increasing the draw ratio while increasing the decitex value in the cited invention, and setting “no more than 2.5 times” in that case is also a design matter a person skilled in the art could readily implement.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-85181.pdf

IP High Court, 2017 (Gyo-Ke) 10075 [… Exercise Bike] <Mori>

Original Ameblo publication: 2024-12-30

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12880489765.html

IP High Court, 2017 (Gyo-Ke) 10075 [… Exercise Bike] <Mori>

*Differences 1 through 6 were held obvious.

*No new problem solved (no technical significance)

⇒ A design matter

*A limited set of alternatives is a design matter.

*Well-known technology makes it a design matter.

"Because there is no statement that a previously unknown new problem was solved …, it is a design matter."

(Excerpts from the court's reasoning)

…The specification contains no statement that adopting the configuration "a city bicycle with dragonfly-style handlebars" solves a previously unknown new problem. Making the handlebars of the exercise bike in Publication 1's invention into well-known dragonfly-style handlebars is therefore a design matter a person skilled in the art may appropriately select.

…

…For training equipment, selecting dimensions suited to the user's physique and ability is routinely done. A crank is either adjustable or not adjustable. Therefore, making the …crank in Publication 1's invention "a crank length suited to the person training" and "nonadjustable" is a design matter a person skilled in the art may appropriately select. …

…Exercise-bike saddles that are "height-adjustable" are well known …; making the saddle of Publication 1's exercise bike height-adjustable is therefore a design matter a person skilled in the art may appropriately select. …

…A "city bicycle with dragonfly-style handlebars" is well-known technology. Thus, providing the handlebars, saddle, and pedals of Publication 1's exercise bike with "a function of establishing the same riding posture and maintaining the operating feel of an actual city bicycle with dragonfly-style handlebars, excluding the perceived height differences from the rider's viewpoint" is a design matter a person skilled in the art may appropriately select. …

…For exercise bikes, which provide training through simulated bicycle riding, it is well known …to provide a gear-changing mechanism like that of an actual bicycle. …Where on the exercise bike to place the device operating that mechanism and what form it should take are design matters a person skilled in the art may appropriately select. Accordingly, providing Publication 1's exercise bike with "a gear-changing function that manually changes the pedal load through a button switch on the electronic equipment and changes the speed of movement of the current position in proportion to the changed load" is a design matter a person skilled in the art may appropriately select.

2015 (Gyo-Ke) 10200 [Press-Through Pack] <Takabe>

***Merely improving accuracy is a matter of design choice**

Even specifying ANSI grade “A” scanning accuracy is a matter of design choice.

“So long as the applied barcode can be read accurately, the degree of barcode-reading accuracy is a matter that a person skilled in the art appropriately determines.”

(Excerpt from the court's reasoning)

The space for displaying a barcode necessarily is limited … the size of the barcode display is a matter of design choice appropriately selected according to the space for displaying it, so long as its function can be ensured … and a barcode size of “nominally 0.169 mm/module” for barcodes used on prescription drugs … is conventional, well-known technology …. Moreover, it goes without saying that barcodes should be easy to read. So long as a barcode reader can accurately read the applied barcode, the degree of barcode-reading accuracy is a matter that a person skilled in the art appropriately determines. Accordingly, … achieving the highest quality, “A,” in the “overall evaluation prescribed by the ANSI standard when scanned ten times with a barcode verifier” is merely a matter of design choice ….

[Article] The Defense of Abuse of Trademark Rights: Internal Disputes within Organizations under the Iemoto System and among Noren-Wake Businesses (Mio Ishii, 2023)

Original Ameblo publication: 2025-01-03

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12881039113.html

HP: https://www.takaishihideki.com/single-post/ameblo-12881039113-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12881039113-ja

[Article] The Defense of Abuse of Trademark Rights: Internal Disputes within Organizations under the Iemoto System and among Noren-Wake Businesses (Mio Ishii, Intellectual Property Law and Policy Journal, Vol. 67 (2023))

1. There can be only one iemoto (head of a traditional school). This is a legal status carrying authority to direct and represent the organization.

⇒ When the iemoto dies without designating a successor, a successor has not been recognized on circumstantial facts alone. In the Shinmakoto-kai case, neither adopted child was recognized as the successor.

(In such a case, even if one party acquires trademark rights, exercising those rights against the other constitutes an abuse of rights.)

2. Noren-wake (allowing a branch business to operate under the original business's name)

⇒ Unlike designation of a successor under the iemoto system, a license may be recognized by implication. Even if one noren-wake business acquires trademark rights, exercising those rights against other legitimate noren-wake businesses often constitutes an abuse of rights.

(However, in the appellate judgment in the Morihan case, the defendant began using the mark “Morihan Sohonpo.” Because it was not identical under generally accepted social norms to “Morihan,” which had long been used, the court did not allow the abuse-of-rights defense for “Morihan Sohonpo.” In that sense, acquiring trademark rights first has some significance.)

3. In principle, rights do not lapse merely because they have not been exercised for a long time, but exercising them may constitute an abuse of rights in the following two types of cases.

(1) The defendant's mark has become famous.

(2) There is a special relationship between the plaintiff and defendant.

IP High Court, 2015 (Gyo-Ke) 10205 [Vehicle Roof Antenna] <Shitara> — Orientation is a matter of design choice

Original Ameblo publication: 2025-01-03

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12881046800.html

HP: https://www.takaishihideki.com/single-post/ameblo-12881046800-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12881046800-ja

2015 (Gyo-Ke) 10205 [Vehicle Roof Antenna] <Shitara>

*Orientation is a matter of design choice

"The orientation in which AM antenna 22, installed in the internal space in the projecting fin of fin-shaped cover 21, is installed … can be said to be a matter of design choice that can be appropriately determined according to the reception sensitivity of the car radio, the dimensions of the internal space, and other considerations."

*A case in which a configuration (positional relationship) could be understood by reading the drawings in the cited reference together with its specification.

(Excerpts from the court's reasoning)

…A person skilled in the art … can design a shorter overall length by adjusting the coil pitch, coil diameter, number of turns, and so on. Thus, even if AM antenna 22 is installed with its axial direction perpendicular to signal amplification circuit board 23, it is possible to configure it so as to avoid problems such as inability to fit inside fin-shaped cover 21 or interference with signal amplification circuit board 23 …. Furthermore, whether AM antenna 22, installed in the internal space in the projecting fin of fin-shaped cover 21, is installed along the upper portion (the invention in Exhibit Ko 1, Figure 2), with its axial direction perpendicular to signal amplification circuit board 23 (Invention 1 at issue, Exhibit Ko 12, Figure 2), or in another orientation is a matter of design choice that can be appropriately determined according to the reception sensitivity of the car radio, the dimensions of the internal space, and other considerations …. Moreover, holding a coil antenna with a retaining cylinder is well-known technology. Accordingly, when installing the "AM antenna" in the invention in Exhibit Ko 1 with its axial direction perpendicular to the signal amplification circuit board, there is no particular difficulty in configuring it to be held by a retaining cylinder projecting from the upper surface of the fin-shaped cover. The configuration of Invention 1 relating to Difference 3 is therefore found to be one that a person skilled in the art could readily have conceived.

Figure 1 of the Ko 1 reference shows an external perspective view of an embodiment of the invention in Exhibit Ko 1. In that drawing, "metal base 25" is drawn with solid lines surrounding the lower portion of "fin-shaped cover 21" and is shown with some thickness. It can therefore be understood that "metal base 25" is positioned below the periphery of the bottom opening of "fin-shaped cover 21." Furthermore, the "Best Mode for Carrying Out the Invention" in the Ko 1 reference states that "metal base 25 is attached to the bottom of fin-type antenna device 20" ([0013]) and that fin-type antenna device 20 is formed in combination with "fin-shaped cover 21" positioned above "metal base 25" ([0009], Figure 2). These descriptions also make it natural to understand that "metal base 25" is positioned below the periphery of the bottom opening constituting the bottom of "fin-shaped cover 21."

IP High Court, 2008 (Gyo-Ke) 10274 [Antibodies against HCV] <Iimura> — Enablement across the full claim scope is necessary

Original Ameblo publication: 2025-01-05

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12881247875.html

HP: https://www.takaishihideki.com/single-post/ameblo-12881247875-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12881247875-ja

2008 (Gyo-Ke) 10274 [Antibodies against HCV] <Iimura>

***Enablement is required across the full scope of the claims.**

(The general principle is the same for biotechnology/antibodies!)

"The degree of disclosure in the specification supporting the public disclosure … should not be understood as sufficient merely because it enables only a part of 'the product.'"

(Excerpts from the court's reasoning)

The plaintiff argues … that whether the claimed invention is enabled should properly be understood as satisfied when the specification describes how to produce and use one arbitrarily selected part (here, a polypeptide), and that the trial decision erred in requiring that they be obtained "exhaustively." …

Considering that the patent system, in exchange for public disclosure, permits the holder to exclusively practice "the product" recited in the claims in the case of a product invention, it is natural that the specification supporting that disclosure must describe the invention sufficiently to enable the entirety of "the product." It should not be understood as sufficient merely because the disclosure enables only a part of "the product." …

The plaintiff argues that, in biotechnology-related fields, the current enablement requirement does not demand that all embodiments be obtained exhaustively, and that imposing such a demand would produce harsh consequences for applicants, ultimately contrary to the Patent Act's purpose of encouraging inventions, and would be markedly unreasonable. Certainly, in biotechnology-related fields, even where the detailed description of the invention does not specifically describe every embodiment having a "deletion, insertion or substitution," it may be permissible for the claims to identify a particular amino acid sequence and additionally encompass cases in which "one or several [amino acids] are deleted, inserted or substituted," or the like. …However, even where claims in that form are permitted, …if circumstances are found that allow a modified polypeptide having activity similar to that of the original polypeptide to be readily obtained, it is appropriate to regard the so-called enablement requirement as satisfied. But …where practicing the entirety of the technology falling within the claims would require trial and error or ingenuity exceeding what can be expected of a person skilled in the art, the so-called enablement requirement must be regarded as not satisfied.

[Article/Unfair Competition Prevention Act] The Validity and Scope of Contracts Prohibiting the Use of Know-How after Leaving Employment (Takuto Hirasawa)

Original Ameblo publication: 2025-01-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12881495720.html

HP: https://www.takaishihideki.com/single-post/ameblo-12881495720-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12881495720-ja

[Article/Unfair Competition Prevention Act] The Validity and Scope of Contracts Prohibiting the Use of Know-How after Leaving Employment (Takuto Hirasawa, Intellectual Property Law and Policy Journal, Vol. 31 (2010))

Osaka High Court, 2009 (Ne) 1456: the rights holder lost on reversal.

⇒ Of the appellee's technologies, the portions used by the appellants “include, to a substantial extent, existing technologies or technologies that a practitioner of eyebrow beauty treatments could readily acquire or master, and the appellee cannot secure exclusive rights in those portions alone.”

To the same effect: Tokyo District Court, 2006 (Wa) 15404.

“It is appropriate to construe the noncompetition agreement at issue as prohibiting only business conducted using confidential business information held by the plaintiff. Business conducted using knowledge, experience and the like concerning routine, general operations acquired by the defendant while working for the plaintiff, or using knowledge, experience and the like held by the defendant before the contract at issue, is not subject to the noncompetition obligation.”

The article also introduces numerous other court decisions and considers the limits of post-employment noncompetition obligations. For example, one decision limited the period for which an injunction based on a noncompetition obligation could be granted to two years (Tokyo District Court, 2006 (Wa) 22955, the “Total Service” case).

[Article] The Limits of the Concepts of “Publicly” and “the Public” under Copyright Law: The Happy Science Prayer Scripture Case (Takuto Hirasawa, 2015)

Original Ameblo publication: 2025-01-13

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12882328852.html

HP: https://www.takaishihideki.com/single-post/ameblo-12882328852-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12882328852-ja

[Article] The Limits of the Concepts of “Publicly” and “the Public” under Copyright Law: The Happy Science Prayer Scripture Case (Takuto Hirasawa, Intellectual Property Law and Policy Journal, Vol. 46 (2015))

Right to prohibit recitation: “The author has the exclusive right to recite the author's literary work publicly.” (Copyright Act, Article 24)

Copyright Act, Article 2(5): “the public” includes a large number of specified persons.

⇒ Cases often concern playing recordings of recitations of works, but this case (Tokyo District Court, 2012 (Wa) 24933) concerned the recitation itself.

The issue was whether the recitation to persons who visited the defendant after being introduced by E could be said to have been made “publicly.”

⇒ “Whether the use of the work is directed to the public should appropriately be determined in accordance with generally accepted social norms, taking into account not only the strength of preexisting personal ties but also the type and nature of the work, the manner of use, and other factors.”

• The court found that there were five or six people and held that this was not a “large number.”

• The court held that the persons were not “unspecified”: their number did not increase or decrease under arbitrary conditions; the money was not consideration for the prayers; and the readings occurred at most ten times, not regularly or continuously.

⇒ In conclusion, the “publicly” requirement was not satisfied.

*These factual findings also appear in the context of rejecting the plaintiff's arguments, and their relevance to applying the “unspecified” criterion is unclear.

https://www.juris.hokudai.ac.jp/riilp/wp-content/uploads/2015/06/f8b597eaecaf77a4b0a1ee3a9d424afa.pdf

[Article] Whether Genuine Goods May Continue to Be Imported in Parallel After Assignment of Trademark Rights: The Converse Parallel Import Case (Yoshiyuki Tamura)

Original Ameblo publication: 2025-01-13

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12882329007.html

HP: https://www.takaishihideki.com/single-post/ameblo-12882329007-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12882329007-ja

[Article] Whether Genuine Goods May Continue to Be Imported in Parallel After Assignment of Trademark Rights: The Converse Parallel Import Case (Yoshiyuki Tamura, Intellectual Property Law and Policy Journal, Vol. 30 (2010))

⇒ IP High Court, 2009 (Ne) 10058 <Appeal>, and Tokyo District Court, 2006 (Wa) 26725 and 2007 (Wa) 15580: both found trademark infringement (neither the parallel-import defense nor the abuse-of-rights defense was established).

(1) The defendant was parallel-importing genuine goods of Converse, which held the U.S. trademark rights.

(2) Converse assigned its Japanese trademark rights to Itochu Corporation, which sued the defendant.

⇒ Because “identity of the trademark proprietors” and “quality control” were not satisfied, the Fred Perry parallel-import defense failed (as did the abuse-of-rights defense).

(3) Although the defendant had been parallel-importing genuine goods, the change of trademark owner turned this into trademark infringement!!

*In the Tokyo District Court's December 7, 1984 [LACOSTE] case, the court recognized a common source by following a chain consisting of a capital relationship between the trademark owner and the licensor and a licensing relationship between the licensor and the overseas distributor.

⇒ The author's view is that the Converse case, too, should still have been treated as noninfringing parallel imports of genuine goods, because Itochu had held 5% of the shares of the new Converse, and the brand was still recognized in Japan as that of the former trademark owner, Converse.

The Tokyo District Court's January 18, 1999 [ellesse] case, by contrast, rejected parallel imports of genuine goods in circumstances where the Japanese and Korean trademark rights had originally belonged to one person, but only the Japanese rights were assigned, there was no capital relationship, and quality differed, making it difficult to regard them as one group.

[Trademark] 2010 (Gyo-Ke) 10101

Mark at issue: “Kitto, Sakura Saku yo” (Surely, the cherry blossoms will bloom for you) + a cherry-blossom-petal design

Cited mark: “Sakura Saku” (Cherry blossoms bloom)

Appearance: significantly different

Pronunciation: quite similar

Concept: the cited mark means “cherry blossoms bloom” or “passed an examination,” while the mark at issue conveys a message to examination candidates and the like; the concepts therefore differ to some degree.

⇒ Article 4(1)(xi): dissimilar

[Article/Patents] What Does “So as to Enable Use” in the Enablement Requirement Mean? (Atsushi Nagano, Intellectual Property Management, 2024)

Original Ameblo publication: 2025-01-27

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12884026476.html

HP: https://www.takaishihideki.com/single-post/ameblo-12884026476-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12884026476-ja

[Article/Patents] What Does “So as to Enable Use” in the Enablement Requirement Mean? (Atsushi Nagano, Intellectual Property Management, Vol. 74, No. 11, 2024)

Court decisions are divided on whether “so as to enable use” under the enablement requirement should be construed to mean enabling use in a manner that solves the problem addressed by the invention.

Example 11 in the Examination Handbook adopts the view that the functions and effects need not be achieved.

Looking at decisions from 2010 through 2024, 27 adopt the view that functions and effects are not required, while 15 require them.

*However, many decisions adopting the view that functions and effects are required ultimately found the enablement requirement satisfied, and some decisions adopting the view that functions and effects are not required found a violation of the support requirement. Thus, this issue was decisive to the ultimate patentability outcome in relatively few cases.

IP High Court, 2023 (Gyo-Ke) 10107 [Induction Heating Coil Unit] <Hibiku Shimizu>

Original Ameblo publication: 2025-01-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12884147129.html

HP: https://www.takaishihideki.com/single-post/ameblo-12884147129-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12884147129-ja

2023 (Gyo-Ke) 10107 [Induction Heating Coil Unit] <Hibiku Shimizu>

“From the principle of induction heating … electrically insulating nonmagnetic materials … have the property of allowing magnetic flux to pass through them … and it was well known that ceramics and resins were such materials …. …Selecting … well-known ceramics or resins as electrically insulating nonmagnetic materials … that allow magnetic flux to pass through … could readily have been conceived.”

The patentee also argued, in identifying the gist of the invention, that the entire case consisted of electrically insulating ceramic or resin, but that argument was rejected. (This point could presumably have been addressed by correction.)

[U.S.] November 2023, CAFC, Actelion v. Mylan, 85 F.4th 1167

The issue was construction of “a pH of 13 or higher.”

“A pH greater than 11” had been narrowed to secure nonobviousness.

Original judgment: “pH 13” encompasses 12.5–13.4.

This judgment: the prosecution history merely distinguished pH 12; extrinsic evidence is important.

⇒ On remand, the federal district court (1:20-cv-110, D.I. 239) construed the term as “a pH of 12.98 or higher” and found the limitation not satisfied.

https://www.finnegan.com/a/web/wZSb7oZT8Kiz2EnxQd2jVd/2024_08_1011a-battle-of-what-a-ph-of-13-or-higher-means_jipa_ck.pdf

2023 (Gyo-Ke) 10053 [Pellicle Film] <Miyasaka>

*Rough arguments that the cited reference necessarily satisfies the condition, or that it would ordinarily do so, were rejected.

“Merely because the cited invention … has in-plane orientation … does not justify finding that it necessarily satisfies the RB-at-least-0.4 limitation …. Nor are there specific allegations or evidence identifying … the ordinary conception ….”

⇒ Inventive step: satisfied

(Excerpt from the court's reasoning)

The mere fact that the CNT bundles of Cited Invention 1 have in-plane orientation does not justify finding that they necessarily satisfy the RB-at-least-0.4 limitation. …There are no allegations or evidence specifically identifying the method of manufacturing the thin-film free-standing disordered SWCNT sheet that the defendant says was “manufactured based on an ordinary conception, using SWCNTs having ordinary properties and an ordinarily used process,” or the “film thickness, bundle diameter and self-supporting properties” of that sheet. Accordingly, the nature of the “thin-film free-standing disordered SWCNT sheet considerably more similar to Example 1 than to Comparative Example 1” is also unclear …. On the contrary, …the CNT free-standing films … prepared by the plaintiffs using the method described in Cited Reference 2 had RB values of −0.38 and −0.26 respectively, whereas the CNT free-standing film manufactured when the invention at issue was completed had a value of 1.04. It therefore cannot be said that a thin-film free-standing disordered SWCNT sheet necessarily satisfies the RB-at-least-0.4 limitation.

HP: https://www.takaishihideki.com/single-post/ameblo-12885143862-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12885143862-ja

Osaka District Court, 2022 (Wa) 9112 and 11173 [Leak-Prevention Sealing Material] <Matsuami>

*The parameter/numerical value cannot be identified from the accused product. ⇒ Limitation not satisfied

The yarn cross sections reported from the image analysis are irregular and lack a circular or nearly circular shape, and it is difficult to identify anything that could be called a “diameter” from those images. … Satisfaction of claim element 1C cannot be said to have been proved ….

⇒ Limitation not satisfied

(Excerpts from the court's reasoning)

The plaintiff's … measurement involved dripping adhesive onto the sealing material of the defendant's product and allowing it to penetrate; after drying, fixing it with masking tape; placing a metal ruler against the sealing material perpendicular to the alignment direction of the pile yarns; cutting it with a single slice of a razor blade used as a cutting jig along the ruler; imaging the cross section; and analyzing the image to determine the cross-sectional areas of the weft and pile yarns. …

However, …claim element 1C concerns the relative sizes of the yarn “diameters.” Using cross-sectional area to compare yarn thickness is contrary to the unambiguous meaning of the wording and is also inconsistent with the common general technical knowledge of a person skilled in the art discussed above …. …Moreover, looking at the specific measurement means as well, the measurement is performed after processing and destroying the defendant's product, and thus differs in its premise even from what the plaintiff itself calls “measurement in the product state” …. In addition, the cutting method does not guarantee an accurately perpendicular cut relative to the fiber direction, and appears to take no account of changes in cross-sectional area arising from differences in cutting angle or location, raising doubts about control of measurement conditions. In the image analysis as well, it can be seen that the “cross-sectional area” may differ depending on how the outline of the yarn (and its constituent fibers) is identified, whether voids are included, and other factors. …It must therefore be said that neither the image-creation process nor the image analysis ensures accurate and reasonable measurement. Further, the yarn cross sections reported from the image analysis (outlines including voids) are irregular and lack a circular or nearly circular shape, and it is difficult to identify anything that could be called a “diameter” from those images. Accordingly, … satisfaction of claim element 1C cannot be said to have been proved ….

[U.S.] December 2021, CAFC, AstraZeneca v. Mylan

*Construction of the claim term “0.001% w/w”: the original judgment construed it as expressed to one significant figure (0.0005%–0.0014%).

⇒ Limitation satisfied

This judgment construed it as “0.00095%–0.00104%,” citing, among other reasons, the prosecution history of narrowing “about 0.0005 to about 0.05% w/w” to “0.001%” and deleting “about.”

⇒ The infringement judgment was vacated and the case remanded. The appellate court did not finally determine noninfringement.

The Claim Scope Indicated by Digits after the Decimal Point Is Strongly Influenced by Intrinsic Evidence — Open Legal Community

IP High Court, 2023 (Gyo-Ke) 10110 [Intraoral OCT with Color Texture (Method)] <Honda>

Original Ameblo publication: 2025-02-06

2023 (Gyo-Ke) 10098 [Laundry Detergent Composition] <Shoji>

*The component has low importance; the numerical range has no particular technical significance ⇒ A matter of design choice

“According to the specification, component (G), meaning a ‘surfactant other than component (A),’ was an optional component … and was not highly important.”

(Excerpt from the court's reasoning)

…According to the specification, component (G), meaning a “surfactant other than component (A),” was an optional component and was not highly important. Moreover, as to G-2, G-2′ and G-3 included within component (G) specified in Invention 1, the examples using these components did not achieve superior deodorizing effects compared with the other examples in the deodorizing-effect evaluation at issue. Thus, specifying component (G) by general formula (I) or general formula (II) in Invention 1 is not found to have any particular technical significance. At least, examining the content of the nonionic surfactant (component (G)) within the content range of the invention in Exhibit Ko 1 and setting it at “20–25% by mass” is found to be a matter of design choice for a person skilled in the art.

[Article/U.S.] Research on Exceptions to Infringement of U.S. Process Patents (JIPA's 1st International Affairs Committee, Intellectual Property Management, Vol. 74, No. 8, 2024)

35 U.S.C. § 271(g)

= Importing into the United States, without authority and during the patent term, a product made by a process patented in the United States constitutes patent infringement.

Exceptions: (1) materially changed by subsequent processes; (2) becomes a trivial and nonessential component of another product.

*Guidance on the “materially changed” exception under § 271(g)(1): the two-phase test

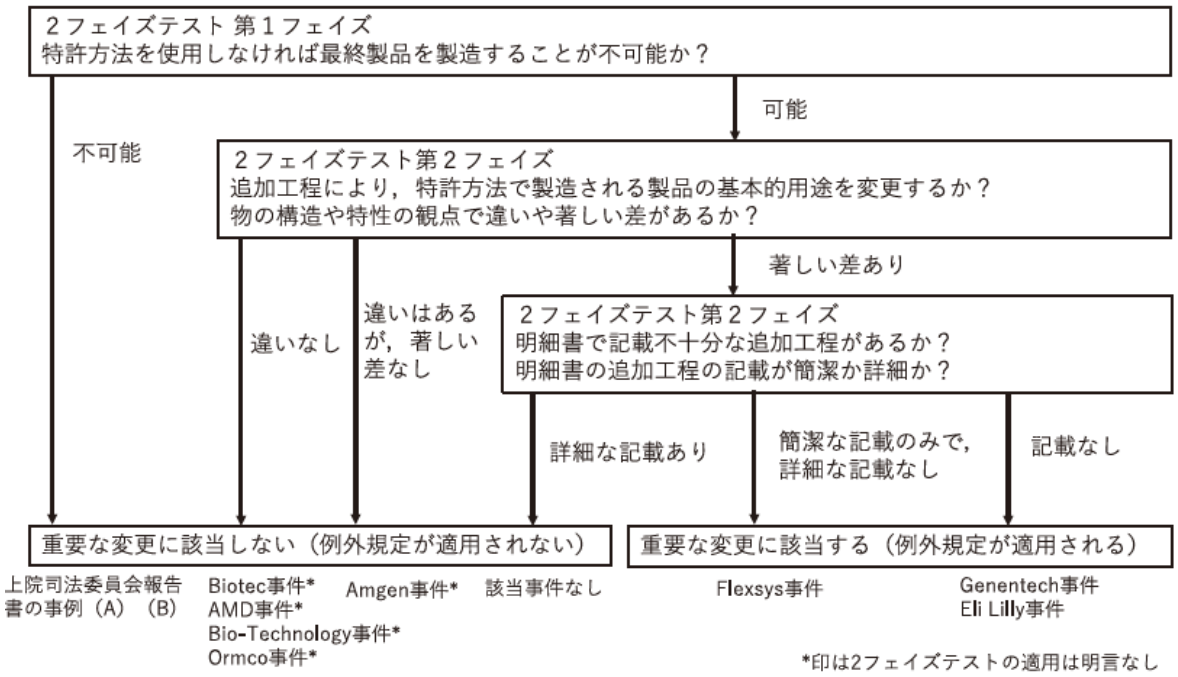

図１　２フェイズテストのガイダンスに沿った重要な変更について判断された事件の分類

English translation of Figure 1 — Classification of Cases Under the Two-Phase Test for Material Change

The figure concerns the “materially changed by subsequent processes” exception in 35 U.S.C. § 271(g)(1).

Phase 1

Is it impossible to manufacture the final product without using the patented process? If manufacture is impossible, the result is “no material change,” and the exception does not apply. If manufacture is possible, proceed to Phase 2.

Phase 2

Does subsequent processing change the basic use of the product made by the patented process? Is there a difference, or a marked difference, in the product's structure or properties?

If there is no difference, or there is a difference but it is not marked, the result is "no material change," and the exception does not apply. If there is a marked difference, continue with the following questions in Phase 2.

Are any additional processing steps insufficiently described in the specification? Is the specification's description of the additional processing steps brief or detailed?

Route in the figure	**Result under the material-change exception**	**Examples and cases classified in the figure**
Phase 1: Manufacture without the patented process is impossible.	No material change; the exception does not apply.	Examples (A) and (B) in the Senate Judiciary Committee Report.
Phase 2: No difference.	No material change; the exception does not apply.	Biotec*; AMD*; Bio-Technology*; Ormco*.
Phase 2: There is a difference, but it is not marked.	No material change; the exception does not apply.	Amgen*.
Phase 2: A marked difference; the additional processing steps are described in detail in the specification.	No material change; the exception does not apply.	No corresponding case.
Phase 2: A marked difference; the specification provides only a brief description, with no detailed description.	Material change; the exception applies.	Flexsys.
Phase 2: A marked difference; no description in the specification.	Material change; the exception applies.	Genentech; Eli Lilly.

* The decision does not expressly state that the two-phase test was applied.

Figure 1: Classification of cases in which material change was assessed according to the guidance of the two-phase test. Source: 1st International Affairs Committee, "Research on Exceptions to Infringement of U.S. Process Patents," Intellectual Property Management, Vol. 74, No. 8 (2024), p. 965.

Osaka District Court, 2022 (Wa) 2058 [Floor Opening Cover] <Takemiya> — Only the third requirement under the doctrine of equivalents was not satisfied!!

Original Ameblo publication: 2025-02-21

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12887242987.html

Osaka District Court, 2022 (Wa) 2058 [Floor Opening Cover] <Takemiya>

*Only the third requirement of the doctrine of equivalents was rejected!! (Second requirement satisfied)

(Note) The court stated that, in view of the circumstances of the case, it would examine the second and third requirements (judgment, p. 12, line 16). It found the second requirement satisfied and the third requirement not satisfied, and did not decide the first, fourth or fifth requirements.

"There is no evidence … that would establish that a person skilled in the art could readily replace the 'screw hole' configuration of Invention 1 with the proposed configuration despite the resulting reduction in fastening strength …. Accordingly, the third requirement for infringement by equivalence cannot be recognized."

(Excerpts from the court's reasoning)

Invention 1 produces the functions and effects of preventing level differences and rattling by screwing screws into "screw holes" formed on the rear surface of the cover frame to secure the cover surface plate and cover base plate in close contact. In contrast, in the "cover (flooring specification)," a cover-frame assist screw is tightened into the space formed by combining the cover-frame assist-screw arcuate portion provided in the cover frame of Defendant Product 1 with the corresponding arcuate portion of the back cover, securing the back cover and flooring material in close contact and preventing level differences and rattling. In this respect it produces the same functions and effects as Invention 1, so the second requirement for infringement by equivalence is recognized.

On the other hand, it is understood to be common general technical knowledge that forming the space into which a screw is tightened from a single member achieves stronger screw fastening (fixing force) than forming it from multiple members. There is no sufficient evidence establishing that a person skilled in the art could readily replace the "screw hole" configuration of Invention 1 with the above configuration of Defendant Product 1, even though that replacement would be expected to reduce fastening strength. Accordingly, the third requirement for infringement by equivalence cannot be recognized.

Osaka District Court, 1991 (Wa) 585 [Method of Manufacturing Anchors]

Original Ameblo publication: 2025-02-26

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12887859081.html

Osaka District Court, 1991 (Wa) 585 [Method of Manufacturing Anchors]

*The contract was terminated because of defects in prototypes, but repeated improvements led to completion of Product Ha.

⇒ Preparation for a business: established

⇒ Prior-use right: established

“The defendant's method differs in using an eccentric rotary press, but the patented invention … places no limitation on the tool used for caulking … within the same technical concept.”

Osaka District Court judgment of July 11, 1995 (1991 (Wa) No. 585, claim for an injunction against manufacture and sale based on patent rights, etc.)

Prior-use right recognized: yes

Subject: method of manufacturing anchors (patent right)

[Facts]

• April 1977: The defendant was established as a stock company for the purpose of designing, manufacturing and selling various anchors

and related activities.

• Around 1978–1979: As an anchor for foamed concrete, the defendant began manufacturing a type inserted into a drilled hole in foamed concrete,

whose leg portions at the tip spread like an umbrella when a nut is tightened

(trade name “Ever Catch”), and began selling it to Seiwa Shoji Co., Ltd. and others engaged in

selling and brokering industrial fasteners.

• Summer 1983: At the time, among anchors whose leg pieces expand when driven into foamed concrete,

the prevalent type consisted of two or three overlapping leg pieces welded together at their heads. However, their appearance

was not very good, so the defendant's representative considered improvements. Referring to the generally practiced method of pressing metal parts to join them to other

parts, he conceived the idea of making an anchor by pressing the heads of leg pieces inserted into a ring.

To realize this structure,

he asked Kazutaka Yoshida, doing business as Yoshida Ironworks, to bundle three iron leg pieces and make an anchor by

crushing their heads under pressure. Shortly thereafter, Kazutaka Yoshida

bundled three iron leg pieces, interference-fitted a washer (ring) around them, removed the drill from a drill press

(a machine that drills holes in metal and other materials by rotating a drill and pressing down from above),

and replaced it with a head having a recess at its tip. While rotating that head, he pressed the projecting portions of the leg pieces,

plastically deforming them to join the leg pieces to each other and to the ring.

By this method (hereinafter the “prior-use method”), he realized the defendant's representative's idea

and taught it to him. Based on the prior-use method, the defendant ordered dies for the leg pieces from Sanei Ironworks Ltd.

and had subcontractors, including Yasuo Nii, who operated an ironworks, begin manufacturing anchors

(at this stage, Product Ni, with neither support projections nor bulging portions on the leg pieces).

• Second half of 1983: The defendant presented samples of anchors manufactured using the prior-use method to the above Seiwa Shoji Co., Ltd.

and solicited sales. After confirming that the samples were usable in practice,

Seiwa Shoji marketed them to Densan Kogyo Co., Ltd. (current trade name: JEFCOM Co., Ltd.).

Densan Kogyo confirmed their practical usability and decided to purchase them.

An agreement was reached between Seiwa Shoji and the defendant for Seiwa Shoji to purchase the anchors

from the defendant on a continuing basis.

• Around April 1984: To strengthen its production system, the defendant supplied Yoshio Toyoshima, doing business as Toyoshima Ironworks,

with a head, rings and leg pieces like those described above and asked him to process the anchors.

Yoshio Toyoshima accepted.

• April–September 1984: Yoshio Toyoshima processed a total of 2,215 anchors.

• Around May 1984: To finalize the product, Seiwa Shoji requested final manufacturing drawings from the defendant,

and the defendant submitted drawings.

• May 11, 1984: Yoshihiko Kusumi, the person in charge at Seiwa Shoji, approved the final drawings. Shortly thereafter,

Seiwa Shoji ordered 100,000 anchors in each of the three principal sizes,

300,000 in total, from the defendant, with delivery promised three months later. The defendant, however,

was unable to deliver by the deadline, so approximately one month to forty days after that deadline,

Seiwa Shoji terminated the anchor sales contract.

● Filing date: November 29, 1984

• Around the end of 1985: Because the above anchors lacked both bulging portions and support projections and had problems, the defendant made repeated improvements.

Ultimately, it decided to provide support projections on the leg pieces below the desired ring-fixing position,

and made recesses in the die for manufacturing leg pieces with bulging portions to form those support projections. However,

the recesses were placed incorrectly, so in the anchors manufactured with that die (Product I),

the ring was not fixed at the proper position. Another recess was therefore added at the correct position in the die,

forming support projections on the leg pieces where the ring should be fixed (Product Ha). As a result,

anchor manufacture proceeded smoothly, and the defendant began selling anchors on a full scale through Osaka Tohiuke Seisakusho.

Subsequently, the defendant made a new die

and began manufacturing and selling anchors with support projections at the proper ring-fixing position on the leg pieces

(Product Ro).

[Court's reasoning]

“III. Issue 3 (Whether the defendant has a prior-use right in relation to the patent at issue)

1. According to the evidence (Exhibits Otsu 4, 6, 7-1 through 7-16, 8-1 through 8-5, 9 through 12, 15,

18-1 through 18-3, 19 through 24, and 26; witnesses Yoshihiko Kusumi, Kazutaka Yoshida and Yoshio Toyoshima;

and the defendant's representative) and the entire purport of oral argument, the following facts are found.

(1) The defendant is a stock company established in April 1977 for the purpose of designing, manufacturing and selling various anchors and related activities.

From around 1978–1979, it manufactured anchors for foamed concrete that are inserted into a drilled hole in foamed concrete

and whose leg portions at the tip spread like an umbrella when a nut is tightened (trade name “Ever Catch”),

and sold them to Seiwa Shoji Co., Ltd. and others engaged in selling and brokering industrial fasteners.

In 1983, among anchors whose leg pieces expand when driven into foamed concrete,

the prevalent type consisted of two or three overlapping leg pieces welded together at their heads. Their appearance was not very good,

so the defendant's representative was considering improvements. In the summer of that year, referring to the generally practiced method

of pressing metal parts to join them to other parts, he conceived the idea of making anchors

by pressing the heads of leg pieces inserted into a ring. To realize this idea, he asked Kazutaka Yoshida, doing business as Yoshida Ironworks,

to bundle three iron leg pieces and make an anchor by crushing their heads under pressure.

(2) Shortly thereafter, Kazutaka Yoshida bundled three iron leg pieces, interference-fitted a washer (ring) around them,

removed the drill from a drill press (a machine that drills holes in metal and other materials by rotating a drill and pressing down from above),

and replaced it with a head having a recess at its tip. While slowly rotating that head, he used it to press the projecting portions of the leg pieces,

plastically deforming those portions to join the leg pieces to each other and to the ring. By this method (hereinafter the “prior-use method”),

he realized the defendant's representative's idea and taught it to him. Based on the prior-use method, the defendant ordered leg-piece dies from Sanei Ironworks Ltd.

and had subcontractors, including Yasuo Nii, who operated an ironworks, begin manufacturing anchors.

(3) In the second half of 1983, the defendant presented samples of anchors manufactured using the prior-use method to the above Seiwa Shoji Co., Ltd.

and solicited sales. After confirming that the samples were usable in practice, Seiwa Shoji

marketed them to Densan Kogyo Co., Ltd. (current trade name: JEFCOM Co., Ltd.). Densan Kogyo likewise

confirmed their practical usability and decided to purchase them. Consequently, an agreement was reached between Seiwa Shoji

and the defendant for Seiwa Shoji to purchase the anchors from the defendant on a continuing basis.

In response, to strengthen its production system, around April 1984 the defendant also asked Yoshio Toyoshima, doing business as Toyoshima Ironworks,

to process the anchors, providing him with a head, rings and leg pieces like those described above. Judging from the processing quantity and fees,

it was an extremely small job, but Yoshio Toyoshima was impressed by the defendant's representative's enthusiasm and accepted. Yoshio Toyoshima

processed a total of 2,215 anchors from April through September of that year (at ¥3.2 each, totaling ¥7,088)

(the delivery slips issued in Toyoshima Ironworks' name to the defendant [Exhibits Otsu 7-1 through 7-16] were in practice filled out by the defendant's representative

so as not to trouble Yoshio Toyoshima. Further, because the defendant lost the receipts for these processing fees,

around April 1991, when the defendant was to undergo a tax audit, Yoshio Toyoshima reissued them at the defendant's representative's request

[Exhibits Otsu 8-1 through 8-5].).

(4) Seiwa Shoji requested final manufacturing drawings from the defendant to finalize the product.

Around May 1984, the defendant submitted the drawings in Exhibit Otsu 4 (dated April 5 of that year; trade name “Sun Nail”),

and on May 11 Yoshihiko Kusumi, Seiwa Shoji's person in charge, approved them. The drawings show three leg pieces bundled together

to the left (toward the anchor tip) of “C,” apparently the ring, while anchor head E is shown to the right of “C”

(toward the anchor head). E's diameter is larger than the diameter of the three bundled leg pieces,

and the lower left of the drawing states: ‘Pass the head portion “E” through “C” and caulk it.’ (Thus, it can be understood

that three leg pieces are bundled together, a ring fitted around them, and their projecting head portions pressed by caulking and deformed

so that they spread outward.)

Shortly after submission of the final drawings, Seiwa Shoji ordered 100,000 anchors in each of the three principal sizes,

300,000 in total, from the defendant, with delivery promised three months later. However, owing to the circumstances described in (5) below,

the defendant was unable to deliver the anchors by the deadline. Approximately one month to forty days after the deadline,

Seiwa Shoji terminated the anchor sales contract.

(5) Those anchors lacked both bulging portions and support projections immediately below the rings on the leg pieces (Product Ni),

causing problems such as the ring slipping too far down or stopping at an angle after pressing. Even when skilled technicians

carefully took time to manufacture them, twenty to thirty percent were defective.

The defendant therefore asked Kazutaka Yoshida to improve them. He first added bulging portions to the leg pieces to stop the rings there,

but defects still occurred. The defendant then devised a method of narrowing the heads (projecting portions) of the leg pieces and reducing the ring-hole diameter,

thereby creating a step so that the ring would stop where the leg-piece diameter became larger.

However, because the heads were narrow and the allowance for crushing was small, the ring could not be adequately fixed.

(6) In view of these circumstances, the defendant ultimately decided to provide support projections on the leg pieces below the position

where it wished to fix the ring.

(i) First, to save costs, the defendant made recesses for forming support projections in the die used to manufacture the leg pieces with bulging portions described in (5).

However, because the recesses were placed incorrectly, in the anchors manufactured with that die (Product I),

the support projections were located entirely away from the intended ring-fixing position and did not contact the ring. Consequently,

the ring ended up fixed by the bulging portions of the leg pieces.

(ii) To save costs, the defendant then added another recess at the correct position in the die described in (i),

providing support projections where the ring should be fixed on the leg pieces (the leg pieces thus had support projections

at both the correct and incorrect positions: Product Ha). As a result, anchor manufacture proceeded smoothly,

and around the end of 1985 the defendant began selling anchors on a full scale through Osaka Tohiuke Seisakusho.

(iii) Subsequently, the defendant made a new die and began manufacturing and selling anchors with support projections

at the intended ring-fixing position on the leg pieces (Product Ro).

2. (1) According to the facts found in 1 above, in 1983 the prevalent type of anchor whose leg pieces expand

when driven into foamed concrete consisted of two or three bundled leg pieces welded together at their heads. Because their appearance

was not very good, the representative of the defendant, a stock company established to design, manufacture and sell various anchors and conduct related activities,

was considering improvements. In the summer of that year, referring to the generally practiced method of pressing metal parts to join them to other parts,

he conceived the idea of making anchors by pressing the heads of leg pieces inserted into a ring.

To realize that idea, he asked Kazutaka Yoshida, doing business as Yoshida Ironworks, to bundle three iron leg pieces and crush their heads

under pressure to make anchors. Kazutaka Yoshida bundled three iron leg pieces, interference-fitted a washer

(ring) around them, removed the drill from a drill press and replaced it with a head having a recess at its tip,

and, while slowly rotating that head, used it to press the projecting portions of the leg pieces, plastically deforming them

and joining the leg pieces to each other and to the ring. By this method, namely the prior-use method, he realized the defendant's representative's idea

and taught it to him. Accordingly, the fundamental technical concept of the prior-use method—manufacturing anchors by bundling three iron leg pieces,

interference-fitting a ring around them and crushing their projecting portions under pressure—can be said to have been invented by the defendant's representative

without knowledge of the patented invention. Even if completion of the invention required inclusion of the specific pressing method

of removing the drill from a drill press, replacing it with a head having a recess at its tip, and, while slowly rotating that head,

using it to press the projecting portions of the leg pieces, the defendant's representative can be said to have learned that method

from Kazutaka Yoshida.

It is clear that the prior-use method possesses claim element A of the patented invention, ‘fitting a ring around the ends of two or more leg blanks,’

claim element B, ‘caulking those ends to integrate the leg blanks with each other and with the ring, thereby forming the anchor head’

(which, as explained above, means ‘striking or tightening the ends of two or more leg blanks around which a ring has been fitted, using a tool,

to bring the leg blanks and ring into close contact, join and integrate them, and thereby form the anchor head’), and claim element C,

‘a method of manufacturing anchors characterized by the foregoing,’ and falls within the technical scope of the patented invention.

(2) Moreover, since the summer of 1983, before November 29, 1984, the filing date of the patented invention,

the defendant had already been having subcontractors manufacture anchors using the prior-use method (at that stage, Product Ni, namely anchors whose leg pieces

had neither support projections nor bulging portions). Although there is insufficient evidence to find that those anchors were actually sold to others,

in the second half of 1983 the defendant showed samples of anchors manufactured using the prior-use method (Product Ni) to Seiwa Shoji Co., Ltd.,

a preexisting business partner engaged in selling and brokering industrial fasteners, and solicited sales.

It reached an agreement to sell the anchors to that company on a continuing basis. Around May 1984,

at the company's request, it submitted final manufacturing drawings for the anchors and obtained approval. Shortly thereafter,

it received an order for 300,000 anchors with delivery promised three months later. Even after termination of that sales contract, it continued improving the prior-use method,

and around the end of 1985, when Product Ha was completed, it began selling anchors on a full scale through Osaka Tohiuke Seisakusho and others.

Accordingly, at the time of filing of the patented invention, the defendant can be said to have been actually preparing in Japan

at least to conduct a business of manufacturing anchors using the prior-use method and selling anchors manufactured

using that method.

The prior-use method uses, as the machine pressing the leg-piece heads, a drill press whose drill has been removed and replaced

with a head having a recess at its tip, whereas the defendant's method differs in using an eccentric rotary press.

However, a prior-use right extends not only to the form of practice that the prior user was actually preparing

at the time of filing of the patented invention, but also to modified forms of practice within a scope that preserves the identity of the invention embodied therein.

The patented invention places no limitation on the tool used for caulking in claim element B, and it is clear that the method using a punch

shown in the specification (publication, column 2, line 13 through column 4, line 3) is one embodiment. Thus, the defendant's method

must be regarded as merely a modification of the form of practice within the same technical concept as the prior-use method.

Further, Methods I through Ha among the defendant's methods differ from the prior-use method in that the leg pieces used as material have support projections or bulging portions.

However, the entry of support projections 3b, 3b, 3b or bulging portions 3d, 3d into the circular hole of ring 14 is merely

an additional configuration and does not prevent a finding that the method falls within the technical scope of the patented invention, as explained in II.3 above.

Accordingly, these likewise must be regarded as merely modifications of the form of practice

within the same technical concept as the prior-use method.

(3) According to (1) and (2) above, the defendant must be held to have a prior-use right in relation to the patent at issue within the scope

of manufacturing anchors using the defendant's method and selling anchors manufactured using that method.”

Trademark — IP High Court, 2023 (Gyo-Ke) 10050 (Hibiku Shimizu)

The trademark at issue: “美容医局” (Biyō Ikyoku; designated services: employment placement and others).

The relevant consumers are “cosmetic surgeons, cosmetic dermatologists, and persons associated with their medical facilities.”

Physicians with no possibility of changing jobs to cosmetic surgery or cosmetic dermatology are not relevant consumers.

⇒ Well-known status: established.

⇒ Violation of Article 4(1)(x) of the Trademark Act.

“Article 4(1)(vii) of the Trademark Act lists ‘a trademark likely to harm public order or morality’ as one category of trademarks that cannot be registered. This includes not only cases in which the composition of the trademark itself is contrary to public order or morality, but also cases in which, in light of the circumstances of the application for trademark registration, permitting registration would be markedly lacking in social propriety.”

⇒ “Considering also that, even in this litigation, the plaintiff has made the factually incorrect assertion that it did not know of the cited trademark and has proposed transferring the trademark for an extremely high price, it is natural to find that the plaintiff’s motive in applying to register the trademark at issue was to have a company under its control indicate that it would use that trademark to provide services of the same kind as the services at issue, thereby confusing consumers, and to await a protest from the defendant so as to secure a transaction on terms favorable to itself.”

⇒ Violation of Article 4(1)(vii) of the Trademark Act.

(The proposal during the litigation to transfer the trademark for payment was used as one of the reasons!!)

Patents / Employee Inventions — IP High Court, 2022 (Ne) 10018 (Honda)

* No “monopoly benefit”!! ⇒ Claim (appeal) dismissed.

“Even if, as the appellant argues, the solvent fractionation method entails danger and may sometimes cause serious accidents, … it is difficult to find that, through the exclusionary effect of the patent right, the appellee excluded competitors from adopting the dry fractionation method at issue and thereby obtained benefits exceeding those obtainable from working the invention under the non-exclusive license it holds as an employer.

Furthermore, the increase in the appellee’s share of the CBE market after the facility at issue began operating appears to have resulted from the appellee anticipating increased international demand for CBE in light of deregulation and economic trends, establishing a new production facility with FVO as its base, and that facility actually commencing operations. There are no circumstances suggesting that adoption of the dry fractionation method at issue particularly enabled an expansion of market share.

Taking all of the above together, it cannot be found that the appellee obtained excess benefits through exclusive working under the patent beyond the amount of benefits obtainable from working Invention A2 under the non-exclusive license it holds in respect of Patent Right A2. Accordingly, no monopoly benefit from Invention A2 is recognized for the appellee.”

* Working of the invention by a subsidiary

“With regard to Invention A, … a subsidiary of the appellee … is working it. Therefore, … when examining the benefits that the appellee should receive, it is appropriate to examine the matter as equivalent to a case in which the appellee, whose business purpose is management as the holding company of the appellee’s group, … works the invention itself.”

Unfair Competition / Trade Secrets — Osaka High Court, 2023 (Ne) 1657 (Morisaki)

* A trade secret allegedly embodied in experimental equipment cannot be said to have been “disclosed.”

⇒ Claim (appeal) dismissed.

In response to the argument that the trade secret could not be acquired without the appellants’ involvement, the court turned that argument back on them and held that receiving the donation did not constitute having the trade secret “disclosed.”

This can be considered parallel to the patent-law proposition that transfer does not constitute public working where a person skilled in the art cannot readily analyze the invention.

(Excerpt from the decision)

“The appellants argue that the information at issue, which constitutes a trade secret, cannot be analyzed merely by looking at the external appearance of the property at issue and cannot be acquired without the appellants’ involvement, so its non-public nature is maintained. … However, if that is so, even if the appellee received the property as a donation and placed it under its management, that alone would not enable it to learn the information. … There is therefore no room to find the facts alleged by the appellants, namely that, by receiving the property as a donation, the appellee thereby, or on that occasion, had the information constituting the trade secret disclosed to it. The appellants have neither alleged nor proved that, in addition to handing over the property, they disclosed the information to the appellee, and there are no facts suggesting such a disclosure. Moreover, on the appellants’ own arguments, even use of the property for experiments or similar purposes should not enable the appellee thereby to learn the information relating to the structure of the property or other matters. Thus, it cannot be found that the appellee has had the information ‘disclosed’ to it even at the present time.”

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12888984577-ja

IP High Court, 2023 (Gyo-Ke) 10039 — Laser Processing Apparatus (Miyasaka)

“Exhibit Ko 1 does not describe any need to ascertain the position or size of the modified region relative to the principal surface of the processing region. … It merely suggests that, by using an infrared image sensor, reflected infrared light (laser light) is used to adjust focus and image the surface of the workpiece. … Nor can it be found that the existence of such a need was well known or part of common general technical knowledge.”

⇒ Inventive step: affirmed.

* The court held that it was inappropriate for the trial decision, as a reason for denying motivation, to attribute to Features F and G of Invention 1 relating to Difference 1 a technical significance not described in the specification. Nevertheless, the conclusion did not change.

Merely pointing out flaws in the trial decision is insufficient to have it revoked. From the patentee’s perspective, there is no need to defend the trial decision’s reasoning.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92772.pdf

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12889146059-ja

IP High Court, 2023 (Gyo-Ke) 10055 — Laser Processing Apparatus (Miyasaka)

The trial decision stated: “Exhibit Ko 1 has no modified region in the thickness direction of the substrate. Accordingly, there is no need to ascertain the position or size of a modified region in the substrate’s thickness direction, and it cannot be said that a person skilled in the art who encounters Exhibit Ko 1 has a motivation to adopt Feature G relating to Difference 2.” The court held: “Accordingly, Invention Ko 1 has no modified region inside the semiconductor wafer, and it must be said that there is no motivation to configure it to image a modified region that does not exist, that is, to adopt the configuration of Invention 1 at issue relating to Difference 2.”

⇒ Inventive step: affirmed.

* If the “modified region” of the invention at issue is a groundbreaking technical concept absent from the prior art, this is a strong patent. (If a “modified region” had also existed in the prior art, using that prior art as the principal reference might have led to a different conclusion, but this would depend on the other features.)

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12889274205-ja

IP High Court, 2024 (Ne) 10026 — Thermoplastic Resin Composition (Miyasaka)

Numerical rounding and the doctrine of equivalents

The issue was whether the ultraviolet absorber contained in the appellee's product, with a molecular weight of 699.91848, satisfied the numerical limitation of a molecular weight of "700 or more."

⇒ Ultimately, because the applicant had "deliberately" drawn the line at the integer "700 or more," a rounding argument could not be used. The fifth requirement of the doctrine of equivalents also failed, because the applicant had objectively and externally acknowledged the exclusion of values below that line from the technical scope.

On this reasoning, if the claim had said "700.0 or more," would a value of 699.95 or more have satisfied it through rounding?

Would it be better to write "7.00 × 10^2 or more" to make clear that the number has three significant digits, rather than being an integer? Certainly, patents are not exactly the same as science: this is a matter of construing the wording of the claims. A neatly rounded "700" may therefore not be the same as "7.00 × 10^2 or more."

The molecular weight of the specific compound at issue was calculated from its structural formula; this was not a case involving variability in a measured value. The case may therefore have been less suited to a rounding argument.

Because the numerical limitation failed the fifth requirement for equivalence in this case, a rounding argument, as in earlier cases, may still offer a better prospect than equivalence for numerical limitations.

That said, considering predictability for third parties, patents do not permit either rounding or equivalents to be interpreted as flexibly as in science. The conclusion of this judgment may therefore be appropriate.

* This resonates with Osaka District Court, 2002 (Wa) 10511, which, in rejecting a measurement-error argument, held: "Quite apart from the number of significant digits, where '3 microns' is claimed as the upper limit of the technical scope on the basis of the examples, it is questionable to regard the maximum range of error in the examples as falling within the scope of the right. This is because, if there is an error of 0.5 microns in the examples, the claims could state an upper limit covering that error, namely 'less than 3.5 microns.' Yet, without doing so, to state the upper limit in the claims as '3 microns' while asserting that 'less than 3.5 microns' is the technical scope would impair the clarity of the claims."

… Of course, it only becomes apparent upon reading the judgment that this should have been done, so it is harsh on the patentee in that particular case. Nevertheless, we practitioners should draft claims for future applications with this judgment in mind.

★ Conclusion: "Numerical values (ranges) in science differ from numerical values (ranges) in patents!!"

(Excerpts from the judgment in 2024 (Ne) 10026)

① Literal satisfaction (rounding argument) ⇒ Not satisfied

“The numerical range of ‘700 or more’ (for the molecular weight of the ultraviolet absorber) at issue here was set by the right holder (applicant) itself to define the scope of its rights. It is nothing other than a boundary dividing, by a single line, what falls within the technical scope of the patented invention (the scope of the monopoly) from what does not. Accordingly, ‘700,’ the lower limit of that range, should be construed as an integer in its original sense, with neither a fractional part that has been rounded down nor a fractional part that has been rounded up. If a different meaning or role is intended for the numerical range, the claims or specification should explain the method of calculating molecular weight, the treatment of decimal values, and similar matters. As stated above, the specification and other documents at issue contain no such description. Consequently, the claim limitation ‘a molecular weight of 700 or more’ must be construed as not being satisfied (i.e., as not falling within the technical scope) if the molecular weight is below 700 by even 0.00001.”

② Doctrine of equivalents: first requirement satisfied, but fifth requirement not satisfied

“The numerical range has no critical significance. The molecular weight having technical significance in relation to the functions and effects of the inventions at issue is considered to extend across a fairly broad range, rather than being precisely 700. It is therefore understood that the numerical limitation of ‘700 or more’ was adopted as, so to speak, a ‘round number.’ … It is difficult to consider that the properties as an ultraviolet absorber differ substantially between a molecular weight of 699.91848 and one of 700. … Accordingly, the difference in molecular weight cannot be regarded as relating to an essential part of the inventions at issue. The first requirement of the doctrine of equivalents is satisfied in this case.”

“The integer value ‘700 or more’ was deliberately used. In this case, no critical significance is recognized in the molecular-weight value of 700. That value can therefore be said to have been selected and set, so to speak, arbitrarily by the appellant. Furthermore, although it is construed that the appellant could easily have set the numerical range as ‘699.5 or more’ or specified how decimal values of molecular weight were to be treated, it deliberately took neither measure. This should be construed as presupposing not only an understanding that decimal values are not technically meaningful numbers, but also that they have no particular legal implications (are not given any special meaning). Thus, by specifying in the claims the molecular-weight range of ‘700 or more,’ the appellant defined the technical scope of the patented invention by the dividing line between ‘700 or more’ and ‘less than 700.’ It is appropriate to find that the appellant objectively and externally acknowledged that substances with molecular weights even slightly below the lower limit of ‘700’ were excluded from the technical scope. … Accordingly, in this case, the fifth requirement of the doctrine of equivalents is not satisfied, and infringement under the doctrine of equivalents as alleged by the appellant is not established.”

* The first-instance judgment, Osaka District Court, 2022 (Wa) 9521, had also rejected the first requirement of the doctrine of equivalents, holding that “where setting a numerical value has significance for the invention, absent special circumstances, the limitation of the technical scope by that numerical value constitutes an essential part of the patented invention.”

IP High Court, 2023 (Gyo-Ke) 10085 — Image Forming Apparatus (Miyasaka)

* Even if a defect in the divisional procedure for a patent application has been overlooked, a “correction” to clarify an ambiguous statement cannot be made to cure it.

If a defect in an amendment or division is overlooked and the patent is registered, the situation may become irreparable!!

There have also been cases in which a violation of the amendment requirements was overlooked and registration took place, breaking the chain of divisional applications. (Osaka High Court, 2002 (Ne) 2776 (Wakabayashi); Tokyo High Court, 2003 (Gyo-Ke) 65 (Shinohara).)

Pair a challenging amendment or divisional application with a safe sibling divisional application!!

(Excerpt from the decision)

“The plaintiffs argue that, because the patent application at issue has a procedural defect in the divisional application, a correction to cure that defect falls within clarification of an ambiguous statement under item (iii) of that paragraph. This argument is understood as follows: ① although the statements in the specification and other documents at the time of registration at issue were within the scope of the statements in the original specification and other documents of the parent application, they were not within the scope of the matters stated in the specification and other documents immediately before division, which had been amended by the time of the patent application at issue; ② as a result, the requirements for a divisional application were not satisfied, but a decision to grant a patent was made without attention being drawn to the problem through a notice of reasons for refusal, leaving the patent at issue defective; and ③ the substantive content of the correction matters being examined is to eliminate that defect by correcting the statements in the specification and other documents at issue from content corresponding to the original specification and other documents of the parent application to content corresponding to the subsequently amended specification and other documents immediately before division. However, ‘the description’ or ‘drawings’ attached to the application as referred to in Article 126(1) of the Patent Act should be understood as the patent specification and drawings at the time of the request for a trial for correction. Accordingly, whether the requirements concerning the purpose of correction under items (ii) and (iii) of that paragraph are satisfied should be determined by comparing the specification and other documents at the time of the request for a trial for correction with those after correction. This is clear both from the wording of the provision and from its purpose (see (2) above). Even if circumstances ①–③ above are found in this case, the defect in the divisional procedure in the relationship between the application specification and other documents immediately before division and the specification and other documents at the time of registration at issue is an issue concerning the application of Article 44 of the Act. That in itself does not

mean that the specification and other documents at the time of registration, which are the subject of correction, themselves contain an ambiguous statement (Article 126(1)(iii) of the Act), nor does it constitute an error or incorrect translation under item (ii) of that paragraph. Even assuming that a defect in the divisional procedure for the patent application at issue was overlooked, the plaintiffs' argument must be regarded as equivalent to seeking to redo the divisional application under the guise of correcting the specification and other documents. No basis can be found to justify this."

English translation of the source figure | 1/2

Image Forming Apparatus — Divisional Applications

Tokyo District Court, 2019 (Wa) 23164 (Tanaka)
Cf. IP High Court, 2020 (Gyo-Ke) 10313 (Otaka)

If the child application violates the divisional requirements, the grandchild's filing date goes back only to the child's actual filing date, not to the parent's filing date.
Same approach: Osaka High Court, 2002 (Ne) 2776; Tokyo High Court, 2003 (Gyo-Ke) 65.

Additional statements in the specification constitute added matter — since the Artificial Nipple case, 2002 (Gyo-Ke) 539!?

“Comparing the specification and other documents of Application 1 at the time Application 2 was filed as a divisional … with those of Application 2 (the specification at division …), the latter adds, for example: a statement about retaining processing conditions after power is switched off through the designated-retention instruction unit and displaying them on the initially displayed screen on subsequent occasions (paragraph [0100]); a statement about reducing the number of settings for magnification, a frequently used processing condition, and the number of menu settings through ‘one up’ and ‘one down’ magnification indications (paragraph [0105]); a statement about preventing erroneous instructions caused by easy menu changes by providing means to lock registered menus against alteration (paragraph [0145]); and Figures 7–15 and related statements (paragraph [0041] …). It differs from the specification at the decision on Application 1 and contains matters absent from that specification, so it cannot be said to fall within the scope of the matters stated there. … Application 2 therefore … fails divisional requirement ②. …”
⇒ Lack of inventive step based on a cited invention arising after the parent's filing date and before the child's.

Partial priority may exist when priority is claimed, but additional specification text on division is all disadvantage and no advantage.
(If disclosed in the original specification and other documents, addition is unnecessary; if not disclosed, it is added matter.)

Parent–Child–Grandchild Applications: Retroactive Effects

⑤ IP High Court, 2016 (Gyo-Ke) 10263
“The substantive requirements for a lawful divisional application are: ① the original application's specification or drawings contained two or more inventions; ② the invention in the new application is part of the inventions stated in the original application's specification or drawings; and ③ the invention in the new application falls within the matters stated in the original application's initial specification and other documents. The application at issue is a fifth-generation divisional counted from the first application. To be deemed filed at the time of the first application, this application and the fourth, third, and second applications must each satisfy requirements ①–③ above in relation to their respective parent applications, and the invention must fall within the matters stated in the initial specification and other documents of the first application.”
Same approach: ① Osaka High Court, 2002 (Ne) 2776; ② Tokyo High Court, 2003 (Gyo-Ke) 65.

Even if lawful when the child is filed, amending the child after filing can, by the amendment's retroactive effect, cause the child to violate the divisional requirements!!
⇒ The grandchild's filing date goes back only to the child's filing date!!

① Osaka High Court, 2002 (Ne) 2776 (Wakabayashi)
② Tokyo High Court, 2003 (Gyo-Ke) 65 (Shinohara)
If the amended text adds matter, the divisional requirements are violated.
③ IP High Court, 2004 (Gyo-Ke) 14649 (Shitara)

If amendment cures the divisional defect (change of gist), the violation is avoided.
④ Tokyo High Court, 1975 (Gyo-Ke) 75

Divisional requirements = amendment requirements.
⑧ Tokyo District Court, 2003 (Wa) 9215 (Mimura)

Timeline: parent's filing date → child's filing date → amendment of child → grandchild's filing date. The amendment has retroactive effect.

“Because all claims were deleted by correction, the utility model registration at issue is deemed never to have existed.”
⑥ Tokyo High Court, 2001 (Gyo-Ke) 421 (Yamashita)

Even if the child is withdrawn, the grandchild's filing date goes back to the parent's.
⑦ Tokyo District Court, 2015 (Wa) 8517, Levee-Coating Machine (Shimasue)
⇒ In that case there was no divisional defect before withdrawal.
(Withdrawal has no retroactive effect except under Article 39(5) of the Patent Act: 1989 (Gyo-U) 123.)

If refusal or invalidity becomes final while a divisional application still contains added matter, the grandchild's filing date does not go back to the parent's.
⇒ Even if it will end in refusal, one should attempt an amendment eliminating the added matter!!

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12889488165-ja

Trademark — IP High Court, 2023 (Ne) 10091: “Gendai no Riron” (Miyasaka)

* No abuse of rights. Ultimately, the defendant nonprofit organization’s failure to register the trademark was the reason it lost.

As a member of the “Gendai no Riron Editorial Committee,” the plaintiff has published an electronic edition of “Gendai no Riron” since 2014.

The defendant has published the magazine “Gendai no Riron” since June 2016.

The defendants argued that, as soon as the defendant announced in February 2016 that it would resume publication of the magazine “Gendai no Riron,” the plaintiff obtained Trademark Right 1 with Class 9 “electronic publications” and Class 16 “printed matter” as the designated goods.

The defendants further pointed out that, on March 24, 2021, a trial decision became final revoking, on grounds of non-use, the registration for Class 16 “printed matter” among the designated goods of Trademark 1. Soon afterward, however, on September 6, 2021, the first-instance plaintiff applied to register Trademark 2 with Class 16 “printed matter” as the designated goods, obtained registration, and filed this lawsuit.

⇒ The defendants’ use of their respective signs on printed matter can, at a minimum, be regarded as use on goods similar to Class 9 “electronic publications,” which are designated goods of Trademark 1. Thus, even if the plaintiff has no plans to publish “Gendai no Riron” as “printed matter,” such as a magazine, it can seek an injunction against the first-instance defendants’ acts on the basis of its trademark right designating “electronic publications.”

Tokyo District Court, 2024 (Yo) 30029 — Age-Related Macular Degeneration (Nakashima, Civil Division 40)

★ Application for a provisional injunction based on violation of the Unfair Competition Prevention Act: a case denying patent infringement by finding that the medical-use invention was not worked under an “exclusively” standard and that, on the patentee’s argument that a certain proportion sufficed, novelty would be lacking.

* However, the word “exclusively” does not mean 100%.

1. The court’s reasoning ①: infringement of a use invention

As set out below, the court denied patent infringement. It found non-satisfaction under an “exclusively” standard for working a medical-use invention: “working” under Article 2(3) of the Patent Act satisfies the use limitation when production, use, transfer, or similar acts are performed exclusively for the medical use specified in the claims (in this invention, for administration to the specified patient group). It also held that, on the patentee’s argument that a certain proportion sufficed, the invention lacked novelty.

“A use invention is technically characterized by discovering an unknown property of a known substance and, on the basis of that property, creating a novel use with a remarkable effect. Accordingly, ‘working’ under Article 2(3) of the Patent Act in relation to a use invention should be construed as producing, using, transferring, or otherwise dealing with a known substance exclusively for use in the novel use. Applying this to the invention at issue, the claims and the specification ([0005], [0006], and [0018]) show that anti-VEGF agents, which are known substances, were conventionally recognized as effective for wAMD patients having predominantly classic active subfoveal CNV regions occupying at least 50% of the total lesion size (pCNVwAMD patients). The invention at issue is characterized by creating a novel use with a remarkable effect through administration to wAMD patients who meet certain inclusion and exclusion criteria and have an active CNV lesion size of less than 50% of the total lesion size (sCNVwAMD patients; also referred to below as ‘the specified patient group’), based on the discovery of the unknown property of anti-VEGF agents that they exhibit a superior therapeutic effect in those patients compared with pCNVwAMD patients. Accordingly, ‘working’ under Article 2(3) of the Patent Act for this invention should be construed as producing, using, transferring, or otherwise dealing with an anti-VEGF agent exclusively for administration to the specified patient group. …

Turning to the creditor’s product in this case, according to the underlying facts, the creditor’s product is a biosimilar of the debtor’s product. The proposed package insert for the creditor’s product submitted with the approval application at issue merely states ‘age-related macular degeneration with subfoveal choroidal neovascularization’ as the indication. Neither the ‘Indications or Effects’ section nor the ‘Dosage and

Administration' section contains any reference to the specified patient group, and no statement can be found to the effect that administration to that group produces a remarkable effect. On these findings, the approval application for the creditor's product cannot be said to be an application for administration to the patient group defined by Claim Limitations A2, B, and C of the invention (the specified patient group). The position might be different if special circumstances established a likelihood that the creditor would deliberately sell or otherwise deal with its product for a use different from that in the approval application. However, even all of the prima facie evidentiary materials in this case are insufficient to clearly establish such special circumstances. In these circumstances, manufacture and sale or similar acts concerning the creditor's product cannot be regarded as producing, using, transferring, or otherwise dealing with an anti-VEGF agent exclusively for administration to the specified patient group, and are insufficient to establish infringement of the patent right at issue.

Moreover, even if one were to adopt the debtor's view that manufacture and sale or similar acts concerning the creditor's product infringe the patent because the product may ultimately be administered to a certain proportion of the specified patient group, the underlying facts show that the creditor's product is a biosimilar of the debtor's product, has equivalence and similarity in quality to it, and that the debtor's product had been manufactured and sold before the priority date at issue. Therefore, like the creditor's product, the debtor's product must also be found to have been administered to a certain proportion of the specified patient group. It is thus self-evident that manufacture and sale of the debtor's product constitutes public working under Article 29(1)(ii) of the Patent Act and that the patent at issue should be invalidated."

2. The court's reasoning ②: the Unfair Competition Prevention Act / communication of false facts

The court found that the patentee's act of responding to the Ministry of Health, Labour and Welfare and others that "manufacturing and selling a biosimilar of the debtor's product would infringe this patent" (the communication at issue) constituted communication of false facts. However, as set out below, it held that this violates the Unfair Competition Prevention Act only "where there are special circumstances in which the act is found to be markedly inappropriate in light of the purpose and objectives of patent linkage." It did not find a violation in this case.

"If, under patent linkage, a response by the aforementioned patentees or others stating that there is a patent conflict between a patent relating to an originator drug and a generic drug were immediately unlawful as communication of false facts whenever it differed from a subsequently final court determination, those patentees or others would be unable to fully state their own views on the existence of a patent conflict in the pharmaceutical patent information reporting form. The Ministry of Health, Labour and Welfare and others would consequently be unable to accurately determine whether a stable supply of the generic drug could be ensured, potentially undermining the purpose and objectives of patent linkage. However, patent linkage is intended, from the perspective of ensuring a stable supply of generic drugs, to confirm during approval review whether there is a patent conflict between a patent relating to an originator drug and a generic drug. It is therefore clear that it does not permit patentees or others relating to originator drugs to provide arbitrary information or grant them broad immunity. Accordingly, where a false response under patent linkage by a patentee or other person relating to an originator drug, stating that there is such a patent conflict, outwardly takes the form of information provision under patent linkage but in substance seeks to place the applicant for manufacturing and marketing approval of the generic drug at a disadvantage and to secure a competitive advantage for the respondent, it is appropriate, in light of the above purpose and objectives of Article 2(1)(xxi) of the Unfair Competition Prevention Act, to regard that act as a category of unfair competition obstructing fair competition among businesses. From this perspective, a false response by a patentee or other person relating to an originator drug under patent linkage, stating that there is a patent conflict between the patent relating to the originator drug and a generic drug, should be regarded as unfair competition under Article 2(1)(xxi) where special circumstances establish that it is markedly inappropriate in light of the purpose and objectives of patent linkage, because it communicates false facts damaging the

business reputation of a competing applicant for manufacturing and marketing approval of the generic drug."

3. Some observations

(1) Definition of a "use invention"

First, a "use invention" must be defined as the basis for discussion. Having comprehensively examined Japanese patent judgments, I consider that inventions for which there is no infringement unless manufacture and sale expressly present the relevant "use" are cases where the structural features of the product alone, excluding the "for …" use limitation, lack novelty or inventive step, and novelty or inventive step is recognized only through specification of the "for …" use.

This decision states: "A use invention is technically characterized by discovering an unknown property of a known substance and, on the basis of that property, creating a novel use with a remarkable effect." It thus defines a "use invention" as an invention whose product features alone, excluding the use limitation, lack novelty. This is a case in which novelty or inventive step is recognized only through specification of the use, and falls within the above category in which manufacture and sale do not infringe unless the "use" is expressly presented.

(2) Technical scope of a "(medical) use invention" specifying the recipients of administration

For a medical-use invention limiting the recipients of administration, under this decision's "exclusively" standard, the use limitation would apparently not be satisfied unless the product is manufactured and sold with labeling, promotion, or similar representations indicating that the recipients are persons "aged 60 or older," persons "who have not had a recurrence of breast cancer," or persons "who have not developed allergic asthma."

Moreover, Patent No. 5705483, whose novelty was recognized in IP High Court, 2018 (Gyo-Ke) 10036, concerns an invention specifying a newly discovered mechanism as an invention-defining feature, a recent hot topic. Its claim reads: "A composition comprising an antagonist of interleukin-23 (IL-23), for use in an in vivo treatment method for inhibiting interleukin-17 (IL-17) production by T cells." Since this too appears to be a use invention, the analysis would be that the limitation is satisfied when it is sold or otherwise dealt with "to inhibit IL-17 production"; in other words, it would not be satisfied unless the product is manufactured and sold with labeling or promotion indicating that the recipients are "patients showing elevated IL-17 levels."

(3) Comparison with the "knowing" requirement for indirect infringement involving multifunctional products (the 25% rule)

The "knowing" requirement for indirect infringement involving multifunctional products (Article 101(ii) and (v) of the Patent Act) concerns producing, transferring or otherwise dealing in an item while knowing that the invention is patented and that the item will be used in working that invention. As in the cases reproduced below, it is held to be satisfied where the indirect infringer knows that persons within a "range that cannot be regarded as exceptional" use it to produce directly infringing products. (This appears to draw on the standard adopted in the Supreme Court decision of December 19, 2011, Keishū Vol. 65, No. 9, p. 1380, the Winny case.) Three decisions have treated approximately "25%" as satisfying a "range that cannot be regarded as exceptional." (The Supreme Court's Winny decision, however, denied intent and upheld the acquittal entered by the court below, holding that "it cannot be found that the defendant recognized and accepted that the proportion of users using it for copyright infringement had … extended to a range that could not be regarded as exceptional, such as approximately 40%." In civil proceedings, an injunction may be available for conduct after the defendant acquires the requisite knowledge, for example through service of the complaint, provided that the other requirements are also met.)

For use inventions, there is also a view that working of the invention is not limited to sales expressly presenting the use through labeling or promotion, but can arise from "the possibility that the product will

ultimately be administered to a certain proportion of the specified patient group.” The patentee advanced that argument in this case as well. If that view is assumed, an unresolved issue was what percentage of the products sold the seller must know will be used for the patented use before infringement arises: 100%, 99%, or a “range that cannot be regarded as exceptional” (approximately 25%?).

By contrast, this decision established an “exclusively” standard. If “exclusively” were interpreted quantitatively as 100%, even 1% use for another purpose would defeat the limitation. The decision, however, did not adopt such a numerical threshold. So-called off-label use—use of a drug for an indication or in a manner different from those approved, that is, use not stated in the labeling (package insert)—would thus appear not to infringe a use invention, unless there are circumstances such as promotion of that off-label use. (Nevertheless, “exclusively” does not mean 100%, so the proportion or amount “used for a use other than that of the use invention” that leads to non-satisfaction remains an unresolved issue.)

As to whether such a conclusion is appropriate, this decision holds that a ground for invalidity based on lack of novelty would exist if one “adopted the debtor’s view that manufacture and sale or similar acts concerning the creditor’s product infringe the patent because the product may ultimately be administered to a certain proportion of the specified patient group.”

However, on this approach, not only medical-use inventions but also selection inventions limiting the range of products to those with particularly high effects may face denial of novelty where the selected range had already been worked before filing, because they are not use inventions. Such an approach is not unreasonable, but it does not necessarily align with past practice in every respect. Further examination is therefore needed to seek a consistent understanding.

Furthermore, where inventive step is recognized because of an unpredictable remarkable effect, a question has been raised: does infringement arise only where the product is sold or otherwise dealt with while expressly presenting that effect, as with a so-called use invention, or does infringement arise irrespective of whether that effect is expressly presented? (Misao Shimizu, Hyakusen of Patent Cases, 5th ed., Case 69, “Inventive Step (5)—The Independent-Requirement Theory of Remarkable Effects [Shoe Press Belt Case].”)

医薬用途発明に関する関連重要裁判例

令和４年 (行ケ) 第 10084 号 ＜本多＞	重症心不全の治療剤 *対象患者の相違点と用法容量の相違点を別個の相違点として容易想到性判断 OK *患者を限定したが、公知医薬も当該患者にも投与されていたから、容易想到	治療薬の用量を検討するに際しては、対象患者や治療の相違は当然に考慮に入れるべきものであり、治療薬に係る特許発明と引用発明の相違点を認定するに際し、対象患者や治療について相違点を認定したときに、用量についてこれら対象患者や治療を含めた相違点として重ねて認定する必要はないというべきである。したがって、本件審決が、前記の相違点１と区別して、トルバプタンの１日当たりの用量の点のみを相違点２として認定したことに誤りはない。… 本件特許発明は、ＮＹＨＡクラスＩＶの患者に入院下で経口にて投与開始される重症心不全の治療薬と特定されている点（相違点１）、及び活性成分の１日当たりの用量が０．３７１ｍｇ／ｋｇ以下の範囲と特定されている点（相違点２）で甲２発明と相違する。 しかしながら、相違点１について、本件優先日当時、利尿薬は急性心不全、慢性心不全、心不全の重症度を問わず広く用いられていた薬剤であり、トルバプタンと同じ作用機序の利尿薬がＮＹＨＡクラスＩＶの患者に投与されていたことからも、重症でないとは即断できない患者を含むＮＹＨＡクラスＩ～ＩＩＩの患者に有効である甲２発明のトルバプタンをＮＹＨＡクラスＩＶの患者の治療薬とすることには十分な動機付けがあり、その阻害要因があったともいえず、容易に想到し得たということができる。また、治療薬を投与する際に患者が入院下であるか否かという点は実質的な相違点とはいい難い。さらに、本件優先日当時のトルバプタンの使用態様から、これを経口投与とすることは当業者が適宜なし得た事項というべきである。相違点２についても、これは甲２発明の最小有効量である１日１回３０ｍｇとほぼ同一の用量であって、１日当たりの用量を０．３７１ｍｇ／ｋｇ以下の範囲とすることに臨界的意義があるとも言えず、甲２の記載及び技術常識を参酌して用量を上記範囲とするのは適宜なし得ることというべきである。… …利尿薬は、急性心不全と慢性心不全とを問わず、また重症と軽症～中等症とを問わず、心不全の症状の一つである体液貯留、うっ血、浮腫等を改善する治療薬として広く用いられており、さらに、上記主張の例は利尿薬とは異なる心不全治療薬が含まれているため、ＮＹＨＡクラスＩＶであることを理由に利尿薬の取扱いを異にすべき旨が記載されていると読み取ることはできない。加えて、本件特許の試験はＮＹＨＡクラスＩＩＩおよびＩＶの患者が混在した試験であり、ＮＹＨＡクラスＩＶの患者のみの死亡数は明らかになっていないのであるから、ＮＹＨＡクラスＩＶの患者に対する効果は不明である。	勝 有 △

東京地判 平成20年 （ワ） 第19874号	医療用器具 *薬事法上の添付文書で禁止された態様で使用された医療用器具について間接侵害が成立した事例 ⇒警告状のみでは、具体的な証拠がなく「知っていた」ことにならないと判断した *差し止め請求なし	…一般に，医療機器に係る添付文書の記載（薬事法６３条の２に基づくもの）は，医師が当該機器を使用する際の指針となるべきものであるから，添付文書の「使用上の注意」として，当該機器の特定の使用方法に危険性があるとして，その使用方法を禁止する注意書きが記載されている場合には，当該機器を使用する医師があえてそのような使用方法を用いることは，通常は考え難い事態であるということができる。 この点，被告製品の添付文書に，一体化同時穿刺の方法で被告製品を使用することには危険性があるため，そのような使用方法を禁止する旨の注意書きが記載されている…。 したがって，上記のような被告製品の添付文書の記載にもかかわらず，なお，医師らが被告製品を一体化同時穿刺の方法で使用することがあり得ることを，被告らにおいて認識していたものと認められるか否かという観点からの検討が必要となる。 …⑤被告らに対し，被告製品が一体化同時穿刺のできる構造であることを指摘し，本件特許に抵触する旨を警告する内容の本件通知書を送付した…。上記⑤の点については，…本件特許の特許権者のＸ１が，被告製品について一体化同時穿刺のできる構造である旨を主張していることが，被告らによって認識されたこと示す事情にすぎず，この時点において，Ｘ１から被告らに対して，上記主張を裏付ける具体的な証拠資料が示されていたとの事情も認められないから，本件通知書の送付を受けたことによって，直ちに被告らが…被告製品が一体化同時穿刺の方法で使用されるであろうことを具体的に認識し得たものと断ずることはできない。…被告らは，本件訴状及びこれとともに提出された書証の写しの送達を受けることによって，少なくとも被告製品を用いて一体化同時穿刺を行っている医師が存在することを疑わせるに足りる事実を認識した…。	勝有 ★ ★ ★
大阪地判 平成27年 （ワ） 第8974号 控訴審 平成31年 （ネ） 第10007号 も不可欠品の間接侵害成立	…異常発生時にラダー回路を表示する装置 *例外的とはいえない範囲の者が当該製品を特許権侵害に利用する蓋然性が高いことを認識・認容していれば足りる。 ⇒「約４分の１」で、102-2の間接侵害○	…特許法１０１条２号においては，「発明が特許発明であること」（主観的要件①）及び発明に係る特許権の直接侵害品の生産に用いる「物がその発明の実施に用いられること」（主観的要件②）を知りながら，その生産，譲渡等をすることが間接侵害の成立要件として規定されている。…主観的要件②について，部品等の生産，譲渡等をする者において，当該部品等の個々の生産，譲渡等の行為の際に，当該部品等が個々の譲渡先等で現実に特許発明の実施に用いられることの認識を必要とすると解するのでは，当該部品等の譲渡等により特許権侵害が惹起される蓋然性が高い状況が現実にあることを認識，認容している場合でも，個別の譲渡先等の用途を現実に認識していない限り特許権の効力が及ばないこととなり，直接侵害につながる蓋然性の高い予備的行為に特許権の効力を及ぼすとの特許法１０１条２号のそもそもの趣旨に沿わないと解される。以上を勘案すると，主観的要件②が認められるためには，当該部品等の性質，その客観的利用状況，提供方法等に照らし，当該部品等を購入等する者のうち例外的とはいえない範囲の者が当該製品を特許権侵害に利用する蓋然性が高い状況が現に存在し，部品等の生産，譲渡等をする者において，そのことを認識，認容していることを要し，またそれで足りると解するのが相当であり，このように解することは，「その物がその発明の実施に用いられることを知りながら」との文言に照らしても不合理な解釈ではない。…	勝有 ★
大阪地判 平成30年 （ワ） 第4851号	クランプ装置 *例外的とはいえない範囲の者が当該製品を特許権侵害に利用する蓋然性が高いことを認識・認容していれば足りる。 ⇒102-2の間接侵害○ *全部差し止めても、過剰差止めではない	被告製品群７及び８は，スイングクランプのほか，リンククランプ，リフトシリンダ，ワークサポートにも使用可能なものである…。しかし，特許法１０１条２号の趣旨に鑑みれば，発明に係る特許権の侵害品「の生産に用いる物…がその発明の実施に用いられること」とは，当該部品等の性質，その客観的利用状況，提供方法等に照らし，当該部品等を購入等する者のうち例外的とはいえない範囲の者が当該製品を特許権侵害に利用する蓋然性が高い状況が現に存在し，部品等の生産，譲渡等をする者において，そのことを認識，認容していることを要し，またそれで足りると解される。 本件においては，…被告製品群７及び８に属する製品がスイングクランプと組み合わせて販売される割合が大きいことに鑑みると，これを購入等する者のうち例外的とはいえない範囲の者が被告製品群７及び８を特許権侵害に利用する蓋然性が高い状況が現に存在するとともに，被告らはそのことを認識，認容していたものといえる。そうである以上，上記事情は本件における間接侵害の成立を妨げるものではない。… 被告らは，被告製品群７及び８につき差止を認めることは過剰差止として許されないなどと主張する。しかし，前記…のとおり，被告製品群７及び８については，これを購入等する者のうち例外的とはいえない範囲の者が特許権侵害に利用する蓋然性が高い状況が現に存在することなどから，その製造，販売等につき間接侵害が成立するのであるから，用途に係る限定を付すことなく差止請求を認めたとしても過剰とはいえない。	勝有 ★

U.S. CAFC Decisions on Inducement, Contributory Infringement, and Related Issues — 1

December 2016 — CAFC, 843 F.3d 1315
Power Integrations v. Fairchild Semiconductor ★
Inducement requires (1) successful communication between the inducer and direct infringer (induced party), plus (2) an affirmative act affecting the conduct of a third party (the direct infringer/induced party); mere inaction in leaving patent infringement unaddressed is insufficient.
A U.S. technical support center was established; customers were enabled to locate U.S. distributors; and indemnification clauses protected customers from U.S. patent infringement claims.
⇒ The U.S. market was targeted; inducement established, § 271(b).

November 2018 — CAFC, 909 F.3d 398
Enplas Display v. Seoul Semiconductor ★
Lens sales outside the United States ⇒ inducement of U.S. patents concerning lighting apparatus established, § 271(b).
The accused infringer held 50% of the global market and knew that its customers also sold the final products (televisions) in the United States; “specific intent to induce infringement” was found.

May 2015 — CAFC, 785 F.3d 625
Takeda v. West-Ward Pharm ★
⇒ Inducement not established, § 271(b).
Even if an accused pharmaceutical manufacturer knows of an infringing use of its drug, intent to induce is not found where the label is vague and physicians will not necessarily prescribe for the patented use.
Arthrocare v. Smith & Nephew, 406 F.3d 1365 (Fed. Cir. 2005), differed because the label necessarily led to infringement.
(The general proposition remained the same afterward: Sanofi v. Watson, 875 F.3d 636 (Fed. Cir. 2017).)

November 2010 — CAFC, 633 F.3d 1042
AstraZeneca v. Apotex ★
The patented invention prescribed once-daily administration. The approved label stated twice daily but recommended reducing the dose if asthma stabilized. The accused drug came only in 0.25 mg and 0.5 mg doses. Some physicians or patients would reduce the dose as recommended and use it once daily.
⇒ Inducement of the treatment-method patent established, § 271(b).
If the label “necessarily leads” a certain proportion of direct infringers, 100% infringing use is not required. What percentage suffices?

August 1998 — CAFC, 152 F.3d 1342
Johns Hopkins University v. Cellpro ○

Source: Hideki Takaishi, Ameblo, March 2025

U.S. CAFC Decisions on Inducement, Contributory Infringement, and Related Issues — 1

Promotion and advertising of medical equipment established inducement, § 271(b).
Knowing the patent, the seller stated that using the device could achieve the patented purification rate.
Cf. CAFC, October 2020, GlaxoSmithKline v. Teva (the label did not expressly state the patented use but described the product as equivalent).
Compare IP High Court, 2005 (Ne) 10125, Cilostazol (employee-invention compensation claim) (Sato).

January 2003 — CAFC, 316 F.3d 1348
Warner-Lambert v. Apotex ★★★
After the earlier patent expired, a generic drug approved by the FDA for one use (partial-onset seizures) could also be used for the patented use (neurodegenerative disease).
⇒ No infringement under § 271(e)(2) in relation to the ANDA.
Dictum: even 2.1% ($50 million) off-label use for the patented purpose did not establish inducement under § 271(b).
In particular, where substantial noninfringing uses exist, even actual knowledge that some users may infringe does not permit an inference of intent to induce infringement. Where, as with gabapentin, a product has many uses and no more than one in 46 sales is for an infringing use, Apotex's intent can neither be inferred nor presumed absent direct evidence.

March 2003 — CAFC, 324 F.3d 1322
Allergan v. Alcon △
A generic drug approved by the FDA for another use (reducing intraocular pressure) could also be used for the patented use (neuroprotection in glaucoma patients).
⇒ No infringement under § 271(e)(2) in relation to the ANDA.
Following Warner-Lambert, summary judgment favored Alcon because it had not sought FDA approval for the patented use.
(The majority did not examine inducement under § 271(b). Even if § 271(e)(2) is cleared, § 271(b) remains relevant after ANDA approval.)

October 2024 — CAFC
Provisur Tech v. Weber ★
Where changing a product's settings would bring it within the invention's technical scope, mere theoretical possibility is insufficient; the product must actually be “readily configurable.”
Fantasy Sports Props. v. Sportsline.com, 287 F.3d 1108 (Fed. Cir. 2002).
⇒ Customers' access to the settings screen enabling claim 14's “advance-to-fill” function was restricted.
The district court's infringement determination was reversed.

CAFC Decisions — 2 / Important Decisions on Medical-Use Inventions

November 2010 — CAFC, 626 F.3d 1197
Finjan v. Secure Computing ★

Software for proactive scanning incorporated into a product constituting a recording medium was locked.
① The user could unlock it by purchasing a key, so direct infringement of the product invention was established.
In ACCO v. ABA, 501 F.3d 1307 (Fed. Cir. 2007), the claims required a particular configuration (e.g., a lock-device pin positioned in a specified slot), and direct infringement required actual use in the infringing mode. By contrast, Finjan's claims did not require a particular configuration or “enablement” for proactive scanning. The existence of a program to perform that function sufficed for infringement.
② No infringement of the method invention because there was no actual performance.
Cf. Southwest Software v. Harlequin, 226 F.3d 1280 (Fed. Cir. 2000).

Important related decision on medical-use inventions
IP High Court, 2022 (Gyo-Ke) 10084 (Honda)
Method for Treating Severe Heart Failure — invalidation decision upheld; the patentee's action to cancel it was dismissed △

The differences concerning the target patients and the dosage regimen may be treated as separate differences when assessing obviousness.
The patients were limited, but the known drug was also administered to those patients, making the limitation obvious.

When considering the dosage of a therapeutic drug, the target patients and differences in treatment naturally must be considered. When identifying differences between a therapeutic-drug invention and a cited invention, however, if differences concerning the patients or treatment have already been identified,

Source: Hideki Takaishi, Ameblo, March 2025

English translation of the source figure | 2/2

CAFC Decisions — 2 / Important Decisions on Medical-Use Inventions

there is no need to identify the dosage difference again as overlapping with those differences. It was therefore not erroneous for the trial decision to identify the daily dose of tolvaptan alone as a difference separate from Difference 1. …

The patented invention differs from the Ko 2 invention in specifying a treatment for severe heart failure that is orally administered to hospitalized NYHA Class IV patients at initiation (Difference 1), and in limiting the daily dose of the active ingredient to 0.371 mg/kg or less (Difference 2).

As to Difference 1, at the priority date diuretics were widely known drugs regardless of acute or chronic heart failure or its severity. Diuretics of the same mechanism as tolvaptan were administered to NYHA Class IV patients. There was therefore ample motivation, without an inhibiting factor, to use the tolvaptan of the Ko 2 invention, effective for NYHA Classes I–III including patients who cannot immediately be described as non-severe, as a treatment for Class IV patients; this was readily conceivable. Whether patients are hospitalized when treatment is administered is hardly a substantive difference. Oral administration was also appropriately selectable in light of tolvaptan's use at the priority date. As to Difference 2, the amount is substantially the same as the minimum effective dose of 30 mg/day in Ko 2. No critical significance is shown for limiting the daily amount to 0.371 mg/kg or less, and that amount was appropriately selectable in light of Ko 2 and common general technical knowledge. …

Diuretics were widely used to improve fluid retention, congestion, and edema—symptoms of heart failure—regardless of whether the heart failure was acute or chronic, severe, mild, or moderate. The examples in the specification also include heart-failure treatment differing from diuretics, so they cannot be read as teaching that diuretics should be treated differently merely because a patient is in NYHA Class IV. Moreover, the patent's trial combined patients in Classes III and IV; mortality for Class IV patients alone was not clarified, so the effect on Class IV patients is unknown.

Japanese Decisions on Indirect Infringement and Knowledge

Tokyo District Court, 2008 (Wa) 19874
Medical instruments — patent holder prevailed ★★★

Indirect infringement involving medical devices used in a manner prohibited by package-insert warnings under pharmaceutical law.
A warning letter alone, without concrete evidence, was held insufficient to establish “knowing.”
No injunction sought.

“… Generally, statements in a medical-device package insert (under Article 63-2 of the Pharmaceutical Affairs Act) should guide physicians' use. Where the ‘Precautions for Use’ warn that a particular method is dangerous and prohibit it, physicians using the device would not ordinarily be expected to use that method.
The accused product's package insert warned that use by the integrated simultaneous-puncture method was dangerous and prohibited that method.
Accordingly, it is necessary to examine whether, despite those warnings, the defendants recognized that physicians might nonetheless use the accused product by that method. …
⑤ A notice was sent to the defendants pointing out that the accused product had a structure capable of integrated simultaneous puncture and warning that it infringed the patent. … This merely shows that the defendants recognized that X1, the patentee, asserted that the product had such a structure. There is no circumstance showing that X1 presented concrete supporting evidence at that point. Receipt of the notice therefore does not immediately establish specific awareness that the product would be used by the integrated simultaneous-puncture method. … By receiving the complaint and copies of the preparatory briefs submitted in this litigation, the defendants recognized facts sufficient at least to suspect the existence of physicians performing integrated simultaneous puncture with the accused product. …”

Osaka District Court, 2015 (Wa) 8974
IP High Court appeal, 2019 (Ne) 10007
Device displaying a ladder circuit upon an abnormality — patent holder prevailed ★★

The appeal also found the product indispensable and upheld indirect infringement.
Knowledge and acceptance of a high probability that a non-exceptional range of users will use the product for patent infringement suffice.
⇒ “Approximately one quarter” established indirect infringement under Article 101(ii).

“… Article 101(ii) of the Patent Act requires manufacture, transfer, or similar acts while knowing that ‘the

Japanese Decisions on Indirect Infringement and Knowledge

invention is patented' (subjective requirement ①) and that a product used to produce a directly infringing patented product 'is used to work that invention' (subjective requirement ②). ... Requiring awareness, at each production or transfer, that the particular component is actually used by the particular recipient to work the patent would mean that the patent right has no effect unless the seller knows each recipient's actual use, even if it recognizes and accepts that infringement is highly likely to occur through its transfers. This conflicts with Article 101(ii), which extends the patent's effect to preparatory conduct highly likely to lead to direct infringement. Subjective requirement ② should therefore be understood as requiring, and being satisfied by, an existing situation in which, considering the component's nature, customers' usage, and the manner of supply, a non-exceptional range of purchasers is highly likely to use it for patent infringement, with the producer or transferor recognizing and accepting that situation. This is not an unreasonable construction of the words 'knowing that the product is used to work the invention.' ..."

Osaka District Court, 2018 (Wa) 4851
Clamp device — patent holder prevailed ★

Knowledge and acceptance of a high probability that a non-exceptional range of users will use the product for infringement.
⇒ Indirect infringement under Article 101(ii).
An injunction against all relevant products is not excessive.

"Accused Product Groups 7 and 8 can also be used with link clamps, lift cylinders, and work supports, besides swing clamps. ... However, in light of the purpose of Article 101(ii), 'is used to work that invention' means that an existing situation makes it highly likely that a non-exceptional range of purchasers will use the components for patent infringement, taking account of their nature, customers' usage, and the manner of supply; the producer or transferor must recognize and accept that situation, and this is sufficient. ... Here, ... products in Groups 7 and 8 are often sold in combination with swing clamps. There is thus an existing high probability that a non-exceptional range of purchasers will use them for infringement, and the defendants recognized and accepted this. These circumstances therefore do not negate indirect infringement. ...
The defendants argue that enjoining Groups 7 and 8 is impermissible as excessive. But ... because the high probability of infringing use by a non-exceptional range of purchasers exists, indirect infringement occurs at the point of manufacture and sale. An injunction without a use limitation is therefore not excessive."

U.S. CAFC Decisions on Inducement, Contributory Infringement, and Related Issues — 1 December 2016 — Power Integrations v. Fairchild Semiconductor, 843 F.3d 1315 ★

Inducement requires successful communication between the inducer and a third-party direct infringer, resulting in actual inducement of direct infringement. An affirmative act encouraging the third party's infringing conduct is required; merely leaving infringement unaddressed is insufficient.

Fairchild established a U.S. technical support center, enabled customers to locate U.S. distributors, and indemnified customers against U.S. patent infringement claims. This and other evidence directed to the U.S. market could support a finding of inducement, so the court declined to enter JMOL of noninfringement. However, it vacated the inducement verdict because the jury had been erroneously instructed that actual inducement was unnecessary, leaving inducement for retrial. 35 U.S.C. § 271(b).

November 2018 — Enplas Display v. Seoul Semiconductor, 909 F.3d 398 ★

Sales of lenses outside the United States supported inducement of infringement of U.S. patents covering lighting apparatus. Enplas held a 50% worldwide market share and knew that its customers also sold the final products, televisions, in the United States. Together with its knowledge of the patents and infringing

activities, specifications recommending infringing configurations, and other evidence, this supported the jury's finding of specific intent to induce infringement. 35 U.S.C. § 271(b).

May 2015 — Takeda v. West-Ward Pharm., 785 F.3d 625 ★

Denial of a preliminary injunction was affirmed because a likelihood of success on induced infringement had not been established. Even where a pharmaceutical manufacturer knows of an infringing use, vague label language combined with speculation about physicians' prescribing behavior does not establish inducement. 35 U.S.C. § 271(b).

In Arthrocare v. Smith & Nephew, 406 F.3d 1365 (Fed. Cir. 2005), sales literature and operating instructions encouraged infringing use. The case Takeda distinguished because following the label necessarily led to infringement was AstraZeneca v. Apotex, discussed below. The general requirement of intent to induce remained the same in Sanofi v. Watson, 875 F.3d 636 (Fed. Cir. 2017).

November 2010 — AstraZeneca v. Apotex, 633 F.3d 1042 ★

The patented method required administration no more than once per day. The proposed generic label specified twice-daily dosing but recommended reducing the dose after asthma stabilized. Only 0.25 mg and 0.5 mg strengths were available, so some physicians or patients following the downward-titration instruction would arrive at once-daily dosing. A likelihood of success on induced infringement was established, and the preliminary injunction was affirmed. 35 U.S.C. § 271(b).

It is sufficient if the label necessarily leads some users to directly infringe; 100% infringing use is not required. What proportion suffices?

August 1998 — Johns Hopkins University v. CellPro, 152 F.3d 1342 ○

The district court found infringement and inducement based in part on promotion and advertising of medical equipment, and the CAFC affirmed the infringement determination. Knowing of the patent, the seller advertised that the device could achieve the patented purification rate. 35 U.S.C. § 271(b).

Compare GlaxoSmithKline v. Teva: the October 2020 opinion was withdrawn in February 2021 and replaced by the August 5, 2021 opinion. The later opinion sustained the inducement verdict based on evidence including instructions remaining in the partial label that encouraged the patented method and promotional materials.

Compare IP High Court, 2005 (Ne) 10125, Cilostazol (employee-invention compensation claim) (Sato).

January 2003 — Warner-Lambert v. Apotex, 316 F.3d 1348 ★★★

Apotex filed an ANDA to sell a generic after expiration of an earlier patent, for the FDA-approved use of treating partial-onset seizures. It did not seek approval for the separately patented use of treating neurodegenerative disease. The ANDA filing did not infringe under 35 U.S.C. § 271(e)(2).

(Obiter) Inducement was also rejected. The court considered Warner-Lambert's data that 2.1% of gabapentin prescriptions were for neurodegenerative disease and assumed, for argument's sake, its assertion that this represented $50 million. Those figures did not establish an intent to promote infringement. Particularly where substantial noninfringing uses exist, knowledge that some users may infringe does not by itself permit an inference of intent to induce. Where, as with gabapentin, a product has many uses and fewer than one in 46 sales are for an infringing use, the court could neither infer nor decline to infer Apotex's intent without direct evidence. 35 U.S.C. § 271(b).

March 2003 — Allergan v. Alcon, 324 F.3d 1322 △

Alcon and the other applicant filed ANDAs for the FDA-approved use of reducing intraocular pressure, rather than the patented use of neuroprotection in glaucoma patients. Although prescribing for the patented use was alleged to be possible, summary judgment of noninfringement under 35 U.S.C. § 271(e)(2) was affirmed under Warner-Lambert.

The majority did not decide inducement under § 271(b) on the facts of this case. Even where an ANDA filing does not infringe under § 271(e)(2), conduct after approval may separately give rise to liability under § 271(b).

October 2024 — Provisur Technologies v. Weber ★

Where changing a product's settings would satisfy the claim limitations, a theoretical possibility is insufficient; the product must be readily configurable to infringe. Fantasy Sports Props. v. Sportsline.com, 287 F.3d 1108 (Fed. Cir. 2002).

Customers could not access the screens needed to configure the advance-to-fill function of claim 14 of the '936 patent. The expert also failed to show that he had actually performed that configuration. The denial of JMOL of noninfringement of that claim was reversed.

CAFC Decisions — 2 / Important Decisions on Medical-Use Inventions

November 2010 — Finjan v. Secure Computing, 626 F.3d 1197 ★

Proactive-scanning software incorporated into the products was locked. (1) Users could unlock it by purchasing a key, so direct infringement of the system and storage-medium claims was established.

In ACCO v. ABA, 501 F.3d 1307 (Fed. Cir. 2007), the claims required a particular configuration, such as a lock-device pin positioned in a specified slot, and actual use in the infringing configuration was necessary for direct infringement. By contrast, Finjan's claims did not require a particular configuration or activation of the proactive-scanning function. The presence of the program for performing the function sufficed.

The method claims were not infringed because performance by the defendants in the United States was not proved. The evidence showed, at most, one test in Germany. See Southwest Software v. Harlequin, 226 F.3d 1280 (Fed. Cir. 2000).

Important Related Decision on Medical-Use Inventions

IP High Court, 2022 (Gyo-Ke) 10084 (Honda) — Method for Treating Severe Heart Failure and a Drug Therefor

Invalidity decision upheld; the patent proprietor's action to cancel it was dismissed. △

Differences in target patients and differences in dosage and administration may be treated separately when assessing obviousness. Although the patient group was limited, obviousness was found because, among other things, a known diuretic with the same mechanism had been administered to that group.

Excerpts from the Court's Reasoning

When considering a therapeutic drug's dosage, differences in target patients and treatment should naturally be taken into account. In identifying differences between a patented therapeutic-drug invention and a cited invention, once differences concerning target patients or treatment have been identified, there is no need to identify them again as part of a dosage difference encompassing those patients or treatment. Accordingly, the trial decision did not err in identifying only the daily dosage of tolvaptan as Difference 2, separately from Difference 1 described above. …

(Summary of the court's reasoning follows) The patented invention differs from the invention in Exhibit Ko 2 in being specified as a therapeutic agent for severe heart failure whose oral administration is initiated in hospitalized NYHA class IV patients (Difference 1), and in specifying the daily dosage of the active ingredient as within a range of 0.371 mg/kg or less (Difference 2).

However, regarding Difference 1, at the priority date diuretics were widely used regardless of acute or chronic heart failure or its severity. Diuretics with the same mechanism of action as tolvaptan were also administered to NYHA class IV patients. Thus, there was ample motivation to use the tolvaptan of the invention in Exhibit Ko 2, effective for NYHA class I–III patients, including patients who cannot immediately be regarded as nonsevere, to treat NYHA class IV patients. No inhibiting factor is identified,

and this could readily have been conceived. Further, whether the patient is hospitalized when the drug is administered can hardly be called a substantive difference. Moreover, given how tolvaptan was used at the priority date, oral administration was a matter that a person skilled in the art could appropriately adopt. Difference 2 likewise concerns a dosage substantially identical to the dose of 30 mg once daily used in the trial in Exhibit Ko 2. Setting the daily dosage within 0.371 mg/kg or less cannot be said to have critical significance, and adopting that range in light of Exhibit Ko 2 and common general technical knowledge was something that could appropriately be done. …

…Diuretics were widely used to treat fluid retention, congestion, edema and other symptoms of heart failure, regardless of whether it was acute or chronic, severe or mild-to-moderate. Furthermore, because the examples in the above argument include heart-failure treatments other than diuretics, they cannot be read as stating that diuretics should be treated differently because a patient is NYHA class IV. In addition, the trial in the patent included a mixture of NYHA class III and IV patients, and the number of deaths among class IV patients alone is not disclosed, so the effect on NYHA class IV patients is unknown.

Japanese Decisions on Indirect Infringement and Knowledge

Tokyo District Court, 2008 (Wa) 19874 — Medical Instruments; Right Holder Prevailed ★★★

Indirect infringement was found for medical instruments used in a manner prohibited by package-insert warnings under pharmaceutical law. A warning letter alone, without concrete supporting evidence, did not establish the required knowledge. No injunction was sought.

Excerpts from the Court's Reasoning

"Generally, statements in the package insert for a medical device (under Article 63-2 of the Pharmaceutical Affairs Act) should guide physicians' use of the device. Where the Precautions for Use warn that a particular method is dangerous and prohibit it, physicians using the device would not ordinarily be expected to adopt that method. The accused product's package insert warned that use by integrated simultaneous puncture was dangerous and prohibited it, as stated in (b)(c) above. Accordingly, it is necessary to examine whether, despite those warnings, the defendants recognized that physicians might nonetheless use the product by that method."

The notice identified the product's structure as allowing integrated simultaneous puncture and warned of patent infringement. The court stated: "With regard to point ⑤ above, this merely shows that the defendants recognized that X1, the patentee, was asserting that the product had such a structure. There is no circumstance showing that X1 presented concrete supporting evidence at that point. Receipt of the notice therefore does not immediately establish specific awareness that the product would be used by integrated simultaneous puncture despite the package-insert warning described in (b)(c) above. … By receiving the complaint and copies of the documentary evidence submitted with it, the defendants recognized facts sufficient at least to suspect that physicians were performing integrated simultaneous puncture with the accused product."

Osaka District Court, 2015 (Wa) 8974 — Device Displaying a Ladder Circuit upon an Abnormality; Right Holder Prevailed ★★

The IP High Court appeal, 2019 (Ne) 10007, also found the product indispensable and upheld indirect infringement. Recognition and acceptance of a high probability that a non-exceptional range of purchasers will use the product for patent infringement suffice. The court found indirect infringement under Article 101(ii), holding that the defendant's asserted proportion of approximately one quarter was not substantiated by evidence but, even if assumed, was not so small as to be "exceptional."

Excerpts from the Court's Reasoning

"Article 101(ii) requires production, transfer, or similar acts with knowledge that the invention is patented (subjective requirement (1)) and that the product used to produce a directly infringing patented product is used to work that invention (subjective requirement (2)). … On the other hand, as to subjective requirement (2), requiring awareness, at each individual production or transfer, that a particular recipient is actually using the component to work the invention would mean that the patent has no effect unless the supplier knows each recipient's actual use, even where the supplier recognizes and accepts an existing high probability that its transfers will cause infringement. This would conflict with the purpose of Article 101(ii), which extends the patent's effect to preparatory conduct highly likely to lead to direct infringement."

"Accordingly, subjective requirement (2) requires, and is satisfied by, an existing situation in which, considering the component's nature, its objective usage, and the manner of supply, a non-exceptional range of purchasers is highly likely to use it for patent infringement, and the producer or transferor recognizes and accepts that situation. This is not an unreasonable interpretation of the words 'knowing that the product is used to work that invention.' …"

Osaka District Court, 2018 (Wa) 4851 — Clamp Device; Right Holder Prevailed ★

Recognition and acceptance of a high probability of infringing use by a non-exceptional range of purchasers suffice for indirect infringement under Article 101(ii). An injunction covering all the relevant products was not excessive.

Excerpts from the Court's Reasoning

"Accused Product Groups 7 and 8 can also be used with link clamps, lift cylinders, and work supports, in addition to swing clamps (Exhibits Ko 6 and 10; Exhibits Otsu 4, 5, 9, and 10). However, in light of the purpose of Article 101(ii), the phrase concerning a product used to produce an infringing patented product being used to work the invention requires, and is satisfied by, an existing situation in which a non-exceptional range of purchasers is highly likely to use the component for patent infringement, considering its nature, objective usage, and manner of supply, with the producer or transferor recognizing and accepting that situation. Here, as stated in section 6 below, considering the large proportion of products in Groups 7 and 8 sold in combination with swing clamps, a high probability existed that a non-exceptional range of purchasers would use them for infringement, and the defendants recognized and accepted this. The stated circumstances therefore do not negate indirect infringement. …"

"The defendants argue that an injunction covering Groups 7 and 8 is impermissible as excessive. However, as stated in section 3(2) above, because there is an existing high probability of infringing use by a non-exceptional range of purchasers, among other circumstances, manufacture, sale, and similar acts constitute indirect infringement. An injunction without a restriction by use is therefore not excessive. The defendants' argument is rejected."

Tokyo District Court, 2024 (Yo) 30028 — Age-Related Macular Degeneration (Kokubu, Civil Division 29)

Tokyo District Court, 2024 (Yo) 30028 — Age-Related Macular Degeneration (Kokubu, Civil Division 29)

(Issued around the same time as Tokyo District Court, 2024 (Yo) 30029 (Nakashima, Civil Division 40).)

⇒ Without deciding whether there was patent infringement, the court, in light of the circumstances, began with “negation of unlawfulness as a lawful act.” It adopted a framework under which, even where an act formally constitutes dissemination or communication of false facts, it is not unlawful as a lawful act contemplated by the patent linkage system if it is found appropriate in light of the purpose of providing pharmaceutical patent information under that system. It found appropriateness in this case.

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12890374936-ja

Osaka District Court, 1998 (Wa) 12899 — Electric Pipe Bending Apparatus
* The defendant simultaneously sold an “electric straight-pipe bender,” a “bender shoe,” and a “bender guide.” Assembling the three infringed the patent.
⇒ Held to constitute direct infringement!!
* The court rejected the argument for a restrictive claim interpretation under the doctrine of estoppel and found literal satisfaction of the claim limitations.
Arguments that did not affect inventive step.
(Excerpt from the decision)
The portions of the plaintiff’s … statements in written opinions and other documents during prosecution of the patent application that concerned the pipe holder (…) asserted, in comparison with the publicly known technology cited in the notice of reasons for refusal or the decision of refusal, that the invention’s pipe-supporting parts were not at the starting point of bending but were distributed on both sides of it, avoiding undesirable lateral pressure from the outside of the bend. Apart from that, they merely described differences from the cited references in line with the wording of Claim 1 concerning the pipe-supporting member before the complete amendment at issue, and cannot be regarded as expressing an intention specifically to exclude other structures of pipe-supporting members. Moreover, through the complete amendment, the pipe-supporting member (pipe holder), originally described in the specification as “a pipe-supporting member having a straight-axis semicircular groove, connected to the matrix via a base plate and functioning as an auxiliary device freely rotatable about a pin mounted on the base plate so as to cooperate with the matrix and the auxiliary matrix during bending,” became “a pipe holder (…) provided on the outer peripheral portion of the rotary former, holding the pipe near the starting portion of bending, and keeping the pipe integral with the rotary former during rotation of the rotary former.” Accordingly, among the statements concerning the pipe-supporting member in the above written opinions and other documents, those relating to points changed by that amendment provide no basis for limiting the interpretation of the claims after amendment (…). The invention was patented as satisfying the patentability requirements notwithstanding the above changes concerning the pipe holder. The applicant’s statements about the pipe holder in written opinions and other documents during prosecution therefore cannot be regarded as a case in which the applicant made statements limiting the meaning of the claims in response to an examiner’s reasons for refusal or grounds of a patent opposition, those statements were accepted by an examiner or trial examiner, and a decision to grant a patent resulted.
Accordingly, the defendant’s argument for a restrictive interpretation under the doctrine of estoppel cannot be accepted.

Trademark / Three-Dimensional Trademark / Article 3(2) — IP High Court, 2024 (Gyo-Ke) 10047 (Miyasaka)

* Article 3(2) applied to the three-dimensional trademark for a Shin Godzilla figurine.

(Excerpts from the decision)

The three-dimensional shape of Shin Godzilla differs in overall proportions from earlier Godzilla characters: the head is smaller, the thinness of the forelimbs (arms) is more pronounced, and the tail is thicker and longer. It also differs in that reddish coloring has been added, particularly from the back through the tail. As the defendant argues, it is therefore inappropriate to regard the two as identical (substantially identical). However, even if the direct object of “use” under Article 3(2) of the Trademark Act is limited to the three-dimensional shape of Shin Godzilla, when determining whether that use has resulted in “consumers being able to recognize the goods as pertaining to the business of a particular person,” nothing precludes consideration of the influence on consumer recognition of the entire “Godzilla” film series leading up to “Shin Godzilla.” Rather, such consideration is necessary.

…

The defendant criticizes each element of the plaintiff’s allegations and proof: there are few types of magazines featuring the goods bearing the mark; the audiences for the books and exhibitions with sales are limited; permanent installations of Godzilla statues are confined to four locations in Tokyo; and the survey contains no question about the relationship between the three-dimensional shape of the applied-for trademark and the plaintiff. However, these are merely minor issues in the face of the overwhelming recognition of the Godzilla character and cannot affect the finding in (2) above.

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12890754477-ja

IP High Court Grand Panel, 2023 (Ne) 10040 — Composition for Breast Augmentation

Unlike the first-instance judgment, the court found that the appellee had prepared and administered a drug containing components ①, ②, and ③ simultaneously.

⇒ Claim limitations satisfied: the patentee won on reversal.

* The closely watched issue of whether separate administration of components ① and ②, on the one hand, and component ③, on the other, would also satisfy the claim thus disappeared….

The patented “composition for breast augmentation” is used for breast augmentation, and its purpose is considered primarily aesthetic.

⇒ In light of current social norms, it is not a “product used for the diagnosis, treatment, medical care, or prevention of human disease.”

⇒ It does not constitute an “invention of a medicine to be produced by mixing two or more medicines (products used for the diagnosis, treatment, medical care, or prevention of human disease)” under Article 69(3) of the Patent Act.

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12891046084.html

HP: https://www.takaishihideki.com/en/single-post/ameblo-12891046084-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12891046084-ja

IP High Court, 2024 (Ra) 10002 (Miyasaka)

Immediate appeal against a decision dismissing an application for an order to disclose sender information.

A Taiwanese provider supplied services within Japan.

⇒ Japanese courts have jurisdiction!!

(The first-instance court had held that jurisdiction could not be found. Reversed!!)

(Excerpts from the decision)

1. Article 9(1)(iii) of the Provider Liability Limitation Act provides that, in addition to the cases listed in items (i) and (ii), Japanese courts have jurisdiction over an application for an order to disclose sender information where the respondent is a person conducting business in Japan and the application concerns that respondent's business in Japan. Considering the current internationalization of information distribution, appropriate measures are required to avoid obstacles to judicial relief against cross-border copyright infringement on the Internet. In view of the geographically and internationally open nature of Internet access services, it is inappropriate to determine formally and rigidly whether the business of a provider of such services is conducted "in Japan." Flexible interpretation and application reflecting actual usage and other circumstances are necessary. With these points in mind, the following specific examination is made.

2. Whether the respondent is a "person conducting business in Japan"

According to the case record, although the respondent is a corporation located in Taiwan and engaged in telecommunications, it provides international roaming services within Japan mainly for travelers from Taiwan, and sells SIM cards at Japanese airports and elsewhere for travelers from Japan to Taiwan. Accordingly, the respondent can be regarded as a "person conducting business in Japan."

3. Whether the "application concerns the respondent's business in Japan"

According to the case record, … Japanese-language content is present, and it is highly likely that the posts at issue were made using SIM cards supplied for Japanese users or other services the respondent offers to Japanese users. …

IP High Court, 2024 (Ne) 10010 — Women’s Clothing (Nakadaira)

*The new invalidity defense raised in the statement of reasons for appeal was found to have been submitted out of time, and the delay was found to be due to gross negligence. Nevertheless, because it would not delay completion of the proceedings in this case, the court considered its merits and rejected it. (New arguments on appeal require attention to the first-instance proceedings and the timing of submission.)

(Excerpts from the decision)

The appellant’s assertion of new grounds for invalidity in this court … was made in the statement of reasons for appeal. …

… After the court disclosed its preliminary view that the proceedings would move on to damages, … the examination of damages proceeded. … At the oral argument hearing, the appellant stated that it had no further allegations or evidence to present. Oral argument in the first instance was then closed and the first-instance judgment was rendered. … In view of this course of proceedings, the new grounds for invalidity asserted in this court constitute allegations and evidence submitted out of time, and the appellant was grossly negligent in submitting them late, so ordinarily their dismissal would be unavoidable. However, the appellee has, albeit in the alternative, responded to the grounds for invalidity submitted in this court, and oral argument in this court has closed without a rejoinder from the appellant. To this extent, it cannot be said that addressing them would delay the conclusion of the proceedings. The court therefore proceeds to examine them below. … The argument that inventive step is lacking is without merit.

IP High Court, 2024 (Ra) 10003
Immediate appeal against a decision dismissing an application to restrict inspection and similar access.
A settlement including a nondisclosure clause was reached in patent infringement litigation.
⇒ The defendant applied to restrict inspection of the settlement terms and portions of the preparatory briefs and documentary evidence.
⇒ The IP High Court held that the settlement terms, taken as an indivisible whole, constituted a trade secret and permitted restrictions on access to all of those terms.
(The first-instance decision had granted the application in full as to the portions of the preparatory briefs and documentary evidence covered by it, but had restricted access to only part of the settlement terms and dismissed the remainder of that application.)
(Excerpt from the decision: the section on the “relationship with the principle of open justice”)
… The plaintiff in the underlying action emphasizes in its opinion that Article 91 of the Code of Civil Procedure derives from the principle of open justice under Article 82 of the Constitution. The court therefore sets out its view on this point.
First, what Article 82(1) of the Constitution requires to be public are the “trials” and “judgments” of courts. “Trials” refers to oral argument in civil proceedings and trial proceedings in criminal cases; it does not automatically include the preparatory proceedings in which this settlement took place. It goes without saying that a settlement in litigation, unlike a “judgment,” is not something pronounced in open court.
In civil litigation, the principle of party disposition is adopted as a reflection of private autonomy, leaving the legal relationship constituting the subject matter of the action to the parties, and respect for the parties’ autonomous resolution is required. In the underlying action here, the plaintiff and the defendant (the appellant) chose final resolution through the nonpublic procedure of a settlement in litigation rather than through a judgment procedure subject to the requirement of publicity. They also agreed to a nondisclosure clause, seeking to prevent the release or leakage of information relating to the settlement terms. If, notwithstanding this, third parties could inspect the settlement terms through the procedure under Article 91(1) of the Code of Civil Procedure, that would clearly produce a result contrary to the intentions and expectations of the parties who decided on such a settlement. In such a case, an order restricting inspection and similar access to all of the settlement terms accords with the principle of party disposition, a basic principle of civil litigation, and the requirement to respect the parties’ autonomous resolution, and in no way conflicts with the principle of open justice.

Article — “Scope of Review in Patent Trial-Decision Revocation Actions: Admissibility of New Arguments on Well-Known Technology — The Laser Processing Optical Apparatus Case” (Peng Zhang, Intellectual Property Law and Policy Journal, Vol. 38 (2012))

The Supreme Court’s January 24, 1980 judgment in the “Food Packaging Container” case held that, because judges do not possess knowledge equivalent to that of a person skilled in the art, new allegations and proof of publicly known technology are permissible to establish the common general technical knowledge underlying the trial decision.

⇒ The (lower) court may decide this in its discretion. (See footnote 31.)

JPO Status Report 2025

The number of patent applications in Japan is recovering: 306,855 applications.

Appeals against examiners' decisions of refusal: approximately 20,000.

Requests for invalidation trials doubled to 186 (one person filed more than 50).

Operation of suspension of examination of divisional applications while the parent application is pending in appeal proceedings

Allowing applicants to consider how to handle a divisional application in light of the results of re-examination before appeal or the appeal proceedings for the parent application is expected to help them develop more efficient and effective filing strategies.

• Examination was suspended in 3,553 cases in 2024.

（iii）原出願が審判係属中の分割出願に対する審査中止の運用*14

2023年４月から、分割出願のうち、原出願の拒絶査定後、拒絶査定不服審判請求にあわせて出願されたものであって、申請がされた案件について、特許法第54条第１項を適用し、原出願の前置審査又は審判の結果が判明するまで当該分割出願の審査を中止する運用を開始している。出願人にとって、原出願の前置審査又は審判の結果を踏まえて分割出願の対応を検討できることは、より効率的かつ効果的な出願戦略の構築につながると期待されている。

また、2024年４月から、審査中止期間の終了前に、出願人側からの申請に基づき分割出願の審査を再開できる運用を開始した。

・2024年に審査を中止した件数は3,553件。

English translation of the source figure | 1/1

Suspension of Examination of Divisional Applications

(iii) Suspension of examination of divisional applications whose parent applications are pending in appeal proceedings (note 14)

Since April 2023, for divisional applications filed after refusal of the parent application, together with a request for an appeal against the examiner's decision of refusal, and for which a request has been made, Article 54(1) of the Patent Act has been applied to suspend examination of the divisional application until the outcome of re-examination before appeal or the appeal proceedings for the parent application is known. Enabling applicants to consider how to handle the divisional application in light of that outcome is expected to contribute to more efficient and effective filing strategies.

Since April 2024, a practice has also been introduced allowing examination of a divisional application to resume at the applicant's request before the suspension period ends.

• Examination was suspended in 3,553 cases in 2024.

Article / Copyright — “Identifying the Author of a Compilation” (Katsuyuki Izumi, Intellectual Property Law and Policy Journal, Vol. 42 (2013))

A compilation work = one “that is creative by reason of the selection or arrangement of its materials” (Article 12(1) of the Copyright Act).

Author of a compilation work = a person who was creatively and substantively involved in the selection or arrangement of the materials.

A person who decided the editorial policy can also be the author of a compilation work. (Tokyo District Court, September 17, 1980, “Chi no Sazamegoto” case.)

The person who commissioned creation of a work or supplied the original proposal can also be an author if that person substantively participated in its creation. (Osaka District Court, March 29, 1985, “Commercial Advertisement” case.)

While looking back through old materials, I found the JPO’s “Toward Strategic Intellectual Property Management” (2007).

I came across this heading:

“Propose research and development themes based on the ‘problem’ sections of other companies’ published patent applications.”

Was this a novel perspective in 2007?

Could we now conduct such research using generative AI?

Article / Compilation Copyright — “Legal Protection for Works Distributed in Parts over the Internet — The Daily Tear-Off Calendar Case” (Takuto Hirasawa, Intellectual Property Law and Policy Journal, Vol. 24 (2009))

* IP High Court judgment of June 23, 2008

The images were not distributed as a daily tear-off calendar. Instead, once a week, images for nearby dates were excerpted and distributed.

⇒ No infringement of the right to integrity of the compilation work.

Infringement of an “expectation right” was also denied.

* The appellate judgment treated the fact that the photographs constituting the materials had not themselves been altered as one reason for finding no infringement of the right to integrity of the compilation work.

Consent to alterations: the majority view is that it is “valid.”

HP: https://www.takaishihideki.com/en/single-post/ameblo-12891909511-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12891909511-ja

Osaka District Court, 2022 (Wa) 3344 — Method for Producing a High-Purity PTH-Containing Lyophilized Preparation … (Takemiya)

① ★ “Suppressing contact with ozone at 0.1 ppm or less” in Claim Limitation 1C need only be achieved by some method. ⇒ Satisfied.

② ★ Inventive step affirmed on the basis that the purpose differs from the prior art (novelty was not at issue).

* If “suppressing contact with ozone at 0.1 ppm or less” in Claim Limitation 1C is treated as the purpose, and inventive step is upheld because that purpose is absent from the prior art, would it not be inequitable unless satisfaction of the claim is also treated similarly to a labeling-based approach, as with a use invention?

Cf. A comparative examination should be made with Tokyo District Court, 2024 (Yo) 30029, the Age-Related Macular Degeneration case (Presiding Judge Nakashima), which denied patent infringement by finding that the medical-use invention was not worked under an “exclusively” standard and that, on the patentee’s argument that a certain proportion sufficed, novelty would be lacking.

(Excerpts from the judgment)

(1) Satisfaction of Claim Limitation 1C

“Claim Limitation 1C merely specifies suppressing contact between the PTH peptide-containing solution and ozone at 0.1 ppm or less contained in the air inside a sterile injectable-drug manufacturing facility. It does not limit the means to any particular method, and no other claim limitation of the invention contains such a restriction.

Moreover, the specification expressly states that the means for suppressing contact between the PTH peptide-containing solution and ozone at 0.1 ppm or less contained in the air inside a sterile injectable-drug manufacturing facility are not particularly limited. … As examples, it describes suppressing the mobility or flow volume of air around the PTH peptide-containing solution … and replacing the atmosphere around the solution with an inert gas. …

In light of these claim limitations and the specification, the means for suppressing contact between the PTH peptide-containing solution and ozone at 0.1 ppm or less contained in the air inside a sterile injectable-drug manufacturing facility are not limited in Invention 1; achieving that suppression by some method is sufficient. …

In the defendant's method, contact between the PTH peptide-containing solution and ozone at 0.1 ppm or less contained in the air inside the sterile injectable-drug manufacturing facility is suppressed during steps including the carrying-in step. The defendant's method therefore satisfies Claim Limitation 1C."

(2) Invalidity / lack of inventive step (novelty was not raised as an issue)

"Difference 1-3

Invention 1 is specified as a method characterized by suppressing contact between the PTH peptide-containing solution and ozone at 0.1 ppm or less contained in the air inside a sterile injectable-drug manufacturing facility, whereas the invention in Exhibit Otsu 1 contains no statement that it is a method characterized by suppressing contact with ozone at 0.1 ppm or less contained in the air inside a sterile pharmaceutical manufacturing facility."

"The invention described in the Otsu 1 publication focuses on sterile transfer and cannot be found to have the purpose of suppressing oxidation of a drug. Certainly, as stated in the claims of that publication, the Otsu 1 invention uses a sterilized 'inert' protective gas (nitrogen), which has an oxidation-suppressing effect. However, this is understood to serve the purpose of transferring the drug in a sterile state. In light of the detailed description of the invention, it is difficult to find that a person skilled in the art would recognize a purpose of suppressing oxidation caused by contact with surrounding air. Even if, as the defendant argues, common general technical knowledge existed that an inert gas such as nitrogen is not a 'sterilized inert protective gas' unless sterilized, and that oxidation of a drug can be prevented by suppressing contact between the drug and surrounding air and filling with an inert gas, the Otsu 1 publication contains no specific statement intended to achieve an oxidation-suppressing effect. It cannot be found to disclose the technical concept of suppressing oxidation by suppressing contact between the drug solution and surrounding air.

Furthermore, … the example in the Otsu 1 publication concerns 'omeprazole sensitive to carbon dioxide.' Considering also that omeprazole is cited not as a drug requiring protection against oxidation but as an example of a drug in an unsealed container that is 'to be transferred in a sterile state,' a person skilled in the art would not be found to understand this as an example of a drug requiring suppression of oxidation caused by contact with surrounding air. Similarly, … the statement that 'Container 2 and its contents need not necessarily be pharmaceutical. Other types of containers filled with liquid or solid chemicals requiring hygienic or non-oxidizing transfer or storage conditions can also be treated by the method of the present invention' should be understood merely as indicating that other types of containers filled with non-pharmaceutical chemicals requiring hygienic or non-oxidizing transfer or similar handling can also be treated by the sterile-transfer method of the Otsu 1 invention.

Even considering the claims, the problems of the prior art, the objectives and effects of the invention, and the examples described in the Otsu 1 publication, the invention focuses on transferring a drug solution in a sterile state. It cannot be regarded as an invention suggesting suppression of oxidation caused by contact between the drug solution and surrounding air."

"The Otsu 1 invention aims to transfer a drug solution in a sterile state and cannot be found to aim at suppressing oxidation caused by contact between the drug solution and surrounding air during the carrying-in step (transport and carrying-in). Accordingly, the … argument premised on that purpose cannot be accepted. Likewise, the … argument that the structure itself inherently performs the function of suppressing contact between the drug and ozone contained in the air inside a sterile pharmaceutical manufacturing facility cannot be accepted. … The Otsu 1 publication contains no description or suggestion of oxidation of the drug solution by ozone. It does state that other types of containers filled with liquid or solid chemicals requiring non-oxidizing transfer or storage conditions can also be treated by the method of the invention. Nevertheless, even on the understanding of a person skilled in the art, this cannot be regarded as stating that the sterile-transfer method of the Otsu 1 invention can be used to prevent oxidation of a drug solution by ozone. Nor, even considering common general technical knowledge before the patent's priority date, can it

be said that a person skilled in the art applying the Otsu 1 invention to manufacture a PTH peptide lyophilized preparation would naturally understand and recognize that its structure also acts to suppress contact between the drug solution and ozone. Specifically, ③ even if it was common general technical knowledge that PTH peptides are readily oxidized …, those publications and other materials do not identify ozone as the cause of oxidation; and ④ even if it was common general technical knowledge that ozone oxidizes methionine and tryptophan …, Exhibit Otsu 10 concerns free amino acids in an environment with an ozone concentration of 1 ppm …, while Exhibit Otsu 11 concerns ranatensin peptide, which differs from PTH peptide in amino-acid sequence and peptide-chain length, under conditions in which the solvent is evaporated in air. These documents therefore do not establish that PTH peptide is oxidized by ozone contained in air. In the first place, … the invention arose not only from the prior-art problem that preparations containing PTH peptide must be particularly pure, but also from the inventors' finding that attempts to manufacture PTH peptide-containing lyophilized preparations industrially produced preparations containing PTH-related substances. The Otsu 1 publication contains no description or suggestion of that problem premised on industrial manufacture, and there are no materials establishing that this finding was common general technical knowledge before the patent's priority date. A person skilled in the art encountering the Otsu 1 publication would therefore not recognize the problem that PTH-related substances are generated during the carrying-in step for PTH-containing lyophilized preparations, and cannot be said to have motivation to suppress contact between the PTH peptide-containing solution and ozone at 0.1 ppm or less contained in the air inside a sterile injectable-drug manufacturing facility. Accordingly, a person skilled in the art cannot be said, on the basis of the Otsu 1 invention and common general technical knowledge, to understand and recognize suppression of contact between the PTH peptide-containing solution and ozone at 0.1 ppm or less contained in the air inside a sterile injectable-drug manufacturing facility. …"

Deletion of All Claims Is Permitted in the JPO’s Q&A

Original Ameblo publication: 2025-03-31

Article type: Legal and examination updates

Categories: Patents

Topics: Patent corrections, Examination and appeal practice, Divisional applications

First published on this website: 2026-10-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892033192.html

HP: https://www.takaishihideki.com/en/single-post/ameblo-12892033192-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12892033192-ja

A note, although this is hardly new.

Deletion of all claims is permitted in the JPO’s Q&A, and the Trial and Appeal Manual also treats such deletion as a restriction of the scope of claims. I should therefore keep it in mind as a last resort for satisfying the requirement of limiting reduction of claims in the parent-child-grandchild divisional-application problem.

(Note) Q20 of the JPO’s “Q&A on Correction Trials and Requests for Correction” (https://www.jpo.go.jp/faq/yokuaru/shinpan/document/index/03.pdf) answers that a correction deleting all claims is permitted, in the situation where the patentee’s own registered patent has given rise to a violation of Article 39 of the Patent Act. It concerns correction of a registered patent. Section 38-03 of the Trial and Appeal Manual treats deletion of claims, including deletion of all claims, as a restriction of the scope of claims, which is a permitted purpose of correction. The “limiting reduction of claims” requirement referred to above (限定的減縮) is a requirement under Article 17-2(5)(ii) of the Patent Act for amendments made after a final notice of reasons for refusal and in certain other situations.

Correction Deleting All Claims — JPO Q&A

Q20. My own already registered patent has caused a violation of Article 39 of the Patent Act. Even if I abandon that patent, its status as an earlier application remains, so the violation cannot be avoided. I therefore wish to eliminate the violation by deleting my own patent. Is a correction deleting all claims permitted?

A20. Yes, it is permitted.

IP High Court, 2024 (Gyo-Ke) 10002 — Nonwoven Fabric for Civil Engineering Work (Shoji) — Motivation to change the specifications of a publicly worked product

Original Ameblo publication: 2025-04-01

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892137239.html

IP High Court, 2024 (Gyo-Ke) 10002 — Nonwoven Fabric for Civil Engineering Work (Shoji)

***Motivation exists to change the specifications of a publicly worked product.**

⇒ Inventive step: lacking

(Excerpts from the court's reasoning)

In the nonwoven fabric for civil engineering work of Cited Invention 1, increasing or decreasing the proportion of black fibers colored with carbon black to improve weather resistance, abrasion resistance and light shielding; prevent reflected light from hindering workers; prevent impairment of the landscape; and suitably adjust the clarity of the mottled pattern used to measure the fabric's elongation is merely a matter of design choice for a person skilled in the art. Moreover, as noted above, it was common general technical knowledge at the filing date that, in a nonwoven fabric for civil engineering work combining white fibers with black fibers colored with carbon black, increasing the proportion of black fibers darkens the mottled pattern, facilitating measurement of elongation based on distances between spots, and also improves weather resistance, abrasion resistance and light shielding and suppresses light reflection. Accordingly, there was motivation to increase the proportion of black fibers above 7.5%. …

Even if compliance with the specifications for the 800Z product is required to maintain its identity or quality, developing and manufacturing a new nonwoven fabric product for civil engineering work based on that product with some specifications changed is something naturally undertaken. The fact that the proportion of black fibers is set at a particular value in the 800Z specifications therefore does not establish an inhibiting factor against changing that value. Nor can the fact that the proportion of black fibers specified for the 800Z product is the single-digit figure of 5% be understood as an inhibiting factor against changing it to the double-digit figure of 10%.

Furthermore, …specifying a particular proportion or range for the black fibers is not found to have any particular technical significance, and there was motivation to increase the proportion of black fibers colored with carbon black. Accordingly, no inhibiting factor is found against changing the proportion of black fibers in Cited Invention 1 from the value stated in the above specifications.

A Revised Edition of the “Trade Secret Management Guidelines” Has Been Published.

Original Ameblo publication: 2025-04-01

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892193335.html

A Revised Edition of the “Trade Secret Management Guidelines” Has Been Published.

Numerous criminal judgments are cited.

<Management as a Secret>

• Nagoya District Court, March 18, 2022 (2017 (Wa [criminal]) 427)

“Even for criminal measures, the requirements for qualifying as a trade secret are understood to be the same as the civil requirements, including in light of the history of the 2003 amendment to the Unfair Competition Prevention Act.”

For the non-public-knowledge requirement, where information consists of a combination of multiple items, the determination depends on whether it is generally available outside the holder's control, considering such matters as the ease of combination and the time, money and other costs needed to obtain it.

• IP High Court, 2020 (Ne) 10066

Management as a secret should be determined from an objective perspective, including recognizability by employees as a whole, and is not affected by what each individual employee actually understood.

• IP High Court, 2010 (Ne) 10039; Tokyo District Court, December 9, 2022, 2021 (Toku-Wa) 129

Regarding the nature of the information, if it is important to the trade-secret holder and it is obvious to employees that it naturally must be managed as secret, management making use of that employee awareness should be permitted.

• Fukuoka High Court, 2024 (U) 20

Limiting the persons who have contact with the medium does not require strictly examining each employee's business need before granting access. Even if access is broadly granted within a particular department for operational needs or similar reasons, it remains limited to specified employees.

<Usefulness>

• Tokyo District Court, 2021 (Toku-Wa) 129; Tokyo District Court, 2022 (Toku-Wa) 2148

If the information is used or utilized in the business activities of the enterprise holding the trade secret, the need to protect it as a trade secret can basically be affirmed. Unless protection is inappropriate, for example because the information is contrary to public policy or morals, the usefulness requirement is satisfied. The assessment of usefulness is not affected by whether the person who wrongfully acquired the information can put it to effective use.

• Yokohama District Court, July 7, 2021, 2018 (Wa [criminal]) 1931

The purpose of protecting trade secrets under the Unfair Competition Prevention Act is to protect the competitively advantageous position obtainable through legitimately held information in order to prevent unfair competition and maintain competitive order, not to protect special information possessing inventive step. Thus, to qualify as useful technical information, the information need not necessarily produce “unexpected, particularly superior functions and effects.”

<Not Publicly Known>

• Tokyo High Court, 2021 (U) 1407

Information need not produce “unexpected, particularly superior functions and effects” to qualify as not publicly known.

• Nagoya High Court, 2020 (U) 162

The court affirmed that the information was not publicly known because learning it by analyzing a commercially available product required employing a paint manufacturer's knowledge and obtaining cooperation from raw-material manufacturers, among other things, and still took a certain amount of time; it was not information that anyone could easily learn.

• Osaka District Court, 2014 (Wa) 11151 and 2013 (Wa) 13167

The court rejected non-public status because the types and mixing ratios of the alloys used in the plaintiff's products on the market could readily be determined using component analysis, a generally available technical means whose costs were not excessive.

IP High Court, 2021 (Gyo-Ke) 10131 [Sheet-Affixed Structure] <Honda>

Original Ameblo publication: 2025-04-02

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892273816.html

2021 (Gyo-Ke) 10131 [Sheet-Affixed Structure] <Honda>

*In the primary reference, providing multiple locations has no particular technical significance.

⇒ A single location does not necessarily mean inferior fixing strength (adhesive strength); the desired fixing strength (adhesive strength) can … be provided by appropriately adjusting the size and other aspects of “PSA region 39.”

⇒ Can be appropriately selected

⇒ A matter of design choice

(Excerpt from the court's reasoning)

…Providing “PSA regions 39” at multiple locations in the invention in Exhibit Ko 3-1 is not found to have any particular technical significance. Furthermore, …having “PSA region 39” at “one location” does not necessarily mean lower fixing strength (adhesive strength) than having it at “multiple locations.” The desired fixing strength (adhesive strength) can … be provided by appropriately adjusting the size and other aspects of “PSA region 39” …. Accordingly, …the number of “PSA regions 39” is a matter of design choice that a person skilled in the art can appropriately select by adjusting various factors, including the material, size, weight and hardness of “laminate 30” and the material and size of “PSA region 39” ….

[U.S. Patents] Claim Differentiation and 35 U.S.C. § 112(d)

Original Ameblo publication: 2025-04-03

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892403149.html

[U.S. Patents] Claim Differentiation and 35 U.S.C. § 112(d)

2024.10 NexStep v. Comcast

The court rejected the claim-differentiation argument that the audio-output limitation in independent claim 4 required “VoIP” in claims 1 and 7 to encompass one-way communication. Claim 4 did not itself recite a VoIP limitation, and the claims also differed in other respects.

2005.07 CAFC en banc Phillips v. AWH Corp.

In claim construction, intrinsic evidence is more reliable than extrinsic evidence.

Dependent claim 2 and independent claim 17 specifically require the baffles to be oriented at an angle to the panel sections and to function to deflect projectiles. As a reason for not adopting the narrow construction, the court noted that, if the baffles of claim 1 were inherently angled, the other claims specifying that feature would be redundant of claim 1.

[U.S. Patents] UTTO v. Metrotech (October 2024, CAFC)

Original Ameblo publication: 2025-04-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892528928.html

[U.S. Patents] UTTO v. Metrotech (October 2024, CAFC)

Plural claim language is presumed to mean more than one, but the presumption is overcome if the specification indicates a different meaning.

⇒ The district court construed “group of buried asset data points” to require “two or more” data points. Noting statements in the specification such as “one or more,” the CAFC held that further examination was required, vacated the dismissal of the patent-infringement claim and remanded for further claim-construction proceedings. It did not decide whether the district court’s construction was correct or establish that the defendant’s product infringed.

IP High Court, 2022 (Gyo-Ke) 10039 [Reservation Support Method] <Honda>

Original Ameblo publication: 2025-04-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892910857.html

2022 (Gyo-Ke) 10039 [Reservation Support Method] <Honda>

*The court identified an “inherent requirement” argued by neither party and found motivation.

⇒ Inventive step: lacking

“To satisfy the inherent requirement, a person skilled in the art would naturally conceive of avoiding a situation in which one continues waiting a long time for a response from the first facility regarding reservation availability.”

(Excerpt from the court's reasoning)

The cited invention and the technology described in Cited Reference 2 belong to the same technical field of facility reservation methods in reservation systems covering multiple facilities. They also share the method of querying a first facility about reservation availability and, if a reply indicating unavailability is received from that facility, extracting other facilities similar to it. …In the cited invention, if the first facility does not send a response about reservation availability for a long time, there is a risk of failing to satisfy the inherent requirement of reserving a facility matching the user's desired conditions before the planned date, or date and time, of use. A person skilled in the art would naturally conceive of avoiding a situation in which one continues waiting a long time for the first facility's response in order to satisfy that inherent requirement. Thus, there is motivation to apply the timeout processing of the technology described in Cited Reference 2 to the cited invention. Applying that timeout processing to the cited invention would result in processing whereby, if no reply is received from the facility terminal within a preset waiting period during which a reply is validly accepted, one or more second facilities other than the first facility are extracted based on the reservation details, and information about those extracted second facilities is sent to the user terminal, just as when the reservation-registration result in the reservation-result information is NG. Accordingly, a person skilled in the art could readily have conceived of the configuration relating to Difference 3 by applying the technology described in Cited Reference 2 to the cited invention.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91648.pdf

IP High Court, 2017 (Gyo-Ke) 10167 [Laminated Film] <Mori>

Original Ameblo publication: 2025-04-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892910986.html

2017 (Gyo-Ke) 10167 [Laminated Film] <Mori>

*The scope of exclusion under Article 29-2 is broader than the scope that would not constitute added new matter based on the earlier application's specification.

⇒ Different from the generally stated purpose of Article 29-2 of the Patent Act!!

*The difference was that the earlier invention lacked the numerical thickness limitation “0.01–100 μm.”

(Excerpt from the court's reasoning)

The plaintiff argues that Article 29-2 of the Patent Act was established for convenience in examining later applications. Citing the Solder Resist Grand Panel judgment, the plaintiff further argues that its construction of “within the scope of matters described in the specification or drawings” was a determination of the general interpretation of that language in Article 17-2(3), and that, when interpreting “is identical to” the invention in the “specification, claims” “or drawings” under Article 29-2, a defining feature of a later invention can be said to fall within the technical matters derived by comprehensively considering all descriptions in the specification or drawings originally attached to the earlier application only where that feature is self-evident from the descriptions in the specification and other documents originally attached to the earlier application. …Even if the scope of “is identical to” under Article 29-2 … differs from the scope of permitted amendments under Article 17-2(3), this is the result of construing each provision according to its purpose, and no resulting difficulty is found. Thus, there is little reason to adopt the same interpretation as that governing permissible amendments under Article 17-2(3) when determining the requirements for exclusion of a later application by an earlier application under Article 29-2.

<Reference> Commentary on the Patent Act: “If all inventions described in the original specification and drawings—the maximum scope that can be incorporated into the claims by amendment—are given the effect of excluding later applications, the later application can be processed without waiting for either a request for examination or the examination of the earlier application ….”

⇒ According to the generally stated purpose of Article 29-2, the scope of the expanded earlier application is the same as the scope relevant to addition of new matter.

This judgment differs!!

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-87782.pdf

IP High Court, 2014 (Gyo-Ke) 10097 [Flat Nonaqueous Electrolyte Secondary Battery] <Shimizu>

Original Ameblo publication: 2025-04-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12892911085.html

2014 (Gyo-Ke) 10097 [Flat Nonaqueous Electrolyte Secondary Battery] <Shimizu>

*At least five opposing faces are “tantamount to being described” in the earlier specification. +The number of layers is a matter of design choice.

⇒ Violation of the expanded-prior-application rule

(Excerpts from the court's reasoning)

Although the only number of opposing faces between the positive and negative electrode plates specifically stated in Exhibit Ko 1 … is three, the invention in Exhibit Ko 1 is not, in the first place, limited to three opposing faces. It seeks to enlarge the opposing area between the positive and negative electrode plates by stacking them, and it is also clear that increasing the number of stacked positive and negative electrode plates (that is, the number of their opposing faces) simply increases the opposing area proportionally. Thus, Exhibit Ko 1 can be regarded as tantamount to describing not only three opposing faces between the positive and negative electrode plates, but multiple faces, namely two or four or more. Accordingly, Exhibit Ko 1 is found also to describe at least five opposing faces between the active-material-containing layers of said positive and negative electrode plates facing each other through a separator. The number of stacked positive and negative electrode plates (that is, opposing faces) is merely a matter of design choice determined according to the required discharge-capacity level under heavy-load discharge.

…Difference A identified by the trial decision amounts to quantitative differences between the invention at issue and the invention in Exhibit Ko 1 concerning (1) the number of opposing faces and (2) the relative sizes of the opposing area and the gasket opening area. …Both inventions use, as an electrode group in a flat nonaqueous electrolyte secondary battery, a multilayer stack of positive electrode plates having active-material-containing layers on the surfaces of positive electrode constituents and negative electrode plates having active-material-containing layers on the surfaces of negative electrode constituents, with separators interposed, thereby increasing the sum of the opposing areas between the active-material-containing layers of the positive and negative electrode plates and increasing discharge capacity under heavy-load discharge. They thus share the same problem and means of solving it. …The fact that increasing the number of opposing faces beyond five produces little change in heavy-load discharge capacity, and sometimes diminishing capacity, may be unexpected. However, the invention at issue addresses the technical problem of increasing discharge capacity under heavy-load discharge and specifies a lower limit, not an upper limit, on the number of opposing faces. The failure of discharge capacity to increase proportionally with the number of opposing faces therefore cannot be regarded as a new effect of the invention.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-84668.pdf

[Trademark] Kobe District Court, 1995 (Wa) 661, “Chafukumame”

Original Ameblo publication: 2025-04-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893042443.html

[Trademark] Kobe District Court, 1995 (Wa) 661, “Chafukumame”

• A coined term

• General consumers encounter the name “Chafukumame” mostly through the plaintiff's and defendant's products.

• With two exceptions, the term “Chafukumame” appears in trade publications as the name of a particular product.

• As many as eight businesses used different names.

⇒ It has not become generic!!

IP High Court, 2016 (Gyo-Ke) 10146 [Method and Compositions for Preparing Antibodies and Antibody Derivatives with Low Core Fucosylation] <Shimizu>

Original Ameblo publication: 2025-04-09

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893172466.html

2016 (Gyo-Ke) 10146 [Method and Compositions for Preparing Antibodies and Antibody Derivatives with Low Core Fucosylation] <Shimizu>

*A substantial number of examples ⇒ Enablement requirement satisfied

(Excerpt from the court's reasoning)

Even if, as the plaintiff argues, differences in the chemical structures of fucose analogs produce different biological activities, the detailed description in the specification substantiates inhibition of core fucosylation for a substantial number of fucose analogs, and there is no apparent reason to deny this for the other fucose analogs recited in claim 1. It is therefore appropriate to find that the invention can be practiced across its entire scope.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-86977.pdf

[Trademark] Osaka District Court, 2013 (Wa) 12788 <Tani> — Registered mark “Raisapo”

Original Ameblo publication: 2025-04-10

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893309858.html

[Trademark] Osaka District Court, 2013 (Wa) 12788 <Tani>

Registered mark: “Raisapo”

Defendant's mark: “Raisapo Ikeda”

⇒ An abbreviation of “Life Support Network Ikeda,” not trademark use under Article 2(3)(viii) of the Trademark Act.

+Not similar

(Excerpt from the court's reasoning)

In light of how the defendant's mark is actually used, persons viewing the website and encountering it are considered to recognize it as a whole, without extracting “Raisapo” alone, and, as described above, to understand it as referring to an organization based in Ikeda City whose purpose is to support people's daily lives. Consequently, there is no likelihood of misidentification or confusion with the plaintiff's mark consisting only of the characters “Raisapo,” and the two are not similar ….

[Article/China and Trade Secrets] Trade Secret Protection in China: Focusing on Academic Views and Court Decisions concerning the Secret-Management Requirement

Original Ameblo publication: 2025-04-11

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893422734.html

[Article/China and Trade Secrets] Trade Secret Protection in China: Focusing on Academic Views and Court Decisions concerning the Secret-Management Requirement (Yang Jianjun, Intellectual Property Law and Policy Journal, Vol. 44 (2014))

China's “secret-management” requirement was lenient before 2007.

In 2007, the Supreme People’s Court issued a judicial interpretation requiring a finding that the rights holder has taken confidentiality measures where one of the following situations (1)–(7) applies and the measures are sufficient, under normal circumstances, to prevent leakage of the confidential information.

(1) Disclosure of confidential information is restricted, and its contents are communicated only to relevant personnel who need to know.

(2) Protective measures such as locking are applied to media containing confidential information.

(3) Confidentiality markings are placed on media containing confidential information.

(4) Passwords, codes or similar measures are used for confidential information.

(5) Confidentiality agreements are concluded.

(6) Visitor access to machinery, factories, workshops or other facilities involving secrets is restricted, or visitors are required to maintain confidentiality.

(7) Other reasonable measures are taken to ensure confidentiality.

*On September 12, 2020, the Supreme People's Court put into effect the “Provisions on Several Issues concerning the Application of Law in the Trial of Civil Cases Involving Infringement of Trade Secrets,” further developing rules on the elements of trade secrets and the determination of infringement.

https://www.juris.hokudai.ac.jp/riilp/wp-content/uploads/2014/03/9290231d65e48330f62497347220ec30.pdf

IP High Court, 2023 (Ne) 10051 [High-Capacity Water Supply System] <Miyasaka>

Original Ameblo publication: 2025-04-12

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893590074.html

2023 (Ne) 10051 [High-Capacity Water Supply System] <Miyasaka>

In view of the wording “based on the remaining-fuel-level signal” in claim element C … the “remaining-fuel-level signal” is understood to be sent to the “automatic supply pump mechanism,” with that signal automatically providing on/off control of fuel supply and stopping.

⇒ Limitation not satisfied

[Article] Examining the Scope of New Evidence Admissible in Actions to Rescind Trial Decisions: A Classification of Court Decisions (Masanori Takahashi, 2014)

Original Ameblo publication: 2025-04-13

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893715540.html

[Article] Examining the Scope of New Evidence Admissible in Actions to Rescind Trial Decisions: A Classification of Court Decisions (Masanori Takahashi, Intellectual Property Law and Policy Journal, Vol. 44 (2014))

⇒ Of the five types, only (1), (2) and (5) permit submission of new evidence in an action to rescind a trial decision!!

Knitting Machine, Supreme Court (Grand Bench) judgment of March 10, 1976, Minshu Vol. 30, No. 2, p. 79 (The appeal trial proceedings under the former system correspond to present-day invalidation trial proceedings.)

"In an action to rescind a trial decision, a ground for invalidity based on comparison with publicly known facts that were not examined and determined in the appeal trial proceedings cannot be asserted as a reason for holding the trial decision unlawful or lawful."

(1) State-of-the-art type

Evidence to establish the state of the art for a person skilled in the art at the filing date is, in principle, admissible.

(2) Corroboration type

Evidence clarifying the meaning of technical matters determined in the trial is also, in principle, admissible.

(3) Essential-to-patentability type

Even if intended to corroborate technical matters examined in the trial, evidence concerning matters essential to patentability is inadmissible.

(4) Addition type

Evidence concerning technical matters not determined in the trial is inadmissible.

(5) Nontechnical type

Evidence concerning nontechnical matters among the issues to be examined is admissible.

[Article] Agreements Not to Exercise Authors' Moral Rights: A Law-and-Economics Analysis (Nobuko Kawashima, Intellectual Property Law and Policy Journal, Vol. 29 (2010))

Original Ameblo publication: 2025-04-14

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893802585.html

[Article] Agreements Not to Exercise Authors' Moral Rights: A Law-and-Economics Analysis (Nobuko Kawashima, Intellectual Property Law and Policy Journal, Vol. 29 (2010))

Nonexercise agreement = an agreement by which an author undertakes not to exercise their own moral rights

Under Japanese law, an author’s moral rights are personal to the author and inalienable (Copyright Act, Article 59). After the author ceases to exist, Article 60 protects moral interests by prohibiting certain conduct; this does not mean that the moral rights themselves continue to subsist.

Recognizing authors' moral rights imposes verification costs on third parties as works circulate from one party to another, but benefits some stars because their works command a premium. (For the many other artists, this new burden worsens compensation and terms.)

[Article] Copyrightability of two-dimensional patterns — Appeal in the Futon Pattern case (Yuanjie Li, Intellectual Property Law and Policy Journal, Vol. 69, 2024)

Original Ameblo publication: 2025-04-15

Article type: Publication review

Category: Copyright

Topics: Copyrightability, Applied art

First published on this website: 2026-10-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12893930031.html

HP: https://www.takaishihideki.com/en/single-post/ameblo-12893930031-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12893930031-ja

[Article] Copyrightability of two-dimensional patterns — Appeal in the Futon Pattern case (Yuanjie Li, Intellectual Property Law and Policy Journal, Vol. 69, 2024)

These three cases all denied copyrightability of utilitarian articles bearing two-dimensional patterns:

• Futon Pattern — Osaka High Court, 2022 (Ne) No. 745

• Saga Nishiki Fukuro-Obi — Kyoto District Court, 1985 (Wa) No. 1737

• Chamois — Osaka District Court, 2015 (Wa) No. 9648

In Chateau Katsunuma (IP High Court, 2013 (Ne) No. 10057), copyrightability of a picture on a signboard was denied.

Type 1: Simple patterns combining short text or basic geometric shapes. Copyrightability is often denied.

Type 2: Patterns containing elements depicting real objects with some abstraction. Copyrightability is often recognized.

Type 3: Patterns containing relatively detailed depictions of real objects. Copyrightability is strongly affirmed.

The article proposes a framework for assessing two-dimensional patterns through these three categories and compares its consistency with earlier decisions.

[My comments — Hideki Takaishi]

There are, however, many exceptions; the basis for classification may require further study.

Copyrightability was also denied in the Clock Original Drawing case (Osaka District Court, June 24, 2021). Recognition may be harder when a picture is created for a practical use.

By contrast, copyrightability was affirmed in two T-shirt Illustration cases. The Tokyo District Court’s April 20, 1981 judgment reasoned that expression was not constrained by the practical purpose of printing it on T-shirts. Its September 29, 2023 judgment reasoned that the aesthetic features could be perceived separately from the configuration relating to the practical function of clothing.

Might the result here have differed if the pattern had been created as a painting, rather than for a futon from the outset, and then used as a futon pattern after being presented as a painting? In this case, the design had been drawn and stored as a design proposal for fabric used in mass-produced clothing, and was subsequently selected and acquired for use on futons.

HP: https://www.takaishihideki.com/en/single-post/ameblo-12894521514-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12894521514-ja

[Article / Copyright] Copyrightability denied for makeup, hairstyling, and the selection and coordination of clothing and accessories in a fashion show, Parts 1–2 (Shun Hashiya, Vol. 47, 2015; Vol. 48, 2016)

IP High Court, August 28, 2014 (appeal); Tokyo District Court, July 19, 2013

Both courts rejected the claim that broadcasting portions of video footage of the fashion show infringed copyright or related rights. They denied copyrightability and qualification as protected performances for the models' movements and poses.

The appellate court categorically denied copyrightability of (1) makeup and hairstyles and (2)–(3) combinations of clothing, etc., applying the standards for applied art.

The first-instance court focused on how element (1), makeup and hairstyling, and element (7), background footage, appeared: the scenes were brief and strongly lit, preventing the details from being perceived; the background footage was also brief and blurred, making its specific content difficult to discern.

A related precedent is Setsugekka: Tokyo District Court, October 27, 1999, and Tokyo High Court, February 18, 2002. Copyright infringement was denied because the calligraphic work's creative expression —the shading and dryness of the ink and the vigor of the brushwork—was not reproduced in the captured image.

(Editor's transcription and correction of the figure above)

Fashion Show Case: Summary of the Reasoning at First Instance and on Appeal

Subject matter	First instance	Appeal
Copyright infringement: ① Makeup and hairstyling	The makeup and hairstyles are commonplace and do not express the creator’s individuality. Even if details are creative, their ingenuity cannot be perceived in moving footage lasting only a few seconds; the broadcast does not make the creative expression perceptible.	Applied art lacking aesthetic features independent of its practical purpose. Even if copyrightable, the author would be the hair and makeup artist, rather than Plaintiff A.

Subject matter	First instance	Appeal
Copyright infringement: ②③ Selection and combination of clothing and accessories	Commonplace combinations lacking creativity.	Applied art lacking aesthetic features independent of its practical purpose.
Copyright infringement: ④⑤ Choreography of poses and movements to remove clothing	The poses and movements are not particularly novel for fashion-show models and do not express the creator’s individuality.	The poses and movements are not particularly novel for fashion-show models and do not express the creator’s individuality.
Copyright infringement: ⑥ Combination of ①–⑤	The individual elements lack creativity or their creative expression is not perceptible in the broadcast. Their combination creates no new impression expressing the creator’s individuality.	For each element, Plaintiff A is not established to be its author or copyrightability is absent. Their combination creates no new impression expressing the creator’s individuality.
Copyright infringement: ⑦ Models’ order of appearance	The order of appearance lacks creativity. The broadcast footage presents scenes in a different order from the show; even if the original order were creative, its creative expression is not conveyed by the broadcast.	The order of appearance lacks creativity. The broadcast footage presents scenes in a different order from the show; even if the original order were creative, its creative expression is not conveyed by the broadcast.
Copyright infringement: ⑦ Photographs in the background footage	The photographs are blurred, and their specific content cannot be perceived in moving footage lasting only a few seconds. The broadcast does not make the creative expression perceptible.	The photographers are unknown, and an assignment of copyright to the plaintiffs is not established. The selection of photographs also lacks creativity.
Performance: Direction of choreography; models’ poses and movements; the fashion show as a whole	Since ④⑤ are not copyrightable works, the models’ poses and movements do not constitute performing works and are not protected performances. Nor is the fashion show as a whole established to be an act that does not perform a work but nevertheless has the nature of performing arts.	Since ④⑤ are not copyrightable works, the models’ poses and movements do not constitute performing works and are not protected performances. Nor is the fashion show as a whole established to be an act that does not perform a work but nevertheless has the nature of performing arts.

[Article / Copyright] Including tweets in a book held to be lawful quotation under Copyright Act Article 32(1) — #KuToo case (Takuto Hirasawa, Intellectual Property Law and Policy Journal, Vol. 66, 2022)

Tokyo District Court, 2020 (Wa) No. 19351

The tweet's '#kutoo' was reproduced in the book as '#KuToo.' This was a typographical error: it neither defeated the quotation exception nor infringed the right of integrity.

(Excerpt, translated)

Even if expressions such as 'a strange person' and 'suddenly glitches on Twitter' offended the plaintiff's feelings of personal honor, these statements may be understood as conveying the following point: although the movement concerned women's footwear, the tweet criticized it by citing the extreme and unrelated example of men going to work in swimming trunks, and its point—including its use of 'conversely'—departed from ordinary perceptions and was difficult to understand.

Even if some expressions offended the plaintiff's feelings of personal honor, they did not constitute insults exceeding socially acceptable limits. No tort was established.

The article examines numerous decisions on the framework for lawful quotation. It further analyzes the framework through the subordinate relationship of the quoted work to the quoting work, conformity with fair practice, and whether the extent is justified by the purpose of quotation.

[Article/Copyright] Ownership of Rights concerning Unknown Methods of Exploitation — The Kaiketsu Lion-Maru Case (Kazuhiro Ando, Intellectual Property Law and Policy Journal, Vol. 26, 2010)

Original Ameblo publication: 2025-04-21

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12895752550.html

[Article/Copyright] Ownership of Rights concerning Unknown Methods of Exploitation — The Kaiketsu Lion-Maru Case (Kazuhiro Ando, Intellectual Property Law and Policy Journal, Vol. 26, 2010)

*Tokyo High Court, 2002 (Ne) 5907 (Kaiketsu Lion-Maru case)

The court held that a contract assigning “broadcasting rights” for ¥10 million did not cover rights to broadcast by satellite, a method that had not yet entered practical use when the contract was concluded.

*Tokyo District Court, 2006 (Wa) 1769 (THE BOOM case)

The court held that an agreement to assign exclusively and without restriction all rights held in the master recordings also covered the phonogram producer’s “right to make transmittable,” which did not exist when the agreement was concluded.

⇒ As to the relationship with the Kaiketsu Lion-Maru case, that case concerned a partial assignment of copyright, not a comprehensive assignment of all rights, so the method and substance of interpreting the parties' intentions naturally differed.

*Tokyo District Court, 2006 (Wa) 8752 (HEAT WAVE case)

“Whether ‘all rights (including the plaintiffs’ neighboring rights)’ in Article 4 of the agreement include performers’ right to make transmittable should be determined in accordance with the method of contractual interpretation, by considering comprehensively … the relevant circumstances, including the adequacy of the consideration.”

⇒ The court held that it also included the “right to make transmittable,” which did not exist at the time of the contract.

[Article/Unfair Competition Prevention Act] Trends in Regulation of Dead Copies of Product Configuration — Evaluating Legislative Amendments and Case Law in Light of the Purpose of the System (Yoshiyuki Tamura, Intellectual Property Law and Policy Journal, Vol. 25, 2009)

Original Ameblo publication: 2025-04-22

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12895914689.html

[Article/Unfair Competition Prevention Act] Trends in Regulation of Dead Copies of Product Configuration — Evaluating Legislative Amendments and Case Law in Light of the Purpose of the System (Yoshiyuki Tamura, Intellectual Property Law and Policy Journal, Vol. 25, 2009)

*Tokyo District Court, November 27, 2002, [Belluna/Ryu Ryu] case

⇒ Clothing identical in configuration apart from having its sleeves cut off was held to fall under Article 2(1)(iii) of the Unfair Competition Prevention Act.

(1) “Ordinarily possessed configuration”

*Tokyo District Court, March 30, 2005, [Frilled Cut-and-Sewn Top] case

⇒ Applying the pre-2005 “ordinarily possessed configuration” provision, the district court denied protection because it considered the combination of existing, publicly known product configurations easy to produce. The appellate court reversed.

(2) Imitation of a part

*Tokyo District Court, May 24, 2005, [Footrest for Precast Manholes] case

⇒ Even a part is treated as equivalent to imitation of the whole if it can be traded as a standalone product.

— Osaka High Court, 2003 (Ne) 3575, [Sekisui House]. The article argues that, because the front of a house is particularly important, copying the front may be treated as copying the whole. The court considered the rear, sides and overall configuration as well as the front, and rejected substantial identity.

(3) Imitation of the interior

⇒ In the Drain Hose case (Osaka District Court, November 28, 1996) and the Small Shoulder Bag I case (Tokyo High Court, September 26, 2001), the two decisions discussed in the article excluded internal structures not observed in ordinary transactions from “product configuration.”

(4) Color, luster and texture

The 2005 amendment expressly included “color, luster and texture” in the definition of product configuration. In discussing the interpretation of that provision, the article refers to the NuBra case (Osaka High Court, April 19, 2006, 2005 (Ne) 2866), which denied protection because of differences in texture.

— Even after the amendment, the Osaka District Court, 2007 (Wa) 8262, [Cosmetic Container] case rejected substantial identity because of differences in luster and color.

[Article/Portrait Rights] Copyrightability of Snapshot Portrait Photographs and Whether They May Be Freely Used: The Tokyo Outsiders Case (2010)

Original Ameblo publication: 2025-04-23

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12896288084.html

[Article/Portrait Rights] Copyrightability of Snapshot Portrait Photographs and Whether They May Be Freely Used: The Tokyo Outsiders Case (Atomu Takase, Intellectual Property Law and Policy Journal, Vol. 32 (2010))

*IP High Court, 2007 (Ne) 10003

A photograph taken by a former wife showing her husband and their child was used in a book describing the husband after the portion showing the child was cropped out.

⇒ Copyright infringement

Even everyday snapshots are copyrightable.

The copyright belongs to the former wife, who took the photograph.

Even assuming the defendants' account that the person who supplied the photograph had said it could be used freely, the court found negligence because they had made no effort to identify the copyright holder and obtain permission to publish it.

Because it was not a work that had been made public, it did not qualify as quotation.

Infringement of the right of attribution

Infringement of the right of integrity

⇒ Even an everyday snapshot may be protected if it is original. Being the subject of the photograph does not, by itself, entitle a person to use it freely.

Even when using a photograph of oneself, one should check the rights involved, obtain any necessary permission from the photographer or other rights holder, or use a self-taken photograph.

Cf. Cases in which "negligence" was rejected

• An academic book published following a proposal brought in by its creator (Medical Faculty Assistant Name Omission case: Chiba District Court, February 19, 1979; Tokyo High Court, September 10, 1980)

⇒ It would be harsh to require publishers to conduct a strict investigation into rights when publishing academic books with low profitability.

• A book on sports medicine (Guutara Kenkoho case: Tokyo District Court, May 31, 1995)

⇒ The infringer was a physician well known in Yamanashi Prefecture, and the defendant publisher was a small local publisher.

• A separate case in which the plaintiff's work had a certain print run and had been featured in magazines, but was not found to be a widely known book ("Konenki kara no Suteki Diet" case: Tokyo District Court, July 17, 1998).

IP High Court, 2022 (Gyo-Ke) 10084 [Therapeutic Agent for Severe Heart Failure] <Honda>

Original Ameblo publication: 2025-04-24

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12896667332.html

2022 (Gyo-Ke) 10084 [Therapeutic Agent for Severe Heart Failure] <Honda>

*It is permissible to assess obviousness by treating differences in target patients and differences in dosage and administration as separate differences.

*Although the patient group was limited, a known diuretic with the same mechanism of action had also been administered to that group. In light of this and the other evidence, the claimed patient selection and administration regimen were held obvious.

(Excerpts from the court's reasoning)

When considering a therapeutic drug's dosage, differences in target patients and treatment should naturally be taken into account. In identifying differences between a patented therapeutic-drug invention and a cited invention, once differences concerning target patients or treatment have been identified, there is no need to identify them again as part of a dosage difference encompassing those patients or treatment. Accordingly, the trial decision did not err in identifying only the daily dosage of tolvaptan as Difference 2, separately from Difference 1 described above. …

(Summary of the court’s reasoning follows) The patented invention differs from the invention in Exhibit Ko 2 in being specified as a therapeutic agent for severe heart failure whose oral administration is initiated in hospitalized NYHA class IV patients (Difference 1), and in specifying the daily dosage of the active ingredient as within a range of 0.371 mg/kg or less (Difference 2).

However, regarding Difference 1, at the priority date diuretics were widely used regardless of acute or chronic heart failure or its severity. Diuretics with the same mechanism of action as tolvaptan were also administered to NYHA class IV patients. Thus, there was ample motivation to use the tolvaptan of the invention in Exhibit Ko 2, effective for NYHA class I–III patients, including patients who cannot immediately be regarded as nonsevere, to treat NYHA class IV patients. No inhibiting factor is identified, and this could readily have been conceived. Further, whether the patient is hospitalized when the drug is administered can hardly be called a substantive difference. Moreover, given how tolvaptan was used at the priority date, oral administration was a matter that a person skilled in the art could appropriately adopt. Difference 2 likewise concerns a dosage substantially identical to the dose of 30 mg once daily used in the trial in Exhibit Ko 2. Setting the daily dosage within 0.371 mg/kg or less cannot be said to have critical significance, and adopting that range in light of Exhibit Ko 2 and common general technical knowledge was something that could appropriately be done. …

...Diuretics were widely used to treat fluid retention, congestion, edema and other symptoms of heart failure, regardless of whether it was acute or chronic, severe or mild-to-moderate. Furthermore, because the examples in the above argument include heart-failure treatments other than diuretics, they cannot be read as stating that diuretics should be treated differently because a patient is NYHA class IV. In addition, the trial in the patent included a mixture of NYHA class III and IV patients, and the number of deaths among class IV patients alone is not disclosed, so the effect on NYHA class IV patients is unknown.

IP High Court, 2018 (Gyo-Ke) 10094 [System for Characterizing a Stenosis in a Fluid-Filled Vessel] <Mori>

Original Ameblo publication: 2025-04-25

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12897171276.html

2018 (Gyo-Ke) 10094 [System for Characterizing a Stenosis in a Fluid-Filled Vessel] <Mori>

*Even if accurate measurement is not necessarily possible, this is not an issue of clarity (although enablement or support may be at issue)!!

[Claim 1] … A system … comprising a first measurement sensor … taking instantaneous pressure measurements at various locations along said vessel without maximal hyperemic conditions ….

(Excerpts from the court's reasoning)

In the claimed invention, “without maximal hyperemic conditions” means not being in a state in which blood flow has been maximally increased by administering a drug, and “instantaneous pressure measurements” means … measuring the value at an instant …. …Their meanings are unambiguously clear …. …

Certainly, …examining the blood-pressure ratio calculated from those measurements may not necessarily allow the presence or location of a stenosis in a vessel to be accurately identified. Even so, depending on the degree of stenosis and the measurement method, identifying its presence or location cannot be said to be wholly impossible, so the claimed invention cannot be regarded as entirely meaningless. Moreover, although the enablement requirement … or support requirement … might be at issue from that perspective, those matters were not examined in the trial and therefore cannot be examined in this litigation.

[Freedom to Choose One's Occupation] IP High Court, 2022 (Ne) 10059 <Honda>

Original Ameblo publication: 2025-04-26

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12897551043.html

[Freedom to Choose One's Occupation] 2022 (Ne) 10059 <Honda>

*Post-contract restrictions imposed by a talent agency were held contrary to public policy and morals!!

Former members of a band (the first-instance plaintiffs) alleged that, after their exclusive management agreement with their agency (the first-instance defendant company) ended, the agency obstructed their use of the band/group name and continuation of their activities.

1. Invalidity of the Noncompetition Clause

The court held invalid a clause that, for six months after termination, prohibited entering into performance-related contracts without the agency’s consent. The clause restricted the former members’ freedom to choose their occupation or conduct business, and the restriction lacked a rational basis, including in relation to the claimed recovery of upfront investment. The court therefore found it contrary to public policy and morals.

2. Rights in the Band Name

The court held that the members could exercise publicity rights in the band name, and denied the agency any authority after termination to exercise exclusive rights of use or performers’ moral rights (the right of attribution) in that name. It was also undisputed that the agency held no trademark rights in the band name when it made the notices and requests at issue.

3. Copyright in Photographs

The court also rejected the claim that copyright in the photograph at issue belonged to the agency, holding that the copyright belonged to C, the photographer.

4. Illegality of the Agency's Obstructive Acts

The agency's acts of obstructing the plaintiffs' activities through notices and requests containing false information constituted a tort.

5. Damages

¥990,000 for each of the four plaintiffs (¥3,960,000 in total), plus delay damages. Each award comprised ¥700,000 in pecuniary damages, ¥200,000 for emotional distress and ¥90,000 in attorney fees. Pecuniary loss was assessed at ¥884,288 per plaintiff, but recovery was limited to the ¥700,000 partial claim made by each.

(Excerpts from the court's reasoning)

The first-instance defendants argue that the clause was included to recover upfront investment. However, what appeals to the first-instance plaintiffs' consumers (their fans) is the plaintiffs' performances and the like, not those of other performers affiliated with the first-instance defendant company. Thus, restricting the plaintiffs' performance activities under the clause would not generate profits for the company and thereby achieve the purpose of recovering its upfront investment. There is no relationship between restricting the plaintiffs' activities under the clause and recovering the company's upfront investment. Further, even assuming that the company needed to recover upfront investment and that the plaintiffs bore some responsibility in that regard, a monetary resolution would be possible by such means as distributing profits generated by the plaintiffs' performance activities. That need therefore does not justify restricting the plaintiffs' activities after termination of the exclusive agreement. (In addition, by July 13, 2019, when the exclusive agreement was terminated by mutual consent, approximately nine years had elapsed since its conclusion on August 1, 2010, and approximately seven years even from July 2012, when all of the plaintiffs had joined the group. The agreement had also been renewed several times (Undisputed Facts (2)).

In these circumstances, the company would naturally be considered to have already recovered its upfront investment.)

Accordingly, without considering the remaining points, the restrictions imposed by the clause lack any rational basis. It is therefore appropriate to construe the clause as invalid for violating public policy and morals.

[Unfair competition] IP High Court, 2019 (Ne) No. 10002 (Judge Otaka)

Original Ameblo publication: 2025-04-28

Article type: Case note

Categories: Unfair competition law

Topics: Indications of goods or business, Confusion

First published on this website: 2026-10-16

Case information: 2019 (Ne) No. 10002

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12898039255.html

HP: https://www.takaishihideki.com/en/single-post/ameblo-12898039255-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12898039255-ja

[Unfair competition] IP High Court, 2019 (Ne) No. 10002 (Judge Otaka)

A violation of Article 2(1)(i) of the Unfair Competition Prevention Act was found for products whose customers were healthcare professionals.

Although many cases find that healthcare professionals will not be confused, confusion was found here because the products were consumables sold through online shops.

The first-instance judgment, 2018 (Wa) No. 13381 (Judge Yamada), also recognized a well-known indication of goods or business and similarity, but denied confusion. The appellate court found confusion and granted an injunction against transfer and related acts, together with disposal of the products.

1. Well-known indication of goods or business

The product had distinctive features differentiating it from others of the same kind and had been sold for 34 years.

2. Similarity

‘Differences in the colors of the lettering, graduations, etc. on the drainage and suction bottles are differences within the same blue color family. Viewed as a whole, they are merely differences in detail.’

3. Confusion

‘Both products are consumable medical devices with the same sales channels. If healthcare professionals encounter the defendant’s product shape, which extremely closely resembles the plaintiff’s, through product images in medical-equipment catalogs or online shops, they may mistakenly believe that the products originate from the same source. The appellee’s sale of the defendant’s products is therefore found to constitute conduct causing confusion with the plaintiff’s products.’

[Unfair Competition Prevention Act/Trade Secrets] IP High Court, 2017 (Ne) 10076 <Takabe>

Original Ameblo publication: 2025-04-30

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12898624499.html

[Unfair Competition Prevention Act/Trade Secrets] 2017 (Ne) 10076 <Takabe>

⇒ Although the documents were marked “Confidential,” a duty of care to investigate wrongful disclosure or similar acts (gross negligence) was rejected.

“It cannot be said that the appellee could have known that a confidentiality agreement existed between the appellant and its business partner or that the documents were covered by that agreement. The numbers of short lamps stated in the documents cannot be regarded as information whose mere disclosure to the appellee would cause the appellant serious disadvantage. Nor does it appear that, when acquiring the documents, the appellee encountered any facts apart from the ‘Confidential’ markings that should have raised suspicion that the information was secret. In light of these circumstances, the ‘Confidential’ markings on the documents cannot immediately be said to indicate that they were subject to a duty of confidentiality. Accordingly, those markings alone do not establish that, when acquiring the documents, the appellee had a transactional duty of care to entertain serious doubts about wrongful disclosure or similar acts and investigate and verify the matter. The appellant's argument cannot be accepted.”

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12899374323.html

[Civil Code/Tort] 2018 (Ne) 10089 <Takabe>

*A seller of predesigned houses sold its own buildings to customers solicited at showgrounds for the appellant's products.

⇒ Tort established (¥1 million in damages per building)

(Excerpt from the court's reasoning)

In the Bigfoot business, customers who visited showgrounds or requested materials were registered in a database and, even if an immediate sale was not possible, were called “stock customers” and cultivated …. The stored customer information had pecuniary value in containing the possibility of future sales of Bigfoot products. From this standpoint, the appellees' sales of their own buildings to those customers reduced or eliminated that possibility and must be regarded as having caused pecuniary damage to the appellant.

[Trademark/Management of Affairs without Mandate] IP High Court, 2018 (Ne) 10074 <Takabe>

Original Ameblo publication: 2025-05-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12901070058.html

[Trademark/Management of Affairs without Mandate] 2018 (Ne) 10074 <Takabe>

The request for procedures to register transfer of the trademark rights acquired by the appellee was rejected, whether as restitution following rescission of the business-transfer agreement or as management of affairs without mandate.

1. Restitution Obligation upon Rescission of the Business-Transfer Agreement

The appellee independently applied for the trademark registration; it was not an object of the business-transfer agreement and is not subject to restitution.

2. Transfer of Rights Based on Management of Affairs without Mandate

The appellee's conduct cannot be evaluated as managing affairs for the appellant.

3. Trademark Similarity and the Availability of Remedies

Other trademark rights and remedies (claims for damages and requests for invalidation trials) exist.

4. Fairness and the Purpose of the Trademark Act

The Trademark Act has no provision corresponding to Patent Act Article 74, which permits registration of a transfer in cases of usurpation. Even to eliminate a situation in which similar marks remain separately owned, a claim for registration of a transfer without a substantive legal basis cannot be allowed.

[Trademark] IP High Court, 2024 (Gyo-Ke) 10029 <Nakadaira>

Original Ameblo publication: 2025-05-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12901314009.html

[Trademark] 2024 (Gyo-Ke) 10029 <Nakadaira>

Applied-for mark: “マーくん” (Mā-kun)

Cited mark: “Markun.”

⇒ Similar (violation of Article 4(1)(xi))

(Excerpt from the defendant's (JPO Commissioner's) arguments as recorded in the judgment)

“Given that both the applied-for mark and the cited mark are represented in standard characters, it is difficult to say that the difference in character types between them gives traders and consumers a strong impression as a conspicuous difference in appearance as an indication identifying source.” “Next, as to pronunciation, the pronunciation 'Mākun' arising from the applied-for mark and the pronunciation 'Mākun' arising from the cited mark are the same. As to concept, neither mark gives rise to a particular concept, so they cannot be compared conceptually.” “Although the two marks cannot be compared conceptually, it is difficult to say that consumers perceive the difference in appearance as a difference sufficient to outweigh the identity of pronunciation. When observed separately at different times and places, they are similar marks that are liable to be confused with one another.”

(Excerpt from the court's reasoning)

“Accordingly, since both the applied-for mark and the cited mark are represented in standard characters, it should be said that it is difficult to say that the above difference in character types between them gives traders and consumers a strong impression as a conspicuous difference in appearance as an indication identifying source.” “In pronunciation, the pronunciation 'Mākun' arising from the applied-for mark and the pronunciation 'Mākun' arising from the cited mark are the same.” “On the other hand, as to concept, neither mark gives rise to a particular concept, so they cannot be compared conceptually.” “Neither the applied-for mark nor the cited mark gives rise to a particular concept, and they cannot be compared conceptually (see (3) above); in addition, the difference in appearance cannot be said to give a strong impression as stated above (see (1) above). It is therefore difficult to say that consumers perceive these differences as differences sufficient to surpass the identity of pronunciation (see (2) above), and when observed separately at different times and places, the applied-for mark and the cited mark are found to be similar marks that are liable to be confused with one another.” “Accordingly, there is no error in the JPO decision's determination that the applied-for mark and the cited mark are similar.”

[Unfair Competition Prevention Act] IP High Court, 2024 (Ne) 10024 <Hibiku Shimizu>

Original Ameblo publication: 2025-05-09

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12901551895.html

[Unfair Competition Prevention Act] 2024 (Ne) 10024 <Hibiku Shimizu>

Although the product contains nicotine at less than 1 ppm, the purpose is “to indicate that it does not contain an amount of nicotine that adversely affects the body and mind,” so indications such as “0 mg nicotine” do not “unfairly” stimulate consumer demand.

⇒ No violation of Article 2(1)(xx) of the Unfair Competition Prevention Act.

(Excerpt from the court's reasoning)

The plaintiff argues that analysis at a quantification limit of 0.1 ppm objectively detects nicotine in the product but not in other nontobacco heated sticks, whereas consumers encountering the indication perceive the product as containing no nicotine at all and as superior to other products. However, …the indication is found to be intended to show that the product does not contain an amount of nicotine that adversely affects the body and mind. Nontobacco heated-stick products in which nicotine was not detected by analysis at a quantification limit of 1 ppm (including the plaintiff's product) are all equivalent in the sense that none contains an amount of nicotine that adversely affects the body and mind. The indication is not intended to state the product's nicotine content with scientific precision. Even if there are further differences in nicotine content among nontobacco heated-stick products at a level undetectable by analysis with a quantification limit of 1 ppm, this does not make the indication one that causes consumers to perceive this product as “superior” to others. So long as the product meets that level, indications such as “zero nicotine” and “nicotine-free” are considered permissible under generally accepted social norms. The indication therefore cannot be said to “unfairly” stimulate consumer demand for the product, nor is it found to give the defendants an “unfair” competitive advantage.

[Article] A Court Decision concerning Application of “Offers to Transfer (Including Offers for Sale)” to Cross-Border Conduct, the Scope of Damages and the Doctrine of Equivalents

Original Ameblo publication: 2025-05-11

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12902184065.html

[Article] A Court Decision concerning Application of “Offers to Transfer (Including Offers for Sale)” to Cross-Border Conduct, the Scope of Damages and the Doctrine of Equivalents: The First-Instance Judgment in the L-Glutamic Acid Manufacturing Method Case (Masabumi Suzuki, Intellectual Property Law and Policy Journal, Vol. 67 (2023))

*Trends concerning “offers to transfer (including offers for sale)” in the United States, United Kingdom and Germany

*They agree in treating this as an independent infringing act.

Regarding the locations of conduct that may be at issue in relation to the territoriality of patent systems, and the respective locations of “transfer (or sale)” and “the offer thereof”:

(1) In the United States, if the former is domestic, the latter need not be domestic.

(2) In the United Kingdom, both must be domestic. (A UK decision states that infringement is established when both the offer and the infringement occur during the patent term.)

(3) In Germany, the position has been that if the latter is domestic, the former may be domestic or overseas. In recent years, however, the view has gained strength that not only must the offer itself be made in Germany, but its subject must also have a connection with Germany. (In Germany, making an offer during the patent term that promises a transfer after the patent expires also constitutes infringement.)

IP High Court, 2015 (Gyo-Ke) 10127 [Laser Processing Apparatus] <Takabe>

Original Ameblo publication: 2025-05-12

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12902299027.html

2015 (Gyo-Ke) 10127 [Laser Processing Apparatus] <Takabe>

Difference 1: The plaintiff argued that there was no motivation to replace pressurized water with a gas having lower cooling capacity and that, if the pressure medium were replaced with gas while disregarding cooling capacity, there would no longer be a need to circulate it to cool the pressure medium, and hence no reason to provide a fluid discharge path separate from the fluid supply path. The court rejected that argument and held Difference 1 obvious.

Difference 4: “In the cited invention, it is itself unclear whether there is a difference in width (diameter) between the fluid discharge path and the fluid supply path.” +No motivation

⇒ Inventive step: satisfied

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-85766.pdf

---

*Difference 1 (whether the fluid is gas or water)

The court first addressed whether “Fluid” in the cited reference generally refers to a fluid encompassing both liquids and gases. The original reference was in German; while “Fluid” may be translated as “fluid,” the plaintiff argued that it could also mean a liquid, as in automotive terminology. Considering several English-German-Japanese and German-Japanese dictionaries and the publication of the corresponding Japanese application, the court found a sufficient possibility that “Fluid” in the cited reference was used as a broad concept encompassing liquids and gases.

The court further found that techniques using gas instead of liquid in mirrors whose curvature is varied to control the laser beam's focal position were shown in well-known references (such as References 1 and 3). Taking these matters together, it held that adopting gas rather than pressurized water in the cited invention was something a person skilled in the art could readily conceive. In other words, it affirmed obviousness for Difference 1 and, consistently with the trial decision's conclusion, found no inhibiting factor against the idea of substituting gas based on the cited reference.

*Difference 4 (making the fluid discharge path narrower than the supply path)

Making the gas discharge path narrower than the supply path allows the required pressure to be applied to the rear of the mirror with a small flow rate (specification [0031]). The specification also describes rapid curvature changes and high-speed control of the laser-beam diameter as effects of the apparatus as a whole. A shorter response time does not, however, necessarily follow merely from narrowing the discharge path.

By contrast, the cited invention presupposes circulation of pressurized water and contains no description of narrowing the discharge or supply pipes to generate pressure with a small amount of fluid. The court examined whether a person skilled in the art would derive from the cited invention the idea of “making the discharge path narrower than the supply path to raise pressure efficiently.”

+Examination of well-known technology

The trial decision had cited as well known a technique for raising pressure by restricting the discharge side in systems using gas. However, after examining the cited well-known references (such as References 10 and 11), the court held that they either concerned different technical fields or did not directly show “raising pressure by changing the relative widths of the supply and discharge paths.”

In particular, it held that Reference 11 (gas-replacement technology within a storage chamber) concerned a field entirely different from laser processing and gave no direct suggestion to apply “a configuration making the discharge path narrower than the supply path” to the invention at issue. It also explained that

References 7–9 taught that “the piping volume should be reduced because of the compressibility of gas,” but could not be said to suggest relative widths of the “discharge path” and “supply path.”

IP High Court, 2015 (Gyo-Ke) 10122 [System for Dermatological Treatment] <Takabe>

Original Ameblo publication: 2025-05-13

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12902639393.html

2015 (Gyo-Ke) 10122 [System for Dermatological Treatment] <Takabe>

"It is natural to understand the 'liquid water filter' of Cited Invention 2 identified by the trial decision as referring to the 'liquid water filter' in [0077], not including the suspension filter. And …the 'liquid water filter' cannot be said to cool the skin."

The trial decision concluded that combining Cited Invention 2 with Cited Invention 1 would allow a person skilled in the art readily to conceive of filtering light with a water filter while cooling the skin.

However, after examining the substantive function of the "liquid water filter" in Cited Invention 2, the court found that it adjusted the light spectrum using water as an absorbing medium and could also be used to cool apparatus components, but disclosed no configuration using that water to cool the skin.

In other words, even considering that Cited Reference 2 also described a different form, a suspension filter (an embodiment using frozen liquid), the court pointed out that its operating principle and purpose differed. Although it was found to cool the skin by cooling the waveguide until the liquid completely melted, it was a special configuration that, after melting, became a highly scattering plate and lost its filtering function. The court also distinguished the liquid water filter, which continuously functions as a filter, from the suspension filter, which functions as a filter only while frozen, and held that even combining the disclosure with Cited Invention 1 would not yield the claimed configuration in which the optical filter cools biological tissue.

The court held that replacing the optical filter formed by the prism and the like in Cited Invention 1 with the liquid water filter of Cited Reference 2 would still not yield a configuration using that water to cool the skin. It also rejected the defendant's proposed design modification: thickening the water layer to cool the skin would reduce light transmission and impair the apparatus's purpose and function, so such a modification could not readily be assumed feasible. Disposable light sources, the prism's spacing and contact functions, and more complex sealing structures may be technical issues to consider, but the court cannot be said to have held them to be reasons for affirming inventive step.

Tokyo District Court, 2021 (Wa) 11507 [Compression Supporter] <Nakashima>

Original Ameblo publication: 2025-05-15

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12903070131.html

Tokyo District Court, 2021 (Wa) 11507 [Compression Supporter] <Nakashima>

*Includes a configuration that cannot solve the problem.

(And that configuration is the defendant's product.)

⇒ Support requirement: not satisfied

(The same structure as the second PCSK9 litigation)

(*The appellate judgment did not decide the support requirement.)

(Excerpt from the court's reasoning)

In the invention at issue, the method of “fixing a low-stretch material to the body” … is understood to encompass, in addition to a so-called separate-material attachment structure …, the integrally knitted/woven structure … adopted by Defendant Product 17 …. However, the specification and other documents contain no statement that a person skilled in the art could solve the invention's problem using a supporter with an integrally knitted/woven structure. On the contrary, paragraph [0002] expressly states that such a supporter cannot apply the necessary pressure to an arbitrary location on the knee joint and cannot solve the invention's problem. Accordingly, in light of the specification and other documents, it cannot be found that, even without a description or suggestion, a person skilled in the art would recognize from the common general technical knowledge at filing that a supporter with an integrally knitted/woven structure could solve the invention's problem.

[Article/Unfair Competition Prevention Act] Usefulness and Non-Public Status of Trade Secrets: The Tin Alloy Composition Case (Chen Keyu, 2018)

Original Ameblo publication: 2025-05-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12903508011.html

[Article/Unfair Competition Prevention Act] Usefulness and Non-Public Status of Trade Secrets: The Tin Alloy Composition Case (Chen Keyu, Intellectual Property Law and Policy Journal, Vol. 52 (2018)）

There are two views of the test for “usefulness” of trade secrets: (1) it has only the limited meaning of excluding scandalous information and other information unrelated to incentives for development; and (2) it is a demanding requirement comparable to inventive step.

The Tokyo District Court, 2001 (Wa) 7445, [Crepe Mix Liquid] case and the Osaka District Court, 2014 (Wa) 11151, [Tin Alloy Composition] case (this case) denied usefulness because there was no additional effect over publicly known technology. The article characterizes these as cases denying usefulness to information that confers no competitive advantage, rather than as imposing a demanding requirement comparable to inventive step.

https://www.juris.hokudai.ac.jp/riilp/wp-content/uploads/2019/01/26139757b3a2882c15acc0420875315f.pdf

[Article/Copyright] Scope of Protection for Works of Pictorial Expression: The Professor Illustration Case (Emi Tsubata, 2009)

Original Ameblo publication: 2025-05-18

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12904118131.html

[Article/Copyright] Scope of Protection for Works of Pictorial Expression: The Professor Illustration Case (Emi Tsubata, Intellectual Property Law and Policy Journal, Vol. 24 (2009))

Tokyo District Court, 2006 (Wa) 16899

This judgment held that the shared portions lacked creativity.

— Considering how closely the two works resemble each other, and the particular circumstances that the defendant's video was originally an OEM version of the plaintiff's video but the defendant continued using the character after ending the OEM agreement, might infringement have been found?

(Excerpt from the court's reasoning)

“The feature of depicting a plump, elderly man wearing a mortarboard and gown and sporting a mustache or the like is merely an idea …. The remaining specific expressions identified as common to the plaintiff's and defendant's professor designs—approximately two-heads-tall proportions emphasizing the upper body including the head, with the lower body depicted as large shoes visible below the gown's hem; a bottom-heavy trapezoidal face with round cheeks, a centrally positioned nose and a Kaiser mustache extending from it; vertically elongated oval eyes approximately the same width as the nose, eyebrows immediately above both eyes, no depicted neck or ears, and hair bulging at the sides of the head—are extremely commonplace and cannot be regarded as creative expression. The two are identical only in ideas that are not expression or in portions lacking creativity in expression.”

[Design] Tokyo District Court, 2021 (Wa) 30281 and Other Cases, “Protective Member and Push Handle” <Kokubu>

Original Ameblo publication: 2025-05-18

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12904118561.html

[Design] Tokyo District Court, 2021 (Wa) 30281 and Other Cases, “Protective Member and Push Handle” <Kokubu>

Patent infringement found + design infringement found

⇒ Design infringement: a converted application and indirect infringement of a partial design (Design Act, Article 38(i)(a))!!

The defendants alleged invalidity, arguing among other things that the conversion to the design application was unlawful. However, the court held that the specification of the divisional application disclosed, for example, that the protective portion was disk-shaped and flat underneath, so identity was not negated.

(Excerpts from the court's reasoning)

The defendant's product is a handgrip attached to the upper end of a single pipe of a transport trolley, in which case it becomes the trolley's push handle together with that pipe. It is found that the product would not be attached to anything other than a trolley pipe and thereby acquire a function or use different from a push handle (entire purport of oral argument). Accordingly, the defendant's product is found to be an “article used exclusively for manufacturing” (Design Act, Article 38(i)(a)) a trolley push handle by being attached to the upper end of its pipe.

The defendants argue that their product is used for purposes other than push handles inserted into their trolleys, can be attached to pipes of various lengths, and therefore does not produce a fixed relationship between the grip length and the total pipe length as in the designs at issue. However, even if the product is attached to different types of trolley or pipe, it remains an “article used exclusively for manufacturing” a trolley push handle by attachment to the pipe's upper end. The defendants' argument therefore cannot be accepted.

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12904455057.html

[Article/Copyright] The Duty of Care Owed by a Party Commissioning Advertising Materials to Avoid Copyright Infringement (Hajime Moriwaki, Intellectual Property Management, Vol. 58, No. 11 (2008))

*Judgments holding that the commissioning party owed a high duty of care

⇒ “Negligence” established

Osaka District Court, 1997 (Wa) 3805: pharmaceutical company

Tokyo District Court, 1994 (Wa) 23092: Tokyo Metropolitan Government

Tokyo District Court, 2007 (Wa) 1126: shrine

*Judgments holding that the commissioning party did not owe a high duty of care

⇒ No “negligence”

Osaka District Court, 2003 (Wa) 2886: construction company

Osaka District Court, 2005 (Wa) 1311: coffee company

[Article/Trademark] The Meaning of “Goods” under the Trademark Act (Takuya Ueda, Theory and Practice of Intellectual Property Law, Vol. 3)

Original Ameblo publication: 2025-05-21

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12904712939.html

[Article/Trademark] The Meaning of “Goods” under the Trademark Act (Takuya Ueda, Theory and Practice of Intellectual Property Law, Vol. 3)

*Novelty and promotional items

T-shirts in the BOSS case (Osaka District Court, August 26, 1987): if an article is not an independent product in itself but merely packaging or an advertising medium for another product, it is not “goods” under the Trademark Act.

Related example: ballpoint pens in the Hertz Rent-a-Car case (Tokyo High Court, February 27, 2001). The signs on the promotional items advertised car-rental services and did not function to identify the source of the promotional items themselves; use of the trademark for the designated goods was therefore denied.

= Origami paper in the Takeda Pharmaceutical case (Tokyo High Court, November 7, 1989)

*Pamphlets and admission tickets

The Shumi no Kai case (Tokyo District Court, March 2, 1961) and Mokuba Kikaku case (Yokohama District Court, Kawasaki Branch, April 28, 1988) held that pamphlets and admission tickets did not qualify as independently traded “printed matter” goods and therefore were not “goods” under the Trademark Act.

*Decisions are divided on whether food and beverages served inside an establishment constitute “goods.”

Chunagon case (Osaka District Court, December 25, 1986): trademark infringement rejected

Koraku case (Hiroshima High Court, Okayama Branch, June 18, 1986): trademark infringement affirmed

*Real estate: in the Village Hakusan case, the first-instance court found infringement because condominium units for sale constituted “goods” similar to the designated service of “buying and selling buildings.” The Tokyo High Court (September 28, 2000) found infringement on the ground that the signs were used for the service of buying and selling buildings.

A research report prepared under a joint-research agreement between a university and an outside organization qualified as a work made in the course of duties, with the university as author.

(1) Initiative of the corporation or other organization

The university concluded a joint-research agreement with Kitami City and others and was obliged to prepare the research report as part of its performance.

(2) Created in the course of duties

Through X's obligation to submit a research plan and the university's designation of the research purpose, content, location and other matters, the university was involved to some extent in the substantive content of the research, beyond ordinary labor management.

(3) Published by the corporation or other organization under its own name as author

The covers of the reports displayed names including “Kitami Institute of Technology Regional Joint Research Center,” and their tables of contents and main texts contained no indication of which author wrote which part. Although the appellant was named in the prefaces or other introductory sections as a research member or joint-research representative, the reports were held to have been published under the university's name as author.

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12905722262.html

[Article/Trade Secrets] Can a Company Enjoin an Employee's Use or Disclosure of Trade Secrets the Employee Developed or Acquired Personally? (Asayo Ohyori, Theory and Practice of Intellectual Property Law, Vol. 3)

*Cases granting injunctions, and an interlocutory judgment finding trade-secret infringement (item 3)

(1) Sapporo District Court order, July 8, 1994: customer list

(2) Osaka District Court, December 22, 1998: technical guidance received at another company's research laboratory as part of the employee's work

(3) Tokyo District Court interlocutory judgment, December 26, 2002: list of dispatched staff (whether to grant an injunction, and its permissible scope, were left for further proceedings)

*Osaka District Court, August 28, 1997: use/disclosure for an improper purpose was rejected, but the determination assumed that the defendant's acts could fall within item (vii).

*Cases denying an injunction

(1) Tokyo District Court, November 30, 1998: the defendant knew the information thoroughly without needing to consult the customer list. Use rejected.

(2) Osaka District Court, 2002 (Wa) 3162: the defendant knew the addresses and other information without consulting the customer list. Use rejected.

Cf. Other cases concerning the requirement that information be “disclosed” to the recipient

(1) Tokyo District Court, 2001 (Wa) 5663 [Personal Importation of Viagra Case]: patient information obtained by the defendant in the course of duties as a physician was not a trade secret held by the plaintiff, who had commissioned the work.

(2) Tokyo High Court, 2002 (Ne) 1413 [At-Cost Sale Case]: wholesale prices are formed through negotiations between seller and buyer, so each independently acquires the information; it is not information “disclosed” to the recipient.

(3) Tokyo High Court order, March 31, 2003: credit-card application information was independently acquired by both the credit-card company and the points-card issuer, rather than being information “disclosed” to the recipient.

2016 (Ne) 10047 [Electrical Connector Assembly] <Takabe>

*Determinations in the reasoning of a judgment in an action to rescind a trial decision do not bind the determination of the patent's technical scope in an infringement action. The patentee's counterarguments on invalidity do not necessarily bind the court's determination in an infringement action either.

(Excerpts from the court's reasoning)

…Determinations in the reasoning of a judgment in an action to rescind a trial decision concerning the same patent do not bind the determination of technical scope in an infringement action.

…When construing the technical scope of a patented invention, a party's arguments made in response to the opposing party's invalidity allegations do not necessarily bind the court. Further, the claims for Patented Invention 2 do not provide the limitation asserted by the appellant …. Nor are the problem and functions and effects of Patented Invention 2 such that they can be achieved only if, whenever the cable connector is tilted upward—that is, before reaching its final mated position—the rearmost position of the rear edge of the locking projection is always forward of the foremost position of the projection extending inward into the locking groove from its rear edge.

Original Ameblo publication: 2025-05-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12906556081.html

2016 (Ne) 10042 [Contact Terminal] <Takabe>

*Because the defendant’s product and the patented invention differed in their technical significance, the product did not literally satisfy the claim limitation “pressing member,” and infringement under the doctrine of equivalents was also denied.

(Excerpts from the court's reasoning)

The plunger pin has an inclined recess of substantially conical-surface shape in its large-diameter portion, and is designed to be urged by a coil spring into contact with the inner peripheral surface of the main casing at two locations, left and right. The top-shaped member is conductive, and is configured so that its spherical portion presses against the inclined recess in the plunger pin's large-diameter portion, contacting it at only one point and thereby tilting into contact with the casing's inner peripheral surface at two locations, left and right. The central axis of the top-shaped member and the deepest point of the bottom surface of the plunger pin are offset to ensure that the plunger pin and top-shaped member tilt and contact the casing.

Securing a total of four current paths in this manner reduces the electrical resistance of the defendant's product, reduces the likelihood that no path other than through the coil spring exists for current flowing through the product, and limits the amount of current flowing through the coil spring.

In addition, because the coil spring is coated with ●●●●●●●, there is no need to use an insulating ball.

By contrast, in the invention at issue, …(1) making the inclined recess substantially conical in shape allows the center of the pressing member's spherical portion, formed by a spherical surface, to be positioned stably on the inclined recess's central axis, thereby stabilizing the direction of the coil spring's biasing force transmitted to the plunger pin through the pressing member; and (2) offsetting the inclined recess's central axis from the plunger pin's central axis ensures that the coil spring urges the plunger pin in a direction at a small angle to the casing's central axis, reliably bringing the plunger pin's large-diameter portion into contact with the casing's tubular inner peripheral surface and allowing current to flow reliably into the casing.

Accordingly, the defendant's product and the invention at issue have different technical significance … in the contact between the pressing member and the plunger pin.

[Trademark/Foreign Server] IP High Court, 2024 (Ne) 10031 <Hibiku Shimizu> — “Sushi Zanmai” Case

Original Ameblo publication: 2025-05-29

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12906944953.html

[Trademark/Foreign Server] 2024 (Ne) 10031 <Hibiku Shimizu>

“Sushi Zanmai” Case

⇒ Reversed: no trademark infringement

[Issue 1: Application of Trademark Act Article 2(3)(viii)]

At first instance, the defendant's webpages were found to be created mainly for Japan, were recognized as concerning services similar to food and beverage services, and were treated as advertising.

However, the IP High Court held that the website as a whole aimed to promote exports of food ingredients from Japan, and that the defendant's displayed indications were merely part of an introduction to its overseas-store business, not advertising directed to consumers in Japan.

[Issue 2: Trademark Use and Infringement of the Source-Indicating Function]

The IP High Court held that, even if the display were considered “advertising,” the defendant’s indications concerned overseas restaurants that did not provide services in Japan. The consequence of mistaking their source and receiving their services would occur abroad, so the source-indicating function of the plaintiff’s marks in Japan was not impaired.

[Issue 3: Territoriality and Consistency with the Joint Recommendation]

The IP High Court also held that, in light of trademark independence under the Paris Convention and the principle of territoriality, it would be inappropriate to use Japanese trademark rights to restrict lawful use of marks registered abroad to identify the designated services in those countries, where the use at issue did not impair the marks’ source-indicating or related functions in Japan.

It also concluded, in light of the Joint Recommendation, that there was no trademark use because no commercial effect in Japan was recognized.

*Regarding the Joint Recommendation:

Concerning the “factors for determining commercial effect” listed in Article 3(1) of the Joint Recommendation, the IP High Court

held that, comprehensively considering that “the sushi restaurants do not provide services in Japan and there are no circumstances indicating that they have undertaken plans to do so (subparagraph (a)); the webpages do not display the restaurants' prices in Japanese currency (subparagraph (c)(ii)) or contact methods in Japan (subparagraph (d)(ii)); and, as noted above, the webpages themselves are intended to advertise the service of exporting food ingredients from Japan, with the defendant's indications used in the context of introducing restaurant chains that use the exported ingredients abroad,” even taking into account that “the webpages are written in Japanese (subparagraph (d)(iv)) and do not explicitly state the absence of an intention to provide the restaurants' services to customers in Japan (subparagraph (b)(ii)),” “the use of the defendant's indications on the webpages cannot be said to have a commercial effect in Japan and thus does not constitute use as trademarks in Japan.”

Tokyo District Court, 2002 (Wa) 23687 [Telephone Card] <Iimura>

*The rights holder's arguments during prosecution of the parent of a divisional application were considered in construing the claim language.

*Consistent with Osaka District Court, 2005 (Wa) 12207.

“If an applicant intentionally deletes a portion of the original specification and drawings of the parent application by amendment, it is impermissible, in making a divisional application, to expand the device to encompass matters already deleted.”

(Excerpts from the court's reasoning)

The device at issue was the subject of a divisional application filed from the parent application after its original specification and drawings had been amended and the application published for opposition.

Where the parent application's original specification or drawings have thus been amended and published for opposition before the divisional filing, the device in the divisional application must be one described both in the original specification or drawings of the parent application and in its amended published specification or drawings.

Accordingly, it is natural that determining the “scope of utility model registration claims” in the divisional application also requires construction taking the parent application's prosecution history into account.

In particular, if the applicant intentionally deletes a portion of the original specification and drawings of the parent application by amendment, it is impermissible, in making a divisional application, to expand the device to encompass matters already deleted. The “scope of utility model registration claims” in the divisional application must therefore also be construed consistently with that principle.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-11371.pdf

Original Ameblo publication: 2025-05-31

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12907233624.html

Tokyo High Court, 1999 (Ne) 3800 [Underarm Sweat-Absorbing Pad]

*The determination in the reasoning of another final judgment concerning the same utility model registration is to be respected.

*The argument that this was correction of a typographical error was rejected, and intentional exclusion was found.

Cf. 2016 (Ne) 10047 [Electrical Connector Assembly] <Takabe>

*Determinations in the reasoning of a judgment in an action to rescind a trial decision do not bind the determination of the patent's technical scope in an infringement action. The patentee's counterarguments on invalidity do not necessarily bind the court's determination in an infringement action either.

(Excerpts from the court's reasoning)

In this litigation, the appellant alleges infringement of its utility model right by the appellee on the premise that “small curvature” in the specification means “small radius of curvature.” However, this premise is substantially the same issue examined in the other litigation. The appellant's argument therefore seeks precisely to revive and contest a matter that should have been settled when the other litigation became final. Although it does not conflict with res judicata, it seeks to leave unresolved a matter intended to be resolved by a final judgment and plainly gravely harms legal stability. In such circumstances, absent special circumstances such as an error objectively obvious on its face or grounds sufficient to warrant retrial of the other litigation, it is appropriate to respect the determination in the final judgment's reasoning. Reopening the dispute must be regarded as impermissible under the principle of good faith. …

The plaintiff argues that “small curvature,” which plainly has technical significance in the device at issue, is technically equivalent to “small radius of curvature,” which has the opposite meaning. Ultimately, that argument can stand only on the premise that “small curvature” in the specification is an obvious typographical error for “small radius of curvature.” However, as explained in I above, “small curvature” cannot be construed as such an obvious error. The plaintiff's argument is therefore plainly without merit, without any need to consider the remaining points.

English Translation of the Source Figure — Electrical Connector Assembly

2016 (Ne) 10047 (Takabe). A patentee’s rebuttal of an invalidity argument does not necessarily bind claim construction. Reasoning in a judgment in an action to cancel a JPO trial decision does not bind the determination of technical scope in an infringement action. ★

“A determination in the reasoning of a judgment in an action to cancel a JPO trial decision concerning the same patent does not bind the determination of the invention’s technical scope in an infringement action. … A party’s arguments, made in response to the opposing party’s invalidity arguments, do not necessarily bind the court’s interpretation of the technical scope of a patented invention. The claims for Patented

Invention 2 do not contain the limitation asserted by the appellant. … Nor is the problem addressed or the effect of Patented Invention 2 such that it can be achieved only if, while the cable connector is in an upwardly inclined position—before it reaches the final connector-mating position—the rearmost point of the rear edge of the locking projection always lies forward of the foremost point of the projection extending into the locking groove from its rear edge."

Osaka District Court, 2005 (Wa) 12207 [Goggles]

Original Ameblo publication: 2025-06-01

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12907494065.html

Osaka District Court, 2005 (Wa) 12207 [Goggles]

*The court considered the deletion of claims from the parent application after division, but found no intentional exclusion of the patented inventions at issue because the deleted claims were not shown to be identical to those inventions.

*Consistent with Tokyo District Court, 2002 (Wa) 23687.

“The plaintiff's deletion of claims 4 through 7 from the parent application does not establish that it intentionally excluded the patented inventions at issue.”

(Excerpt from the court's reasoning)

…The amendment concerned the parent application, not the patented inventions in the divisional application. As explained above, claims 4 through 7 of the parent application are not found to be identical to the patented inventions at issue. Thus, the plaintiff's deletion of those claims cannot be regarded as intentional exclusion of the patented inventions at issue.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-34563.pdf

Kyoto District Court, 1996 (Wa) 1597 [Thermal Head]

Original Ameblo publication: 2025-06-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12908157393.html

Kyoto District Court, 1996 (Wa) 1597 [Thermal Head]

*The patentee's arguments during prosecution of the parent of a divisional application were likewise not considered in construing the claim language.

“The prosecution history of the invention in the parent application may be considered only in exceptional circumstances where establishment of the patent right in the divisional application is closely related to the parent application, and reference to the parent's prosecution history clarifies the meaning of the specification or drawings attached to the parent application that already formed the basis for the divisional application at the time of division.”

(Excerpts from the court's reasoning)

Because the invention in the divisional application and the invention remaining in the parent after division are separate and independent, it is, as above, generally inappropriate to consider the parent invention's prosecution history in determining the technical scope of the divisional invention. (Statements made during prosecution of the parent invention cannot be regarded as statements about the divisional invention.)

However, the parent invention's prosecution history may be considered only in exceptional circumstances where establishment of the divisional patent right is closely related to the parent, and reference to the parent's prosecution history clarifies the meaning of the specification or drawings attached to the parent application that already formed the basis for the divisional application at the time of division. (In that situation, determining the meaning of the parent's pre-division specification also permits the meaning of the divisional invention described therein to be regarded as already clear at the time of division.)

Tokyo District Court, 1995 (Wa) 23005 [Topical Antifungal Agent]

Original Ameblo publication: 2025-06-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12908158008.html

Tokyo District Court, 1995 (Wa) 23005 [Topical Antifungal Agent]

*The contents of documents filed in the European application claiming priority from the Japanese application were also considered in construing the claim language.

= Osaka District Court, 1972 (Wa) 1526 [Chakku]

(Excerpts from the court's reasoning)

…Considering together the wording of the claims, the descriptions and examples in the detailed description, the plaintiff's arguments during prosecution of the patent application, the contents of its submissions to the European Patent Office, and other matters, the invention can be described as follows. It concerns a topical antifungal agent using miconazole or the like, known as antifungal agents. In light of the problem that directly adding miconazole or the like to a topical base using an ordinary formulation method causes crystals to precipitate and prevents the desired topical agent from being obtained, it employs the novel technical concept of using crotamiton or the like—known as an active ingredient of topical agents but not as a solvent for miconazole or the like—as such a solvent, and formulating that solution with a topical base to obtain a superior topical agent without crystal precipitation.

Accordingly, …“solution” in the claims should appropriately be construed as a solution having compound (I) as the solute and crotamiton or the like as the solvent.

Original Ameblo publication: 2025-06-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12908158087.html

Shizuoka District Court, 1990 (Wa) 360 and 1992 (Wa) 524 [Alfacalcidol]

*The court rejected the argument that the prosecution history of the corresponding German patent precluded explaining a difference in the melting point of the substance covered by the Japanese patent by differences in purity.

Cf. Tokyo District Court, 1995 (Wa) 23005 [Topical Antifungal Agent]; Osaka District Court, 1972 (Wa) 1526 [Chakku]

(Excerpt from the court's reasoning)

The defendants argue that because the German patent corresponding to the patented invention was granted with emphasis on the fact that the substance obtained by the method was pure, it is impermissible to explain a different melting point of the target substance of this patent, based on the same invention, by lower purity. However, in light of the principle of independence of patents in each country, that argument is plainly without merit.

Even if the presumption under Patent Act Article 104 applied, it has been rebutted.

⇒ The court also stated the following as an alternative observation.

(Excerpts from the court's reasoning)

Even assuming that the defendant's pharmaceutical product were presumed under Patent Act Article 104 to have been produced by the manufacturing method of the invention, the explanation in 2 above shows that the presumption is rebutted …. …

It is appropriate to find that, before the priority date, the “product” produced by the invention was known to an extent that provided a person skilled in the art with a clue to how to manufacture it. Accordingly, the defendant's pharmaceutical product cannot be presumed under Patent Act Article 104 to have been produced by the manufacturing method of the invention.

[Article/Trademark] Trademark-Related Judgments in the Reiwa Era (Kentaro Hattori, Patent News, February 14, 2025)

Civil litigation relating to trademarks, 2019–2024

• Of 92 district court cases, 31 resulted in dismissal on the merits or as inadmissible. (However, many concerned abuse of rights; few involved dissimilarity of marks.)

• Of 31 appeals, five resulted in reversals (four of those judgments found no abuse of rights).

Actions to rescind trial decisions

Of 229 cases, the trial decision was rescinded in 47.

Of these, eighteen concerned non-use cancellation and seven concerned Article 3.

IP High Court, 2010 (Gyo-Ke) 10121 [Natto Food] <Takizawa>

Original Ameblo publication: 2025-06-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12908866363.html

2010 (Gyo-Ke) 10121 [Natto Food] <Takizawa>

*Different standards apply to whether something is an “invention” eligible to serve as a cited invention and whether it is an “invention” when assessing patentability.

(Excerpts from the court's reasoning)

…It is assumed that there is no discrepancy between the applicant's original intention and the claim wording. Even if there is such a discrepancy, as noted above, it is properly a matter to be addressed on the applicant's own responsibility. The examiner therefore does not bear a duty to investigate whether such a discrepancy exists and, if it does, point out that defect or deficiency in the application. …

Identifying an “invention” in a cited invention for assessing inventive step requires, and is satisfied by, disclosure of the technical concept sufficiently to permit its practice, based on the state of the art at the filing date and to the extent necessary for comparison with the invention in the application and the like. In contrast, identifying the “invention” in an application for assessing patentability requires that it be constituted concretely and objectively enough for a person skilled in the art repeatedly and continuously to achieve the intended technical effect. Even if the two identifications of “invention” do not employ the same standard, that is natural given their different purposes and subjects, and cannot be called unreasonable.

Accordingly, although applying different standards to a particular applicant in comparable cases could violate the principle of equality, the plaintiff's arguments plainly do not establish that the defendant engaged in unequal treatment based on double standards.

IP High Court, 2024 (Gyo-Ke) 10023 [Information Processing Terminal] <Hibiku Shimizu>

Original Ameblo publication: 2025-06-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12909092248.html

2024 (Gyo-Ke) 10023 [Information Processing Terminal] <Hibiku Shimizu>

*Claim wording was deleted, but the amendment was held not to add new matter.

(Excerpt from the court's reasoning)

Amendment 4 deletes “regardless of whether payment-related information is input” from the claimed invention. Literally, …because it deletes a limitation, there is room to interpret it as meaning that “an information processing terminal in which the presence or absence of ‘input of payment-related information’ is relevant to the mode at issue,” previously outside the claimed invention, now falls within the amended invention. However, the claimed invention addresses the difficulty of applying to nonpayment uses the prior-art configuration that performs processing and display prompting the user to read a payment card after the user inputs payment-related information …. It provides an information processing terminal applicable to nonpayment uses and capable of quickly reading required information from an information storage medium, whether contact or contactless …. This is also true of the amended invention. …It can hardly be considered a reasonable interpretation that the invention after amendment, including Amendment 4, encompasses within its technical scope these ‘information processing terminals in which the presence or absence of input of payment-related information is relevant to the mode at issue.’ Rather, construing the technical scopes of the original and amended inventions in light of the specification, it remains true both before and after amendment that ‘input of payment-related information’ is unnecessary to achieve the mode at issue. It is appropriate to understand the phrase ‘regardless of whether payment-related information is input’ as merely specifying applicability to nonpayment uses. Amendment 4 therefore does not cause the amended invention to encompass matters absent from the original invention. …Since Amendment 4 does not add new matter, …the amendment as a whole narrows the claims.

Tokyo District Court, 2022 (Wa) 18332 [Method of Transmitting and Receiving Reference Signals in a Wireless Communication System] <Nakashima>

Original Ameblo publication: 2025-06-09

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12909308720.html

2022 (Wa) 18332 [Method of Transmitting and Receiving Reference Signals in a Wireless Communication System] <Nakashima>

*Not mandatory under the “standard” +Non-satisfaction was confirmed by materials submitted under a protective order.

The LTE standard provides that values such as NID_csh_DMRS are used when supplied by higher layers, and that ordinary cell IDs (such as NID_cell) are used when they are not supplied.

⇒ Whether a terminal is configured to support CoMP (coordinated transmission and reception among multiple base stations) is left to its particular implementation; the LTE standard does not make CoMP mandatory for terminals.

+Further, based on the defendant's evidence subject to the protective order (Exhibits Otsu 50–52) and the entire purport of the oral argument, the court inferred that the chipsets incorporated in the defendant's products did not generate or transmit reference signals using the parameters at issue and found no objective evidence to the contrary.

⇒ Limitation not satisfied

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92805.pdf

Tokyo District Court, 2022 (Wa) 70139 and 2023 (Wa) 70009, “Claim for a Declaration of the Right to Obtain a Patent” <Nakashima>

Original Ameblo publication: 2025-06-10

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12909487358.html

2022 (Wa) 70139 and 2023 (Wa) 70009, “Claim for a Declaration of the Right to Obtain a Patent” <Nakashima>

An action seeking a declaration that the plaintiff held the right to obtain a patent for an invention in an international patent application deemed withdrawn because national-phase procedures were not completed in designated states was dismissed for lack of an interest in declaratory relief.

The court treated the right to obtain a patent arising under Japanese employee-invention law as distinct from the corresponding right under German law. Recognition of the former in Japan would not necessarily establish the latter in Germany. It therefore considered a German action to determine ownership under German law more effective and appropriate for resolving this dispute. This concerned the interest in obtaining declaratory relief in this case, not a general rule that Japanese judgments cannot be recognized in Germany.

(Excerpts from the court's reasoning)

“Under the principle of territoriality, the right to obtain a patent under Japan's employee-invention provisions and the right to obtain a patent under Germany's employee-invention provisions are different. Thus, even if the former is recognized in Japan, the latter is not necessarily recognized in Germany. …

Because the plaintiff can bring an action in a German court seeking a declaration of the right to obtain a patent under German employee-invention provisions, directly seeking a declaration of ownership of that right under German law in a German court, rather than seeking a declaration under Japanese law in a Japanese court, is a more effective and appropriate means of resolving the dispute.”

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92853.pdf

[Copyright] Tokyo District Court, 2023 (Wa) 70080, “Action for Disclosure of Sender Information” <Nakashima>

Original Ameblo publication: 2025-06-11

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12909727022.html

[Copyright] Tokyo District Court, 2023 (Wa) 70080, “Action for Disclosure of Sender Information” <Nakashima>

The plaintiff sought disclosure of sender information, alleging infringement of privacy and feelings of personal honor through posts about age and related matters, and infringement of copyright and the right of attribution through a separate post linking to an image.

⇒ The court rejected infringement of privacy because the age was already widely known and the legal interest in its nondisclosure did not outweigh the reasons for disclosure. It also held that statements such as “You're just creepy” and “Act your age!” were opinions and were not clearly insulting acts exceeding socially acceptable limits.

As to the image link, the court found that, under the circumstances of its display and the operations needed to reach the original image, transmission of the information did not directly cause copyright infringement. Infringement of the right of attribution was likewise not shown to be clear. It therefore dismissed the claim for disclosure of sender information.

(Excerpts from the court's reasoning)

Sending the URL in Post 2 caused a coarse, reduced-resolution version of the original image to be displayed. The original image, however, would not be seen unless a user viewing Post 2 clicked the URL and then clicked the same URL again, alongside which was a notice that it would take the user to another site.

The facts found above also establish that the original image merely showed the plaintiff's clothing and the like without showing the face, and that a thumbnail was already displayed in Post 2. In light of those facts, circumstances sufficient to find that a user viewing Post 2 would ordinarily deliberately click the URL and then click it again despite the notice of moving to another site cannot be recognized.

Under these circumstances, the sender's transmission of the URL cannot be found directly to cause infringement of the plaintiff's copyright through the circulation of information.

Accordingly, Post 2 cannot be found clearly to constitute the above-mentioned “infringement of rights.”

[Trademarks] Tokyo District Court, 2022 (Wa) No. 16062 — “仙修” (Judge Shibata)

Original Ameblo publication: 2025-06-12

Article type: Case note

Categories: Trademarks

Topics: Similarity of trademarks, Trademark infringement

First published on this website: 2026-10-16

Case information: 2022 (Wa) No. 16062

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12909987156.html

HP: https://www.takaishihideki.com/en/single-post/ameblo-12909987156-en

Japanese version: https://www.takaishihideki.com/single-post/ameblo-12909987156-ja

[Trademarks] Tokyo District Court, 2022 (Wa) No. 16062 — “仙修” (Judge Shibata)

Registered mark: 仙脩

① Defendant's Mark 1 (仙修): similar

② Defendant's Mark 2 (仙修六神丸): similar

③ Defendant's Mark 3 (御所 [boxed separately] 仙修): similar

④ Defendant's Mark 4 (御所仙修): dissimilar

① 仙修 versus 仙脩

Both have two kanji, the first being the identical 仙. The second characters, 脩 and 修, differ in whether part of the lower portion resembles 月 or 彡; the remaining shapes closely resemble each other, as do the overall visual impressions. Both are pronounced “senshu.” Although 脩 originally means dried meat, it also largely encompasses meanings of 修. No conspicuous conceptual difference strongly suggesting distinct meanings to consumers was found. Overall similarity in appearance, pronunciation and concept was therefore established.

② 仙修六神丸

Of the five characters, 六神丸 has long denoted a traditional Chinese medicine/cardiotonic for palpitations and shortness of breath. It lacks inherent source-identifying force for consumers and is close to a generic name. Thus, 仙修 performs the strong source-identifying function. Comparing that portion with 仙脩 establishes similarity in appearance, pronunciation and concept as above; the mark as a whole was held similar.

③ 御所 (boxed separately) 仙修

The four characters comprise 御所 followed by 仙修. A space separates the two portions, and 御所 is boxed, visually dividing them. 仙修 can therefore also function independently as a source identifier. 御所 may be known as a place name in Nara, but it is unclear whether that meaning is immediately familiar nationwide; it may also be read “gosho,” meaning an imperial residence, and does not necessarily evoke one clear concept. The readily separable 仙修 portion resembles 仙脩, so this mark as a whole was also held similar.

④ 御所仙修

The characters run together without a space, and 御所 is not enclosed in a separate frame. Separate observation of the two portions is therefore not inevitable. 御所 also has some source-identifying function, and the whole forms a continuous pronunciation and appearance. Its appearance plainly differs from the two-character 仙脩, and “gose-senshu” or “gosho-senshu” sounds substantially different from “senshu.” On overall observation, the marks were held dissimilar. The court regarded 御所仙修 as a single, fully combined sign, not sufficiently similar to cause confusion with the registered mark.

[Unfair Competition Prevention Act/Communication of False Facts] Osaka District Court, 2022 (Wa) 11394, “Shogi Game-Record Information” <Takemiya>

Original Ameblo publication: 2025-06-13

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12910186575.html

[Unfair Competition Prevention Act/Communication of False Facts] Osaka District Court, 2022 (Wa) 11394, “Shogi Game-Record Information” <Takemiya>

The information used in the videos about the shogi players’ moves and conduct was held to be publicly disclosed objective facts falling, in principle, within the sphere of free use.

Game records may include board diagrams and move sequences expressed through symbols. The information used here consisted of the moves and conduct of players in a broadcast game, including whether a player was thinking. The court did not conflate these objective facts with the concrete expressions, such as videos or text, that convey them, and proceeded on the undisputed premise that these videos did not infringe the defendant’s copyright.

The “Guidelines for Use of Game Records in the Osho Tournament” presented by the defendant were merely unilaterally established internal rules, not a legal basis for restricting third parties' free use of game-record information.

⇒ The plaintiff's video distribution did not infringe the defendant's copyright. The plaintiff's use of the game-record information fell within the scope of free use, and neither its means of acquisition nor manner of distribution was unlawful. The takedown request to the platform therefore constituted “communication of false facts.”

IP High Court, 2023 (Ne) 10093, “Copyright Owner of a Cinematographic Work” <Shoji>

Original Ameblo publication: 2025-06-14

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12910465129.html

2023 (Ne) 10093, “Copyright Owner of a Cinematographic Work” <Shoji>

*Note that even when the film producer acquires copyright under Copyright Act Article 29(1), the author still holds moral rights!!

The appellee published online an animated video (a cinematographic work) created by the appellant without indicating the author's name.

Because the appellant alone creatively contributed to the overall formation of the video, the appellant is its author.

On the other hand, the appellee was found to be the film producer because it intended to produce the video, held the legal rights and obligations concerning production, was responsible for the related income and expenditure, and bore the ultimate risk of covering production costs. Since the appellant had promised the appellee to participate in production, copyright (economic rights) belongs to the appellee under Copyright Act Article 29(1).

However, the appellant holds the right of attribution as an author's moral right, so that right (a moral right) was infringed.

[Trademark] IP High Court, 2023 (Gyo-Ke) 10131, “hololive Indonesia” <Miyasaka>

Original Ameblo publication: 2025-06-15

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12910640633.html

[Trademark] 2023 (Gyo-Ke) 10131, “hololive Indonesia” <Miyasaka>

*“hololive Indonesia” violates Trademark Act Article 4(1)(xvi).

Within “hololive Indonesia,” “hololive” is a coined term capable of distinguishing goods and services, while “Indonesia” is widely known among Japanese consumers as referring to the Republic of Indonesia in Southeast Asia.

The application's designated goods and services span a wide range, including cosmetics, clothing and provision of food and beverages for general consumers, and many have no connection with Indonesia. If the mark is used for goods not produced or sold in Indonesia or services unrelated to Indonesia, the “Indonesia” portion may cause misunderstanding that the goods were produced or sold in Indonesia or that the services relate to Indonesia.

Even if the plaintiff argues that the mark is “the name of an Indonesia-based virtual idol group” and that fans are unlikely to be misled, consumers of the designated goods and services as a whole are not limited to the group's fans. Many will associate a mark displaying a country name with the goods' place of production or sale or a connection between the services and that country.

The plaintiff also relied on online subscriber numbers to argue that the mark was well known. The court observed that much of the content on the channels other than “hololive” was posted using Roman characters and that there was no evidence establishing how many subscribers were Japanese consumers. It therefore did not find the mark widely recognized among consumers in Japan.

IP High Court, 2023 (Gyo-Ke) 10034 [Method of Manufacturing a Raised-Pile Sheet] <Hibiku Shimizu>

Original Ameblo publication: 2025-06-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12910812675.html

2023 (Gyo-Ke) 10034 [Method of Manufacturing a Raised-Pile Sheet] <Hibiku Shimizu>

B developed the imparting of raised-pile properties through steaming and drying, the characteristic part of the invention, so the defendant's application was a usurped application filed without the right to obtain a patent.

*In courtroom disputes over usurped applications, the results of witness examination have a major influence!!

(Excerpts from the court's reasoning)

…The changes in the allegations and statements greatly affect the very problem addressed by the invention, the need for it and its creative process. If A were truly the inventor, it would be hardly conceivable for those accounts to change in this manner merely through faulty recollection or the like.

Furthermore, …Shinei Senshoku initially outsourced the steaming process and performed it in-house from 2007 at the latest. The defendant's previous allegation that Shinei Senshoku formerly “did not perform a steaming process” therefore cannot be accepted as fact.

Moreover, the defendant's allegations would mean that Shinei Senshoku's former dyeing process did not include presetting. Yet A's account of trial and error concerning presetting was that he experimented with its position in the sequence, without explaining why presetting was introduced. This suggests that the presetting process already existed and A was experimenting solely with its order. Further, the conditions A described trying for steaming were “steam at 90°C for zero, thirty, sixty and 120 minutes,” which do not match the specification's description of “steaming at 95–110°C for two to three hours” ([0022]). In examination during the trial proceedings, A made statements premised on never having kept an invention notebook himself …. This must be regarded as wholly unnatural for an inventor supposedly engaged in repeated trial and error.

[Article] The Scope of “Quality” in Acts Causing Misapprehension of Quality and the Like under the Unfair Competition Prevention Act (Michihiko Otsuka, Patent, 2025)

Original Ameblo publication: 2025-06-17

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12911048143.html

[Article] The Scope of “Quality” in Acts Causing Misapprehension of Quality and the Like under the Unfair Competition Prevention Act (Michihiko Otsuka, Patent, 2025, Vol. 78, No. 2)

Some court decisions have recognized dual-price displays as acts causing misapprehension of quality and the like.

Marking goods that do not embody a patented invention as patented constitutes a direct indication and an act causing misapprehension of quality and the like.

● Supreme Court decision of March 22, 1978, Keishu Vol. 32, No. 2, p. 316, “Special-Grade Sake Case”

Labeling sake as special grade without the required grade examination and certification, even if its quality is substantially no worse than special-grade sake, constitutes misrepresentation of quality and the like.

● Osaka District Court, January 31, 2017, “Toner Cartridge Case”

The court held: “Even if the defendant's goods merely lack designation by plaintiff Kyocera DS and objectively are no different in quality or content from the plaintiff's genuine goods, because the defendant lacks authority to make that designation, its designation indication may still properly be regarded as an indication ‘liable to cause misapprehension’ of quality and content.”

No court decision has been found holding that an indication of founding date or history constitutes an act causing misapprehension of quality and the like.

Where an indication of ranking accompanies a direct indication, it is sufficient to determine whether making that direct indication constitutes an act causing misapprehension of quality and the like.

[Article] Interpretation of Broad Patent Claims (Koichi Hirota, Patent, 2005, Vol. 58, No. 7)

Original Ameblo publication: 2025-06-18

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12911248954.html

[Article] Interpretation of Broad Patent Claims (Koichi Hirota, Patent, 2005, Vol. 58, No. 7)

— The “Holes” Theory —

“When comparing a selection invention with an earlier invention, conceptually the selection invention falls within the earlier invention's claims. However, it obtained a patent because it went beyond what the inventor of the earlier invention recognized as the invention. From the view that protection is limited to what the inventor recognized, the selection invention is separate and independent of the earlier invention, so on that view there is no dependent-invention relationship: it does not fall within the earlier invention's technical scope.”

“Regarding the recognition-limit theory, ‘It seeks to afford protection within what the inventor actually recognized; conversely, what the inventor did not recognize should not be protected … taking this view to its logical extreme severely limits the room for applying the doctrine of equivalents discussed below ….’”

https://www.jpaa.or.jp/old/activity/publication/patent/patent-library/patent-lib/200507/jpaapatent200507_021-033.pdf

[U.S. Patents] CloudofChange v. NCR (Fed. Cir. 2024)

Original Ameblo publication: 2025-06-19

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12911406750.html

[U.S. Patents] CloudofChange v. NCR (Fed. Cir. 2024)

The court examined in detail who constitutes the entity “using” a claimed system and whether the customers' acts could be attributed to defendant NCR (vicarious liability), and rejected direct infringement by the defendant.

⇒ For system claims, it is advisable to assert active inducement (35 U.S.C. § 271(b)) and contributory infringement (35 U.S.C. § 271(c)). (In this case, the plaintiff had abandoned inducement and contributory-infringement claims.)

1. The Entity Performing “Use”

Referring to Centillion, the court stated that the entity “using” a claimed system is the one that “control[s] the system as a whole and obtain[s] benefit from it.”

Here, “benefit” means not merely earning monetary revenue but enjoying the purpose and effect recited in the claims—that is, the essential advantages achieved by the invention.

Because the patent claims aim at constructing and editing POS terminals and using a system permitting repeated interaction with POS software over a network, the customers actually enjoy the system's intended purpose and effects.

2. Whether “Vicarious Liability” Is Established

For method claims, as stated in Akamai, even when a third party other than the accused infringer performs some of the steps, the accused infringer may be liable if it directs or controls that conduct or has a special relationship with the third party, such as agency or a contractual relationship.

However, the court pointed out that this case concerns system claims, where the central issue is to whom “use” is attributed, and the analysis differs from that for method claims.

The court applied Akamai’s vicarious-liability principles to this case. The district court’s error was not applying those principles to system claims as such, but conflating customers’ provision of an Internet connection with their “use” of the claimed system as a whole.

The approach in Akamai of examining and aggregating who performed each individual step of a method claim cannot simply be imported into the “use” analysis for a system claim.

For system claims, one must evaluate as a whole “who enjoys the invention's purpose and effects resulting from operation of all the system's constituent elements.”

For a system claim, the inquiry is whether the defendant directed or controlled the customer’s use of the entire claimed system. Here, a contractual obligation requiring the customer to supply an Internet connection did not establish NCR’s direction or control of that use.

[Article/Europe] After the Long-Awaited Decision: Are SEPs Now Worthless in Europe? (Christoph Rademacher, 2016)

Original Ameblo publication: 2025-06-20

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12911615875.html

[Article/Europe] After the Long-Awaited Decision: Are SEPs Now Worthless in Europe? (Christoph Rademacher, Intellectual Property Law and Policy Journal, Vol. 48 (2016))

As standardized technologies have spread, concerns have been raised that patentees may monopolize markets through SEPs.

Germany's “Orange-Book” judgment (2009) generally allowed patentees to seek injunctions against companies infringing SEPs, but subsequent European Commission policy emphasized the need to offer licenses on FRAND (fair, reasonable and nondiscriminatory) terms.

In 2013, the Huawei–ZTE litigation led to a referral to the CJEU.

The CJEU’s 2015 judgment addressed injunctions and product recalls sought by a dominant SEP holder that had committed to a standard-setting organisation to license on FRAND terms. It set out the following negotiation steps and related options under EU competition law.

(1) The patentee must notify the alleged infringer of the patent infringement.

(2) The alleged infringer must indicate willingness to obtain a license on FRAND terms.

(3) The patentee presents a specific licensing offer based on FRAND terms.

(4) If the alleged infringer objects to the terms, it must present a FRAND counteroffer.

(5) If the parties still cannot agree on FRAND terms after a counteroffer, they may, by common agreement, ask an independent third party to determine the royalty without delay. If the alleged infringer continues using the SEP after its counteroffer is rejected, it must also provide appropriate security and an account of past use.

The judgment clarified that seeking an injunction without complying with FRAND conditions may constitute an abuse of a dominant position. At the same time, deliberate “stalling tactics” in licensing negotiations are not permitted, and alleged infringers must respond promptly as well.

In the United States, contract law and equitable principles apply, while Japan regulates through the doctrine of abuse of rights. In Europe, by contrast, abuse of a dominant position under competition law provides the principal constraint.

Methods of calculating FRAND royalty rates are also discussed, including the equal allocation of value among standard-essential patents used by Japan's IP High Court and the classification approach proposed by the German judge Thomas Kühnen.

In conclusion, the CJEU judgment imposed certain procedural constraints on both patentees and alleged infringers in enforcing standard-essential patents in Europe.

However, many issues remain unresolved, and national courts' decisions will have a major impact on future practice.

Original Ameblo publication: 2025-06-23

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12912148809.html

2022 (Ne) 10078 [Display Device Supportable with One Hand] <Kanno>

*Obviousness was found based on a shared technical field.

*The angle is a matter of design choice.

(Excerpt from the court's reasoning)

…The invention in Exhibit Otsu 1′ and the well-known technology both concern the technical field of small foldable electronic devices. Because they share that field, as explained in the original judgment incorporated with modifications …, a person skilled in the art could readily have conceived of adopting the well-known intermediate stopper in the invention in Exhibit Otsu 1′ to obtain the configuration relating to the difference at issue. In doing so, the angle at which the two display panels are fixed is a matter of design choice, and adjusting it to “a predetermined angle within the range of about 150 degrees to about 170 degrees” was also something a person skilled in the art could appropriately do ….

[Trademarks] IP High Court, 2024 (Gyo-Ke) No. 10058 (Judge Hibiku Shimizu)

Three-dimensional shape of a support base for a dental model

→ Registration refused under Article 3(1)(iii); Article 3(2) not satisfied.

(Excerpt from the judgment, translated; portions omitted)

Of the shapes constituting the applied-for mark,

① A generally cuboid shape with a substantially oval top and a hollowed-out bottom, and

② regularly arranged holes, recesses and projections on its top and sides, are ordinary shapes for a support base. …

③ On the top, five holes are equally spaced in a central row. Sloping continuous projections lie inside both longitudinal edges, with several semicircular notches in their slopes (first characteristic shape). A row of small dotted projections lies between one continuous projection and the central holes (second characteristic shape). Both serve the product's function: connecting and securely fixing the support base to the dental-model fixing plate, which together form the working dental model, through insertion of dowel pins on the underside of the fixing plate and engagement with notches and projections, or increasing their connection strength.

The arrangement of the continuous projections inside both edges and the row of small projections also enhances aesthetic appeal. Many similar competing products have various irregularities, recesses and projections around the top holes and edges. The plaintiff's patent specification also describes a base with similar three-dimensional features and discloses that these projections and recesses assist connection and further increase the strength of the connection between the base and fixing plate.

In light of these facts, the shape, including its characteristic features, objectively falls within the foreseeable range of choices intended to serve function or aesthetics for similar goods under constraints arising from the goods' uses and nature. Since the mark includes no sign other than the product's three-dimensional shape, consumers would perceive it as consisting solely of an indication, in an ordinary manner, of the shape of the designated dental-model support base, without distinctiveness. …

[Article/Copyright] The Public’s Freedom to Use Accessible Works: The Working Vehicles Case — Maiko Murai

Original Ameblo publication: 2025-06-23

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12912149070.html

[Article/Copyright] The Public's Freedom to Use Accessible Works: The Working Vehicles Case (Maiko Murai, Intellectual Property Law and Policy Journal, Vol. 10 (2006))

*Tokyo District Court, 2001 (Wa) 56

A painter working mainly in outdoor painting alleged copyright infringement and infringement of the author's moral right of attribution after paintings created on the body of a municipal bus were included in a picture book published by the defendant publisher.

Although the municipal bus operated continuously on public roads and entered a garage at night, it was regarded as permanently located in outdoor places readily viewable by unspecified members of the public.

⇒ This falls under Copyright Act Article 46's case of “originals of artistic works permanently installed in outdoor places” and permits free use without the copyright owner's authorization.

The court also considered whether the use fell within Article 46(iv), “reproducing artistic works solely for the purpose of selling their reproductions, or selling those reproductions.” It held that it did not, because the defendant's picture book had the educational purpose of introducing young children to various vehicles traveling through town, rather than displaying the plaintiff's works primarily for appreciation or sales promotion.

Regarding the right of attribution, the court held that, given the purpose and manner of use, omitting the author's name was unlikely to harm the plaintiff's interests, and ultimately dismissed the plaintiff's claims.

The judgment is significant in recognizing paintings on moving bus bodies as “permanently installed” artistic works, broadly allowing freedom to use readily accessible works in public places while reaffirming Article 46(iv)'s exclusion from free use of reproductions made solely for the purpose of selling reproductions of the artistic works, and sales of those reproductions.

[U.S.] Provisur Tech v. Weber (October 2, 2024), CAFC — Willfulness

Original Ameblo publication: 2025-06-25

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12912546111.html

[U.S.] Provisur Tech v. Weber (October 2, 2024), CAFC

***Treatment of evidence concerning willful infringement**

35 U.S.C. § 298 provides that an infringer's failure to obtain advice of counsel concerning alleged patent infringement, or failure to present such advice to the court or jury, cannot be used to prove willful infringement.

(1) The CAFC held that the Provisur expert's testimony that "Weber did not ask a third party to evaluate the patents" failed to distinguish legal from non-legal services. Provisur could not circumvent § 298 by substituting advice from a third party for advice of counsel, and admitting that testimony violated § 298.

(2) The judgment held that mere awareness or monitoring of the patents was insufficient: proving willful infringement requires specific evidence showing the defendant's clear intent to engage in particular infringing conduct.

IP High Court, 2022 (Ne) 10055 [Specified Heat-Treated Meat Product] <Shoji>

Original Ameblo publication: 2025-06-27

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12913024094.html

2022 (Ne) 10055 [Specified Heat-Treated Meat Product] <Shoji>

*The court rejected obviousness of directly applying the cited technology, which presupposed sufficient heating, to the specified heat-treated meat product at issue under different heating conditions, in light of technical differences concerning sterilization and related matters.

⇒ Inventive step: satisfied

(Excerpts from the court's reasoning)

Specified heat-treated meat products and heat-treated meat products differ not only in the heating temperature and time at the meat's center, but also completely in … the principle of color development. Producing a specified heat-treated meat product by changing the heating temperature and time of a heat-treated meat product therefore cannot be regarded as a matter of routine design.

In addition, heat-treated meat products heated to their centers for a sufficient time and adequately sterilized differ entirely in safety from specified heat-treated meat products deliberately not thoroughly heated and eaten as they are. A person skilled in the art would therefore not contemplate applying the technology of heat-treated meat products, whose safety is ensured both by thorough heating and by addition of nitrite during curing, to specified heat-treated meat products that are not thoroughly heated and in which bacteria may proliferate again.

Even if one did apply it, producing a specified heat-treated meat product would require major changes to specifications, such as control of heating temperature and time and whether to use a color-forming agent. Thus, a person skilled in the art encountering pastrami beef, a heat-treated meat product, would not thereby be motivated to apply the same manufacturing technology to make a specified heat-treated meat product.

Furthermore, even if consumers prefer to avoid color-forming agents, this concerns only their product choices when purchasing and does not provide a basis for applying the manufacturing technology as well.

IP High Court, 2005 (Gyo-Ke) 10366 [Method of Manufacturing Bottles for Carbonated Beverages] <Tsukahara>

Original Ameblo publication: 2025-06-29

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12913416981.html

2005 (Gyo-Ke) 10366 [Method of Manufacturing Bottles for Carbonated Beverages] <Tsukahara>

*In explaining its approach to the proceedings in this case, the court stated that, even if it found a difference obvious where the trial decision had found it nonobvious, there could be scope to uphold the decision rejecting invalidation if another difference not decided by the trial decision was nonobvious.

The court reassessed Difference 2, which the trial decision had found “nonobvious,” as “obvious,” and then itself examined Difference 1, on which the trial decision had reserved judgment, and found that “obvious” as well.

The reasoning suggests that if the court had found Difference 1 “nonobvious,” the conclusion itself (no ground for invalidity = rejection of the request) could have been maintained even with Difference 2 “obvious.”

In this case, however, Difference 1 was also found “obvious,” so the trial decision's conclusion lost its basis and was rescinded.

*Both parties' consent was obtained.

[U.S.] Finjan v. Secure Computing <November 2010, CAFC>

Original Ameblo publication: 2025-06-29

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12913417899.html

[U.S.] Finjan v. Secure Computing <November 2010, CAFC (626 F.3d 1197)>

Software for proactive scanning incorporated in a product constituting a recording medium was locked.

⇒ Product invention infringed; method invention not infringed.

(1) Because a user could unlock it by purchasing a key, direct infringement of the product invention was established.

*In ACCO v. ABA, 501 F.3d 1307 (Fed. Cir. 2007), the claims required a particular configuration (for example, locking-device pins positioned in particular slots), so direct infringement required actual use in an infringing mode. By contrast, Finjan's claims did not require a particular configuration or “activation” for the proactive-scanning function to operate; the presence of a program capable of performing that function was sufficient for infringement.

(2) No infringement of the method claims was established because there was no proof that the defendants actually practiced the claimed methods in the United States.

=Southwest Software v. Harlequin, 226 F.3d 1280 (Fed. Cir. 2000)

https://www.cafc.uscourts.gov/opinions-orders/09-1576.pdf

[U.S.] Provisur Tech v. Weber (October 2, 2024), CAFC

Original Ameblo publication: 2025-06-29

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12913418146.html

[U.S.] Provisur Tech v. Weber (October 2, 2024), CAFC

For a claim directed to capability, where changing an accused product’s settings would bring it within the claim’s scope, a theoretical possibility alone does not establish infringement; the product must be “readily configurable” to infringe.

=Fantasy Sports Props. v. Sportsline.com, 287 F.3d 1108 (Fed. Cir. 2002).

⇒ The accused product was sold in “retract-to-fill” mode, and customers' access to the settings screen needed to enable claim 14's function (“advance-to-fill”) was restricted.

⇒ The infringement judgment was reversed as to claim 14 of the patent at issue.

[Criminal/Unfair Competition Prevention Act/Trade Secrets] Acquittal: Nagoya District Court, March 18, 2022, 2017 (Wa) No. 427

Original Ameblo publication: 2025-06-30

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12913607755.html

[Criminal/Unfair Competition Prevention Act/Trade Secrets] Acquittal: Nagoya District Court, March 18, 2022, 2017 (Wa) No. 427, “Magnetic Sensor Wire Alignment Process Case”

(1) “It amounts merely to selecting and combining commonplace methods and cannot be said to be not generally known or not readily ascertainable.”

⇒ Not “non-public”

(2) Even setting (1) aside, “the possibility remains that they believed it did not constitute a trade secret, and there were reasonable grounds for that belief.”

⇒ They cannot be held liable for an intentional offense.

(Excerpt from the court's reasoning)

The information the two defendants explained to e at the meeting concerned a process for aligning amorphous wire on a substrate, but differed significantly in important process steps from the structure of b's wire-alignment apparatus and the process of aligning amorphous wire on a substrate using that apparatus. Further, the portion corresponding to the process alleged by the prosecutor stripped away the devices for precisely arranging wires on a substrate in light of amorphous wire's characteristics, and was excessively abstracted and generalized. Even viewed as a unified series of steps, it amounted merely to selecting and combining commonplace methods and could not be said to be not generally known or not readily ascertainable. It therefore did not satisfy the non-public-status requirement among the three requirements for trade secrets (management as secret, usefulness and non-public status). Accordingly, the two defendants cannot be said to have disclosed b's trade secrets at the meeting. Furthermore, even adopting the view that their conduct objectively constituted disclosure of a trade secret (which is not this court's view), the possibility remains that they believed the information explained to e at the meeting did not constitute b's trade secrets, and reasonable grounds existed for that belief. In light of these and other circumstances, neither defendant can be held liable for an intentional offense. Both defendants are therefore acquitted.

[Trademark] IP High Court, 2024 (Gyo-Ke) 10055, “Shifuku no Girisha” (Blissful Greece) <Hibiku Shimizu> (Plaintiff: Hellenic Republic)

Original Ameblo publication: 2025-07-01

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12913799847.html

[Trademark] IP High Court, 2024 (Gyo-Ke) 10055, “Shifuku no Girisha” (Blissful Greece) <Hibiku Shimizu> (Plaintiff: Hellenic Republic)

*“Shifuku no Girisha” (Blissful Greece) is not understood as being limited or specifically confined to “produced in Greece.”

⇒ No violation of Article 3(1)(iii) of the Trademark Act or the other provisions at issue.

(Translation of an excerpt from the court's reasoning)

The trademark at issue combines the words “shifuku no” (blissful) with “Girisha” (Greece), … and is found to convey a single coherent meaning along the lines of “Greece, a country of unsurpassed happiness.” It therefore calls to consumers' minds the country or region of Greece itself together with the positive image conveyed by “blissful,” and projects that image onto the designated goods at issue, namely yogurt. Unlike a trademark consisting solely of “Greece,” it does not descriptively indicate a place of production or sale. Rather, it merely uses an abstract image associated with the country or region of Greece to indicate that the goods are connected with Greece in some way. That connection is not confined to a place of production or sale, and the mark cannot be regarded as indicating “Greece” as the place of production or sale. Neither the actual circumstances of trade in yogurt, which encompasses the designated goods, nor the Internet search results for “Shifuku no Girisha” … provide sufficient evidence that “Shifuku no Girisha,” or similar signs combining words such as “blissful” with the name of a country or region, are generally used to indicate the place of production or sale or other characteristics of goods. The examples cited by the plaintiff, such as “Blissful Hawaii” and “Blissful America,” … are used in articles and advertisements introducing overseas travel or overseas real estate as expressions referring to the country or region itself, and are not examples of indications identifying the place of production of particular goods. Accordingly, the trademark at issue cannot be described as a “trademark consisting solely of a sign indicating, in a commonly used manner, the place of production, place of sale, or other characteristics of the goods.” …

[Trademark] IP High Court, 2024 (Gyo-Ke) 10066, “UNITED GOLD” Case <Nakadaira>

Original Ameblo publication: 2025-07-02

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12914011169.html

[Trademark] IP High Court, 2024 (Gyo-Ke) 10066, “UNITED GOLD” Case <Nakadaira>

Trademark at issue: “UNITED GOLD”

Cited trademark: “UNITED／ユナイテッド” (“UNITED” and its katakana rendering “Yunaiteddo,” written on two lines)

*Because “UNITED” had weak distinctiveness in the fashion industry and related industries, “UNITED GOLD” is an inseparable whole.

⇒ Not similar.

(Translation of an excerpt from the court's reasoning)

… In the fashion industry handling clothing and accompanying personal accessories, and in the retail industries for those goods, the “UNITED” portion is found to have weak distinctiveness. Accordingly, because the “UNITED” portion of the trademark at issue is not found to possess any particular distinctiveness, it is appropriate to view the trademark at issue as a mark having the inseparable overall composition “UNITED GOLD.” It is not considered to be observed separately as “UNITED” and “GOLD”; therefore, it is appropriate to conclude that the pronunciation “Yunaiteddo” does not arise from the trademark at issue.

IP High Court, 2023 (Gyo-Ke) 10052 [Assist Device] <Miyasaka>

Original Ameblo publication: 2025-07-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12914394858.html

IP High Court, 2023 (Gyo-Ke) 10052 [Assist Device] <Miyasaka>

Claim: "… the main bearing consists solely of one single-row rolling bearing (excluding cross-roller bearings), or …"

The description in Exhibit Ko 1 does not establish what type of bearing the "bearing" in the primary reference is.

⇒ Not specifically identified.

*(Commentary) "Addition versus substitution": If a particular configuration is found to be disclosed in the primary reference, the obviousness of "substitution" becomes the issue, and the hurdle for denying inventive step is high. If a particular configuration is found not to be disclosed in the primary reference, the obviousness of "addition" becomes the issue, so the hurdle for denying inventive step is lower.

(Summary of the reasons for the JPO's revocation decision) "As bearings, 'single-row rolling bearings' other than cross-roller bearings and 'plain bearings' are well-known configurations of machine elements."

(Excerpt from the court's reasoning)

"… what type of bearing the 'one bearing' is cannot but be said to be unclear from the description in Exhibit Ko 1." "For a person skilled in the art who came across the assist device of the Ko 1 Invention to measure the direction and magnitude of the load on the shaft in order to select an appropriate bearing and, based on the measurement results, to change the design to an optimal, inexpensive bearing from among the options of well-known bearings should be said to be no more than an exercise of the ordinary creative ability of a person skilled in the art." "Neither the revocation decision's determination nor this court's determination in item (b) above is based on the well-known nature of single-row rolling bearings as mere machine elements; rather, they set out reasoning focused on what main bearing would be selected for a reduction gear for an assist device in light of the differences between reduction gears for assist devices and reduction gears for industrial robots, and they fully take into account the premise of Feature A (the technical context) asserted by the plaintiff."

⇒ Inventive step denied.

[Claim for contractual penalties] Osaka District Court, 2023 (Wa) No. 829 (Judge Matsuami)

The defendant had been a franchisee but terminated the contract and continued operating an English conversation school at the same location.

→ An employee of the plaintiff attended a consultation session and persistently requested a leaflet. The defendant distributed an old leaflet but explained that the school had closed as a Wam school.

→ This did not constitute trademark “use.”

The allegation of unlawful use of trade secrets was also rejected because the “learning instruction know-how” asserted by the plaintiff lacked specificity.

[South Korea] Patent Court, December 3, 2024 <2023 Na 10914>

Original Ameblo publication: 2025-07-06

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12914775015.html

[South Korea] Patent Court, December 3, 2024 <2023 Na 10914>

Unless processing or assembly abroad is extremely minor or simple, domestic production of a semi-finished product does not constitute direct infringement.

⇒ Where production of components or a semi-finished product has reached a state in which the patented invention's functions and effects are achieved, domestic production is recognized (Supreme Court, 2019 Da 222782). In this case, however, the remaining mixing step was found not to be “extremely minor or simple,” and non-infringement was found.

(Note) The Patent Court’s judgment of December 3, 2024 (2023Na10914), citing the reasoning of Supreme Court judgment 2019Da222782, held that domestic production of the patented product is exceptionally recognized where all of the parts or components for working the patented invention are produced in Korea, or a semi-finished product that has completed most of the production stages and has all principal elements is produced there; they are to be exported to a single entity for final processing or assembly; that processing or assembly is extremely minor or simple; and the state in which the functions and effects can be achieved has been reached. In this case, the mixing step was not extremely minor or simple, and production of the individual conjugate solutions alone had not reached the state in which the functions and effects could be achieved. https://www.law.go.kr/LSW/precInfoP.do?precSeq=606645

★In the United States: CAFC, April 2001, Waymark v. Porta Systems

Under 35 U.S.C. § 271(f)(2), where components meeting the other statutory requirements are supplied from the United States with the intent that they be combined abroad, proof that assembly was actually completed abroad is not required.

⇒ In the case in which completion of the system was planned but it was not actually assembled, the court vacated the non-infringement determination based solely on the absence of actual assembly abroad and remanded the claim under that provision.

★Also in Japan: Osaka District Court, 2009 (Wa) 15096, “Heat-Treatment Furnace Equipped with an In-Furnace Heater …” Case

*Knock-down shipment after initial assembly (a method in which all components are assembled at the export destination) was held to constitute a transfer of the products.

(Translation of an excerpt from the court's reasoning)

For the defendant's products intended for overseas customers as well, the defendant manufactured or procured the necessary components in Japan … and completed the products to the stage of provisional assembly, at which it checked their operation; for some products, it even provisionally fired the furnace body. Although these products were subsequently returned to component form and exported, and some components were added when they were assembled overseas, those components were unrelated to the constituent requirements of the patented invention. Therefore, at the stage of provisional assembly in Japan, the defendant's products, although still work in progress, are found already to have been completed to the extent that they satisfied the constituent requirements of the patented invention. On that basis, the defendant can be said to have performed “production” (Article 2(3)(i) of the Patent Act), an act of working the patented invention, in Japan. …

The defendant's products were reportedly returned to component form after provisional assembly and operational checks, and then packed and exported. … Given that the products in their provisionally assembled state appear not to have been so large as to make transportation in that state impossible, their being provisionally assembled and then returned to component form is found to have been merely for convenience of transportation. …

Considering these matters together, the series of acts performed by the defendant in Japan in connection with the sale of the defendant's products can be regarded as “transfer” (Article 2(3)(i) of the Patent Act), an act of working the patented invention, notwithstanding the fact that the defendant's products were in component form before export.

[Trademarks] Cases Concerning Similarity of Marks with Reordered Kanji

Original Ameblo publication: 2025-07-07

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12914987745.html

[Trademarks] Cases Concerning Similarity of Marks with Reordered Kanji

Supreme Court, 1991 (O) No. 1805: “木林森” and “大森林” (original Japanese marks). The Court recognized the possibility of similarity and remanded the case; it did not finally determine that the marks were similar.

IP High Court, 2009 (Gyo-Ke) No. 10071: “肌優” and the cited mark featuring “優肌” (the same kanji in reverse order) were held similar.

The emphasis was on concept, rather than pronunciation.

A judicial decision holding that conceptual similarity should be assessed on the basis of the concept that naturally arises in light of customary practices in the field of the designated goods is the IP High Court's decision in 2014 (Gyo-Ke) 10180, the “Hakko Genmai Saishoku GABA” (Fermented Brown Rice Vegetable Diet GABA) Case.

[Patents / Employee Inventions] Osaka District Court, 2020 (Wa) 12107

Original Ameblo publication: 2025-07-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12915224559.html

[Patents / Employee Inventions] Osaka District Court, 2020 (Wa) 12107

*Because making an orally disintegrating (OD) tablet was the characteristic part of the invention, the plaintiff, who was involved in that work, was an inventor.

Prior art existed in which formulations containing other ingredients had been converted into OD tablets. However, it did not concern the same ingredient as Invention 2 at issue, and there was no indication that the defendant had specifically considered converting its previously marketed product into OD tablets before the plaintiff's proposal. It therefore did not alter the finding that the plaintiff was an inventor.

(Translation of an excerpt from the court's reasoning)

The plaintiff recognized problems associated with taking the originator drug L capsules and similar products and investigated the greater demand for OD tablets than for capsules. The plaintiff then conceived the development of OD tablets, namely orally disintegrating tablets of ambroxol hydrochloride, investigated other companies' products and conducted technical studies, and proposed their development at a PJ meeting. … The plaintiff attended every PJ meeting up to the meeting to select the next development candidates, participated in preliminary feasibility experiments concerning conversion to OD tablets, gave a certain degree of concrete form to the feasibility of microparticle coating, and ultimately obtained formal development approval at that selection meeting.

Accordingly, the plaintiff … can be said to have conceived the characteristic part of Invention 2 at issue. The plaintiff is therefore found to be an inventor of Invention 2 on this basis alone.

In response, the defendant argues, among other things, that the defendant itself had already been selling an ambroxol hydrochloride capsule formulation; that the idea of changing its dosage form to OD tablets was easy to conceive; that this point cannot be called the characteristic part of the invention; and that conceiving it therefore does not make the plaintiff an inventor of Invention 2 at issue.

Although the prior art includes examples of conversion from capsules to OD tablets (such as Takepron), they do not concern ambroxol hydrochloride, the same ingredient as in Invention 2 at issue. Nor is there any indication that, before the plaintiff's proposal, the defendant had specifically considered improving the previously marketed product into OD tablets. Accordingly, the facts asserted by the defendant do not alter the above findings concerning the characteristic part or, on that basis, the plaintiff's inventorship, and the defendant's argument cannot be accepted.

Tokyo High Court, 1994 (Gyo-Ke) No. 243 — Buddhist altar (Judge Minoru Takeda)

*For applications filed on the same day (Article 39(2)), it is not enough that the other invention is identical when viewed from one invention. At the same time, viewed from the other invention, the first invention must also be regarded as identical!!

(The same as the Examination Guidelines.)

(Excerpt from the judgment, translated)

…In light of the purpose of Article 39(2) of the Patent Act, under which no applicant may obtain a patent for any of two or more inventions in applications filed on the same day if the applicants fail to reach an agreement, “the same invention” under that paragraph requires more than a finding of identity when one invention is compared with the other from only the first invention’s standpoint. The inventions must also be regarded as identical when the comparison is made from the other invention’s standpoint.

As for requirement b of the other application’s invention, …even if the “swing arm,” in terms of its actual function, corresponds to a subordinate concept of requirement D of the invention at issue, it specifies the means for folding and storing the altar doors structurally as a “swing arm” not specifically disclosed in the specification at issue. This clearly produces an effect absent from the invention at issue: …simplifying the means for opening, closing and storing the altar doors and improving assembly and workability….

Accordingly, requirement b includes a configuration producing an effect distinct from the invention at issue. Viewed from the other application’s invention, requirement b therefore cannot be understood from the requirements of the invention at issue, and cannot be said to coincide with its requirement D.

English translation of the case table — 1/4

IP High Court, Heisei 22 (Gyo-Ke) No. 10379 — Judge Iimura
Slot machine
Standard for “the same invention” under Article 39(2), and its application.

“Regarding ‘the same invention’ under Article 39(2) of the Patent Act, where there are differences in the configurations of multiple inventions, if the configuration relating to the differences is assessed as making no technical contribution to solving the problem, those inventions should be construed as the same invention. However, where the configuration relating to the differences cannot be so assessed, they are not the same invention under Article 39(2) of the Patent Act.

In a pachinko gaming machine, the machine itself automatically stops at symbols corresponding to a winning flag determined in advance after a predetermined time. By contrast, in a rotary-reel gaming machine (slot machine), the player must press the stop button to stop the symbols, and the symbols at the time of stopping may vary depending on when the stop button is pressed. Therefore, upon notification of a big-bonus win, the player tries to align the big-bonus identification information, and a difference is recognized in the effect of giving that notification. In light of these facts, … the technology of notifying by sound that a big-bonus combination has been internally selected cannot be recognized as a configuration that can be assessed as making no technical contribution to solving the problem in the technical field of slot machines.”

IP High Court, Heisei 24 (Gyo-Ke) No. 10123 — Judge Iimura
Light-emitting diode
Application of “the same invention” under Article 39(2).

“… According to the description in the patent specification …, ‘improving the visual sensitivity of the light-emitting diode’ means bringing the emission wavelength of light-emitting elements having a blue emission color close to violet, with emission peaks near wavelengths of 430 nm and 370 nm, closer to wavelengths near 550 nm or 500 nm, where visual sensitivity reaches its peak. As stated above, ‘correcting the color of the light-emitting element’ in the seventh divisional application and ‘improving the visual sensitivity of the light-emitting diode’ in the patented invention at issue have different technical significance and differ substantially.”

English translation of the case table — 3/4

IP High Court, Heisei 25 (Gyo-Ke) No. 10282 — Judge Shimizu
Rice cake
Application of “the same invention” under Article 39(2).

“… According to the description in the patent specification …, the divisional invention … produces the effects of allowing cuts to be formed easily and being still more suitable for mass production, and can be said to have a certain degree of technical significance. On the other hand, patented invention 1 at issue, like the divisional invention, has cuts in the lateral surface constituting an upright side surface of a cut rice cake. However, although those cuts have ‘a length with the direction along the upright side surface as the circumferential direction,’ they may simply be ‘continuous all the way around in the circumferential direction to form a ring,’ or ‘formed on opposite side surfaces constituting upright side surfaces.’ They therefore differ from the cuts technically limited as in the divisional invention.”

Result markers in the source: Win / Valid / △.

English translation of the case table — 4/4

IP High Court, Heisei 29 (Gyo-Ke) No. 10159 — Judge Mori
Sheet cutter
Application of “the same invention” under Article 39(2).

(Divisional patent invention 2)

“Divisional patent invention 2 ... is recognized as having technical significance from the viewpoint of the effect of achieving simple and rapid cutting. On the other hand, patented invention 1 at issue has the first blade or the second blade protrude from the guide plate, but the operation in doing so is merely for the body to ‘move’ relative to the guide plate. This differs from an operation limited to ‘tilting,’ as in divisional patent invention 2.”

(Divisional patent invention 3)

“In divisional patent invention 3, the body is flat, in the same way as the guide plate. Although the divisional specification does not expressly describe the effect of making the body flat, a person skilled in the art can recognize effects such as improved grip resulting from the body being flat and having the same shape as the guide plate. Making the body flat is therefore recognized as having technical significance. On the other hand, patented invention 1 at issue has no particular limitation on the body’s shape and does not have a limited shape as in divisional patent invention 3, and therefore differs from divisional patent invention 3.”

English translation of the case table — 1/4

IP High Court, 2010 (Gyo-Ke) No. 10379 — Judge Iimura (飯村)

Slot machine

The test for “the same invention” under Article 39(2) and its application.

“Regarding ‘the same invention’ under Article 39(2) of the Patent Act, where the configurations of two or more inventions differ, the inventions should be construed as the same invention if the differing configuration is assessed as making no technical contribution to solving the problem. If the differing configuration cannot be assessed in that way, however, the inventions are not the same invention under Article 39(2) of the Patent Act. …

In a pachinko gaming machine, after a predetermined time, the machine itself automatically stops the symbols at those corresponding to the winning combination selected in advance by the winning flag. In contrast, in a reel-type gaming machine (slot machine), the player must press stop buttons to stop the symbols, and the symbols displayed when they stop can change depending on the timing of those button presses. When notified of a big-bonus win, the player therefore tries to align the big-bonus identifying symbols. Accordingly, the effects of providing that notification differ. In light of these facts, … the technology of using sound to notify the player that a big-bonus combination has won in the internal lottery cannot be regarded as a configuration making no technical contribution to solving the problem in the technical field of slot machines."

English translation of the case table — 3/4

IP High Court, 2013 (Gyo-Ke) No. 10282 — Judge Shimizu (清水)

Mochi (rice cake)

Application of "the same invention" under Article 39(2).

"... According to the statements in the patent specification …, the divisional invention … produces the effects of allowing the cuts to be formed easily and further improving suitability for mass production, and thus has a certain degree of technical significance.

On the other hand, invention 1 at issue, like the divisional invention, provides cuts in the peripheral side surfaces constituting the upright sides of a piece of cut mochi. Although those cuts 'have a length in the circumferential direction, with the direction along the upright sides taken as the circumferential direction,' they are merely 'continuous around the entire circumference to form a rectangular ring,' or 'formed on two opposing peripheral side surfaces constituting upright sides.' They therefore differ from the cuts that are technically limited as in the divisional invention."

Result markers in the source: Win / Valid / △.

English translation of the case table — 4/4

IP High Court, 2017 (Gyo-Ke) No. 10159 — Judge Mori (森)

Sheet cutter

Application of "the same invention" under Article 39(2).

"(Divisional patented invention 2) Divisional patented invention 2 … has technical significance in terms of producing the effect of achieving simple and rapid cutting. In contrast, although patented invention 1 at

issue causes the first blade or the second blade to project from the guide plate, this occurs through the body simply ‘moving’ relative to the guide plate. That operation differs from an operation limited to ‘tilting,’ as in divisional patented invention 2.

(Divisional patented invention 3) In divisional patented invention 3, the body is shaped like a flat plate, as is the guide plate. Although the divisional specification does not expressly describe the effects of giving the body that shape, a person skilled in the art can recognize effects such as improved ease of gripping that result from the body being shaped like a flat plate and having the same shape as the guide plate. Giving the body the shape of a flat plate therefore has technical significance. In contrast, patented invention 1 at issue does not particularly limit the shape of the body, and its shape is not limited as in divisional patented invention 3. It therefore differs from divisional patented invention 3.”

Tokyo High Court, 1998 (Gyo-Ke) No. 82 — Semiconductor device (Judge Shinohara)

TI v. Fujitsu

*The court found the inventions to be “the same” under Article 39(1) and upheld the JPO decision invalidating the patent.

(Excerpts from the judgment, translated; portions omitted)

…In light of the definition of the invention at issue, the “planar arrangement” in requirement e must be regarded as merely a summary statement that the semiconductor-device circuit composed of the preceding requirements is, as a result, “arranged essentially in a plane.” In that sense, it is equivalent to restating the other claim elements and has no particular technical significance….

Turning to the meaning of the “planar arrangement” in requirement e as a statement of this nature, … in the semiconductor device of the invention at issue, the multiple circuit elements are formed by P-N junctions between the diffusion regions and the body, or between the diffusion regions themselves, in a semiconductor wafer whose surface has been polished by lapping and in which diffusion regions have been formed. The surface on which the elements are formed therefore has little unevenness and is flat, resulting in an essentially planar arrangement. Further, the inert insulating material serving as the base for the conductive interconnection material is formed on the semiconductor wafer by vapor deposition, so its surface is plainly flat. Because the conductive interconnection material is deposited on that inert insulating material, it too may be regarded as flat. If the multiple circuit elements are arranged in a plane and the conductive interconnection material connecting them is also flat, the electronic circuit constituted by them is naturally arranged in a plane. …Accordingly, there is no error in the JPO decision’s finding that Difference ⑥ is not a substantive difference.

…Although it is acknowledged that differences in the wording of the claims in the respective specifications cause some differences in the scope covered by the invention at issue and the original invention, it cannot be said that a person skilled in the art, considering together the purposes, functions and effects, examples and other matters set out in the detailed descriptions, could perceive those differences in claim wording as differences in the technical ideas of the two inventions. The two inventions should therefore be understood as substantially the same invention, notwithstanding the differences in the wording of their claims.

Accordingly, there is no error in the JPO decision’s conclusion that the application at issue was ineligible for the benefit of Article 9(1) of the former Patent Act, that its filing date therefore could not be deemed to be the earlier date, and that the patent based on the application actually filed on December 21, 1971, was granted in violation of Article 39(1) of the Patent Act.

English translation of the case table — 1/2

Tokyo High Court, Heisei 10 (Gyo-Ke) No. 82 — Judge Shinohara
Semiconductor device — TI v. Fujitsu
Identity under Article 39(1) was recognized, and the JPO decision invalidating the patent was upheld.

"… In light of the definition of the gist of the invention at issue, the 'planar arrangement' in requirement e must be understood as merely a summary statement that the semiconductor-device circuit composed of the requirements described before it is, as a result, 'arranged substantially in a plane.' In that sense, it is equivalent to repeating the other constituent requirements and has no particular technical significance. …

When considering the meaning of 'planar arrangement' as a statement of that nature, … in the semiconductor device of the invention at issue, multiple circuit elements are formed by P–N junctions between diffusion regions and the body of a semiconductor wafer whose surface has been polished by lapping and in which diffusion regions have been formed, or between the diffusion regions themselves. The surface on which they are formed is therefore flat with little unevenness, resulting in a substantially flat arrangement. Also, the inactive insulating material serving as the base for the conductive material for circuit connection is formed on the semiconductor wafer by vapor deposition, so its surface is clearly flat. The conductive material for circuit connection is deposited on that inactive insulating material and may likewise be understood as flat. Thus, if the multiple circuit elements are arranged flat and the conductive material connecting them is also flat, the resulting electronic circuit is naturally arranged flat. … Accordingly, the trial decision was not erroneous in finding that difference (6) was not a substantial difference. …

Although the invention at issue and the original invention differ in their encompassing scope owing to differences in the wording of the claims, a person skilled in the art, considering together the purpose, effects, and examples described in the detailed description in the specifications, cannot readily regard those differences in claim wording as differences in the technical ideas of the two inventions. They should therefore be recognized as substantially the same invention notwithstanding the different claim wording. Accordingly, the trial decision was correct in denying retroactivity of the filing date because the application at issue could not benefit from former Patent Act Article 9(1), and in finding that the patent, filed on its actual filing date of December 21, Showa 46 (1971), violated Patent Act Article 39(1)."

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12915886850.html

Tokyo District Court, 2022 (Wa) 70058 [Grapple Bucket Device] <Kokubu>

First requirement of the doctrine of equivalents: not satisfied.

*The analytical framework of the IP High Court Grand Panel judgment in the Maxacalcitol case.

⇒ A defendant seeking to defeat the first requirement of the doctrine of equivalents should confront the invention at issue with closely related prior art, argue that the problem described in the specification at issue is insufficiently stated, and steer the argument toward the proposition that the difference from that prior art is the essential part.

*The problem described in the specification at issue could be solved by the prior art.

⇒ The description of the problem is objectively insufficient in light of the prior art at the filing date, so extrinsic evidence may be considered.

⇒ The degree of the invention's contribution cannot be assessed as substantial.

⇒ The essential part of the invention cannot be identified at a higher level of abstraction, and is identified as substantially equivalent to the language of the claims.

⇒ The difference from the prior art is the essential part.

(Translation of an excerpt from the court's reasoning)

At the time the patent at issue was filed, the problem that, when timber gripped by a grapple bucket device was long, a worker had to use a cutting device such as a chainsaw to cut timber exceeding a certain length to a prescribed length could be solved by the prior art disclosed in the Exhibit Ko 27 reference. Thus, the problem described in the specification at issue as one that the prior art could not solve is found to be objectively insufficient in light of the prior art at the filing date. Accordingly, when identifying the characteristic part constituting the technical idea peculiar to the invention at issue and absent from the prior art, consideration of the technical matters described in the Exhibit Ko 27 reference should also be permitted.

… Before the patent at issue was filed, the Exhibit Ko 27 reference is found to have disclosed a traveling branch-cutting apparatus equipped with a bucket having a gripping unit attached to one side and a cutting device attached to the other. The difference between the invention at issue and the prior art is therefore found to lie only in the configuration of that cutting device, not in the fact that the device itself is a grapple bucket device capable of cutting material that it has gripped. Accordingly, because the degree of the invention's contribution relative to the prior art cannot be assessed as substantial, its essential part cannot be identified at a higher level of abstraction, and should be identified as substantially equivalent to the language of the claims.

Therefore, … it is appropriate to find that the characteristic part constituting the technical idea peculiar to the invention at issue and absent from the prior art is the adoption, for the cutting device provided on the grapple device, of the following configuration: a cutting blade located on either the outside or the inside of the bucket's side wall, pivoting in a direction along that side wall from a position away from the bucket's opening edge to a position along the bucket's side wall, and having a cutting edge on its side edge facing the opening-edge side of the bucket, the blade being pivotally supported at the base of the bucket opening; and a hydraulic cylinder connected to the pivot base of that cutting blade to pivot the blade. The cutting edge of

the cutting blade is positioned offset toward the blade's cutting direction relative to the line connecting the blade's pivot center and the hydraulic-cylinder connection point, and is curved in an arc backward relative to its direction of rotation in the cutting direction. By adopting this configuration, namely the configuration relating to constituent requirements C and D, a large value of the inclination angle θ at which the blade edge contacts the object is maintained even in portions far from the pivot center, thereby maintaining a draw-cutting action and achieving a smooth cutting effect.

… The essential part of the invention at issue is that, by adopting the configuration relating to constituent requirements C and D, a large value of the inclination angle θ at which the blade edge contacts the object is maintained even in portions far from the pivot center, thereby maintaining a draw-cutting action and achieving a smooth cutting effect. Consequently, the defendant's products cannot be found to possess the essential part of the invention at issue, and it cannot be said that the part in which the invention and the defendant's products differ is not the essential part of the invention.

IP High Court, 2023 (Gyo-Ke) 10019 [Methods for Treating Atopic Dermatitis by Administering an IL-4R Antagonist] <Miyasaka>

Original Ameblo publication: 2025-07-13
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12916207396.html

IP High Court, 2023 (Gyo-Ke) 10019 [Methods for Treating Atopic Dermatitis by Administering an IL-4R Antagonist] <Miyasaka>

*Even though the cited invention had reached a Phase 2 clinical trial, the material cited in the judgment put the Phase 2 success rate for allergic diseases at only approximately 33%. A person skilled in the art therefore could not be said to understand that it was necessarily therapeutically effective without even seeing the Phase 2 results.

⇒ Inventive step affirmed.

[Difference] Corrected Invention 1 at issue is a pharmaceutical composition comprising a therapeutically effective amount of an anti-human IL-4R antibody or an antigen-binding fragment thereof, for use in a method of treating a patient with moderate-to-severe atopic dermatitis (AD) who does not respond adequately to treatment with topical corticosteroids or topical calcineurin inhibitors, whereas the cited invention is an investigational drug composition.

(Translation of an excerpt from the JPO decision as reproduced in the judgment. The court also rejected the challenge based on lack of inventive step.)

The trial in Exhibit Ko 1 is a Phase 2 clinical trial. It is common general technical knowledge that the preceding Phase 1 clinical trial ordinarily investigates the safety and pharmacokinetics of an investigational drug in a small number of healthy individuals, and that confirmation of efficacy in patients begins with Phase 2 clinical trials. According to Exhibit Ko 21 …, the probability of success in Phase 2 clinical trials is far lower than in any other phase and is approximately 33% for allergic diseases. In light of this, the mere fact that a Phase 2 clinical trial is being conducted does not mean that a person skilled in the art would understand that the investigational drug must be therapeutically effective without even examining the trial results.

Furthermore, examination of Exhibits Ko 2–6 reveals no evidence that, before the priority date of the patent at issue, an anti-human IL-4R antibody had been administered to patients with atopic dermatitis and had actually produced a therapeutic effect. In light of the common general technical knowledge at the priority date of the patent application concerning the roles of cytokines in the acute and chronic phases of atopic dermatitis, even if REGN668 (an anti-human IL-4R antibody), as used in Exhibit Ko 1, had the ability to block IL-4 and IL-13 activity, as did the antibody in Exhibit Ko 3, it cannot be said that a person skilled in the art could have conceived of using REGN668 (an anti-human IL-4R antibody) therapeutically effectively in the patients of the cited invention, who had suffered from chronic atopic dermatitis for at least three years and in whom production of interferon gamma and IL-12 was considered to predominate over IL-4, unlike the acute phase in which IL-4 predominates. Nor could improvement in clinical symptoms readily have been predicted in those circumstances.

Moreover, as described in Exhibit Ko 24 (Exhibit Otsu 4 in the trial proceedings), given the complexity of the immune pathways involved in atopic dermatitis, it is found difficult to predict, without awaiting clinical-trial results, that a therapeutic agent based on the particular mechanism of blocking IL-4 action—a mechanism with no track record of use in treating atopic dermatitis as of the priority date of the patent at issue—would have a therapeutic effect on moderate-to-severe atopic dermatitis. Accordingly, it cannot be said that a person skilled in the art could readily have arrived, from the descriptions in Exhibits Ko 1–6, at the cited invention having the configuration relating to the difference—namely a pharmaceutical composition comprising a therapeutically effective amount of an anti-human IL-4R antibody for use in a method of treating patients with moderate-to-severe atopic dermatitis who do not respond adequately to treatment with topical corticosteroids or topical calcineurin inhibitors—and actually producing, in patients falling within Corrected Invention 1 at issue, the improvement in clinical symptoms of atopic dermatitis demonstrated in the specification at issue.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93292.pdf

IP High Court, 2023 (Gyo-Ke) 10090 [Fulvestrant Formulation] <Nakadaira>

Original Ameblo publication: 2025-07-14
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12916367152.html

IP High Court, 2023 (Gyo-Ke) 10090 [Fulvestrant Formulation] <Nakadaira>

*The journal Clinical Cancer Research published an experiment in which a composition identical to that of the patented invention was administered subcutaneously to mice as an adjunct to eliminate estrogen activity in an experiment testing a hypothesis (according to the plaintiff, the composition was supplied by the patentee). The court did not find it to be common general technical knowledge to administer that composition, unchanged, to humans by intramuscular injection.

⇒ Inventive step affirmed.

[Difference] Corrected Invention 1 is “a pharmaceutical formulation for administration to humans by intramuscular injection” and “a pharmaceutical formulation suitable for intramuscular injection,” whereas the Exhibit Ko 1 invention is an experimental composition, administered subcutaneously to ovariectomized tumor-bearing mice inoculated with breast cancer cells (MCF-7 cells) transfected with fibroblast growth factor (FGF), for verifying FGF autocrine activity as a mechanism of tamoxifen-resistant breast cancer.

(Translation of an excerpt from the court's reasoning)

(a) Common general technical knowledge I (concerning intramuscular injection of fulvestrant)

At the priority date at issue, pharmaceutical formulations containing fulvestrant were undergoing clinical trials and had not yet been approved in any country …. Thus, fulvestrant is not found to have been established as a breast cancer treatment. Accordingly, common general technical knowledge I (concerning intramuscular injection of fulvestrant) is not found to have existed.

Nevertheless, according to the results of pharmacokinetic studies (PK studies) and clinical trials concerning fulvestrant conducted at the priority date at issue …, there is room to say that it was common general technical knowledge at that date that fulvestrant was under investigation as a possible breast cancer treatment and was being administered by intramuscular injection in the trials. However, even if such common general technical knowledge existed, a person skilled in the art is not found to have readily recognized that the composition administered to mice as an antiestrogen in the Exhibit Ko 1 reference could immediately be used, with its composition unchanged, as a pharmaceutical formulation for administration to humans by intramuscular injection.

(b) Common general technical knowledge II (concerning subcutaneous injection in mice)

The references cited by the plaintiff … include statements that intramuscular injection is difficult in small laboratory animal species such as mice, and examples in which drugs administered intramuscularly to humans were administered subcutaneously in experiments using small laboratory animal species such as mice. However, they also contain descriptions of intramuscular injection in rats …. Even in light of these references, it cannot be found that common general technical knowledge II (concerning subcutaneous injection in mice), as asserted by the plaintiff, existed at the priority date at issue. Moreover, even if common general technical knowledge II existed, that would not mean there was common general technical knowledge that a drug injected subcutaneously in experiments using mice is always injected intramuscularly in humans. Furthermore, even if common general technical knowledge existed to the extent that “a pharmaceutical formulation administered intramuscularly to humans may be administered subcutaneously in experiments using mice,” it cannot be found to have been common general technical knowledge to inject humans intramuscularly with a drug having the same composition as a drug injected subcutaneously into mice. Still less could there be said to be motivation to inject humans intramuscularly with a drug having the same composition as the fulvestrant administered to mice in the Exhibit Ko 1 invention, where that fulvestrant was used as an adjunct to eliminate estrogen activity in an experiment intended to test a hypothesis.

Tokyo High Court, 2003 (Gyo-Ke) 104 [New Medical Use of Tachykinin Antagonists]

Original Ameblo publication: 2025-07-15

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12916582613.html

Tokyo High Court, 2003 (Gyo-Ke) 104 [New Medical Use of Tachykinin Antagonists]

*The court found non-compliance with the disclosure requirements for Claims 1–7 and 9 because the medical use of substances other than those supported by the examples also required substantiation in the specification. Separately, it set aside the decision denying inventive step for Claim 8.

(Translation of an excerpt from the court's reasoning)

In the detailed description of the invention in the specification at issue, both NK1 receptor antagonistic activity and activity in treating emesis are found to have been confirmed only for the (2S,3S) enantiomer of the (±)-cis-3-(2-methoxybenzylamino)-2-phenylpiperidine identified in item (1) above. The position would be different if a person skilled in the art could objectively comprehend a correlation between NK1 receptor antagonistic activity and activity in treating emesis—for example, if the detailed description of the invention in the specification contained descriptions enabling confirmation that a sufficiently wide variety of structurally dissimilar substances having NK1 receptor antagonistic activity were effective in treating emesis. In the detailed description of the invention in the specification at issue, however, although it can be said to be substantiated that the NK1 receptor antagonist (2S,3S)-3-(2-methoxybenzylamino)-2-phenylpiperidine can be used to treat emesis, there is no description substantiating, in the first place, a correlation between NK1 receptor antagonistic activity and activity in treating emesis for other NK1 receptor antagonists. Accordingly, the detailed description of the invention cannot be found to describe antiemetic agents containing those other antagonists as active ingredients to an extent that would enable a person skilled in the art readily to work the invention ….

[Article / Unfair Competition Prevention Act, Article 2(1)(i)] Protection of product packaging consisting of weakly distinctive elements — Suntory Black Oolong Tea case (Yukari Hira, Intellectual Property Law and Policy Journal, Vol. 35 (2011))

Even if weakly distinctive portions are similar to some extent, there is no similarity unless strongly distinctive portions are shared.

→ Nevertheless, even for commonplace, weakly distinctive indications, similarity exists if even portions whose adoption is not inevitable in relation to the goods bearing the indication coincide.

(For example, Product A in the Suntory Black Oolong Tea case and the Royal Milk Tea case.)

[Article / International Jurisdiction] A Case Recognizing Japanese International Jurisdiction Based on a Foreign Corporation's Website Displaying Products Allegedly Infringing a Patent and Circumstances Including the Corporation's Business Activities in Japan—The Motor Case (Zhang Peng, Intellectual Property Law and Policy Journal, Vol. 36 (2011))

*IP High Court, 2010 (Ne) 10001

The decision showed that the Supreme Court's Tsuburaya Productions judgment extends to claims for an injunction based on patent rights and clarified the requirements.

The alleged infringer was a foreign company, but its website advertised that it served Japan, and it belonged to the Samsung Group.

⇒ Japan had jurisdiction.

Cf. Tokyo District Court, May 14, 2001, “Intraocular Pressure-Lowering Agent” Case: The court denied Japanese jurisdiction over the foreign parent company of the entity acting in Japan, reasoning that, so long as the corporate personality was not a mere shell, the defendant, which had no economic base in Japan, could not be compelled to defend the action.

Cf. Tokyo District Court, 2004 (Wa) 10667, “Data Transmission Method”: Japanese jurisdiction was recognized because sales activities were conducted with knowledge that the products would be transferred in Japan.

IP High Court, 2020 (Gyo-Ke) 10057 [Electric Bed] <Kanno>

*Motivation to combine was rejected because the technical fields of the primary and secondary references were far removed from each other.

⇒ Inventive step affirmed.

(Translation of an excerpt from the court's reasoning)

The Exhibit Ko 1 invention concerns a medical bed 10 and addresses the problem of setting it at a preselected vertical height according to the patient's anticipated needs. It selects, as a lower intermediate position, “a convenient height for getting into and out of the bed 10” (that height is also one at which a caregiver's or patient's feet will not be trapped even if present …). In contrast, the Exhibit Ko 3 invention … concerns a vehicle convertible-top opening and closing device. In view of the risk of objects being caught when the top closes, it addresses the problem of providing a vehicle convertible-top opening and closing device that automatically pauses just before the top is fully closed, enabling safety to be reliably checked, and further addresses the problem of avoiding discomfort to the operator. The technical fields of the two inventions are far removed from each other, and they share only the abstracted problem of avoiding the risk of trapping an object. Extracting a common problem from different inventions in such different technical fields and seeking to apply concrete solutions suited to the characteristics of each field to the other requires particular ingenuity …. … There is no motivation to apply the Exhibit Ko 3 invention to the Exhibit Ko 1 invention ….

“The … invention-specifying matter ‘even if a caregiver's or patient's feet are present between the frame and the floor, they will not be trapped’ specifies the basis on which the height at which the frame stops is determined … and therefore does not make this a use invention ….”

<Trial and Appeal Practitioners Study Group Report 2024> Case 1 (Mechanical) — IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transport System]

Original Ameblo publication: 2025-07-20

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12917659886.html

<Trial and Appeal Practitioners Study Group Report 2024> Case 1 (Mechanical)

IP High Court, 2022 (Gyo-Ke) 10007 [Heat Transport System]

•In practice, it is difficult to determine whether alternatives can be said to be “actually described in parallel.” … Moreover, depending on the state of the art, there may be cases in which it is permissible to extract one member from the description of a general formula in a cited reference ….

•It is understandable that, with a number of alternatives on the order of that in this case, they can be said to be “actually described in parallel,” whereas, when the number is enormous, a particular alternative cannot be extracted; nevertheless, the dividing line is unclear.

•The participants agreed that the judgment's finding of obviousness as a design modification or the adoption of a matter of design choice, even without particular motivation, was appropriate.

On the other hand, concern was also expressed that determining what constitutes a matter of design choice is not necessarily highly predictable.

When well-known technology is used as a secondary cited invention, it is the subject of application (combination), so motivation is naturally required. By contrast, when well-known technology is used as the basis for a design modification or the like, motivation is not necessarily required under the rule stated in this judgment.

•Regarding identification of the cited invention, the judgment states that configurations not essential to solving the problem need not be included in that identification. However, it is not necessarily clear how far descriptions in the specification and other documents may be extracted and identified in making a concrete finding.

Accordingly, care must be taken not to identify the invention in a manner that is merely convenient for the person making the finding.

Trial and Appeal Practitioners Study Group Report 2024 — Theme 2 (Chemistry 1)

[Inventive step in parameter and numerically limited inventions]

When can a numerical range not expressly disclosed in a cited document be held readily conceivable?

• Commonality of the technical fields and problems of the invention at issue and the primary cited invention.

→ When preparing a specification, the problem considered by the inventor is not based on all prior art. In practice, the inventor sets the invention's problem by considering common general knowledge within the inventor's awareness and contributions or effects relative to documents found in a pre-filing search.

Accordingly, identifying the problem from the "Problem to be solved by the invention" sections of the specification at issue and the primary cited invention's specification also accords with actual practice.

Where the problem is merely common general knowledge, industry-association technical journals and standards are useful for showing that it is self-evident to a person skilled in the art.

Trial and Appeal Practitioners Study Group Report 2024 — Case 2 (Chemistry 1)

[Matters equivalent to disclosure in the earlier application's specification; substantial identity]

IP High Court, 2014 (Gyo-Ke) No. 10097 — Flat nonaqueous-electrolyte secondary battery

• A "new effect" under the expanded prior-application rule need not be a "remarkable" or "advantageous" effect required for inventive step. Improvement in the degree of an effect suffices; the level may be lower than for inventive step.

• Regarding the relationship between disclaimer amendments commonly used to avoid lack of novelty and assessment of minor differences under the expanded prior-application rule, a participant questioned whether, following a disclaimer amendment, consideration extends to whether the excluded and remaining portions produce a new effect for this assessment.

(Excerpt from the judgment, translated)

…Difference A identified in the JPO decision is, in short, that the invention at issue and the invention in Exhibit Ko 1 differ quantitatively in ① the number of opposing faces and ② the relative sizes of the facing area of those faces and the gasket opening area. …Both inventions use, in a flat nonaqueous-electrolyte secondary battery, an electrode assembly in which positive electrode plates having an active-material-containing layer on the surface of the positive-electrode constituent material and negative electrode plates having an active-material-containing layer on the surface of the negative-electrode constituent material are stacked in multiple layers with separators between them. By increasing the sum of the facing areas between the active-material-containing layers of the positive and negative electrode plates, they enable an increase in discharge capacity under heavy load. They therefore share the same problem and means of solving it. …It may be unexpected that heavy-load discharge capacity shows little change, and in some cases gradually decreases, when the number of opposing faces exceeds five. However, the invention at issue addresses the technical problem of increasing discharge capacity under heavy load and specifies a lower limit, rather than an upper limit, for the number of opposing faces. The fact that discharge capacity does not increase in proportion to the number of opposing faces therefore cannot be regarded as a new effect of the invention at issue.

Trial and Appeal Practitioners Study Group Report 2024 — Theme 3 (Chemistry 2)

[Consideration of experimental results submitted after filing: inventive step]

Regarding experimental results submitted after filing (post-filed data), the practice is established to a certain extent: consideration is permitted insofar as a person skilled in the art can infer the effect from the specification or drawings. As stated in the guidance, examiners should not consider an effect asserted and proved in written arguments, etc., if it is neither described in the specification nor inferable by a person skilled in the art from the specification or drawings.

Recently in Europe, in appeal proceedings concerning EP2484209 (insecticide compositions for controlling pests), the Enlarged Board of Appeal issued G 2/21 in response to questions referred by a Technical Board of Appeal. Regarding evidence submitted after the filing date in assessing inventive step, it held that:

① it cannot be disregarded solely because it was submitted later;

② a technical effect may be relied upon for inventive step if a person skilled in the art, bearing common general knowledge in mind and on the basis of the application as originally filed, can derive that effect as encompassed by its technical teaching and embodied by the same originally disclosed invention.

Trial and Appeal Practitioners Study Group Report 2024 — Case 3 (Chemistry 2)

[Relationship between requirements for correction of medical-use inventions, particularly new matter, and the enablement and support requirements for the corrected invention]

IP High Court, 2020 (Gyo-Ke) No. 10135

Addition of new matter concerns “technical ideas disclosed by the specification or drawings.” This is consistent with the support-requirement inquiry that compares the claims with the detailed description and asks whether the claimed invention is an invention described in the detailed description.

Whether something is “substantially disclosed” is distinguished as an area to be assessed under the support requirement: whether it falls within the scope in which a person skilled in the art can recognize, from the detailed description, that the invention’s problem can be solved.

Trial and Appeal Practitioners Study Group Report 2024 — Theme 4 (Electrical 1)

[Eligibility as an invention: human mental activities and artificial arrangements]

Whether something “as a whole” constitutes a creation of technical ideas utilizing the laws of nature involves the following factors:

(i) whether artificial arrangements or human mental activities themselves are recited in the claims;

(ii) whether technical means for solving the problem, namely the system specified in the invention, are identified;

(iii) whether the technical significance of the invention is directed toward artificial arrangements or human mental activities themselves.

Trial and Appeal Practitioners Study Group Report 2024 — Case 4 (Electrical 1)

[Inventive step in business-related inventions]

IP High Court, 2022 (Gyo-Ke) No. 10039

The judgment recognized an “inherent requirement” concerning facility reservations without specifically identifying evidence. Some participants observed that, from the applicant’s perspective, recognition of this requirement and denial of inventive step without evidence made the judgment difficult to predict and felt harsh.

<How to describe problems and effects in the specification>

• In some cases, it may be effective to describe the problem in the main text of the specification while either stating it as abstractly as possible in the problem section or leaving that section unwritten.

• Conversely, describing individual relationships among problems, effects and technical means too specifically may prevent the patent’s scope from having breadth.

• If the doctrine of equivalents is contemplated, the problem section should also state: “The essence of this invention lies here.”

• Describing the problem too specifically in the problem section may result in a proposed divisional application being summarily rejected as adding new matter.

Trial and Appeal Practitioners Study Group Report 2024 — Theme 5 (Designs)

[Similarity of designs: the person whose perspective governs]

Identifying the relevant person takes account of the nature, purpose and manner of use of the article embodying the design. If appearance determines an end consumer’s purchase, ordinary consumers are the relevant consumers. If shape derived from function determines purchasing, “experts,” in addition to ordinary consumers, may be the relevant consumers.

Ordinary consumers tend to emphasize the overall configuration and portions readily noticeable at a glance. Beyond the overall configuration, they tend to focus on the shape of portions important in deciding a purchase—those emphasized when selecting a design.

Experts tend to observe details, particularly portions related to function, functionally important portions and improvements.

*The study also considered whether the relevant person may differ between actions to rescind trial/appeal decisions and infringement litigation.

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7514579478090629120-ja

Trial and Appeal Practitioners Study Group Report 2024 — Theme 6 (Trademarks)

[Similarity of composite marks]

<Marks formed by adding other characters, etc., to an already registered mark>

• Whether the registered-mark portion is a dominant element is influenced by its recognition and actual trading conditions concerning meaning and usage. However, additions having no difference in the strength of distinctiveness are relatively uncommon; in practice, additions often indicate quality, etc., and therefore differ in distinctiveness.

• Of two components, the one having relatively stronger distinguishing function may be extracted as the dominant element.

• For an applied-for mark “A+B,” even if added “B” is strongly distinctive, existing registered/cited mark “A” was itself registered because it is distinctive. In principle, both “B” and the portion “A” corresponding to the existing registered mark are separately extracted for comparison.

• If the applied-for mark is “A” and the cited mark is “A′+B,” the applicant for the cited mark considered the combination distinctive. In principle, it should not have the power to prevent registration of “A.”

• If the applied-for mark is “A+B” and the cited mark is “A′,” an element has been added to an existing mark, and there are many cases in which similarity should be favored.

• If both the registered mark and the added characters have weak distinctiveness, they may form a coined term with a different meaning. Traders and consumers may also perceive and remember the whole as inseparable. One view was that, unless the mark is well known or famous, registration could be allowed on the basis that the marks are dissimilar. (Tokyo High Court, 2000 (Gyo-Ke) No. 301 — “ロマンティック北街道” (“Romantic Kita-kaido”) held that a person selecting such a weak mark as its own trademark must tolerate the word being used in this manner as part of another person’s trademark.)

Trial and Appeal Practitioners Study Group Report 2024 — Case 6 (Trademarks)

[Application of Article 3(1)(iv) of the Trademark Act to a mark combining a common surname and a customary name]

IP High Court, 2023 (Gyo-Ke) No. 10031 — Ikegami Seimensho

Where a meaning other than a surname is better known and the word is ordinarily perceived in that other sense, such circumstances may affect whether it is a “common surname.”

As to how the number of people bearing the surname may be considered, most participants acknowledged the rationality of a numerical criterion to ensure objectivity, while considering it difficult to draw a line at a specific number.

A surname forming a mark may be “common” even if relatively few people bear it:

① where it is the surname of a historical or fictional person;

② where it is concentrated in a particular region.

Regarding the provision applicable to composite marks combining a common surname with a customary industry name, some decisions differ from this judgment and apply item (vi) when refusing registration (IP High Court, March 11, 2024 — Tanaka Hashiten).

Japanese version: https://www.takaishihideki.com/single-post/東京地判令和５年-ワ-70178【酢酸亜鉛水和物錠】-中島

Tokyo District Court, 2023 (Wa) No. 70178 — Zinc acetate hydrate tablets (Judge Nakashima)

*The claim was held not to be satisfied unless the temperature remained within the numerical range until the end of the drying process.

(Excerpt from the judgment, translated)

The marketing approval document for the defendant’s pharmaceutical product states that “the product temperature at the drying endpoint shall be no higher than <50°C>.” Each manufacturing instruction and record for that product instructs that drying end at a product temperature of 41.0°C or higher. It is therefore recognized that, in the defendant’s method, the product temperature reaches 41°C or higher in the “step of drying to obtain granules.” The “step of drying to obtain granules” means the entire drying process. Accordingly, the defendant’s method cannot be said to satisfy the limitation that “the product temperature is below 40°C” in the “step of drying to obtain granules.”

[India] Syngenta Limited v. Controller of Patents and Designs, 471/2022 (Division Bench of the Delhi High Court, October 13, 2023)

*A Delhi High Court judgment that relaxed the requirements for divisional applications!

Before this judgment, the practice was that an invention disclosed only in the parent application’s specification, but not in its claims, could not be made the subject of a divisional application.

→ The judgment held that a divisional application could be filed for an invention disclosed only in the parent application’s specification, even if it was not recited in the parent application’s claims.

*The practice became consistent with that of Japan, the United States, Europe and other jurisdictions.

Japanese version: https://www.takaishihideki.com/single-post/【著作権】大阪地判令和１年-ワ-10940

[Copyright] Osaka District Court, 2019 (Wa) No. 10940

The court affirmed the copyrightability of the program, taking into account the volume of its source code.

*Where the source code and the functions contained in it are extensive, creativity is recognized unless there are special circumstances (Tokyo District Court, January 28, 2011, New Masuda-ashi case).

There was an implied license for the acts of reproduction and modification.

→ Infringement of copyright (the right of reproduction) and moral rights (the right of integrity) was denied.

On the other hand, infringement of the right of attribution was found with respect to the defendant’s display of only its own company name on the program’s startup and version screens and its removal of the plaintiff’s name.

→ The court awarded total damages of JPY 110,000, comprising JPY 100,000 in compensation for non-pecuniary harm and JPY 10,000 for attorney’s fees.

*On appeal (IP High Court, 2024 (Ne) Nos. 10017 and 10036, November 21, 2024), total damages were reduced to JPY 55,000, comprising JPY 50,000 in compensation for non-pecuniary harm and JPY 5,000 for attorney’s fees, because some of the programs had not been “offered or presented to the public.”

Text to Enter in “Customize ChatGPT”

Original Ameblo publication: 2025-08-05

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12920940421.html

When researching judicial decisions, prior art for invalidity arguments, or other facts, the following text can be entered in “Customize ChatGPT” to request exact quotations and summaries and to reduce the risk of hallucinations.

“I am not asking ChatGPT to invent anything or to tell me what it thinks I want to hear. I am asking for answers to the questions entered in the prompt. In your answer, always cite the links on which you rely and always quote the text on which you rely in quotation marks. When quoting, reproduce the text exactly as it is, without changing a single character. The output I seek is accurate quotation; paraphrasing for readability or summarizing is completely prohibited. Do not create text under any circumstances; quote the text in quotation marks. After completing the quotation without changing a single character, also summarize the content that you quoted in quotation marks. If there is nothing corresponding to the question, I want an answer saying that there is nothing, so never introduce a judgment that does not exist. If you introduce something nonexistent, my delivered report will contain falsehoods, which is what causes me the greatest difficulty. Thank you. temperature=0 Above all, hallucinations cause me the greatest difficulty, so if the answer you are looking for is not there, please honestly answer that it was not there. Thank you.”

[China] Requirements when further limiting an independent claim while amending an original dependent claim into an independent claim

Original Ameblo publication: 2025-08-06

HP: https://www.takaishihideki.com/en/single-post/china-requirements-when-further-limiting-an-independent-claim-while-amending-an-original-dependent
Japanese version: https://www.takaishihideki.com/single-post/【中国】独立請求項に対して更なる限定を行うと共に、元の従属請求項を独立請求項に補正する場合の要件

[China] Requirements when further limiting an independent claim while amending an original dependent claim into an independent claim

<Supreme People's Court, (2021) Zui Gao Fa Zhi Xing Zhong No. 556 (December 12, 2023)>

The patentee further limited the independent claim and rewrote original dependent Claim 3 as new independent Claim 4.

Because the substantive content and scope of protection of new Claim 4 and original Claim 3 are exactly the same, amended Claim 4 is original Claim 3; it was not obtained by combining original Claims 1 and 3. New Claim 4 is subject to examination.

<Key points of the holdings (2023)>

In patent-right confirmation proceedings, whether an amendment to a claim constitutes a "further limitation" should be assessed solely by determining whether the amended claim fully includes all technical features of the claim before amendment, whether the amended claim adds technical features compared with the claim before amendment, and whether those added technical features are recited in other claims of the original claim set.

As a general rule, an amendment that "further limits" a claim should be confined to responding to grounds for invalidation. An amendment made under the guise of remedying the deficiencies alleged in those grounds, but which in substance optimizes claim drafting rather than responding to those grounds, may be rejected.

In this case, incorporating the technical features of original Claims 2, 4, 6 and 7 into original Claim 1 constitutes a "further limitation." In these circumstances, rewriting original Claim 3 as new independent Claim 4 is permissible because it changes the form of drafting without altering the substantive content or scope of protection and does not substantively reconstruct the claims.

Japanese version: https://www.takaishihideki.com/single-post/【商標】令和６年-行ケ-10038

[Trademarks] IP High Court, 2024 (Gyo-Ke) No. 10038

Applied-for mark: “新生甘酒” (Shinsei amazake)

→ No distinctiveness (contrary to Article 3(1)(iii) of the Trademark Act).

1. If understood as “新生” + “甘酒”

It could ordinarily be used for amazake whose ingredients, manufacturing method or other aspects have been changed.

2. If understood as “新” + “生甘酒”

It could ordinarily be used for new “生甘酒” (unheated amazake).

(Excerpts from the judgment, translated; portions omitted)

1. Both “新生” and “甘酒” are common dictionary words. In light of the actual trade circumstances concerning “新生” that existed at the time of the trial decision, the applied-for mark is recognized as a name generally referring to amazake whose content has been renewed by changing its ingredients, manufacturing method or other aspects. It could ordinarily be used to describe such amazake. When used for the designated goods, traders and consumers would generally recognize it as indicating the quality of the goods. [...]

2. If “新生甘酒” is understood as combining “新” and “生甘酒,” consumers and others encountering it on the designated goods would recognize it as a name generally referring to unheated amazake manufactured that year, or new amazake whose manufacturing method or characteristics differ from previous products. “新” is a common word listed in dictionaries, and the trade circumstances described above establish the practice of placing it before words indicating beverages or food products. “生甘酒” was also used in trade to mean “amazake manufactured without heat treatment.” Accordingly, the combined term “新生甘酒” could ordinarily be used to describe unheated amazake manufactured that year, or new amazake whose manufacturing method or characteristics differ from previous products. …

Japanese version: https://www.takaishihideki.com/single-post/【商標】令和５年-行ケ-10117『ベスリ会-東京 tms クリニック』事件-本多

[Trademarks] IP High Court, 2023 (Gyo-Ke) No. 10117 — “Besurikai Tokyo TMS Clinic” (Judge Honda)

Applied-for mark: “ベスリ会 東京 TMS クリニック”

Cited mark: “東京 TMS クリニック”

*“ベスリ会,” the name of a medical corporation, has a source-identifying function, but “東京 TMS クリニック” can be extracted as the dominant element.

(Excerpts from the judgment, translated; portions omitted)

The term “TMS” is not recognized as immediately calling to mind “transcranial magnetic stimulation” or “TMS treatment” as a treatment for depression. The textual portion “東京 TMS クリニック,” taken as a whole, functions as a source identifier representing the name of the clinic that provides the services. [...]

The textual portion “ベスリ会,” which indicates the medical corporation’s name, is not devoid of a source-identifying function. However, considering actual trade circumstances in which a medical corporation’s name and a medical institution’s name are used together, its source-identifying function must be regarded as relatively weak within the applied-for mark as a whole, which combines it with “東京 TMS クリニック.”

Even where pronunciations and concepts functioning as source identifiers arise from multiple parts of a composite mark, [...] a particular part may be extracted as its dominant element where, for example, that part gives traders and consumers a strong and dominant impression as an identifier of the source of services. Accordingly, even if “ベスリ会” has a source-identifying function, this does not prevent extraction of “東京 TMS クリニック” as the dominant element of the applied-for mark. [...]

[United States] CAFC, August 2, 2023 — Realtime Data v. Array Networks

[Alice, step one] → Directed to an abstract idea

The claims do not clearly define a particular technology for performing data compression; they merely state results abstractly.

[Alice, step two] → No inventive concept

The specification does not show a particular use of a processor or differences from the prior art.

Data compression itself has long been well known. Even when the elements and procedures recited in the claims are combined, no technical feature beyond an abstract idea implemented by a general-purpose computer can be found.

IP High Court, 2020 (Gyo-Ke) No. 10094 — Agent for suppressing recurrence of reflux esophagitis (Judge Mori)

*Common general knowledge at the priority date: completion of a phase II clinical trial led to denial of inventive step.

Phase I clinical trial: safety trial

Phase II clinical trial: efficacy trial with a small number of participants

Phase III clinical trial: efficacy trial with a large number of participants

<Difference>

Invention 1 is an “agent for suppressing recurrence of proton-pump-inhibitor-resistant reflux esophagitis,” containing “rabeprazole sodium” as its active ingredient and administered “for maintenance therapy.” By contrast, the Exhibit Ko 1 invention is “rabeprazole sodium (E3810) used in a phase III clinical trial to examine efficacy and safety” “in maintenance therapy for patients with PPI-resistant reflux esophagitis.”

(Excerpts from the judgment, translated; portions omitted)

…In light of common general knowledge concerning safety, the tolerability of long-term administration of 20 mg of rabeprazole sodium once daily in maintenance therapy was clear to a person skilled in the art at the priority date. …Considering also that no safety difference was thought to exist between twice-daily and once-daily administration, …no circumstance indicating an obstacle from the perspective of clinical safety to administration of “10 mg per dose twice daily” for “four weeks or more” is apparent. The guidelines in Exhibits Ko 42 and Ko 44 do describe concerns about the safety of long-term PPI administration. However, they state, for example, that “a direct causal relationship between any of these concerns and PPI administration cannot be said to be clear” (Exhibit Ko 42), and therefore do not alter the above conclusion. Nor do the warnings in the package inserts for the respective PPIs in Exhibits Ko 23 and Ko 29–31 alter that conclusion: they merely contain general statements about adverse reactions and similar matters ordinarily included in drug package inserts. …Accordingly, a person skilled in the art could readily have conceived of using the rabeprazole sodium of the invention in Exhibit Ko 1 as a recurrence-suppressing agent administered during maintenance therapy for patients with PPI-resistant reflux esophagitis and of adopting the features of Invention 1 at issue relating to Difference 1. …

The plaintiff relies on the 2017 judgment (2016 (Gyo-Ke) No. 10107). However, that judgment addressed “novelty,” not “inventive step,” and plainly concerned a different case.

[Trademarks / Similarity] Tokyo High Court, 2000 (Ne) No. 6252

*During prosecution, the applicant emphasized the distinctive spelling “BeaR.”

→ Dissimilar to “bear.”

(Excerpts from the judgment, translated; portions omitted)

Even if “BeaR” in the registered mark is understood as the English word “bear,” it is established, as noted above, that numerous marks giving rise to concepts and pronunciations associated with “bear” (the animal) have been registered as independent trademarks and are actually used in the field of the designated goods. In light of these circumstances, in the market for clothing and the other designated goods, it is difficult to distinguish one trader’s goods from another’s solely by the pronunciation “bear” or the concept of a bear. It accords with experience that traders and consumers instead distinguish the various “bear” marks by differences in the words, devices and other elements added to “bear” and similar terms.

The applicant’s arguments in the above written opinion responding to the notice of reasons for refusal should be understood as expressing its recognition of the general trade circumstances that marks containing “bear” or similar terms are not distinguished merely by the pronunciation “bear” and the concept of the animal. In the case of the registered mark, as emphasized in that written opinion, the distinctive spelling “BeaR,” particularly the emphasis created by the capital final “R,” should be understood as the feature distinguishing it from the ordinary word “bear” (the animal).

In other words, among the many registered and actually used marks associated with “bear,” this mark should be understood as being perceived and conceptualized as the distinctive “bear with a capital final R,” and as exercising distinctiveness in that form.

If the mark is viewed as a coined word with “e” and “a” between “B” and “R,” it is not similar to the appellant’s sign in pronunciation or concept. [...]

HP: https://www.takaishihideki.com/en/single-post/trademarks-cancellation-for-non-use-heisei-22-gyo-ke-no-10083-ecopac
Japanese version: https://www.takaishihideki.com/single-post/【商標-不使用取消】平成 22 年-行ケ-10083『ecopac』事件

[Trademarks / Cancellation for non-use] IP High Court, 2010 (Gyo-Ke) No. 10083 — “ECOPAC”

*Prosecution history estoppel prevents an argument that the registered mark conveys the concept of “environmentally friendly packaging.”

→ The registered mark “ECOPAC” is not equivalent to “エコパック.”

→ Cancellation for non-use.

(Excerpts from the judgment, translated; portions omitted)

At present, the mark in actual use, “エコパック,” conveys the concept of “economical and environmentally conscious packaging containers.” Further, because the registered mark “ECOPAC” has the pronunciation “ekopakku,” even taking into account that the English words meaning “packaging containers” are “package” and “pack,” there is room to construe that traders and consumers would associate the constituent part “ECO” of the registered mark with “ECO,” an abbreviation of “ecology,” and would further associate “PAC” with “pack,” meaning “packaging containers,” thus understanding the registered mark to convey the concept of “economical and environmentally conscious packaging containers.” …

However, in the course of prosecution of the registered mark, the plaintiff repeatedly argued that the mark had a distinctive composition and consisted of a coined term that gave rise only to the pronunciation “ekopakku,” corresponding to its constituent letters, and did not give rise to any particular concept; following an appeal against a decision of refusal, the mark was allowed for registration. In particular, in proceedings on an opposition to registration, the opponent argued that the mark “ECOPAC” suggested a compound of “ecology” and “package” and, in relation to the designated goods, would be recognized solely as a generic term indicating “packaging containers giving full consideration to environmental protection” or as a representation of the quality of such containers. In response, the plaintiff asserted that the registered mark was not divisible into “ECO” and “PAC”; that, even if the components were considered separately, there was no general ordinary commercial use of “ECO” as an abbreviation indicating “ecology”; that the foreign-language words ordinarily adopted in trade to designate “packaging containers” were “package” and “pack,” which differed in their letter composition from “PAC” in the registered mark; and that the continuously joined expression “ECOPAC” did not designate “packaging containers giving full consideration to environmental protection,” but would be understood by traders and consumers as a coined word created by the plaintiff and incapable of giving rise to any particular concept. The plaintiff made these assertions. The Japan Patent Office accepted the plaintiff’s contentions, allowed registration of the mark, and subsequently decided that the registration should be maintained.

Consequently, even taking into account that the points disputed in the appeal against refusal and similar proceedings did not necessarily coincide with the grounds for rescission at issue in this lawsuit, and that social awareness of environmental protection had increased by the present time compared with the time of the application for registration in 1988 and the appeal decision in 1997 when assessing whether the registered mark and the mark in actual use are identical according to accepted social standards, the plaintiff itself had clearly maintained in prosecution that “PAC” differed in composition from the foreign-language word denoting “packaging containers”; that the continuously joined registered mark “ECOPAC” did not signify “packaging containers giving full consideration to environmental protection”; and that traders and consumers would perceive and understand it as a coined term created by the plaintiff that gave rise to no particular concept. In these circumstances, the plaintiff cannot reverse its prior position in this case and contend that the registered mark conveys the concept of “environmentally friendly packaging,” since that would violate the principle of estoppel. Accordingly, the plaintiff’s contention that the registered mark and the mark in actual use are identical according to accepted social standards, on the premise that their pronunciation and concept are identical, cannot be accepted.

Japanese version: https://www.takaishihideki.com/single-post/【不競法-商品等表示】東京地判令和５年-ワ-70036『カテーテル用コネクター』-國分

[Unfair Competition / Indication of goods or business] Tokyo District Court, 2023 (Wa) No. 70036 — Catheter connector (Judge Kokubu)

The court recognized dimensions compared with similar products as an “indication of goods or business.”

→ Injunction granted!

*It is unusual for a likelihood of confusion to be found where the consumers are medical professionals.

[Subsequent appeal] In its judgment of July 16, 2025, 2025 (Ne) No. 10012, the IP High Court recognized the plaintiff’s product shape as a well-known indication of goods or business, but found that the defendant’s product shape was not similar. It reversed the portions of the first-instance judgment adverse to the defendant and dismissed the corresponding claims.

(Excerpts from the first-instance judgment, translated; portions omitted)

1. Distinctive features

[...] The plaintiff’s Y-connector was the only two-valve Y-connector having an overall length of approximately 88 mm and approximate proportions of 4:1:2:1 for the overall length, thumbwheel, main branch and rotator. It cannot be regarded as commonplace.

Accordingly, in Feature (e), the plaintiff’s Y-connector has an objectively conspicuous feature distinguishing it from other goods of the same kind. [...]

[...] Features (a) and (c) can be said to arise from an unavoidable configuration for which there is no choice of another form to achieve the product’s technical function and utility. As for the other features, however, there are multiple alternatives, and they cannot be said to arise from such an unavoidable configuration.

2. Well-known status

[...] Since 2008, the plaintiff’s Y-connectors had achieved shares of 50% or more in both sales volume and sales value in the PTCA market where Y-connectors are used. In 2022, those shares reached 70% by volume and approximately 80% by value. [...]

Because the plaintiff had exclusively used the form of its Y-connector for a long period, by around 2008 it had become widely recognized among its consumers, principally physicians and other medical professionals, as indicating the plaintiff as its source; it had acquired well-known status.

3. Similarity

The plaintiff's and defendant's Y-connectors share their overall length (87.99 mm for the plaintiff's and 87.80 mm for the defendant's), a cylindrical screw, an overall construction of transparent material, and an opener colored in a warm color. [...] Their overall dimensional proportions are also very similar. Particularly because their dimensions and colors are similar, their appearance gives consumers, principally physicians and other medical professionals, the impression that the two indications are similar overall.

Additional translation of the complete passages quoted in the Japanese edition (ellipses correspond to those in the Japanese text):

1. Distinctive characteristics: The two-valve Y-connectors sold in Japan before the plaintiff's product was launched and still being sold are Abbott's Y-connector and Merit Medical's Y-connector. These goods must naturally be taken into account as other products of the same kind when examining the distinctiveness of the plaintiff's Y-connector. …

Excluding short-size versions, two-valve Y-connectors range in overall length from 72 mm to 78.99 mm; some short-type versions have an overall length of 58 mm. Among the two-valve Y-connectors other than the plaintiff's, excluding the defendant's, even the Kaneka Y-connector, which is closest in overall length to the plaintiff's Y-connector, measures approximately 82 mm, a difference of approximately 6 mm. Whereas the plaintiff's Y-connector has a thumbwheel length of 27.90 mm (screw length 16.04 mm), the Kaneka Y-connector has a thumbwheel length of 33.88 mm (screw length 22.22 mm), according to the attached Comparison of Two-Valve Connectors and the evidence (Defendant's Exhibit Otsu 24). Apart from the defendant's Y-connector, there was no product whose form exhibited approximately the same proportions among overall length, thumbwheel, main branch and rotator as the plaintiff's Y-connector.

Consequently, the plaintiff's Y-connector was the only two-valve Y-connector having an overall length of approximately 88 mm and approximate proportions of 4:1:2:1 among its overall length, thumbwheel, main branch and rotator. Its form cannot be described as commonplace. The plaintiff's Y-connector thus possessed, in respect of Feature (e), an objectively conspicuous feature distinguishing it from other goods of the same kind. … Features (a) and (c) can be said to arise from an unavoidable configuration for which there is no choice of another form to achieve the product's technical function and utility. As for the other features, however, there are multiple alternatives, and they cannot be said to arise from such an unavoidable configuration.

2. Well-known status: The plaintiff continued advertising at trade fairs and conducting sales activities aimed at physicians, thereby increasing sales. In the PTCA market where Y-connectors are used, Y-connectors manufactured by the plaintiff had achieved market shares of 50% or more in both sales volume and sales value since 2008. By 2022, the market share had reached 70% by volume and approximately 80% by value. Approximately 70% of the Y-connectors sold by the plaintiff were the plaintiff's product, in which an OKAY II-type Y-connector was selected and combined with accessories. Although market data confined to two-valve Y-connectors did not exist, it could be inferred that the plaintiff's share of the two-valve Y-connector market was even higher than its share of the overall Y-connector market. In light of these circumstances, the form of the plaintiff's Y-connector had acquired well-known status by around 2008: through its longstanding exclusive use by the plaintiff, it had become widely recognized by its consumers, principally physicians and other healthcare professionals, as indicating the plaintiff as its source.

3. Similarity: The plaintiff's and defendant's Y-connectors share an overall length of 87.99 mm and 87.80 mm, respectively; the cylindrical shape of their screws; their manufacture entirely from transparent components; and openers colored in warm hues. … Their overall dimensional ratios are also very similar. In particular, because their dimensions and colors are similar, their appearance gives consumers, principally physicians and other healthcare professionals, the impression that the two indications are similar overall.

Japanese version: https://www.takaishihideki.com/single-post/【意匠】部分意匠の間接侵害が認められた事例

[Designs] A case recognizing indirect infringement of a partial design

Tokyo District Court, 2021 (Wa) No. 30281 — Hand-pushing member for a transport cart (Judge Kokubu)

1. Comparison of the articles

“The articles relating to the registered designs and the article relating to the defendant’s design are attached to a transport cart and used to protect the hand holding the grip from surrounding objects. Their purpose and function are the same.”

2. Comparison of the shapes

“There is no publicly known design combining the shape of the grip and that of the protective portion of Registered Design 1 as viewed obliquely from above. [...]

[...] The common features of Registered Design 1 and Defendant’s Design 1′ [...] produce an aesthetic impression approximately resembling an inverted letter ‘T’ when viewed from the front. Although the surface of the grip in Registered Design 1 is smooth, whereas Defendant’s Design 1′ has nine annular ridges at equal intervals around the grip, and this is a difference concerning an essential part, the unevenness is not substantial. It cannot be assessed as a difference sufficient to outweigh the aesthetic impression of an approximately inverted ‘T’ produced by Defendant’s Design 1′.”

3. Requirements for indirect infringement

“The defendant’s product is not attached to anything other than the single pipe of a transport cart and does not acquire a function or purpose different from that of a hand-pushing member (entire import of the oral argument). Accordingly, the defendant’s product, which is attached to the upper end of the transport cart’s single pipe, is an article ‘used exclusively for manufacturing’ the hand-pushing member of a transport cart (Design Act, Article 38(i)(a)).”

[Trademarks / False marking] Osaka High Court, 1991 (Ne) No. 1003 — Choco Krispies

Original Ameblo publication: 2025-08-17
Article type: Case note
Category: Trademarks
Topics: False trademark marking, Well-known status, Protection under unfair competition law
First published on this site: 2026-10-10
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12923668454.html
HP: https://www.takaishihideki.com/en/single-post/trademarks-false-marking-osaka-high-court-heisei-3-ne-no-1003-choco-krispies
Japanese version: https://www.takaishihideki.com/single-post/【商標-虚偽表示】大阪高判平成３年-ネ-1003（チョコクリスピー事件）

[Trademarks / False marking] Osaka High Court, 1991 (Ne) No. 1003 — Choco Krispies

The appellant argued that Kellogg's continued use of "クリスピー(R)" on packaging after registration of the Japanese-character mark "クリスピー" had expired falsely suggested registration, contrary to Article 74(i) of the Trademark Act. It argued that a party making such false indications should not receive protection under the Trademark Act or the Unfair Competition Prevention Act.
→ The court recognized that the act itself violated Article 74(i) and was subject to criminal penalties. However, the existence of a criminal penalty did not automatically require refusal of civil protection based on the trademark right. In particular, the claim was based on the Latin-letter mark "KRISPIES," which differed from the Japanese-character indication "クリスピー(R)" at issue. The existence of false marking could not defeat the claim based on the trademark right.
(Excerpt from the judgment, translated)
"3. The new issue on appeal: whether a person who made false indications contrary to Article 74(i) of the Trademark Act can receive protection under the Unfair Competition Prevention Act
As stated above, appellee Kellogg Japan continued to state on its product packaging that the Japanese-character mark "クリスピー" was a registered trademark even after its registration as an associated trademark had expired on August 1, 1984, in violation of Article 74(i) of the Trademark Act. The appellant argues that, even if marks such as "チョコクリスピー" used by Kellogg Japan are well known, that recognition was acquired by improper means and should therefore not receive protection under the Unfair Competition Prevention Act.
However, as already stated, the imposition of criminal penalties as a sanction for that violation does not itself mean that the person's rights are denied civil protection. Moreover, 'チョコクリスピー' became well known as Kellogg Japan's mark through its advertising and sales activities as found above, not through the false indications. The appellant's argument therefore cannot be accepted."

Japanese version: https://www.takaishihideki.com/single-post/【著作権】大阪高判平成 19 年（ネ）713（ピーターラビット事件）

[Copyright] Osaka High Court, 2007 (Ne) No. 713 — Peter Rabbit

Manufacturer X planned to sell towels using parts of illustrations from picture books whose copyright term had expired. Against Y, the company managing copyright in the picture books, X alleged that Y had its licensees use indications suggesting that copyright still existed, thereby misleading consumers into believing that copyright continued to subsist in Japan (the defendant's indications). X argued that this constituted unfair competition misleading consumers about the quality or content of licensed goods and about the quality or content of services relating to merchandising licensing.

→ The court upheld the dismissal of X's unfair-competition claims and dismissed X's appeal. The goods bearing the defendant's indications on reproductions of the works covered by the injunction claim were diverse, but X had not specifically identified, alleged and proved which goods used those indications. Whether an indication "misleads" consumers about the "quality" or "content" of "goods" must be determined by examining the specific content of specific goods, and the conclusion may differ for each product. Without allegations and proof identifying specific goods, X's case was insufficient.

The first-instance judgment also granted X's claim for a declaration that Y had no right, based on copyright in the original illustrations, to obtain an injunction against X. That part of the judgment was likewise upheld through dismissal of Y's incidental appeal.

Copyright notices after expiration of copyright

Displaying patent, utility model or design rights that do not actually exist on products is considered likely to constitute unfair competition in many cases. Such indications often mislead consumers about the quality or content of the products by suggesting that they possess superior technology or design of a kind granted a patent, utility model registration or design registration.

Supreme Court, 1992 (O) No. 1491 — Earth belt

Where a party acquired well-known status for its product indication through a series of acts contrary to accepted principles of morality, including placing “PAT,” which could be confused with a patent marking, on products and displaying the same letters in advertisements—acts falling under Articles 188 and 198 of the Patent Act and Article 1(1)(v) of the then-applicable Unfair Competition Prevention Act—it cannot claim damages or publication of an apology under the Unfair Competition Prevention Act against a person using a similar product indication.

The Supreme Court affirmed the judgment below (Sendai High Court, February 12, 1992), which so held.

*The court found the invention readily conceivable on the basis of its “advantages”!

→ Inventive step denied.

(Excerpt from the judgment, translated)

[...] Adopting a Web browser in place of a Web client and implementing dynamic-display processing in JavaScript is recognized as readily conceivable by a person skilled in the art in view of its advantages. If JavaScript is written directly in HTML, the Web browser cannot execute that JavaScript before receiving the HTML. Accordingly, it is sufficient—and necessary—to perform the step of identifying the map using JavaScript written directly in the HTML after receiving the HTML. Changes of the order of the steps relating to transmission and reception of HTML and identification of map data, deletion of unnecessary steps and addition of necessary steps, to the extent ordinarily required to deal with such inevitable consequences, are merely within the scope of ordinary creativity of a person skilled in the art. The need for such modifications does not constitute an impediment to making those modifications. [...]

IP High Court, 2024 (Gyo-Ke) No. 10050 — Information processing apparatus (Judge Miyasaka)

*The computations performed by each processing unit contribute to solving the invention’s problem.

→ Qualifies as an “invention.”

(Excerpt from the judgment, translated)

“The patented invention [...] is understood to be implemented by loading a computer program into a computer and operating the computer in accordance with that program. The fund-related computation and optimization performed by each unit are specifically identified. The combination of those units specifically indicates the method, sequence and other aspects of operation of an information processing apparatus for determining the contents of fund products. This serves as the means of solving the patented invention’s problem [...] of providing investors with fund products whose investment targets offer favorable investment returns, supply-demand balance and trading-price stability, and which can realize the profits and losses desired by investors. It can therefore be recognized as an ‘invention.’”

Japanese version: https://www.takaishihideki.com/single-post/令和６年-行ケ-10049【情報処理装置】-宮坂

IP High Court, 2024 (Gyo-Ke) No. 10049 — Vehicle (Judge Nakadaira)

*The trial decision did not state the reasons for its obviousness determination.

→ The JPO decision was set aside because its obviousness determination was erroneous.

(Summary of the court's reasoning, translated)

<Whether it was readily conceivable to make the vehicle of the cited invention a vehicle configured to turn in a leaning posture>

…Even assuming that "vehicles configured to turn in a leaning posture and their energy storage devices are generally small," a small energy storage device (battery), even if it has a small total amount of electrical energy available for supply, does not necessarily supply low electrical power at a particular point in time. The cited document shows that the cited invention addresses the problem of the small amount of power that a battery can supply when its temperature is low. However, the evidence is insufficient to establish that vehicles configured to turn in a leaning posture generally face the problem of low power available from their energy storage devices (batteries). Accordingly, the problem addressed by the cited invention cannot be said to be common to the problems generally faced by such vehicles, and no motivation for a person skilled in the art to make the vehicle of the cited invention a "vehicle configured to turn in a leaning posture" can be found on the basis of a common problem.…

<Whether it was readily conceivable to make the vehicle of the cited invention a drone>

…The drone of the amended invention is an aircraft with rotary wings and flies through the atmosphere by rotating those wings. By contrast, the vehicle of the cited invention travels by transmitting power to the road surface through its drive wheels; it is therefore a vehicle with wheels that travels over land by rotating them. Thus, the vehicle of the cited invention, which travels over land by rotating its wheels, and the drone of the amended invention, which flies through the atmosphere by rotating its rotary wings, differ fundamentally in their structure and mode of movement.

IP High Court, 2013 (Gyo-Ke) No. 10266 — Transparent film (Judge Ishii)

*In this case, the correction introducing a disclaimer was held not to introduce new technical matter because it limited the types of metal oxides without changing the technical content of “metal oxides” used as acid acceptors.

→ Correction requirements satisfied, but inventive step denied after correction.

(Excerpts from the judgment, translated; portions omitted)

[...] The metal oxides used as acid acceptors in Invention 1 include any type possessing that function. The correction excludes certain specifically listed metal oxides from those having that property. There is no circumstance changing the technical content of “metal oxides” used as acid-acceptor particles before and after correction, such as a particular acid-accepting property possessed only by the excluded oxides or only by the remaining oxides. The correction therefore limits the types of metal oxides recited in the claims compared with before correction and does not introduce new technical matter. [...]

Since a solar-cell encapsulating film is a member in contact with equipment suggested in Ko 1, a person skilled in the art reading Ko 1 could readily have conceived of making the film of Invention Ko 1 crosslinked and transparent and using it as a solar-cell encapsulating film. [...] The invention could readily have been conceived by a person skilled in the art based on Invention Ko 1 and well-known technology.

Osaka High Court, 1999 (Ne) No. 18 — Method of attaching a filter to an exhaust outlet

*For a product sold as a set, the “exclusively” requirement is assessed for the set as a whole.

(Excerpt from the judgment, translated)

Product 1 is sold as an integrated set comprising a range-hood filter and a magnet-containing case with a protrusion, together with installation instructions. Purchasers of such sets buy them to use the components together, rather than to use each component separately.

Accordingly, in examining whether a set is an article “used exclusively for working” the invention—whether it has other uses—the economic, commercial and practical possibilities of using the set as a whole should be considered. Even if the filter and the magnet-containing case with a protrusion can each be used independently, no use of the entire set other than working Invention ① can be contemplated. Product 1 is therefore an article used exclusively for working Invention ①.

Tokyo District Court, 2004 (Wa) No. 10431 — Design infringement litigation

*The court recognized the reliability of the contents and dates shown by the Wayback Machine records submitted as evidence in this case.

(Excerpt from the judgment, translated)

The US nonprofit Internet Archive began collecting the worldwide Web in 1996 and made its archive publicly available through the Wayback Machine in 2001, by which time it comprised a vast collection of 100 terabytes and more than 16 million sites. WIPO's guidelines governing international searches and international preliminary examination under the PCT identify the archive as one means of determining the publication date of information published on a website. Moreover, [...] the defendant's website as of December 9, 2003, added "Design registration applied for" to photographs of Defendant's Products 1 and 2, whereas the website as of February 27, 2003, did not. This is consistent with the application history of the design right, for which the application was filed on May 22, 2003. These facts establish that the collected contents and dates indicated by the archive are sufficiently reliable.

Intellectual Property High Court (Grand Panel), 2023 (Ne) No. 10040 — Composition for promoting an increase in subcutaneous adipose tissue (Judge Honda)

*Where consideration is received, the act generally does not constitute experimentation or research under Article 69(1) of the Patent Act.

Unlike the judgment below, the court found that the appellee had prepared and administered a formulation containing components ①, ② and ③ simultaneously.

→ Claim satisfied; the patentee won on appeal.

*The issue that had attracted attention—whether separate administration of components ① and ②, and component ③, would satisfy the claim—thus disappeared.

The patented “composition for breast augmentation” is used for breast augmentation, whose purpose is primarily aesthetic.

→ Under current social conventions, it is not a substance used for the diagnosis, therapy, treatment or prevention of human disease.

→ It does not fall within an invention of a medicine to be manufactured by mixing two or more medicines (substances used for the diagnosis, therapy, treatment or prevention of human disease) under Article 69(3).

(Excerpts from the judgment, translated; portions omitted)

The purpose of Article 69(1) of the Act is understood to be to balance the interests of patentees and the general public from the standpoint of industrial policy: working a patented invention for experimentation or research ordinarily does not harm the patentee’s economic interests, whereas extending the effects of a patent right to such experiments would instead hinder technological progress and impair industrial development.

Here, a patentee has the exclusive right to work the patented invention in the course of business (the main text of Article 68 of the Act). Working a patented invention in exchange for consideration harms the patentee’s economic interests. In light of the purpose of Article 69(1)—to balance the interests of patentees and the general public—such conduct should therefore be understood not to constitute “working a patented invention for experimental or research purposes,” even if a research purpose coexists, unless special circumstances exist.

Applying this to the present case, …the appellee…is found to have provided the surgery at issue in exchange for payments from customers and to have manufactured (produced), for use in that surgery, a composition falling within the technical scope of the patented invention.… Although discounts were often applied to the amounts the appellee received from customers as payment for the surgery, the amounts of those discounts were not uniform. There were cases with no discount even during the monitoring period asserted by the appellee…and cases with substantial discounts even after that period. At least, it cannot be said that, because the surgery was performed during the monitoring period, it was provided for an amount so low that it did not in substance constitute consideration. Accordingly, the special circumstances referred to above cannot be found, and the appellee's working of the invention should not be regarded as "working a patented invention for experimental or research purposes."

→ Direct infringement established!

(Appellant's contentions reproduced in the judgment, translated; portions omitted—not the court's findings)

The appellee's products…sold to Freund and displayed at the exhibition either had stirring blades satisfying Element D of the patented invention (such blades are referred to below as "GM blades") installed from the outset or were intended to have them installed, and were sold as integrated units with…GM blades (the HSM blades in the attached list were the former product name for GM blades) and…GM blades, respectively. Even if…the products could not be regarded as having been sold as integrated units with the respective GM blades, and…sales of those products did not infringe the patent right, …the GM blades are used exclusively in stirring granulators manufactured by the appellee, so their transfer constitutes indirect infringement of the patent right (Patent Act, Article 101(i)).

Court's own findings (translation of Section IV, "The Court's Findings"):

The Court determines that the appellee's products satisfy all the limitations of the patented invention and therefore fall within its technical scope, and that the patent should not be invalidated in a patent invalidation trial. Accordingly, the appellant's claim for damages for infringement of the patent right is well founded to the extent stated in the main text of the judgment. However, the appellant's remaining claims based on violation of the Unfair Competition Prevention Act, copyright infringement, and breach of the basic agreement are all without merit. The reasons are set out below.

Tokyo District Court, 2020 (Wa) No. 4331 — Heated aerosol-generating device (Judge Nakashima)

*Embodiments that cannot solve the problem are not included within the scope of the claims.

→ Support requirement satisfied.

(Excerpt from the judgment, translated)

…Even for other durations, it can be understood that the problems addressed by the claimed inventions can be solved by appropriately setting the other conditions, taking into account the common general technical knowledge at the filing date. The defendants point out that the inventions also encompass a first temperature of 360°C, a second temperature of 359°C and a third temperature of 360°C, or a heating duration of one second at each stage. However, a person skilled in the art would readily understand that conditions such as the first to third temperatures and the duration of heating at each stage should be appropriately set “so that aerosol is delivered more evenly during heating of the substrate” (…).

It cannot be said that a person skilled in the art, assuming numerical values such as those asserted by the defendants, would recognize that the claims include embodiments incapable of solving the problems addressed by the inventions.

IP High Court, 2019 (Gyo-Ke) No. 10103 — Support structure for a concrete foundation (Judge Mori)

*The court defined the problem at a less demanding level.

→ Support requirement satisfied.

(Excerpt from the judgment, translated)

The plaintiff argues that the problem addressed by the invention is “to prevent damage to the pile head even when excessive bearing pressure acts on it”…. However,…whether the invention achieves the effect of preventing damage to the pile head is assessed by comparing the use of pile-head concrete with a design strength higher than that of the foundation concrete against cases without such concrete, when the design strength is set after considering various factors for a particular construction project. The effect is that damage to the pile head becomes less likely than when the claimed configuration is not adopted. The plaintiff’s argument is therefore unfounded.

[United States] Incyte v. Sun Pharm (Federal Circuit, May 2025)

A preliminary injunction requires a likelihood of success on the merits, a likelihood of irreparable harm, a favorable balance of equities, and consistency with the public interest; irreparable harm alone is not sufficient.

Even economic harm may qualify if it cannot readily be compensated as quantifiable monetary damages.

→ In this case, Incyte's product remained at an early stage of development and could not be launched before patent expiry, so Sun's head start was inevitable. There was no non-speculative evidence of irreparable harm, and the preliminary injunction was reversed.

IP High Court, 2019 (Gyo-Ke) No. 10055 — Mechanical fastener (Judge Otaka)

*The ordinarily expected basis-weight range calculated on the basis of the cited reference and other relevant material was approximately 19.9 to 42.7 g/m², overlapping the amended invention's range of 25 to 75 g/m².

→ Taking into account the motivation to make the sheet thinner and other circumstances, the court held it obvious to select a value within the amended invention's numerical range.

(Excerpt from the judgment, translated)

A person skilled in the art reading the cited reference would, if selecting smaller values within the respective preferred ranges for the thickness of base sheet 2 and the height of male engagement portions 3 based on the motivation to reduce the thickness of male-side sheet material 1, naturally also consider selecting smaller values within the preferred numerical ranges disclosed in the cited reference for dimensions other than the height of male engagement portions 3, the number of male engagement portions 3 per unit area, and similar parameters. There would therefore be no particular difficulty in appropriately selecting any basis weight for male-side sheet material 1 within the range of approximately 19.9–42.7 g/m². Accordingly, a person skilled in the art would readily arrive at setting the basis weight of male-side sheet material 1 in the cited invention to a value within the range of the amended invention relating to Difference 3 ("25 grams per square meter to 75 grams per square meter")….

[Unfair competition / Misleading representations of quality] IP High Court, 2023 (Ne) No. 10061 — “High-penetration nanoe” (Judge Nakadaira)

*The party bringing the action bears the burden of pleading and proving that a representation is misleading as to quality.

→ A representation based on a reasonable scientific foundation is not misleading as to quality merely because it is not strictly accurate.

(Excerpt from the court-published case summary, translated)

When a party brings an action for damages or an injunction under the Unfair Competition Prevention Act, alleging that another party’s representations constitute misleading representations of quality under Article 2(1)(xx), the burden of pleading and proving this rests with the party bringing the action (the first-instance plaintiff). However, if a representation leads consumers to believe that it is based on specific tests or similar evidence, the absence of supporting materials means that it should be regarded as misleading as to quality. Accordingly, if the party making the representation (the first-instance defendant) does not submit supporting materials, there may be grounds for finding that the first-instance plaintiff has successfully pleaded and proved its allegation. In this case, Y submitted experimental reports and other materials, and X submitted results of verification tests conducted at the time of filing the action and at the appeal stage. Whether Y’s representations are misleading as to quality will therefore be examined in light of these materials.

Y’s representations appeared on its website and in catalogs to describe the benefits of using the appellee’s products and encourage purchases by ordinary consumers. These benefits arise from functions invisible to users. There is no uniquely prescribed method for measuring their degree, which may also vary substantially with conditions such as the environment, manner of use and individual differences. The representations also include a notice that results vary by individual. Ordinary consumers viewing such representations would understand the specific numerical values and experimental results as indicating the degree of benefit and the existence of supporting scientific evidence, and would not be especially concerned with whether they are strictly accurate. Given the content and nature of Y’s representations, a lack of strict accuracy does not immediately make them misleading as to quality. If they are found to rest on a reasonable scientific foundation, they cannot be regarded as misleading representations of quality.

Japanese version: https://www.takaishihideki.com/single-post/【商標】令和６年-行ケ-10061「conart」事件-本多

[Trademarks] IP High Court, 2024 (Gyo-Ke) No. 10061 — “CONART” (Judge Honda)

*Take care with jointly owned trademarks!

The trademarks were jointly owned by the plaintiff, Raffles Properties Incorporated, and Raffles Co., Ltd. in Japan.

The JPO decision found that only Japan Raffles had entered into the license agreement with the non-exclusive licensee, and that the co-owner’s consent had not been established.

The court found that the plaintiff had entrusted management of the trademark rights to Raffles Co., Ltd. in Japan and had consented to the grant of a non-exclusive license to A-style. It found not only that the CONART logo used was identical, in terms of generally accepted social norms, to Trademark C, but also that the “CONART LOGO” indication in the brochure was identical in that sense to Trademarks A and B. The court therefore set aside all three JPO decisions canceling Trademarks A, B and C for non-use.

(Summary of the judgment, translated)

Although the plaintiff was not a party to the license agreement between Raffles and A-style, the agreement expressly stated that the plaintiff had entrusted management of its Japanese trademark rights to Raffles and that Raffles was contracting pursuant to that entrustment. In addition, statements by the plaintiff’s representative and other materials indicate that the agreements had been concluded solely by Raffles’ representative with the plaintiff’s consent, and nothing in their contents is particularly implausible. Furthermore, 50% of the amounts recognized as royalties under the license agreement were recorded as accounts payable in the financial statements and remitted overseas to the plaintiff.

(Excerpt from the judgment, translated)

These circumstances establish that the plaintiff authorized the grant of the license when Raffles entered into the agreement with A-style. It can readily be found that Raffles granted A-style a non-exclusive trademark license with the consent of the plaintiff, the co-owner of the trademark rights (Trademark Act Article 35; Patent Act Article 73(3)).

Tokyo District Court, 2023 (Wa) No. 70114 — Motorcycle brake control device (Judge Shibata)

*An error in the detailed description of the invention.

The argument that it was an obvious clerical error was rejected.

→ Support requirement not satisfied.

(Excerpt from the judgment, translated)

A person skilled in the art would recognize that there is some error because the terms in Formula A have different dimensions. However, the plaintiff's proposed correction is not the only way to resolve that dimensional inconsistency, and there is insufficient evidence that, from Formula A and other information, a skilled person would understand that changing it to Formula A′ is the only solution. Moreover, successively correcting the specification's passages concerning Formula A to make them consistent with that correction would render previously unproblematic passages unintelligible or inconsistent. In these circumstances, the specification does not establish that Formula A can be understood as a clerical error for Formula A′. The plaintiff's argument, premised on that understanding, therefore lacks its premise. …None of the claimed inventions can be regarded as an invention described in the specification, and all are found to fail the support requirement.

IP High Court, 2021 (Gyo-Ke) No. 10094 — PCSK9 (second litigation) (Judge Kanno)

*It was successfully proved that the technical significance asserted by the patentee did not hold!

→ Support requirement not satisfied.

(Excerpt from the judgment, translated)

…The technical significance of the invention lies in identifying that an antibody competing with antibody 31H4 has the functional properties of an antibody that neutralizes binding between PCSK9 and the LDLR protein through the same mechanism as antibody 31H4…. In the absence of any particular explanation of a mechanism supporting the proposition that all such antibodies exhibit functional properties similar to antibody 31H4, it cannot be said that an “antibody that competes with antibody 31H4 for binding to PCSK9” in the claimed invention “exhibits similar functional properties” to antibody 31H4….

A person skilled in the art would have difficulty understanding that an antibody competing with antibody 31H4 is necessarily a binding-neutralizing antibody.

…Dr. B expressed the opinion that “it is certainly incorrect to say that all antibodies…competing with antibody 31H4 would neutralize binding.” …For these reasons, neither Invention 1 nor Invention 5 satisfies the support requirement…

IP High Court, 2005 (Gyo-Ke) No. 10645 — Method for inspecting sealed packages (Judge Tsukahara)
*The mechanism described in the claims and specification contradicts the laws of physics.
→ Clarity and enablement requirements not satisfied.
(JPO decision's reasoning quoted in the judgment, followed below by the court's own findings; translated)
The JPO decision's findings on violations of Patent Act Article 36(4) and (6)…
Paragraph [0008] states: "Thus, when electrode 4 from the voltage output terminal of high-voltage power supply 6 is brought into contact with or proximity to side portion 31 of sealed package 3, electrically conductive contents 1 within sealed package 3 become charged by the negative or positive potential of the high voltage (0.6 kV–30 kV) applied to electrode 4, generating negative (−) ions or positive (+) ions." Figure 1 depicts only negative (−) ions as having been generated throughout the contents, but it is unclear how these "negative (−) ions or positive (+) ions" have been generated, and a person skilled in the art cannot readily carry this out. Specifically, if there is no closed circuit and no displacement current flows, or if charge does not travel through side portion 31 of sealed package 3, it is unclear where the charge for generating the negative (−) ions or positive (+) ions is supplied from. If negative (−) ions or positive (+) ions are said to be generated in the contents without charge being supplied from outside the contents, this is contrary to the law of conservation of charge.
…
The court's findings
…
"Bringing…a single electrode 4 into contact with or close to side portion 31 of sealed package 3…to charge contents 1 inside the package through electrically insulating film 2," as recited in the claimed invention, contradicts conservation of charge and cannot be achieved by anyone. Such an invention must therefore be regarded as unclear. Moreover, the detailed description in the application is not sufficiently clear and complete to enable a person skilled in the art to carry out the invention….

Tokyo High Court, 2003 (Gyo-Ke) No. 166 — …Topical agent for treating atopic dermatitis (Judge Tsukahara)

*The invention was held to be incomplete because there was insufficient evidence to establish that the clinical trial described in the specification had been conducted, that the drugs described had been used, and that the results had been accurately stated, and the intended technical effect therefore could not be inferred.

(Note) The judgment did not find that the description of the clinical trial in the specification was false. It stated that, even if there was no proof that steroids had been mixed in, the description of the clinical trial would not thereby be established as true, and that, ultimately, the defendant, having itself discarded the most probative evidence, must naturally bear the resulting difficulty of proof. The court set aside the JPO decision. https://www.courts.go.jp/assets/hanrei/hanrei-pdf-9822.pdf

→ Not an “invention” eligible for a patent.

(Excerpt from the judgment, translated)

Although the specification…reports the clinical trial results, there is insufficient evidence to establish (i) that the trial was actually conducted, (ii) that the agents used in it were in fact…the topical ointment and cream, or (iii) that the results were accurately recorded in the specification. Nor does examination of the defendant’s arguments concerning evidence other than the trial provide sufficient grounds to find that the agents have a therapeutic effect. It therefore cannot be inferred that the technical content (technical means) of the alleged invention can achieve its intended technical effect. The alleged invention is thus incomplete as an invention and does not constitute an “invention” within the opening clause of Patent Act Article 29(1), and cannot be patented….

[Trademarks] IP High Court, 2024 (Gyo-Ke) No. 10071 — “Taishoken” (Judge Miyasaka)

*An implied agreement granting a non-exclusive trademark license requires objectively verifiable, clear and affirmative intent to confer a right, going beyond mere acquiescence.

→ The court set aside the JPO decision rejecting the request for cancellation for non-use.

(Excerpt from the judgment, translated)

Even if a trademark owner has shown tolerance of a third party’s use of a mark identical to the registered mark, an implied agreement granting a royalty-free non-exclusive license should not readily be inferred from that alone. A non-exclusive license is a right to use the registered mark for the designated goods or services (Trademark Act Article 31(2)). It may be transferred with the trademark owner’s consent or through inheritance or other general succession (paragraph 3), and, if registered, it may be asserted against persons subsequently acquiring the trademark right or an exclusive license relating to that right (paragraph 4). Given this proprietary character, establishing an implied agreement to grant a non-exclusive license requires objectively verifiable, clear and affirmative intent to confer a right, beyond mere “acquiescence.”

[Unfair competition] Osaka High Court, 2024 (Ne) No. 1775 — “Wam”

*Only the claim for return of the manuals was upheld.

→ Completion of the litigation also conclusively determines the obligation to return the manuals. Keeping them for litigation purposes does not excuse that obligation.

(Excerpt from the judgment, translated)

The agreement provides, as an effect of termination, that “the appellee must immediately return to the appellant the originals and copies of equipment, manuals, other materials, documents, etc. lent or supplied under the agreement, or take measures such as destroying them in accordance with the appellant’s instructions”…. Since the agreement…has terminated, the appellee must immediately return to the appellant the existing copy of Item 1, which forms part of the manuals and related materials.

The appellee disputes the return obligation under that provision on the ground that Item 1 is retained for litigation purposes. However, when the judgment becomes final—that is, when the litigation ends—the obligation to return the manuals under the provision will also be conclusively determined. Retention for litigation purposes therefore cannot excuse that obligation.

[Trademarks / JPO decision] Appeal No. 2024-5257

*The applied-for mark, which added “The” to the cited mark and used a stylized design, was held dissimilar.

(Excerpt from the decision, translated)

A. The applied-for mark

As shown in Appendix 1, the mark consists of a device on the left, prominently large lettering “THE CLASSICA” to its right, and smaller lettering “omotesando” below. The components are spaced apart and differ in form (device versus letters and differences in letter size), giving a visually separate and independent impression.

The device does not appear to depict any specific object and gives rise to no independent pronunciation or concept.

“omotesando” is the romanized spelling of Omotesando, meaning “the main approach to Meiji Shrine; also, the surrounding area” (Kojien, 7th ed., Iwanami Shoten), and indicates a place where services are provided. Together with its small, subsidiary presentation on a separate line, this means it produces no pronunciation or concept as an independent indication of origin.

By contrast, the prominently large “THE CLASSICA” lettering is presented as a coherent whole in the same typeface, with the initial letters of “THE” and “CLASSICA” slightly larger and the other letters of equal size. Its pronunciation, “Za Kurashika,” can naturally be spoken as a continuous expression.

“THE” is the English definite article. “CLASSICA” is an Italian word meaning, among other things, a traditional sporting event (Italian–Japanese Dictionary, 2nd ed., Shogakukan), but it cannot be said to be generally well known in Japan and would be perceived as a coined term without a specific meaning. The combination as a whole is not an established dictionary word and does not immediately suggest any particular meaning in relation to the designated services, so it too is perceived as a coined expression.

Given this configuration and pronunciation, the lettering should be understood and perceived as an indivisible whole, rather than as something in which attention would focus particularly on “CLASSICA” alone.

Accordingly, “THE CLASSICA” gives traders and consumers a strong and dominant impression as an indication of the origin of the services, while the other components produce no pronunciation or concept as indications of origin. It is therefore permissible to separate and extract that lettering as the essential part and compare it with another person’s mark in assessing similarity of the marks themselves.

Thus, the applied-for mark produces the pronunciation “Za Kurashika” corresponding to its dominant element, and no specific concept.

B. Cited Mark 1

As shown in Appendix 2, Cited Mark 1 consists of “クラシカ” and “CLASSICA” in two ordinary lines. The upper katakana lettering would naturally be understood as indicating the pronunciation of the lower Roman lettering.

“CLASSICA” should be perceived as a coined term with no specific meaning.

Accordingly, Cited Mark 1 produces the pronunciation “Kurashika” and no specific concept.

C. Similarity between the applied-for mark and Cited Mark 1

Comparing the applied-for mark and its dominant element with Cited Mark 1, there are clear differences in appearance, including the presence or absence of the device and the constituent lettering, making them readily distinguishable.

Their pronunciations differ in the number and identity of their sounds and can readily be distinguished aurally.

Neither gives rise to a specific concept, so no conceptual comparison is possible.

Even though they cannot be compared conceptually, they can readily be distinguished visually and aurally. The two marks should therefore be regarded as dissimilar.

HP: https://www.takaishihideki.com/en/single-post/jpo-appeal-2024-11680-1

Japanese version: https://www.takaishihideki.com/single-post/jpo-appeal-2024-11680

[Trademarks / JPO decision] Appeal No. 2024-11680

*Applied-for mark: “SENJYU”; cited mark: “千寿” (Senju).

→ Dissimilar.

Note: The appellant sells products including “Kubota Senju.”

*Appeal No. 2024-10278

Applied-for mark: “MANJYU”; cited mark: “万寿” (Manju).

→ Dissimilar.

*Appeal No. 2024-10716

Applied-for mark: “HAKUJYU”; cited mark: “白寿” (Hakuju).

→ Dissimilar.

(Excerpt from the decision, translated)

(1) The applied-for mark

The mark consists of “SENJYU” in standard characters. It is not an established word listed in dictionaries.

“JYU” does not follow the romanization generally used in Japan (see the Agency for Cultural Affairs, “Romanization: Tables 1 and 2,” https://lnkd.in/gvK4eB6P). However, the configuration produces the pronunciation “Senju.”

“SENJYU” should therefore be perceived as a coined term conveying no specific meaning. The mark produces the pronunciation “Senju” corresponding to its lettering, but no particular concept.

(2) The cited mark

As shown in the appendix, the cited mark consists of “千寿” written horizontally in a Gothic-style typeface.

Although it is not an established dictionary word, as the examiner explained and the appellant acknowledged in its grounds of appeal, the meanings and actual usage of the constituent characters “千” (thousand) and “寿” (longevity), among other factors, can suggest a meaning roughly equivalent to “living a long life.”

The expression may be read “Senju,” following examples such as “万寿,” read “Manju” or “Banju,” and “米寿,” read “Beiju.”

Accordingly, the cited mark produces the pronunciation “Senju” and may convey the concept of “living a long life.”

(3) Similarity between the marks

In appearance, the scripts and numbers of characters differ, and the marks can immediately be understood as expressing different terms. They can therefore be clearly distinguished visually. It is true that in trade, the characters in a mark are commonly converted into another script while retaining the same pronunciation. However, as explained in (1), under romanization generally used in Japan, the sound “ju” is spelled “ju” in Hepburn romanization or “zyu” in Kunrei-shiki. The applied-for mark therefore cannot immediately be regarded as a romanization of a Japanese word pronounced “Senju.” It is not merely a conversion of the cited mark’s “千寿” into Roman letters; it is properly regarded as a different mark.

The marks have the same pronunciation, “Senju.”

Conceptually, the applied-for mark has no specific concept, whereas the cited mark may convey “living a long life,” so they are not likely to be confused in this respect.

Although identical in pronunciation, the marks are clearly distinguishable in appearance and are not likely to be confused conceptually. There is no evidence that traders and consumers identify the designated goods and their origin exclusively by pronunciation, or that distinctiveness through pronunciation outweighs that through appearance and concept. Considering their overall impressions and the memories they leave, the marks should be regarded as dissimilar, with no likelihood of confusion as to the origin of the goods.

Japanese version: https://www.takaishihideki.com/single-post/jpo-appeal-2024-7278

[Trademarks / JPO decision] Appeal No. 2024-7278

*The applied-for mark “CONNECT,” consisting of a figure and lettering, was held dissimilar to the cited mark “&connect.”

(Excerpt from the decision, translated)

(1) The applied-for mark

As shown in Appendix 1, the mark consists of a device above the lettering “COnnECT” (with the inside of the “O” colored yellow).

The device and lettering do not overlap and are spaced apart, so they are observed as visually separate. The device does not immediately suggest any specific object, and no conceptual connection with the lettering can be found. It is therefore difficult to regard the components as so inseparably combined that observing them separately would be unnatural in trade. Rather, each can function as an essential part identifying the goods and services of one undertaking as distinct from those of others.

The mark therefore produces the pronunciation “Konekuto” from its lettering, one of its dominant elements, and concepts such as “join” or “connect” (Basic Genius English–Japanese Dictionary, 2nd ed., Taishukan Shoten).

(2) The cited mark

As shown in Appendix 3, the cited mark consists of “&connect” written horizontally with letters of the same size aligned along the bottom. Although “&” is slightly stylized in white within a black square, it is placed close to “connect,” and the mark is perceived and understood as an indivisible whole.

“&connect” is not an established dictionary expression and does not immediately suggest any particular meaning in relation to the designated services, so it is perceived as a coined term.

Accordingly, the cited mark produces only the pronunciation “Ando Konekuto” and no specific concept.

(3) Similarity between the marks

Comparing the applied-for mark and its dominant element with the cited mark, there are clear differences in appearance, including the presence or absence of the device and the constituent lettering, making them readily distinguishable.

The pronunciation “Konekuto” of the applied-for mark and “Ando Konekuto” of the cited mark differ in the number and identity of their sounds and are readily distinguishable aurally.

Conceptually, the applied-for mark conveys ideas such as “join” or “connect,” whereas the cited mark has no specific concept. They are therefore not likely to be confused conceptually.

Accordingly, the two marks should be regarded as dissimilar, with no risk of confusion in appearance, pronunciation or concept.

HP: https://www.takaishihideki.com/en/single-post/beverage-dynamic-design-10019-1
Japanese version: https://www.takaishihideki.com/single-post/beverage-dynamic-design-10019

[Designs] IP High Court, 2024 (Gyo-Ke) No. 10034 — Beverage in a container (Judge Nakadaira)

*The design was excluded from protection as a dynamic design because its manner of change lacked a certain regularity and its changing shape was not steady.

(Excerpt from the judgment, translated)

A dynamic design concerns an applied-for design whose constituent shape or other features change while it remains a “design” under Design Act Article 2(1). It treats the entire process, including the states before and after the change, as one dynamic shape or configuration and protects it as a single design. It therefore requires a definite form and other characteristics enabling the whole, including intermediate shapes throughout the change, to be understood as the shape or configuration of one article.

Specifically,…in every state before, during and after the change, the shape must satisfy the requirements for an article under the Design Act: as an attribute of the article, a certain shape must exist for a certain period; it must have a definite form whose boundaries can be identified as the basis for recognizing the shape; and its manner of change must have a certain regularity or its changing shape must be steady.

In the application at issue,…plan views 1–3 after opening the lid show changes in the foam. The width of the band of bubbles around the can’s edge is not uniform, and its outline is an irregular circle. During the process, the bubble band becomes wider in some places but disappears or narrows in others. After the white central area disappears and small clusters of white bubbles become irregularly scattered, the diameter of the annular shape gradually decreases. However, the rate at which the outline contracts varies by location. The shape becomes irregular rather than circular before reaching a two-tier truncated-cone shape. This formation and disappearance of bubbles cannot be regarded as having a certain shape for a certain period with identifiable boundaries, as required for a design or dynamic design. Nor can the manner of change be regarded as having a certain regularity or the changing shape as being steady.

Japanese version: https://www.takaishihideki.com/single-post/mite-trapping-mat-11025

Osaka District Court, 2022 (Wa) No. 11025 — Mite-trapping mat (Judge Matsuami)

*A “porous air-permeable bag” must have a structure that retains its contents inside and prevents their dispersal.

→ Claim limitation not met.

(Excerpt from the judgment, translated)

<No literal infringement>

Both the dictionary meaning and the specification support construing the “porous air-permeable bag” in limitation A-3 as requiring, at a minimum, a structure capable of retaining its contents inside and preventing their dispersal. In the accused products sold by the defendants, however, the mite attractant is merely sandwiched between two layers of nonwoven fabric, gauze or similar material and can spill out around their edges. The structure therefore cannot be found capable of retaining the attractant inside.

<No infringement under the doctrine of equivalents>

By storing mite bait in a “porous air-permeable bag” that holds it without spillage, the invention achieves both high adhesive strength of the adhesive tape and a reduction in the number of constituent materials. A bag structure is therefore an essential element. The accused products instead sandwich the mite attractant between two sheets of nonwoven fabric or gauze from which it can spill. Their difference from the invention is not merely in a non-essential part, nor can the substituted structure be said to produce the same function and effect.

Japanese version: https://www.takaishihideki.com/single-post/rolling-device-10019

IP High Court, 2024 (Ne) No. 10019 — Rolling device (Judge Miyasaka)

*The appellate court rejected the narrow construction adopted below (Tokyo District Court, 2022 (Wa) No. 18830), but found that another claim limitation was not met.

[Invention 1 (Claim 4)] …forming, in part of the rolling path, an unloaded region in which the rolling element contacts only one of the raceway grooves, …

(Excerpt from the judgment, translated)

The appellee's products are angular-contact ball bearings used with preload that elastically deforms the balls and inner and outer rings, eliminating gaps between the balls and the inner- and outer-ring raceway grooves. Accordingly, the products do not have "a rolling element contacting only one of the raceway grooves" and cannot be said to "form an unloaded region."

Japanese version: https://www.takaishihideki.com/single-post/mark-gonzales-10128

[Trademarks / Article 4(1)(vii)] IP High Court, 2023 (Gyo-Ke) No. 10128 — “MARK GONZALES” (Judge Honda)

From 2020, as termination of the license approached, the plaintiff filed numerous applications in Japan, South Korea, China, Taiwan and elsewhere for marks containing the angel design, the defendant’s name and “(what it isNt).” After the license ended, it continued developing its own brand while sending warnings that obstructed the defendant’s new licensing business.

The court found that the plaintiff intended improperly to use its trademark rights, including by seeking injunctions, to obstruct or prevent persons other than the plaintiff and its affiliates from selling the relevant goods. It held that the applications for Marks A–C disrupted the fair trademark order.

→ Trademark Act Article 4(1)(vii) applied.

(Excerpt from the judgment, translated)

Around 2014, the defendant sought termination of the license agreement with the Sakura Group. By around 2020, the defendant had made clear that it did not intend to continue the licensing business with that group after termination and requested return of all trademark rights. In response, the plaintiff obtained transfers of the rights to Marks D–G from the Sakura Group and, from around 2020, the final stage of the license agreement, filed numerous applications in Japan, South Korea, China, Taiwan and elsewhere for marks including “Mark Gonzales,” “(what it isNt)” and the angel design. Even after January 1, 2022, when the license agreement had clearly ended, the plaintiff continued selling products bearing “Mark Gonzales” and the angel design through licensees. However,…the plaintiff cannot be said to have acquired copyright in Angel Designs 1 and 2 or the signature under the MPSA agreement, and the license agreement effectively included a novation of the MPSA agreement’s terms. Even assuming that the MPSA agreement remains valid, it permits only reproduction of the cover art on T-shirts and similar items and use of the defendant’s and others’ names for promotion of the album. The plaintiff’s current “(what it isNt)” brand development exceeds both the album-promotion purpose and the scope of reproducing the cover art. Moreover, after termination of the license agreement, the plaintiff attempted to block the defendant’s brand development by sending warning letters to the defendant’s own Japanese sublicensees and retailers.

These actions since 2020 establish that, when applying for Marks A–C…, the plaintiff fully knew that the dispute had become overt and that it would lose the ability to use Angel Designs 1 and 2 and the defendant’s name after the license ended. Nevertheless, it had the improper purpose and intent of using the resulting trademark rights to obstruct and prevent sales by persons other than the plaintiff and its associates, including by seeking injunctions against the defendant’s own sales in Japan of goods bearing the angel designs or “Mark Gonzales.”

Accordingly, even under Japan’s first-to-file trademark system, these applications for Marks A–C contradict the purpose of the Trademark Act: to protect trademarks, maintain the business reputation of those using them, contribute to industrial development and protect consumers’ interests (Article 1). They disrupt the fair trademark order and are also impermissible as a matter of reason in light of sound legal sentiment. Marks A–C therefore fall within Article 4(1)(vii) as trademarks likely to harm public policy or accepted principles of morality.

IP High Court, 2013 (Ne) 10035 [Method for Manufacturing a Rotary Toothbrush] (Appeal) <Shitara>

Original Ameblo publication: 2025-10-01

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12935168850.html

IP High Court, 2013 (Ne) 10035 [Method for Manufacturing a Rotary Toothbrush] (Appeal) <Shitara>

*Although the manufacturing method contains a temporal sequence, satisfaction of the claim was recognized flexibly with respect to that sequence.

[Claim 2] (A) … (B) … a first step of causing a group of filaments to project outward by a fixed amount from an insertion hole provided in a base; (C) a second step of blowing air into the center of the projecting ends of that group of filaments to spread the group radially; (D) a third step of fusion-bonding the central portion of the group of filaments while fixing the spread group to the base; and (E) a fourth step of cutting out the center of the fusion-bonded central portion; (F) a method for manufacturing an individual brush unit of a rotary brush, comprising these steps.

(Translation of an excerpt from the court's reasoning)

... “Cutting out the center of the fusion-bonded central portion” in constituent requirement E also encompasses a process in which, after the “fusion-bonding” process has begun and the “melting” stage has taken place—that is, after the molten filaments have become adherent to one another—the “cutting-out” process begins; the process then enters the “bonding” stage, namely the solidification stage; and the “cutting-out” process ends after sufficient time has elapsed for “fusion-bonding” (solidification) ordinarily to be considered complete ….

... As to the temporal relationship between “fusion-bonding” and “cutting-out” as well, the claim also encompasses a process in which, after the “fusion-bonding” process has begun and the “melting” stage has taken place—that is, after the molten filaments have become adherent to one another—the “cutting-out” process begins; the process then enters the “bonding” stage, namely the solidification stage; and the “cutting-out” process ends after sufficient time has elapsed for “fusion-bonding” (solidification) ordinarily to be considered complete ….

IP High Court, 2024 (Ne) 10041 [Receiving Device] <Masuda>

Original Ameblo publication: 2025-10-02

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12935558409.html

IP High Court, 2024 (Ne) 10041 [Receiving Device] <Masuda>

*The reference to another subcombination in this claim does not limit the structure or function of the claimed receiving device.

⇒ Not a matter specifying the invention (lack of inventive step).

[Claim 5] (Invention at issue)

A receiving device characterized by having an RFID interface for transmitting and receiving to and from the mobile telephone recited in Claim 4; transmission means for transmitting to that mobile telephone a request for the transmission of individual information; and determination means for determining whether individual information received from that mobile telephone is the requested individual information; and performing processing with that mobile telephone when the determination information received by the determination means is determined to be the requested individual information.

(Translation of an excerpt from the court's reasoning)

The corrected invention at issue is an invention of a “receiving device” in an invention of an overall apparatus consisting of a mobile terminal and a receiving device, namely an individual-information system; it is a so-called subcombination invention.

In a subcombination invention, it is necessary to ascertain what significance matters concerning another subcombination recited in the claim have in specifying the claimed invention from the standpoint of shape, structure, components, composition, operation, function, nature, characteristics, acts or actions, intended use, and the like (hereinafter “structure, functions, etc.”), and thereby delineate the technical scope of the invention. If matters concerning another subcombination specify only the apparatus of that other subcombination and do not specify any structure, functions, etc. of the apparatus recited in the claim, those matters concerning the other subcombination can be said to have no significance in specifying the claimed invention.

Turning to the corrected invention at issue, it is identified as an invention concerning a receiving device having an RFID interface for transmitting and receiving to and from the mobile telephone recited in Claim 4 (constituent requirement J′). The mobile telephone recited in Claim 4 is specified not only by that claim but also by Claims 1 and 3.

However, the descriptions in Claims 1, 3, and 4 all specify the structure, functions, etc. of the mobile telephone, not the structure, functions, etc. of the “receiving device.”

Accordingly, the matter “the mobile telephone recited in Claim 4,” which concerns another subcombination in the corrected invention at issue, can be said to have no significance in specifying the corrected invention at issue, which is an invention of a “receiving device.”

Therefore, in identifying the gist of the corrected invention at issue, it is appropriate to exclude the matter “(the mobile telephone) recited in Claim 4.”

[United States] Maquet Cardiovascular LLC v. Abiomed Inc. (CAFC, March 21, 2025)

Applying prosecution disclaimer across a patent family requires consideration of whether the relevant claim limitations are shared. Any disclaimer must also meet the strict standard of a clear and unmistakable disavowal.

Here, the applicant's silence in response to the examiner's statements in the notice of allowance did not constitute a clear and unmistakable disavowal of claim scope.

⇒ No prosecution disclaimer was established on the prosecution history at issue.

Statements made during IPR (inter partes review) proceedings must also meet the “clear and unmistakable” standard.

[United States] Sigray v. Carl Zeiss (CAFC, May 2025)

<Novelty>

Novelty may be denied even if a feature is not recognized as existing in the reference, is present only in a minute amount, or is regarded as unnecessary.

Teaching away is irrelevant to novelty.

⇒ Because the beam in the reference was not perfectly parallel, it necessarily diverged, resulting in projection magnification greater than 1×; novelty was therefore denied.

Original Ameblo publication: 2025-10-06

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12936302933.html

[United States] IQRIS Techs v. Point Blank (CAFC, March 2025)

*The district court's summary judgment of non-infringement was vacated and the case remanded.

(1) The claim language provides only that the pull cord is “connected to at least one releasable hook and actuates that hook to release the engagement”; it does not limit who pulls it or how it is pulled. In other words, “pull cord” amounts only to a functional description of “a cord that actuates a releasable hook when pulled,” and a limitation requiring “direct pulling” cannot be read from the language.

(2) The claim language specifies only the pull cord's function (actuating the hook), not its structure (whether it has a handle). The specification's drawings consistently depict a gripping portion, such as a spherical bead, attached to the end of the pull cord and do not suggest that adding a gripping portion negates its character as a pull cord.

[Trademark] IP High Court, 2023 (Gyo-Ke) 10087, “Sankin Kogyo” Case <Hibiku Shimizu>

Original Ameblo publication: 2025-10-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12937191760.html

[Trademark] IP High Court, 2023 (Gyo-Ke) 10087, “Sankin Kogyo” Case <Hibiku Shimizu>

The “Sankin” portion of the trademark at issue, “Sankin Kogyo” (standard characters), was widely known as indicating the goods of another company (the plaintiff's Japanese subsidiary).

The “三金” portion can be assessed separately.

⇒ The “三金” portion and the cited mark, which displays “Ｓａｎｋｉｎ” and “サンキン” on two lines, differ in appearance but have the same pronunciation. The trademark at issue is similar to the cited mark overall. Article 4(1)(xi) applies to the pharmaceutical and other relevant goods and denture-processing services. Article 4(1)(xv) applies to the metalworking and other relevant services because there is a likelihood of confusion.

[United States] Sierra Wireless v. Sisvel (CAFC, March 2025)

Original Ameblo publication: 2025-10-08

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12937340264.html

[United States] Sierra Wireless v. Sisvel (CAFC, March 2025)

The PTAB's decision in an IPR finding lack of novelty and obviousness was overturned.

The CAFC construed the plain and unambiguous claim language to require both “process [c] (stopping the timer if previously unreceived data is received while the timer is running)” and “process [d] (transmitting a status report containing a positive acknowledgment of received data after the timer expires)” to be performed where their respective preconditions apply. It therefore rejected the PTAB’s conclusion that disclosure of only one of processes [c] and [d] in the prior art would suffice.

[China / Copyright] Guangzhou Internet Court, February 8, 2024

Case No. (2024) Yue 0192 Min Chu 113

The “Ultraman” case

Images generated by entering “Ultraman” as a generative-AI keyword resembled Ultraman.

⇒ The generative-AI service provider was held liable.

<Operative part of the judgment, translated>

... The defendant must cease infringing copyright in the Ultraman series of works and take appropriate technical measures to prevent images infringing the plaintiff's copyright from being generated during users' normal use of the service.

Plus damages of RMB 10,000.

<Reasons>

1. Lack of complaint and reporting functions.

2. Insufficient warnings about potential risks.

3. Breach of the obligation to clearly identify AI-generated content where it may cause public confusion or misidentification.

Cf. Japan's “Chupa Chups” case (trademark rights).

[Trademarks] IP High Court, 2024 (Gyo-Ke) 10032 <Judge Miyasaka>

* Contrary to Article 4(1)(xi) of the Trademark Act: the marks are similar and likely to cause confusion as to the source of the services.

(Excerpt from the judgment, translated)

In appearance, the textual portion constituting the dominant element of the applied-for mark and the upper textual portion constituting the dominant element of cited mark 2 differ in the initial lowercase “i” versus uppercase “I,” and in the use of katakana versus Roman letters. However, considering the widespread understanding of English in Japan and of “デンタルクリニック” and “DENTAL CLINIC” as referring to a dental clinic, those differences cannot be said to give traders and consumers a strong impression of a conspicuous visual distinction as indicators of source.

In pronunciation, both yield “Ai Dentaru Kurinikku” and are identical.

In concept, neither gives rise to any specific concept, so the two cannot be compared conceptually.

[Trademarks] IP High Court, 2024 (Gyo-Ke) 10007, “Jimny Fan” <Judge Miyasaka>

* The mark cannot be assessed by separating its components. The concepts differ. Distinct market spheres have been established.

⇒ The marks are dissimilar.

(Excerpt from the judgment, translated)

The designated goods of the applied-for mark, as amended, are the extremely niche goods in Class 16, “information magazines concerning parts and accessories used to modify off-road vehicles.” As found above regarding actual trade conditions, no automobile manufacturer, including Suzuki, publishes such magazines itself or through affiliated dealers. Nor is it plausible that traders and consumers encountering the amended goods bearing the applied-for mark would perceive an automobile manufacturer, including Suzuki, or an affiliated dealer as the publisher (or a possible publisher).

Moreover, although Suzuki was fully aware that the plaintiff had published the magazine under the same title as the applied-for mark for over ten years, it had never sent the plaintiff a warning or complaint alleging confusion with the Jimny mark. Instead, it supported publication, including by paying the plaintiff to place advertisements for the Jimny in the magazine. ...

Suzuki's business under the Jimny mark may include related merchandise and ancillary services as well as the off-road vehicle itself. In practice, however, the business of providing “information magazines concerning parts and accessories used to modify off-road vehicles” is conducted by third parties with no direct connection to Suzuki or its affiliated dealers. Distinct market spheres that do not conflict with Suzuki's business have therefore been established.

IP High Court, 2024 (Gyo-Ke) 10016 [Undried tea paste] <Judge Nakadaira>

The decision dismissed a request for retrial of a JPO decision upholding refusal. Although the original decision had not yet become final when retrial was requested, it had become final by the time the decision dismissing that request was issued. The defect arising from the original decision's lack of finality at the time of the request had therefore been cured by the time the dismissal decision was issued.

⇒ The request for retrial could not be dismissed on that ground.

The JPO decision was set aside.

[Unfair Competition Prevention Act] Tokyo District Court, 2023 (Wa) 70513, the “Karate dojo” case <Judge Nakashima>

Although the plaintiff's name was not stated, a person acquainted with the plaintiff, or aware that the plaintiff was the owner of the dojo in question, could identify the “dojo owner” in the post as the plaintiff when reading it in the ordinary way.

⇒ Defamation was established.

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513416876903899136-ja

[Trademarks / Contracts] Osaka District Court, 2022 (Wa) 7393, “MICHEL JURDAIN” <Judge Takemiya>

* The injunction claim was partly granted!!

* The bankruptcy trustee's understanding in separate bankruptcy proceedings was rejected.

<Operative part of the judgment, translated>

“The defendants shall not affix any of the marks listed in Schedule 2 to watches, their packaging boxes, or hang tags; or transfer, display for transfer, possess, export, import, or offer through telecommunications networks watches bearing those marks or watches whose packaging boxes or hang tags bear those marks (excluding watches with the product numbers listed in Schedule 7, the list of defendant products manufactured by other companies, that do not have packaging boxes or hang tags bearing those marks).”

An exclusive contractual license to use the trademark, without creation of a statutory exclusive right to use, had been granted.

⇒ Claims for royalties for January and February 2018 had been waived, so termination for nonpayment was not established. The bankruptcy trustee's assessment was not based on a detailed investigation and did not establish the absence of a license.

For products made by other companies, the defendant obtained them in unmarked boxes, then made its own boxes bearing similar marks and sold the products in those boxes. The contract prohibited repackaging; doing so without authority infringed the trademark rights.

(Excerpt from the judgment, translated)

The plaintiffs point out that Elim Trading did not pay royalties for January and February 2018 and that its trustee in separate bankruptcy proceedings proceeded on the premise that Elim Trading had no license as of January 18, 2018.

However, Andrews waived the claims for those royalties (Exhibit Otsu 16). It cannot therefore be found that the licensing agreement had been terminated for their nonpayment.

It is true that the trustee's first report on key aspects of the administration, dated May 28, 2018, stated that Elim Trading transferred the defendant products to defendant Marushu around the end of January, and Marushu unilaterally valued them at 50% of book value and offset that amount against its trade receivables. The trustee regarded this as payment in kind but did not treat it as subject to avoidance, considering the difficulty of selling the goods because of the trademark-license issue (Exhibit Ko 14). However, the trustee had not investigated the contractual relationship between Elim Trading and Andrews in detail. A purchaser of movable property had merely said, upon appraisal, that a license was needed. The trustee's assessment therefore does not, in itself, establish that Elim Trading had not been granted a license.

[Unfair Competition Prevention Act / Contracts] Osaka District Court, 2023 (Wa) 886 <Judge Takemiya>

* The contractual warranty was held to cover only the goods sold, not finished products incorporating those goods.

(Summary of the judgment, translated)

Article 6(1) of the basic agreement for purchasing components provides that the defendant warrants legal compliance, quality, and other matters concerning the “Products” it sells to the plaintiff (LED boards and other components of a chlorine-dioxide-generating unit).

Article 6(2) provides that the plaintiff warrants representations concerning products it makes incorporating that unit, excluding the Products themselves.

Article 19 expressly provides that the plaintiff is responsible for promoting the finished products and for complying with the Act against Unjustifiable Premiums and Misleading Representations and other laws.

Given this wording and structure, the defendant's warranty is confined to the Products themselves and does not extend to representations on the retail packaging and elsewhere for the finished products sold by the plaintiff (the Cleverin products at issue).

Even if that packaging carried representations misleading consumers about quality in violation of that Act, the plaintiff bears contractual responsibility; the defendant has no warranty obligation.

The plaintiff argued that the defendant was responsible for the representations because it gave detailed instructions and supplied the core components. However, it was not established that the defendant took the lead in determining the design in a relationship that bound the plaintiff to follow it. Although the defendant made suggestions and supplied materials, the plaintiff prepared the original designs and made the final decisions. The plaintiff was therefore responsible for the representations.

The plaintiff's proposed interpretation that “the defendant warrants the portions of the representations concerning the Products” also cannot be adopted. Even if the finished-product packaging includes an explanation of the Products, that does not make it a representation for the Products themselves, nor can the defendant be said to have been responsible for making it.

Tokyo District Court, 2023 (Wa) 70393 [Foldable and stowable temporary protective fence] <Judge Nakashima>

* The problem was to reduce weight and make the structure more compact.

⇒ A “pivoting plate-shaped member” is a thin, plate-like member and does not include a circular pipe or rectangular tube.

(Excerpt from the judgment, translated)

Considering the term “plate-shaped” in the “pivoting plate-shaped member” recited in the claim elements, that member solves the problems addressed by the inventions by making the pivoting member plate-shaped and thereby reducing its thickness in the transverse direction of the base frame (H-section steel). It is therefore properly construed as a thin, plate-like member that does not include a circular pipe or rectangular tube.

The defendant's product uses a rectangular tube as the structure corresponding to the “pivoting plate-shaped member.” It therefore cannot be found to satisfy that element.

[Copyright / Quotation] Tokyo District Court, 2023 (Wa) 70388 <Judge Nakashima>

An SNS post describing a “most vicious tag team.”

⇒ Permissible quotation was established.

1. Purpose of use

The defendant used an article in the Seikyo Shimbun, to which the defendant subscribed, to criticize Soka Gakkai. The critical purpose was clear, and a connection between the article and the criticism was recognized.

2. Method and manner

Only one image, showing a single photograph together with the article, was taken and posted. This was not indiscriminate, comprehensive reproduction. The article and criticism corresponded in each post.

3. Nature of the work

The photographs published in the Seikyo Shimbun were news photographs depicting meetings, people and similar subjects, and their compositions were generally commonplace. The posted images were coarse and omitted fine details. The court therefore held that, even if the original photographs contained creative expression, only a very small part of that expression had been reproduced.

4. Form of use

The posted photographs were coarse and unclear, with details difficult to distinguish. They were not independently suitable for appreciation, and the likelihood of secondary use was low.

5. Effect on the copyright holder

No loss of economic benefit to the plaintiff from the posts was established. The photographs were not made available in high resolution for third-party use.

6. Identification of the source

The defendant indicated the source by expressly mentioning “Seikyo Shimbun” or including those words in the photographed image. Ordinary readers could sufficiently identify the source.

IP High Court, 2023 (Gyo-Ke) 10100 [Gas-scrubber fluid purification apparatus] <Judge Hibiku Shimizu>

The technical significance of the inventions lies in purifying scrubber fluid with a disk-stack centrifuge to reduce maintenance burdens and waste volume, and in reducing problems such as buildup and clogging by circulating the fluid through a buffer tank. The court noted that the specification did not explain the technical significance of the buffer tank being “independent of the exhaust gas conduit.”

By contrast, there was no motivation in the cited invention to provide a “buffer tank” separately from the “gas scrubber.”

⇒ Inventive step upheld.

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513418920406556672-ja

IP High Court, 2024 (Gyo-Ke) 10014 [Acceleration recovery generator] <Judge Miyasaka>

[Outline of the configuration of Claim 1]

A motor drives a weight at the end of an arm through: (1) acceleration → (2) high-speed rotation on the front side → (3) deceleration (recovering “surplus energy” through regenerative braking) → (4) low-speed rotation on the rear side.

⇒ The angular velocity in (2) is the “rated operating angular velocity.” The difference in centrifugal force between (2) and (4) provides propulsion, while (3) generates electricity.

The applicant argued, among other things, that “classical mechanics is flawed” and that “a unidirectional force F can be generated with constant power consumption.” On that premise, the applicant treated consumed energy E1 as a linear function of t and kinetic energy E2 as a quadratic function of t, so that E2 would exceed E1. The court held, however, that generating a constant force F requires E1 also to increase as a quadratic function of t. The premise was therefore incorrect, and the claimed invention violated the law of conservation of energy.

⇒ The claimed subject matter did not qualify as an invention, and the enablement requirement was not satisfied.

[IP Practice Online] “A compass for succeeding in future markets: How to turn IP landscaping into a management tool” (Hiroshi Hirose, patent attorney, Ebara Corporation)

* A must-watch video that examines, from an internal corporate perspective and with consultants' roles also in mind, the approach to involving the IP department efficiently in management strategy that Mr. Akutsu of Shimadzu discussed at the end of his presentation!!

IP departments should make use of their unique strengths: (1) the ability to understand technological trends chronologically, (2) the ability to give concrete form to abstract concepts, and (3) knowledge of contractual matters.

New business proposals must go beyond technical ideas to flesh out business viability and market potential, bringing them to a level capable of persuading those with approval authority.

In organizational terms, a top-down approach from management is ideal. Even without it, however, bottom-up success is possible by establishing a dedicated IPL organization and having it work closely with business divisions and development departments as an integrated trio.

(Episode 261) IP Practice Online: “A compass for succeeding in future markets: How to turn IP landscaping into a management tool” (Guest: Hiroshi Hirose, Development and Intellectual Property Department, Technology Division, Precision Machinery Company, Ebara Corporation)

[Video introduction] Generative AI and prompt-driven reform in Shimadzu's IP operations [Koji Akutsu] [Summaria webinar]

Original Ameblo publication: 2025-11-03

Article type: Lectures and videos

Topics: AI and intellectual property / IP management / Patent drafting and translation

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12942839630.html

HP: https://www.takaishihideki.com/en/single-post/linkedin-7513029162211885056-en

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513028913489518592-ja

[Video introduction] Generative AI and prompt-driven reform in Shimadzu's IP operations [Koji Akutsu] [Summaria webinar]

Annual cost savings exceeding JPY 100 million

As with the move to paperless operations, reform was pushed forward by overcoming resistance.

The approach is to replace the specialized work itself—“intellectual work that can be expressed as logic”—with AI. Prompts shared throughout the company were developed.

First, translations for foreign applications were brought in-house.

ChatGPT was initially used, but inconsistent terminology and omitted paragraphs led to a switch to a large Gemini model, improving quality.

Next, AI replaced local counsel's analysis during foreign patent prosecution.

Using NotebookLM, only PDFs of the office action, cited references, and the invention in the application are provided. Restricting the information suppresses hallucinations and enables highly accurate analysis and preparation of proposed amendments in about two minutes.

For the “invention disclosures” prepared by inventors, development materials (PDFs, PowerPoint files, etc.) are entered into Gemini Deep Research. It extracts the inventive technology and organizes the problems, solutions, and effects, then automatically conducts a prior-art search and prepares claim charts based on that information.

This allows the essential aspects of an invention to be identified and searched in about 15 minutes.

Work has also begun on automating specification drafting.

Based on the invention's configuration, refined through a prior-art search, AI automatically generates the specification's “prior art,” “problems,” and “effects,” as well as embodiments and even the claims (independent and dependent).

Preparing drawings remains difficult.

For FTO (third-party patent clearance) searches, product specifications are also extracted automatically from development materials. AI (the GPT-4o API) then compares and assesses every claim in a set of several thousand patents retrieved using a broad search query against the product specifications.

This has drastically reduced the work previously requiring researchers to read 100,000 documents annually, narrowing the cases down to those the IP department needs to review (triangle and circle ratings).

“Prompts” are at the heart of these reforms.

Creating prompts means putting experienced staff's tacit knowledge (decision logic) into words and converting it into explicit knowledge.

The speaker emphasizes three measures against hallucinations: (1) selecting a model suited to the work, (2) giving instructions in very fine-grained steps, rather than only stating the goal, and (3) restricting input information to create a closed information environment.

Looking ahead, he anticipates an era in which AI will devise patent strategies from management strategies and development plans and output them together with specifications. AI cannot assume responsibility or exercise authority; humans must make the final judgments.

[United States] HOOP v. HOOP (Fed. Cir., 279 F.3d 1004) (2002)

Determining inventorship (design authorship) for U.S. design patents

⇒ At the preliminary-injunction stage, the court upheld the finding that the later design was likely to be found similar to, and merely a refinement and completion of, the earlier design, rather than a separate invention (design). Final resolution of that factual question was left for the trial on the merits.

★ This connects to determining inventorship (design authorship) for inventions (designs) created using AI!!

[Article / United States] Determining inventorship (design authorship) for U.S. design patents (Tsuyoshi Fujimoto, AIPPI (2025), Vol. 70, No. 10)

USPTO guidance

α: A design created by a natural person is input into AI.

⇒ If the AI output is similar, the natural person is the inventor (design author).

β: A natural person finishes a design created by AI.

⇒ If the finished design is dissimilar to the AI-created design, the natural person is the inventor (design author).

Cites HOOP v. HOOP (Fed. Cir., 279 F.3d 1004) (2002).

[Update] The USPTO's February 13, 2024 Inventorship Guidance for AI-Assisted Inventions was rescinded and replaced by revised guidance that the USPTO announced on November 26, 2025 and that was published in the Federal Register on November 28, 2025 (90 FR 54636). The current guidance applies the ordinary conception standard regardless of whether AI was used.

[United States] FMC v. Sharda (CAFC, August 1, 2025)

During prosecution, a provisional application was first filed containing several teachings that the disclosed compositions were stable.

Subsequently, all references to stability were deleted from the common specification of the two asserted patents.

The CAFC held that, in view of those deletions in the prosecution history, a person skilled in the art would not understand the compositions recited in the asserted patents' claims to cover only stable formulations.

(Lesson) The history of deleting limiting statements from the original specification may weigh against a narrow claim construction. Such deletion does not invariably prevent a narrow construction.

⇒ Would the same apply in Japan? What about concerns over extending the scope of disclosure or adding new matter?

[IP Practice Online] “Analysis” is changing: The world of patent analysis evolving with generative AI (Yutaro Uemura, LeXi/Vent Co., Ltd.)

(1) AI output depends heavily on the quality of the instructions (prompts) it receives, making prompt-engineering skills essential.

(2) Selection of the “patent population” (input data) underlying the analysis determines the reliability of the results.

(3) Issues include hallucinations (generation of fictitious patent numbers or factual errors), risks of confidential information leakage, copyright infringement, and biases inherent in AI.

Osaka District Court, 2023 (Wa) 8403 [Ventilation structure beneath a coping] <Takemiya>

* For a person skilled in the art, the natural construction of “ventilation member” is that the member itself has “ventilation performance and waterproofing performance.” This is also consistent with the specification.

⇒ The claim element was not satisfied.

(Excerpt from the judgment, translated)

For a person skilled in the art, the natural construction of the “ventilation member” specified in claim element C is that at least the member itself must have “ventilation performance and waterproofing performance.” This is also consistent with the specification.

(b) The ventilation structure beneath a coping incorporating the defendant's product is outlined in item 2 of the attached “Drawings.” The plaintiff argues that inclined portion ⑤ corresponds to “a ventilation member that exhibits ventilation performance and waterproofing performance.” However, even if inclined portion ⑤ could qualify as something placed inside the “member beneath the coping” (first vertical portion ① through second horizontal portion ④), it is a plate made of Galvalume steel (the entire import of the oral argument), and inclined portion ⑤ itself cannot be found to have air permeability as a material. A certain space is secured between the upper part of inclined portion ⑤ and the first horizontal portion. Although that space may be regarded as a ventilation passage, it cannot be said to constitute the “ventilation member” (or part of it); the plaintiff, too, argues that inclined portion ⑤ corresponds to the “ventilation member.” The “ventilation member” therefore cannot be construed as having ventilation performance. Inclined portion ⑤ provides a blocking function (waterproofing performance) through its shape, including its inclination, and clearly narrows the area through which air can pass. It cannot be found to exhibit ventilation performance as a “ventilation member.”

Accordingly, the ventilation structure beneath a coping incorporating the defendant's product does not satisfy the “ventilation member that exhibits ventilation performance ...” in claim element C.

[IP Practice Online] “Counterfeits defeated even at China's Supreme Court! A thorough explanation of the keys to victory with the actual inventor” (Denka Company Limited / Yasuki Ito and Shunichi Sugawara, patent attorney)

Original Ameblo publication: 2025-11-10
Article type: Lectures and videos
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12944457316.html
HP: https://www.takaishihideki.com/en/single-post/linkedin-7513030997970546688-en
Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513030863744409601-ja

[IP Practice Online] “Counterfeits defeated even at China's Supreme Court! A thorough explanation of the keys to victory with the actual inventor” (Denka Company Limited / Yasuki Ito and Shunichi Sugawara, patent attorney)

The inventor and the IP department's section manager look back on more than seven years of experience leading to victory at China's Supreme People's Court and explain practical lessons.

1. Litigation

In China, invalidity cannot be asserted as a defense in infringement litigation (as in Germany).

When sued for infringement, a defendant may respond by requesting invalidation before the patent office. Such a request does not automatically stay the infringement proceedings; in a dispute concerning an invention patent, the court may decide not to stay the proceedings.

In infringement litigation in China, using notarization throughout acquisition, opening, transportation, and analysis of suspected counterfeit products is important for preserving the identity and authenticity of the evidence. However, a notary’s presence throughout every stage is not a uniform legal requirement for all evidence submitted to a court.

China uses “judicial appraisal,” in which a third-party institution designated by the court conducts the analysis.

To prepare for this appraisal, Denka selected a reliable analytical institution in advance, had the inventor provide technical guidance, and prepared accurate, notarized analytical data.

This preparation helped steer the subsequent judicial appraisal results in Denka's favor.

2. Invalidation proceedings

(1) Enablement was challenged on the basis of another patent for which Denka applied after the patent at issue, and a paper by the inventor.

(2) To enhance the patent's reliability, the specification identified specific manufacturers and product names, such as “manufactured by XX, product name XX” for reagents. This was effectively providing counterfeiters with a “recipe.”

(3) It proved advantageous that, when filing the PCT application, the inventor had added experimental data showing that “although incomplete, even one component can be separated.”

IP High Court, 2005 (Gyo-Ke) 10099 [Image processing system]

Original Ameblo publication: 2025-11-11

Article type: Case note

Topics: Added matter / Divisional applications

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12944690873.html

HP: https://www.takaishihideki.com/en/single-post/linkedin-7513031248231956480-en

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513031104174391298-ja

IP High Court, 2005 (Gyo-Ke) 10099 [Image processing system]

* Even if a person skilled in the art could understand the subject matter from the parent's original specification sufficiently to implement it readily, that did not mean the invention was disclosed there. The divisional-application requirements were therefore not met.

(Excerpt from the judgment, translated)

A straightforward reading of the above passages of the original specification of the parent application shows that the “digital image data” of the invention described there consists solely of digital image data obtained by reading images on developed negative film. No other “digital image data” is described.

… At the time of the parent application, it was well known (1) that various devices, including television cameras, scanners, electronic cameras and video cameras, could create digital image data, and (2) that image-processing devices such as personal computers could perform prescribed processing on digital image data produced by any of those devices. However, as described above, the image-processing system disclosed in the original specification of the parent application includes scanner means that read images on film and convert them into digital image data, and is characterized by transmitting the processed digital image data to the laboratory system for printing. Accordingly, although television cameras, electronic cameras and video cameras were generally known as devices for creating digital image data, the original specification of the parent application did not disclose any such means as a component of the apparatus, or any device for importing into the image-processing system the digital image data created by those means. Therefore, it cannot be said to have been obvious from the original specification that digital image data obtained from television cameras, electronic cameras or video cameras would be edited by the photographer, transmitted to a laboratory system and printed. …

Even if an image-processing system for digital image data created by an electronic camera or the like and an image-processing system for digital image data obtained by reading an image on film have the same purpose and effect, if the means for inputting the digital image data differ, the systems or apparatuses plainly differ in configuration in that respect. The fact that two inventions having different configurations have the same purpose and effect does not make them the same invention. It therefore cannot be concluded from statements of purpose and effect that the original specification disclosed an invention in which “digital image data are not limited to data obtained by scanning exposed negative film.” … Even if the transmission-data configuration or transmission system forming part of the image-processing system did not limit “digital image data,” the original specification contained no disclosure of “digital image data” other than those obtained by reading images on developed negative film. It therefore cannot be said that the original specification disclosed an invention absent from that disclosure—namely, an invention in which the “means for reading a target image and converting it into digital image data” was not limited to scanner means. …

Even if a person skilled in the art (a person having ordinary knowledge in the technical field to which the invention belongs) could understand from the original specification, to an extent permitting ready implementation, that the “digital image data” may be data formed by an electronic camera or the like and is not limited to a scanner, that does not mean the original specification described an invention in which the “means for reading a target image and converting it into digital image data” is not limited to scanner means.

IP High Court, 2005 (Gyo-Ke) 10420 [Information supply system using a communication line] <Shinohara>

* Even if obvious, domestic priority was denied.

(Excerpt from the judgment, translated)

... The matter need not necessarily be expressly stated in the specification. However, the purpose of the priority system is to provide the benefit of the earlier filing date for matters disclosed in the specification of the priority application. Matters equivalent to being described must therefore be distinguished from matters readily recognizable from the description. Even if the Internet was widely known and a person skilled in the art reading the priority specification recognized that the Internet could be used to implement the invention of the priority application, that alone is insufficient to deem it equivalent to having been described. To qualify as a matter equivalent to being described, it must be self-evident to the extent that a person skilled in the art would recognize it as naturally being described in the specification. It is clear that the priority specification does not meet that standard.

[Overview] Patent Examination Standards Working Group: Disclaimer amendments and AI-related examination issues (November 17, 2025)

Original Ameblo publication: 2025-11-16

Article type: Legal and examination updates

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12946063025.html

HP: https://www.takaishihideki.com/en/single-post/linkedin-7513032373446324224-en

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513032254009331712-ja

November 17, 2025

Industrial Structure Council, Intellectual Property Committee, Patent System Subcommittee

18th Meeting of the Working Group on Patent Examination Standards

<Document 1> Recent initiatives concerning examination standards

A report investigating the technological level of generative AI, the use of AI, and whether inventions exist without human involvement was published in April 2024. The survey identified issues including effects on inventive-step assessments and disclosure requirements, determination of inventorship where human involvement is limited, and requests to recognize AI as a rights holder.

<Document 2> Planned revisions to examination standards

Addressing “disclaimer claims”: Amendments excluding certain matters from claims to overcome grounds for rejection are increasing, and there are numerous concerns about how they are being used. Reviewing the examination standards to clarify the approach is under consideration.

<Document 3> Approach to amendments introducing “disclaimer claims”

Such amendments have recently increased, and individual companies and relevant organizations have expressed concerns about their use.

The JPO is preparing drafting examples for examiners, introducing checks by managers, and communicating points requiring attention.

Effect on inventive step: Excluding the portion overlapping with a cited invention can overcome lack of novelty. For inventive step, however, whether a person skilled in the art could readily arrive at the claimed invention from the cited invention must be considered anew. If inventive step is still lacking, a decision of rejection will issue.

Even if an essential configuration is excluded, inventive step is denied where redesigning it into another configuration falls within the ordinary creative ability of a person skilled in the art.

This working group will examine whether the examination standards need review or revision from the perspectives of inventive step, addition of new matter, clarity, and other issues.

<Reference Document 1> (Committee member Takashi Tanishima)

The Japan Intellectual Property Association's comments note that amendments introducing “disclaimer claims” have increased since the Solder Resist case (the IP High Court's 2008 Grand Panel judgment). Although useful in some situations for obtaining rights, they are sometimes used inappropriately.

Practical issues identified include cases in which inventions inherently lacking inventive step are nevertheless found inventive after such amendments; difficulty using other prior art once one cited reference has been excluded; and prolonged examination through repeated amendments, making third parties' business decisions difficult.

English translations of the original image text

Example of a case where inventive step is denied even after an essential configuration is excluded

- Even if an amendment excludes a configuration regarded as essential in the cited invention, there are cases where, for a person skilled in the art, rather than the inventor of the cited invention, attempting a design change to some configuration other than that configuration for further improved inventions or the like can be said to be an exercise of the ordinary creative ability of a person skilled in the art.
- Further, even if the configuration was described as essential in the cited invention, there are cases where a teaching away so strong as to completely prevent replacement with any other configuration is not recognized, and where it cannot be said that excluding that configuration in the present invention has an advantageous effect.
- In such cases, inventive step is still denied in accordance with the approach of the current Examination Guidelines.

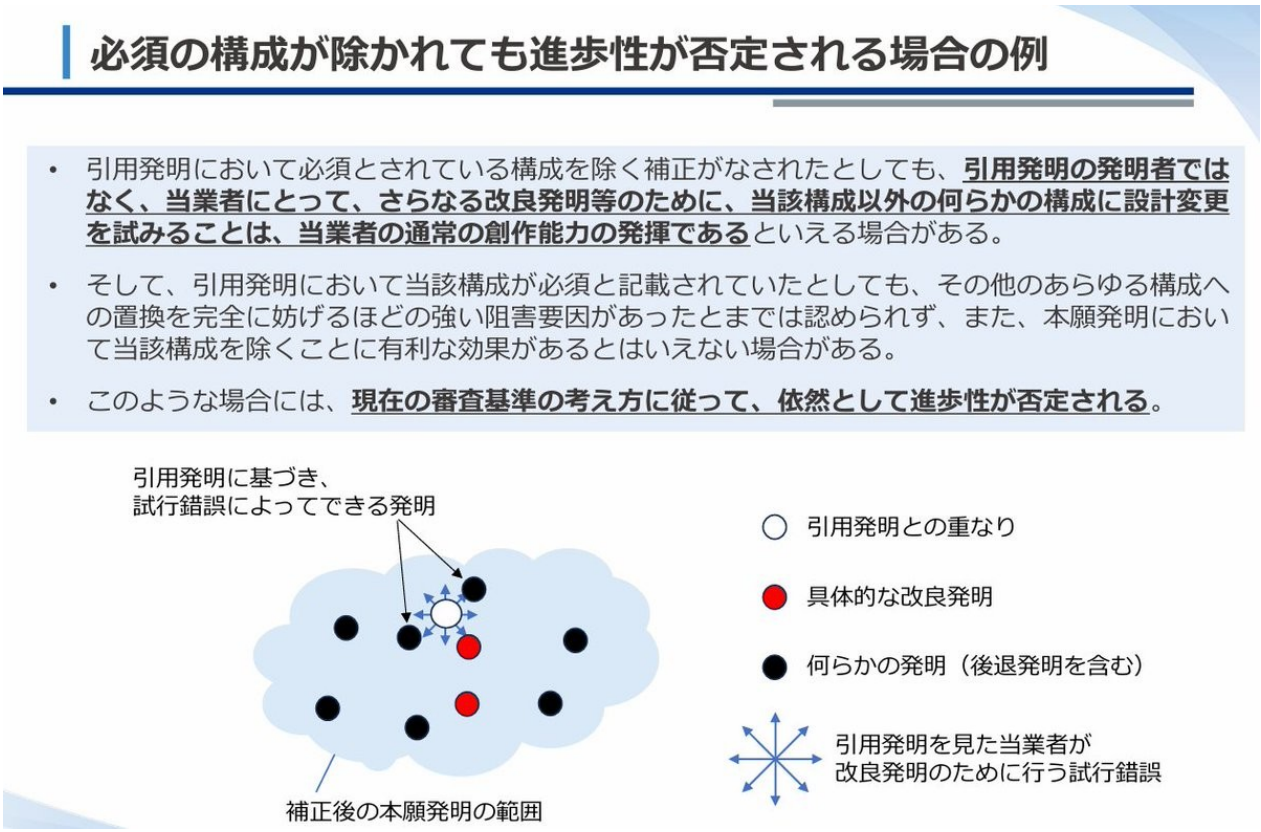

Diagram labels:

Inventions obtainable through trial and error based on the cited invention
Scope of the present invention after amendment

Legend:

Open circle	—	Overlap with the cited invention
Red circle	—	Specific improved invention
Black circle	—	Some invention (including a retrogressive invention)

Tokyo District Court, 2023 (Wa) 70346 [Wireless scuff plate] <Nakashima>

* The claim term “adjustable” was construed as meaning capable of precise adjustment.

⇒ Active “adjustment” is required!!

(Excerpt from the judgment, translated)

Claim element F provides that “the time interval between its on and off states is adjustable.” As to the meaning of “adjustable,” paragraph [0014] of the specification states that “the control module 6 can intelligently adjust the time interval between the on and off states according to the sensing signal,” and paragraph [0019] states that “the control module can switch the light on or off, or control the duration of illumination.” In light of claim element F and those descriptions, and considering the meaning of “intelligently” and “control” in the specification, it is appropriate to construe “adjustable” in claim element F as meaning capable of precisely adjusting the “duration of illumination.” ...

In the defendant's products ..., when the backlight module is left in the on (illuminated) state, it gradually dims and goes out. This happens because the module is affected by charging or discharging of the connected capacitor, rather than because the time until it goes out is controlled through a control circuit or control program for precisely adjusting the duration of illumination. ...

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513032763835482114-ja

Osaka District Court, 2022 (Wa) 11025 [Porous air-permeable bag containing food for mites]

* The invention has a structure capable of retaining the attractant inside.

⇒ In the defendant's product, the mite attractant is merely sandwiched between two superposed nonwoven sheets, gauze, etc., and can spill out around their periphery. The claim element was therefore not satisfied.

* ... Is the defendant's product really like that? Should experiments or other evidence have been used to prove that the attractant does not spill out?

(Excerpt from the judgment, translated)

According to the above descriptions in the specification, the invention aims to provide a high capacity to capture mites. Its means are to attract mites over a wide area by diffusing a mite attractant from a woven sheet impregnated with it, and then to place inside the mat adhesive tape for capturing mites and porous air-permeable bags containing food for mites, attached to the tape in a staggered arrangement. This causes the attracted mites to enter further into the interior from both the front and back surfaces of the mat, contact the adhesive tape, and be captured there. The configuration impregnates the woven sheet with “fragrance” as a substance for attracting mites and places porous air-permeable bags containing “food” on both the front and back surfaces of the double-sided adhesive tape, thereby luring the mites inside the porous air-permeable cover and causing them to contact the unmixed adhesive layer and be captured. Thus, in the invention, the “porous air-permeable bag” is envisaged as having the function of keeping the food in the same location without reducing the adhesive strength of the adhesive layer. In addition, the structure of the bag allows a single bag to accomplish these functions and reduces the number of constituent materials.

In light of the foregoing, both the dictionary meaning and the specification make it appropriate to construe the “porous air-permeable bag” in claim element A-3 as requiring at least a structure capable of retaining its contents inside and preventing their dispersion. In the defendant's product sold, however, the mite attractant is merely sandwiched between two superposed nonwoven sheets, gauze, etc., and can spill out around their periphery. It therefore cannot be found to have a structure capable of retaining the attractant inside.

[IP Practice Online] Current state, challenges, and responses in Customs' border enforcement against IP-infringing goods (Attorney Kei Iida)

Original Ameblo publication: 2025-11-23
Article type: Lectures and videos
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12947756956.html
HP: https://www.takaishihideki.com/en/single-post/linkedin-7513033143461830656-en
Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513033031834615808-ja

[IP Practice Online] Current state, challenges, and responses in Customs' border enforcement against IP-infringing goods (Attorney Kei Iida)

Current import-suspension results for IP-infringing goods

China accounts for approximately 80% of cases by country of shipment.

In the 2024 import-suspension results, goods infringing trademark rights accounted for 93.6% of the aggregate number of suspension cases counted by type of intellectual property right, with cases involving multiple rights counted in each relevant category.

The trend toward small consignments is pronounced.

Counterfeiting is becoming more sophisticated. Products with similar, rather than identical, trademarks or appearances, and unbranded copies of designs, are increasing.

Personal imports

For counterfeit goods involving trademark or design rights, treating importation solely as an act by an individual in Japan for personal use created a problem: without a business character, that act did not constitute infringement, making Customs suspension difficult.

To address this, the 2021 amendments to the Trademark Act and Design Act and the 2022 amendment to the Customs Act expressly included within importation an act by “a person in a foreign country” of “causing another person to bring goods into Japan.” Direct shipment of counterfeit goods by overseas e-commerce businesses and others consequently became subject to regulation.

⇒ As this is a clarifying provision, could the same argument be made for patents?

Exhaustion (parallel imports)

Under the 2020 amendment to the Plant Variety Protection and Seed Act, domestic exhaustion is also denied for exports to countries other than designated countries (violations of restrictions on use).

Importation of harvested material obtained from propagating material “propagated without authorization” abroad is unlawful. In Customs practice, importers are expected to be required to prove lawfulness—that the propagation was not unauthorized.

For deterrent effect, I consider that Customs should also display the status of accepted applications in foreign languages and change the current practice under which that information disappears ten days after acceptance.

[IP Practice Online] Intellectual property rights and Customs procedures (Attorney Reiko Tonomura)

Customs determination procedures

Customs receives written opinions from both the right holder and the importer (or exporter) and decides whether the goods are infringing.

Even where sales-territory restrictions exist, imports may qualify as “parallel imports of genuine goods” if their quality and source (manufacturer) are the same as those of authorized goods.

For works other than cinematographic works, the right of transfer is exhausted in respect of the original or copy where the statutory conditions, such as a lawful transfer by the copyright owner, are met.

Customs procedures can be used not only to prevent infringing goods from entering Japan but also with a view to coordinating subsequent civil and criminal proceedings.

⇒ Prior consultation with the police and preparation of supporting evidence are important when seeking acceptance of a criminal complaint.

The police are cautious because accepting a criminal complaint requires them to begin an investigation. On the other hand, the prosecution rate following referral to prosecutors is high, at 70–80%.

Osaka District Court, 2022 (Wa) 9696 [Method for producing active GcMAF]

* A claim seeking registration of the transfer of a share in the patent right under Article 74(1) of the Patent Act or under the agreement was denied.

⇒ If the other party to joint research is filing an application, the parties should consider whether joint filing is appropriate after checking inventorship, succession to rights, and the agreement, rather than abandoning the issue merely because patentability appears uncertain. Any inference about why joint filing did not occur should be distinguished from established facts.

(Excerpt from the judgment, translated)

... P1 had knowledge and experience in the relevant technical field, as well as his own knowledge of patents and IP management strategies, and sufficiently understood the invention at the time of the discussions. ... After seeking a patent attorney's opinion, ... he confirmed with P3 that Saisei Mirai would abandon seeking a patent for the invention.

(3) In light of this course of events, the plaintiff Saisei Mirai, fully aware of the invention and following discussions with the defendant, decided that it would not obtain rights in (have attributed to itself) the results of the research, including the invention. An agreement was therefore reached through the consultations contemplated by Article 14(1) of the agreement. ...

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513033758799917058-ja

[IP Practice Online] A surge during COVID-19! Online sales of counterfeits in Asia: Current situation and countermeasures (Patent attorney Tsuyoshi Masutani)

Counterfeit sales have become a global business through cross-border e-commerce, rapidly expanding from a market previously centered on China to Southeast Asia and India.

The counterfeit business is becoming more sophisticated and higher in quality.

Impersonation sales using photographs of genuine stores without permission, fabricated consumer reviews, and similar practices are widespread, and platforms' enforcement efforts are reaching their limits.

The prevalence of small-consignment shipping through delivery services also makes infringement harder for brand owners to detect.

The quality of counterfeit products is improving, and manufacturing is speeding up. Copies of the latest products appear on the market almost simultaneously with their launch.

There are also cases involving the outflow of technology or personnel from authorized local factories, or former local agents participating in counterfeit production.

Bad-faith trademark registrations, in which third parties improperly register well-known Japanese trademarks locally, are also a serious problem, particularly in Indonesia and Vietnam.

In China, social networks such as WeChat offer powerful anti-counterfeiting functions for brand owners.

Brand owners can view complaints from other users, including photographs and purchase-location information, and use them to understand infringement across China and gather evidence.

In Southeast Asia, major e-commerce platforms such as Lazada and Shopee, as well as Facebook, have simplified their takedown-request processes.

In Thailand and Vietnam, it is possible to communicate directly with police and Customs personnel through social networks such as LINE.

Customs officers send photographs of suspected counterfeit goods through LINE; brand owners assess authenticity, allowing Customs clearance to be stopped immediately.

Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513033995362775040-ja

Osaka District Court, 2023 (Wa) 10237 [Tool for slaughtering wild animals]

* “A rod of a predetermined length that is freely extendable and retractable”

⇒ A fixed-length rod is not included.

(The plaintiff argued that “freely extendable and retractable” means that the length of the rod's functional portion can be changed by changing where it is held.)

(Excerpt from the judgment, translated)

Claim 1 recites “a rod of a predetermined length that is freely extendable and retractable” (claim element A). From that wording, a person skilled in the art can understand that a configuration in which the rod is freely extendable and retractable is indicated.

The specification shows that the problem the invention seeks to solve is, in essence, to enable even a person with limited physical strength to slaughter dangerous wild animals simply and reliably where those animals live. ...

To solve that problem, configuring the rod to extend and retract freely allows the distance from the animal to be adjusted. For example, one can keep a greater distance from birds of prey or, where safety can be ensured, shorten the distance and reliably bring the electrode into contact with the animal's body. ...

Accordingly, a person skilled in the art would understand “a rod of a predetermined length that is freely extendable and retractable” as meaning a rod whose structure allows the length of the rod portion itself to be changed. A fixed-length rod must be regarded as excluded.

[Unfair Competition / Trade Secrets] Osaka District Court, 2023 (Wa) 2681

* “For a confidentiality clause to be valid, there must be trade secrets or other information deserving protection”!!

(Note) The quoted statement above is the defendants’ argument as recorded in the judgment, not the court’s holding. The court held that the confidentiality undertaking contained nothing unreasonable and recognized Defendant P2’s duty of confidentiality (see the excerpt from the court’s reasoning below).

⇒ NDA provisions should be drafted so that their scope is construed as extending beyond “trade secrets” under the Unfair Competition Prevention Act.

* The court also rejected liability in general tort because the information was not managed as secret and there were no circumstances in this case requiring consideration of an interest separate from those protected by the Unfair Competition Prevention Act.

(Excerpt from the defendants’ submissions recorded in the judgment, translated)

For a confidentiality clause to be valid, trade secrets or other information deserving protection must exist. However, the copied information at issue lacks, at a minimum, management as secret and usefulness, and the document data at issue is not highly confidential. Neither therefore qualifies as trade secrets or other information deserving protection. Defendant P2 signed and sealed both the undertaking given upon joining the company and the confidentiality undertaking at issue, but the plaintiff never explained their specific contents to him. He should not be subjected to unnecessary and excessive confidentiality obligations on their basis. Accordingly, P2 did not breach a confidentiality obligation by acquiring the copied information or providing the document data.

(Excerpt from the court’s reasoning, translated)

The plaintiff and Defendant P2 had agreed, through the confidentiality undertaking, on the scope of his duty of confidentiality during employment. As the undertaking contained nothing unreasonable, P2 must be regarded as having owed a duty of confidentiality regarding the “confidential information” specified in it.

... In light of the information-management system then in place for information within the plaintiff's operation-management system (including the copied information and document data), both sets of information lacked management as secret and did not constitute “trade secrets” under Article 2(6) of the Unfair Competition Prevention Act. Nor are there circumstances in this case requiring consideration, in relation to acts involving such information, of an interest separate from those protected by that Act.

Accordingly, P2 committed no unlawful act, and the defendants' alleged joint tort, premised on such an act, is not established either.

Tokyo District Court, 2024 (Wa) 70106 <Kokubu>

* An obligation to grant a non-exclusive license under another person's patent was not performed.

⇒ Termination was effective.

(Excerpt from the judgment, translated)

Even where someone grants another person a non-exclusive license without the patent owner's consent, it is possible to obtain the patent owner's authorization after concluding the contract. Thus, even if someone without authority to grant a non-exclusive license grants one to a third party, there is no need immediately to deny the contract's validity between the contracting parties.

However, such a license agreement concerns another person's rights. A person who grants a non-exclusive license despite lacking authority to do so must therefore, under Articles 559 and 561 of the Civil Code, acquire that authority for the non-exclusive licensee.

In this case, ... the agreement included the plaintiff's promise to grant the defendant non-exclusive licenses under the patents at issue. ... Patent 1 is found to be jointly owned by Japan Conservation Engineers & Co., Ltd. and Nihon Sofuken, while Patent 3 is jointly owned by those two companies and Nihon Mikuniya Co., Ltd. Accordingly, as an obligation under the agreement, the plaintiff owed the defendant a duty to obtain from those co-owners the authority to grant non-exclusive licenses for the defendant. ...

However, ... although the plaintiff had been granted an exclusive license under Patent 2 by its sole owner, Nihon Sofuken, the entire import of the oral argument shows that, for Patents 1 and 3, the plaintiff had not obtained the co-owners' authorization to establish non-exclusive licenses for the defendant. The plaintiff therefore failed to perform that obligation. ...

... The requirements for termination following a demand for performance—the plaintiff's nonperformance of its contractual obligation, the defendant's demand for performance within a reasonable period, failure to perform within that period, and a declaration of termination—are satisfied (main clause of Article 541 of the Civil Code). As a result of termination of the agreement, the defendant has no obligation to pay the license fees. ...

[IP Practice Online] An enjoyable discussion of patent claim interpretation (Attorney Masakazu Kobayashi)

Original Ameblo publication: 2025-11-30
Article type: Lectures and videos
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12948514671.html
HP: https://www.takaishihideki.com/en/single-post/linkedin-7513035099232169986-en
Japanese version: https://www.takaishihideki.com/single-post/linkedin-7513034976284536832-ja

[IP Practice Online] An enjoyable discussion of patent claim interpretation (Attorney Masakazu Kobayashi)

For example, “annular” in the claim phrase “an annular sealing member” is explained in the Kojien dictionary as “a ring-like shape,” “a round shape,” and so forth.

Focusing on “ring-like” and the technical significance of the “sealing function” described in the specification, a patent owner would argue that a shape making one circuit with its ends joined falls within the patent's scope even if the defendant's product is quadrilateral. A concrete example, such as the Osaka Loop Line not being a perfect circle, may also inform interpretation.

The defendant, in contrast, would rely on the definition “a round shape” and circular drawings of the embodiments to argue that the scope is limited to circular shapes.

Likewise, even a seemingly clear term such as “rod-shaped” may give rise to a dispute over whether an L-shaped or conical product can be considered a “rod.” Here, too, interpretation looks beyond mere word definitions to the member's technical significance within the invention—for example, its function of “sliding along a straight elongated hole.”

Claim interpretation can be divided into three categories: (1) the meaning of terms, (2) the integral/separate-member issue (one member or a combination of multiple members), and (3) the whole/part issue (whether the entire item must satisfy a requirement or whether a part suffices).

If the wording alone does not resolve the dispute, the principal battleground moves to the technical significance, problems, and effects described in the specification.

Here, too, disputes arise over the level of generality at which to understand the technical significance—for example, a “sealing function” or the narrower “uniform sealing function.”

Numerically limited inventions are no exception. In a recent case involving a claim requiring “a molecular weight of 700 or more,” literal infringement was strictly denied for a defendant's product with a molecular weight of 699.9.

Even if the number itself is clear, ambiguity in the definition of what is measured (for example, “particle diameter”), the measurement method, product variability, and changes over time can become issues, making interpretation difficult.

In conclusion, claim interpretation involves constructing one's legal argument by drawing on the specification, drawings, prosecution history, and common technical knowledge, while recognizing the ambiguity of language.

[Unfair Competition Prevention Act / Trade Secrets] Osaka District Court, 2023 (Wa) 12731

*Merely signing a confidentiality undertaking does not automatically establish that information was managed as secret.

(Translation of an excerpt from the court's reasoning)

… The plaintiff asserts that the defendant signed the confidentiality undertaking at issue, but that alone does not mean that Information 1 at issue automatically qualifies as “confidential information” or was managed as secret.

Furthermore, … an online form was publicly available through which customers could request a free estimate and agree to a visit for an estimate …. That and a customer's request to a contractor for a site survey are identical in that both involve conducting visiting sales activities in the form of an application from the customer. Thus, Information 1 at issue also lacks non-public status.

[Europe] CJEU Grand Chamber Judgment on Jurisdiction over Foreign Patent Infringement and Its Implications for the UPC (February 25, 2025), C-339/22

Original Ameblo publication: 2025-12-04

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12948936981.html

[Europe] CJEU Grand Chamber Judgment on Jurisdiction over Foreign Patent Infringement and Its Implications for the UPC (February 25, 2025), C-339/22

BSH Hausgeräte GmbH v Electrolux AB

The judgment clarified the jurisdiction of the courts of the EU Member State where the defendant is domiciled over infringement actions concerning patents granted or validated in another Member State or a third State. It did not decide the UPC's own jurisdiction, but is also relevant to the consideration of the UPC's long-arm jurisdiction.

In a separate related case, the UPC's Düsseldorf Local Division recognized jurisdiction over infringement of the UK part of a European patent. That UPC ruling must be distinguished from this CJEU judgment.

This judgment opened the way to pursuing, together in the courts of the defendant's country of domicile, not only infringement of the European patent part validated in that country, but also infringement based on European patent parts in other countries and on foreign patents.

Article 24(4) of the Brussels I bis Regulation gives the courts of the Member State in which a patent is granted or validated exclusive jurisdiction over its validity, including where invalidity is raised as a defence. However, the court hearing the infringement action does not thereby lose jurisdiction over that action.

As a result, the court of the EU Member State where the defendant is domiciled retains jurisdiction over the infringement action even if an invalidity defence is raised concerning a foreign patent part, and may adjudicate infringement in other Member States and third States. Whether cross-border injunctive relief is available depends on the substantive requirements for an injunction and other applicable requirements in the particular case.

The validity of a patent granted or validated in another EU Member State falls within the exclusive jurisdiction of that Member State's courts. Article 24(4), however, does not apply to the courts of a third State. Subject to restrictions arising from the Lugano Convention, bilateral conventions, and rules concerning proceedings already pending in a third State, the court of the defendant's Member State of domicile may determine an invalidity defence concerning a third-State patent with effects limited to the parties, without altering the existence or content of the patent in the third State's register.

The infringement court, on the other hand, has the power to sever and stay infringement proceedings if there is a reasonable possibility that the patent will be invalidated in invalidity proceedings pending in another country.

Parallel disputes over infringement and validity in different countries make proceedings more complex and increase defendants' costs.

The judgment clarified that jurisdiction over an infringement action must be distinguished from jurisdiction to determine validity even when invalidity of a foreign patent is raised as a defence. Merely raising invalidity does not automatically deprive the court chosen by the patentee of jurisdiction over the infringement action.

⇒ Favorable to patentees.

For the UPC, the judgment is relevant when considering jurisdiction over European patents validated in non-contracting states, such as the UK and Turkey. It does not, however, uniformly establish jurisdiction or entitlement to an injunction in each UPC case or for every national patent.

At the same time, confirmation that the national courts of EU Member States have similarly broad jurisdiction has expanded patentees' opportunities for forum shopping between the national court of the defendant's domicile and the UPC, and judicial competition between the two is expected to intensify.

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12949482642.html

IP High Court Grand Panel, 2006 (Gyo-Ke) 10563 [Solder Resist]

A case in which an invention could be specified using a trademark (a disclaimer claim).

(Translation of an excerpt from the court's reasoning)

The invention is specified in a negative form of expression (the so-called “disclaimer claim” format), with reference to the description of particular substances or products in Example 2 of the earlier application's specification. Since this appears to be the only way to exclude the portion identical to the cited invention precisely, neither more nor less, the use, in the corrections at issue, of the trademark “TEPIC,” which serves as an element specifying the cited invention, to indicate the excluded portion cannot be said to violate Article 24 of the above Regulations.

[IP Practice Online] Explanation of Patent Eligibility Issues in the United States and Practical Responses in Patent Prosecution (Japanese and U.S. Patent Attorney Shigeki Takeuchi)

Original Ameblo publication: 2025-12-09

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12949482771.html

[IP Practice Online] Explanation of Patent Eligibility Issues in the United States and Practical Responses in Patent Prosecution (Japanese and U.S. Patent Attorney Shigeki Takeuchi)

<1> Basic principles and case law

The current framework for assessing eligibility is the “Alice test,” based on Supreme Court case law.

<2> USPTO (United States Patent and Trademark Office) examination guidelines

Examiners conduct examination based on the Alice test while using their own flowchart (Steps 2A and 2B).

The general rule for examiners' claim construction is the “broadest reasonable interpretation” (BRI).

The eligibility analysis considers whether a claim integrates a judicial exception into a practical application rather than merely using it. An improvement to computer functionality or other technology can support that determination. However, even where integration is not established under USPTO Step 2A, a claim may satisfy eligibility under Step 2B if additional elements amount to significantly more than the exception.

<3> Practical responses

From the Japanese filing stage, it is recommended that the specification describe in detail the technical field, the technical problems specific to that field, and the technical effects that solve those problems.

For AI-related inventions in particular, it is important to specify field-specific data and inputs and outputs, and the resulting improvement in the system's functionality, rather than a general-purpose model.

In drafting claims, it is necessary to avoid “results-based functional expressions” (for example, “analyzing” or “displaying”) and to describe specific hardware configurations or processing steps.

[IP Practice Online] Abductive Reasoning as an Axis of Logic and Thought in Patent Prosecution Practice—Focusing on Chemical Inventions (Patent Attorney Masanori Tomatsuri)

Original Ameblo publication: 2025-12-09

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12949482882.html

[IP Practice Online] Abductive Reasoning as an Axis of Logic and Thought in Patent Prosecution Practice—Focusing on Chemical Inventions (Patent Attorney Masanori Tomatsuri)

In addition to “deduction” and “induction,” logical reasoning includes “abductive reasoning” (abduction).

1. Inventors' materials often state objective facts but omit the “unspoken essentials,” such as why a particular configuration was chosen, why other configurations do not work, the difficulties encountered, and the mechanism by which effects arise.

Use abduction when reviewing inventors' materials, reasoning about questions such as “Why is this statement included?” and “Why is this point not discussed?”

2. If the causal relationships described in the inventor's materials seem “too neat,” prepare questions based on the hypothesis that the explanation was constructed after the fact and that there may actually have been trial and error or unexpected results.

3. In interviewing the inventor, build a relationship of trust, because you will be playing the role of “devil's advocate.”

4. When drafting a specification (especially for a chemical invention), stating the mechanism definitively risks rejection for lack of inventive step on the ground that the result “could readily have been predicted.” An effective writing approach is therefore deliberately to introduce a “pause” in the logic, along the lines of: “Surprisingly, this effect was obtained, but the mechanism has not been fully elucidated. However, the following is conjectured.”

Setting a lower hurdle for the problem addressed by the invention (for example, “rapid action ‘or’ high strength,” or a more relaxed threshold for an acceptable result) increases the possibility of obtaining broader protection without violating the support requirement.

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12949591631.html

Tokyo District Court, 2022 (Wa) 70058 [Grapple Bucket Device] <Kokubu>

“Curved in an arc” (constituent requirement D2) not satisfied.

<No literal infringement>

“It is appropriate to interpret ‘arc-shaped’ in constituent requirement D2 as meaning a shape like a portion of a circumference, composed entirely of a curve, and ‘curved in an arc’ as meaning a shape that curves like a bow in the form of a portion of a circumference.”

⇒ The defendant's product has a shape in which two straight lines intersect, and is not found to be arc-shaped.

<No infringement under the doctrine of equivalents>

“It is appropriate to find that the characteristic part constituting the technical idea peculiar to the invention at issue and absent from the prior art … is that, by adopting the configuration relating to constituent requirements C and D, a large value of the inclination angle θ at which the blade edge contacts the object is maintained even in portions far from the pivot center, thereby maintaining a draw-cutting action and achieving a smooth cutting effect.”

⇒ The defendant's product does not possess the essential part of the invention at issue.

<Study Group on Effective Disclosure and Governance of Intellectual Property Investment and Utilization Strategies (24th Meeting)>

Original Ameblo publication: 2025-12-11
Ameblo: https://ameblo.jp/hideki-takaishi/entry-12949733265.html

<Study Group on Effective Disclosure and Governance of Intellectual Property Investment and Utilization Strategies (24th Meeting)>

Material 3 (Cabinet Office, Intellectual Property Strategy Promotion Secretariat)

Presents a shift in thinking from treating research and development as an expense to treating it as asset formation, visualization of investment productivity, realization of a virtuous cycle through constructive dialogue with investors, dissemination of the Intellectual Property and Intangible Asset Governance Guidelines (GGL) and promotion of an awards program, and development of the Innovation Box tax regime.

Material 4 (Association for the Promotion of Intellectual Property and Intangible Asset Governance)

Sets out the purpose, organization, and selection process of a private-sector-led awards program, aiming to recognize and disseminate throughout society initiatives that link intellectual property and intangible-asset strategies to corporate value.

Material 5 (Intellectual Property and Intangible Asset Governance Association)

Disclosure by the top 990 Prime Market companies by market capitalization is improving, but challenges remain among companies making no disclosure and in non-manufacturing industries. Companies should seek to enhance corporate value through active disclosure informed by good examples.

Material 6 (Japan Patent Office)

In response to revisions to the Corporate Governance Code (CGC), presents a framework for advancing management through better-quality disclosure of intellectual property and intangible assets and constructive dialogue with investors. Sets out implementation-support procedures, including dispatching expert teams and developing value-creation stories.

Material 7 (Ministry of Economy, Trade and Industry)

Provides for a deduction of 30% of eligible income relating to patent rights and copyrighted AI-related programs, and explains operational advance-confirmation and certification procedures.

Material 8 (Committee Member Toshihiko Mori)

Proposes using the introduction of enterprise-value security interests as an opportunity to spread the GGL among the financial sector and small and medium-sized enterprises, and to use its logo. The aim is to strengthen value-creation capabilities by embedding the idea that research and development and similar activities should be treated as assets rather than expenses, and by extending that thinking throughout the supply chain.

Material 9 (Committee Member Araki)

Emphasizes the foundations and value-conversion mechanisms for generating business results from intellectual property. Taking into account facilitating factors such as leadership by top management and use of IP landscape analysis (IPL), as well as impediments such as personnel constraints, this position regards maintaining and strengthening the structure while working alongside those on the ground as the most important task.

(*Material 1, “Agenda,” and Material 2, “List of Committee Members,” are omitted because they contain only the agenda and the list of members.)

IP High Court, 2025 (Gyo-Ke) 10046 [Multifunctional Quantum Charge Ratio Flow Conversion Device] <Nakadaira>

Original Ameblo publication: 2025-12-12

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12949805885.html

IP High Court, 2025 (Gyo-Ke) 10046 [Multifunctional Quantum Charge Ratio Flow Conversion Device] <Nakadaira>

*The applicant's own publication was not accepted as establishing common general technical knowledge!!

(1) Clarity requirement not satisfied.

Regarding the statement that “NI(t)e− (negative quantum charge)” and “PI(t)e+ (positive quantum charge),” which form the foundation of the claimed invention, are generated by applying random numbers to electric charges, there is no evidence that this was common general technical knowledge at the time of filing, and the specification's explanation is also unclear.

The specification repeatedly states that applying the action of random numbers to the “negative charge” and “positive charge” from the energy source's ± electrodes generates aperiodic and fluctuating “negative quantum charge NI(t)e−” and “positive quantum charge PI(t)e+.” However, it does not address their physical meaning or the specifics of the generation mechanism. It merely notes that Figures 1 and 2 are basic conceptual diagrams, and provides little identification of circuits, elements, conditions, and the like.

(Even assuming the clerical error asserted by the applicant, the conclusion that the clarity requirement is not satisfied is unaffected.)

The non-patent literature relied on by the plaintiff consists of the plaintiff's own writings and is not recognized as common general technical knowledge.

(2) Enablement requirement not satisfied.

The specification does not describe a concrete configuration for generating quantum charge in the “negative (positive) quantum charge generation unit.”

“Manual for Startups on Collaboration with Operating Companies” (INPIT)

Original Ameblo publication: 2025-12-13

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12949935349.html

“Manual for Startups on Collaboration with Operating Companies” (INPIT)

Kenjiro Suzuki introduced it on IP Practice Online.

A practical guide to collaboration between startups and large companies.

(1) Searching for potential partners (designing appropriate patent classifications and keywords in J-PlatPat and similar services, and ranking candidate companies in a “target report”).

(2) Making proposals to candidates (selection, meetings, and preparation of proposals, also taking account of non-patent information such as investor-relations materials).

Successful proposals require three qualities: starting from a business problem rather than stopping at a technical problem, scenario hypotheses, and backcasting.

⇒ Even if you manage to meet someone, simply presenting your own strengths will not produce a match. It is the same as seeking a marriage partner: merely talking about your annual income or your strengths will not get you married. (Mr. Suzuki)

[IP Practice Online] Joint Reading Festival for “A Sham Selection of One Hundred Copyright Cases” (Subaru Tomori)

Original Ameblo publication: 2025-12-14

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12950047923.html

[IP Practice Online] Joint Reading Festival for “A Sham Selection of One Hundred Copyright Cases” (Subaru Tomori)

1. “The Complete Suicide Mania”

   A parody of the cover design of “The Complete Suicide Manual.”

   The specific expressions differ (for example, a coffin versus a gravestone), and what they have in common amounts only to “ideas,” such as layout, or “commonplace expression.”

   The defendant's “boomerang strategy” succeeded: it submitted evidence that the plaintiff, too, had published numerous parody books consisting merely of puns without critical content, such as “Noruwei no Omori,” a parody of “Noruwei no Mori” (Norwegian Wood).

2. “Time Does Not Betray Dreams”

   The line at issue appeared in a 1996 sequel and was not well known, and it was found unlikely that Mr. Makihara had relied on it (or encountered it).

   Moreover, the expressions “must not betray” used by Mr. Matsumoto (a wish or admonition) and “will never betray” used by Mr. Makihara (a categorical statement or conviction) convey different meanings.

   ⇒ A number of Mr. Matsumoto's statements were held to constitute defamation, and the dispute was settled with Mr. Matsumoto apologizing to Mr. Makihara.

3. LINE Creators' Stickers, “Urusee Tori” (Noisy Bird)

   The plaintiff asserted similarities such as “an oval head,” “eyes consisting of black dots,” and “a white shirt with a red tie.” All of these, however, were merely ideas or commonplace expression, so the scope of protection as a copyrighted work was narrow. Because the specific expressions differed, infringement was not found.

(Note) The Tokyo District Court judgment of October 14, 2020 (2019 (Wa) No. 26106) found that each of the individual features was commonplace expression in cartoons and illustrations of anthropomorphized characters, while also stating that the plaintiff’s work was found to be creative in combining those features to express it, and held that the scope of protection of the plaintiff’s work as a copyrighted work was limited to a narrow range in light of its content and nature (pp. 10–11 of the judgment).
https://www.courts.go.jp/assets/hanrei/hanrei-pdf-89898.pdf

4. “Doeraimon Encyclopedia”

   Shogakukan sent a warning under the Unfair Competition Prevention Act, alleging that the cover of “Doeraimon Encyclopedia,” a book introducing counterfeit Doraemon toys, imitated the cover design of the Doraemon comic books.

   The response centered on the practice of parody in the publishing industry and the differences in specific expression, citing examples such as Fujiko F. Fujio himself having drawn a Star Wars parody (R-3D-3).

5. “One Hundred Selected Copyright Cases”

   An editor of the fourth edition was excluded from editing the fifth edition.

The publisher (Yuhikaku) responded that “the professor's name was merely on the cover, and the professor was not a substantive author of the fourth edition.”

Internal emails and other evidence showed that the contribution amounted only to advice, and the professor was found not to qualify as an “author.”

Tokyo District Court, 2025 (Wa) 70002 [Nanocomposite Having Quantum Dots and Method for Manufacturing the Same] <Takahashi>

Original Ameblo publication: 2025-12-15

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12950128756.html

Tokyo District Court, 2025 (Wa) 70002 [Nanocomposite Having Quantum Dots and Method for Manufacturing the Same] <Takahashi>

*No objection was raised to filing in the company's name.

⇒ Assignment of the right to obtain a patent was found.

Plaintiff A, a former technical adviser to the defendant, and plaintiff B, its founder and former representative director, sought confirmation of their co-ownership interests in rights relating to patents applied for in the defendant's name.

The plaintiffs argued that, although they had discussed a draft agreement specifying consideration for assignment of the rights (such as share acquisition rights and royalties), the draft agreement at issue had never been signed, so no agreement had been concluded; they would not have assigned their research results without compensation.

⇒ Claims dismissed (an agreement to assign the rights existed).

<The court's findings>

(1) In their capacities as officers or technical advisers to the defendant, the plaintiffs instructed a patent firm to undertake procedures naming the defendant as applicant and raised no objection to the applicant entries in the draft application documents. These facts support an inference that, no later than the filing of the respective applications at issue, there had been an agreement to assign the rights to the defendant.

(2) As to the absence of a written agreement, a written agreement is not essential to assignment of rights, and none had been prepared for another application around the same time, so its absence was not unnatural.

(3) As to the argument that assignment without compensation would be strange, relations had not deteriorated at the time of filing, and plaintiff A had offered to help launch the business without compensation. In those circumstances, it is entirely conceivable that the rights would first be assigned to the defendant even without an agreement on consideration.

IP High Court, 2025 (Ne) 10032 [Rod-Shaped Light] <Honda>

Original Ameblo publication: 2025-12-16

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12950237053.html

IP High Court, 2025 (Ne) 10032 [Rod-Shaped Light] <Honda>

*Under the principle, based on the Regulations under the Patent Act, that claim terminology should be used consistently throughout the specification, the same term “first predetermined input” means the same input method.

⇒ “Said first predetermined input” in constituent requirements J3 and J4 refers to one of the two input methods specified in J2, either a “short press” or a “long press,” and means the same input method in J3 and J4.

Even if this renders the invention unclear, “it can only be described as the result of the applicant's drafting of the claims.”

⇒ Claim requirements not satisfied.

(Translation of an excerpt from the court's reasoning)

Terms recited in the claims should be interpreted in light of the requirement that terminology be used in its ordinary meaning and consistently throughout the specification and claims (Article 24 of the Regulations under the Patent Act; Note 8 to Form 29). “Or” is a word expressing a relationship in which one of two or more matters is selected. Thus, the “first predetermined input” in constituent requirement J2 refers to one of the two input methods specified as the “first predetermined input,” either a “short press” or a “long press”; and “said first predetermined input” in constituent requirements J3 and J4 is interpreted to mean the same input method as the “first predetermined input” in constituent requirement J2. Accordingly, as a matter of the meaning of the claim language of the invention at issue, there is no room to interpret the input method for “said first predetermined input” in constituent requirement J3 as differing from the input method for “said first predetermined input” in constituent requirement J4. Even if this interpretation leaves it unclear, as the appellant argues, whether carrying out the “first predetermined input” on the second button while the light-emitting portion is emitting light causes storage of the recommended color (constituent requirement J3) or emission of light in the recommended color (constituent requirement J4), that can only be described as the result of the applicant's drafting of the claims of the patent at issue.

IP High Court, 2024 (Gyo-Ke) 10012 [Enzyme-treated milk product] <Judge Hibiku Shimizu>

* Inventive step denied for the use of bovine “normal milk.”

[Difference between the principal cited reference and the invention]

Regarding “bovine milk,” the amended invention specifies “milk derived from cows (excluding bovine colostrum (milk secreted by a mother cow through the tenth day after calving)),” whereas the Ko 1 invention uses “bovine colostrum (secreted during the first several days after calving).”

(This judgment)

According to literature published before the priority date, the difference in Gc-globulin concentration between colostrum and normal milk is not so large after approximately one week following calving, and cannot be said always to be at least fortyfold.

Bovine normal milk is distributed in overwhelmingly larger quantities and is easier to obtain than colostrum, providing sufficient motivation to use it as a source of Gc-globulin.

The experimental results in Exhibit Ko 10 do not clarify when the comparator “bovine colostrum” was milked or whether the macrophages used in the experiment had the same responsiveness. It was also unclear whether experimental error or statistical significance had been examined. These results therefore cannot be accepted as evidence supporting a remarkable effect.

IP High Court, 2024 (Gyo-Ke) 10076 [Fuel and Blending Combinations Thereof] <Judge Hibiku Shimizu>

~ Clarity requirement not satisfied.

<Judgment>

The wording “(a) ... (b) ... and (c) ...” in Claim 1 means that conditions (a), (b) and (c) must be “satisfied simultaneously,” in light of the ordinary use of the conjunction “and.”

⇒ While condition (b) means “(L)%/(H)% = 1,” condition (c) specifies a ratio that does not give “(L)%/(H)% = 1” (e.g., 0.4/1 to 0.6/1). There is therefore “no combination of (L)% and (H)% that satisfies both simultaneously.”

<JPO decision>

The JPO decision held that the term “end point of the 90% distillation temperature” was unclear because it is not a well-known, customary technical term, is not defined in the specification, and combines the substantively different terms “90% distillation temperature” and “end point,” making it incomprehensible to a person skilled in the art.

⇒ The judgment did not decide this issue.

Japanese version: https://www.takaishihideki.com/single-post/令和６年-ネ-10069【トイレットロール等】-中平

IP High Court, 2024 (Ne) 10069 [Toilet rolls, etc.] <Judge Nakadaira>

① “Embossing depth” is not defined in the claims.

⇒ The specific measurement method described in the specification—calculating a contour curve from a sectional curve and identifying P1 and P2—must be followed. The appellant’s own measurement methods, such as surface roughness measurement, cannot be adopted. Although the specification calls P1 and P2 “two upward-convex inflection points,” the court interprets this expression as referring to two upward-convex points of maximum curvature.

(Excerpt from the judgment, translated)

<Method for measuring the “embossing depth” of toilet rolls>

The claims for Invention 1 contain no description defining “embossing depth”....

The term “embossing depth” in the claims for Invention 1 should be interpreted as the numerical value measured by the method described in the above paragraphs of Specification 1....

The measurement method described in the above paragraphs of Specification 3 is the same as the method described in the previously mentioned paragraphs of Specification 1.

② Configuration of the package's “slit-shaped finger hole”

⇒ The shape of the handle portion of the package should be assessed in the product's condition before cutting it out.

“Although the centers of the slits in Appellee's Products 1 and 3 are arcuate, both ends curve outward and downward, with their terminal points located inward. The shape of each slit itself therefore cannot be said to be ‘substantially oval.’”

③ Infringement under the doctrine of equivalents

⇒ In the opposition proceedings, after the advance notice of the decision, the patentee corrected the claim to limit the shape of the finger hole, intentionally excluding other shapes. This is an additional reason why infringement under the doctrine of equivalents is not established.

Osaka District Court, 2022 (Wa) 8985 [Cross connector] <Judge Matsukawa>

(Plaintiff: Inaba Denki Sangyo v. Defendant: Marui Sangyo)

Based on the specification and common general technical knowledge, the court held that the invention also encompasses a configuration in which the “first holding portion” and the “second holding portion” share members.

⇒ Claim elements satisfied.

(Excerpt from the judgment, translated)

The claims and the specification contain no wording providing that the “first holding portion” and the “second holding portion” cannot share members. Rather, there is a description premised on their being able to share members (paragraph [0057] of the specification). Therefore, it cannot be said that the “first holding portion” and the “second holding portion” are subject to a limitation prohibiting them from sharing members.

Nor is there any recognized limitation under which the “first holding portion” must hold the first rod-shaped body by sandwiching it between the base plate portion and an enclosing part of the first holding plate portion, and fastening the base plate portion and holding plate portion together by one fastening member (even if the specification describes such a configuration as a preferred embodiment or the like, it is also clear from the specification that the invention is not limited to it).

Accordingly, the “first holding portion” in the invention at issue should be understood, in accordance with the wording of claim elements B to D, as a portion that “holds the first rod-shaped body,” “includes a base plate portion formed in a plate shape,” and “is connected to the second holding portion so as to permit relative displacement.”

Likewise, the “second holding portion” should, in accordance with claim elements C and F, be construed as a portion that “is connected to the first holding portion so as to permit relative displacement” and “sandwiches and holds the corresponding second rod-shaped body along the respective axial direction of each second rod-shaped body,” with one of the pair of “second holding portions” connected to one of the pair of attachment bases (provided on both sides of the base plate portion), and the other connected to the other attachment base. As explained above, no limitation prevents the “first holding portion” and the “second holding portion” from sharing members; consequently, a portion having that configuration falls within the “second holding portion” even if it shares members with the “first holding portion.”

Furthermore, “(the second holding portion is) connected to the first holding portion so as to permit relative displacement” (claim element C), also taking account of paragraph [0050] of the specification, is understood to include enabling easy adjustment of the crossing angle between suspension bolt 81 (first rod-shaped body) and brace bolt 82 (second rod-shaped body) through relative displacement of the “second holding portion” with respect to the “first holding portion” during an intermediate stage of installation. As stated above, there is no limitation prohibiting the “first holding portion” and the “second holding portion” from sharing members. Therefore, where the crossing angle between the first and second rod-shaped bodies can easily be changed through relative displacement of the “second holding portion” with respect to the “first holding portion,” the requirement “connected so as to permit relative displacement” is satisfied even if the connected members are shared by the first and second holding portions.

IP High Court, 2024 (Gyo-Ke) 10100 [Child safety seat for attachment to a vehicle seat] <Judge Nakadaira>

The JPO decision permitting correction of a mistranslation was revoked.

~ The patent proprietor's inconsistent position had an impact.

(The judgment notes that the proprietor had previously argued that “LINEAR → 直線的 (straight-line)” was correct.)

<Requirements for correction of a mistranslation>

① The meaning of the description in the specification, claims or drawings of the international application as of the international filing date (the original text) differs from that in the specification, claims or drawings at registration (as corrected if there has been a correction through a trial for correction), due to a translation error (mistranslation).

② The corrected description expresses the meaning of the original text, so the meanings of the two descriptions coincide.

(Excerpt from the judgment, translated)

Correction Item 7 included a correction, for the purpose of correcting a mistranslation, changing “直線的 (straight-line)” to “直接的 (direct)” in paragraph [0008] of the specification and related documents, where “linear” in the original text (...) had been translated as “直線的 (straight-line)” before the correction....

The defendant argues that the correction was not made by focusing only on the single translated term “直線的 (straight-line)” and treating that term itself as a mistranslation to be changed to “直接的 (direct),” but was intended to make the meaning of the text as a whole faithful to the original.

However, dictionaries define “linear” as “1a) straight-line, line-shaped”.... Moreover, in the earlier request for correction ..., the defendant not only did not seek correction of the above “直線的 (straight-line)” wording in paragraph [0008], but ... in Correction Item XII of the correction request deemed withdrawn, based on correction of a mistranslation, expressly sought a correction that included translating the word “linear” in two places in the relevant original text ... as “直線的 (straight-line),” asserting that this was the correct translation of the original.

In view of these circumstances, where “linear” in the original text is translated as “直線的 (straight-line)” in the specification, the meanings of the original and the specification cannot be found to differ.

Further passage appearing in the published Japanese judgment (translation; its apparently inconsistent formulation is retained without correction):

“On the other hand, because the word ‘直線 (straight line)’ and the word ‘直接 (direct)’ have different meanings, where ‘linear’ in the original text is translated in the specification as ‘直線的 (straight-line),’ the meaning of the original text and that of the specification are different and cannot be regarded as coinciding.”

Accordingly, in Correction Item 7 ..., the meaning of “直線的 (straight-line)” in the specification before correction cannot be said to differ from the meaning of “linear” in the original because of a translation error, so requirement ① in (1) above is not satisfied. Nor can the corrected description be said to coincide with an expression of the original meaning, so requirement ② is also not satisfied.

IP High Court, 2024 (Gyo-Ke) 10085 [... Solar power self-consumption system] <Judge Nakadaira>

1. Enablement requirement

The court emphasized that the examples in the specification provide specific table values (e.g., β = 30 kW when 0 < α ≤ 20%) and explain their effects (avoiding reverse power flow and improving generation efficiency), and that the table is rewritable, with the idea of adjusting margins according to operation itself disclosed as part of the invention. It held that a person skilled in the art could implement this within the scope of ordinary design and adjustment, and that this could not be regarded as “undue trial and error.”

2. Inventive step

① Exhibits Ko 16–18 concern technologies in other fields—calculation of environmental burdens, assessment of component failure rates, and energy-saving management, respectively—with backgrounds different from the problems in Ko 1 of avoiding reverse power flow in photovoltaic generation and improving generation efficiency.

② These publicly known technologies disclose no specific motivation to “introduce a ratio obtained by dividing power consumption by the PCS rating and control the output upper limit by referring to a table according to that ratio” in the Ko 1 invention.

③ The Ko 1 invention uses coefficients a and b of a linear function as parameters and attempts to solve the problem by adjusting a and b within that framework. There is no necessity to replace that framework with ratio α and a table method.

⇒ The configuration pertaining to Difference 1-1 cannot be reached merely because “a ratio can be calculated using elementary mathematics”; technical motivation is lacking.

⇒ Inventive step affirmed.

IP High Court, 2024 (Gyo-Ke) 10081 [Pet matching system] <Judge Nakadaira>

* Inventive step denied for a claim containing a disclaimer.

A limitation “excluding animal hospitals and places where a veterinarian is present” was added to distinguish the prior art (a system for handing over animals at an animal hospital), but it was held to be obvious.

(Excerpt from the judgment, translated)

The plaintiff argues that ... the handover location being “at least one of a veterinarian or an animal hospital” is fundamental to the technical idea of the cited invention and an essential requirement for solving its problem. On that basis, the plaintiff contends that changing the handover location from “at least one of a veterinarian or an animal hospital” to a place other than an animal hospital or a place where a veterinarian is present would change an essential requirement fundamental to the cited invention's technical idea and necessary to solve its problem. Because this would run counter to that technical idea, the plaintiff argues that there is no motivation to make the change and, rather, a teaching away exists.

However, that argument presupposes that the location for handing over animals in the cited invention is limited to an animal hospital or a place where a veterinarian is present. Since that premise cannot be accepted ..., the plaintiff's argument lacks its premise and cannot be adopted.

IP High Court, 2025 (Ne) 10042 [Fastening hardware] <Judge Hibiku Shimizu>

* Reciting an effect in the claim (“to delay destruction caused by the growth of cracks and improve short-term allowable load-bearing capacity”) was held not to limit the configuration of the invention.

+ The comparator (excluded configuration) asserted by the plaintiffs is not described in the specification.

(Excerpt from the judgment, translated)

The phrase “to improve short-term allowable load-bearing capacity” is also described in the specification as an operation/effect of the invention. The specification discloses no configuration beyond the “configuration of the branch-like portions” as necessary to obtain that operation/effect.... Accordingly, the phrase merely indicates the operation/effect intended to be achieved by the “configuration of the branch-like portions” and does not limit the configuration of the invention. Even if improving short-term allowable load-bearing capacity in practice requires the specific design (conditions) asserted by the plaintiffs in addition to the “configuration of the branch-like portions,” the wording “to improve short-term allowable load-bearing capacity” cannot be regarded as specifying any particular design (conditions) other than the “configuration of the branch-like portions.”

Osaka District Court, 2024 (Wa) 6216 [Taxi dispatch management system] <Judge Matsuami>

* Claim elements not satisfied.

⇒ In this case, the new means of attack or defense submitted after the court disclosed its preliminary view were rejected as untimely: their late submission was attributable to intent or gross negligence and would delay the conclusion of the proceedings.

(Excerpt from the judgment, translated)

“Assuming that ‘taxi selection range information’ has been transmitted before reaching configuration ③ in the defendant's product, what is shown on the user terminal at configuration ③ is a ‘screen for selecting conditions,’ not information on individual vehicles. The defendant's product therefore does not satisfy claim element B3.

Furthermore, the defendant's product has no configuration for requesting dispatch of a particular taxi selected by the user. It therefore also lacks the ‘dispatch confirmation request’ in claim element B4.”

≈ IP High Court, 2024 (Gyo-Ke) 10074

* Even if a particular mutation was common general technical knowledge, it cannot necessarily be said to have been disclosed in the cited reference.

⇒ Nevertheless, inventive step denied.

(Judgment, translated)

Regarding Difference 3 (whether aspartic acid at position 265 of the Fc region is mutated to alanine), the court stated: “However, paragraph [0744] of Exhibit Ko 10 merely states that ‘certain other Fc regions’ may be used where it is desirable to eliminate or reduce effector function; it does not clarify specifically what those ‘certain other Fc regions’ are. Even if the D265A mutation in the Fc region was well-known technology or common general technical knowledge as one means of reducing Fcγ receptor binding affinity and effector function, it cannot be said that the specific D265A mutation is described, or can be regarded as described, as one of those ‘certain other Fc regions.’”

⇒ Nevertheless, in the bispecific antibody of the Ko 10 invention, which does not require effector function, introducing the D265A mutation into the Fc region on the basis of that common general technical knowledge would have been readily conceivable to a person skilled in the art.

⇒ Inventive step denied.

Japanese version: https://www.takaishihideki.com/single-post/大阪地判令和６年-ワ-7193号【物品搬送設備】-松阿彌

Osaka District Court, 2024 (Wa) No. 7193 — Article transport equipment (Judge Matsuami)

⇒ The claim for compensation for an employee invention was dismissed.

1. The process of formulating and operating the regulations

Following the amended Patent Act that took effect in 2016 and publication of the guidelines, the defendant consulted with the labor union and explained the reward system and calculation method. When revising the regulations, it also solicited opinions from all employees and responded to the plaintiff's opinions, thus undertaking careful and sincere procedures, which were reasonable.

2. Awareness of the regulations

The regulations were available for viewing at all times through the internal system and were also explained in training for new employees. The plaintiff had received rewards during employment and was in a position to understand the system.

3. Content of the regulations

The performance reward system is one in which the business division and the intellectual property department evaluate performance based on objective indicators and determine grades, and inventors are also assured an opportunity to state their opinions. It is therefore not unreasonable.

(Excerpt from the judgment, translated)

“It is doubtful whether the appropriateness of the amount of compensation, which in itself may be considered to be left to private autonomy, is necessarily included among the perspectives for determining unreasonableness prescribed in Article 35(5) of the Patent Act. Even assuming that it could be one factor for consideration, the case would be different, for example, if the regulations provided only for payment of small lump sums as application and registration rewards without distributing the profits subsequently obtained by the company through working the patent rights. The detailed rules at issue, however, evaluate the economic value of the patent rights, etc. relating to their working from various perspectives, such as contribution to profit and exclusion of competitors, and provide for payment of corresponding performance rewards in stages. It is difficult to find any point that would make them unreasonable.”

In conclusion, because the regulations at issue are not unreasonable, the claim for statutory reasonable benefits under Article 35(7) of the Patent Act, which presupposes that those regulations do not apply, is without merit.

IP High Court, 2025 (Ne) 10025 [Spindle Motor] <Nakadaira> ⇛ Claim for Compensation for an Employee Invention

Original Ameblo publication: 2025-12-28

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12951545162.html

IP High Court, 2025 (Ne) 10025 [Spindle Motor] <Nakadaira>

⇒ Claim for compensation for an employee invention. Dismissed.

(Co-inventorship denied.)

The core of the Japanese invention at issue lies in the formation of particular “communicating holes.” However, the written explanation submitted by the appellant does not refer to their specific configuration and describes an entirely different problem and solution. The appellant's idea therefore does not exhibit the characteristics of the Japanese invention at issue.

(The “Invention / Utility Model Explanation” submitted by the appellant to the employer merely describes a different problem and solution and does not address the specific configuration of the communicating holes.)

The parts of the U.S. and Chinese patented inventions that differ from the Japanese invention at issue are based on “Invention A,” in which through-holes are provided in the sleeve. These parts also differ in configuration from the appellant’s concept of providing a communicating groove between the sleeve and the housing, and were not found to be the appellant’s invention.

IP High Court, 2025 (Ne) 10035 [Vehicle Guidance System] <Honda> (PXZ v. East Nippon Expressway Company Limited)

Original Ameblo publication: 2025-12-30

Ameblo: https://ameblo.jp/hideki-takaishi/entry-12951727893.html

IP High Court, 2025 (Ne) 10035 [Vehicle Guidance System] <Honda>

(PXZ v. East Nippon Expressway Company Limited)

*Non-satisfaction of the relevant claim limitations was found on the same basis as the finding in IP High Court, 2024 (Gyo-Ke) 10086 that the grandparent application failed to meet the divisional-application requirements.

“The ‘entrance/exit for ordinary vehicles’ in claim element 2E cannot be construed as including an entrance/exit for ordinary vehicles at another interchange adjacent to the toll-road tollgate, service area, or parking area where the vehicle guidance system of Invention 2 at issue is installed.”

⇒ The relevant claim limitations are not satisfied.

“Guidance” means objectively directing a vehicle. In the absence of signs or the like, a driver's voluntary U-turn cannot be evaluated as guidance provided by a function of the facility.

⇒ “None of the facilities identified by the plaintiff can be said to have guidance means for directing vehicles from which tolls cannot be collected by ETC onto a ‘route returning once again to a point before said entrance/exit exclusively for ETC vehicles’; accordingly, they do not satisfy claim element 2E.”

⇒ The relevant claim limitations are not satisfied.

Legal Update (Items Posted in January 2026)

Scope: The collection supplied as attorney Hideki Takaishi's January 2026 articles (Nakamura & Partners), including coauthored articles

Number of items included: 34

List page: https://www.nakapat.gr.jp/ja/legal_updates_jp/

All 34 articles, figures, and the English figure descriptions are included. Commentary in the articles should be distinguished from the courts' holdings.

<Highlights of This Month> Key Points in the January 2026 Intellectual Property and Legal Affairs Update

This month's legal update addresses 34 court decisions and commentaries spanning a broad range of intellectual-property practice, including chains of divisional applications, new grounds for invalidation in appellate proceedings, scientific errors in specifications, claim construction, international jurisdiction, standard-essential patents, and employee inventions. The important decisions and practical points are as follows.

1. The [Vehicle Guidance System] Case, Which Shakes the Chain of Divisional Applications <Presiding Judge Honda>

The Intellectual Property High Court judgment in 2024 (Gyo-Ke) No. 10086, the [Vehicle Guidance System] case, focused on the configurations that had been indispensable in the fourth-generation specification as originally filed: returning, through a branch lane, a vehicle that could not use ETC, and determining the vehicle subject to return based on whether communication was possible. The fifth-generation divisional application, which did not limit these configurations and also encompassed guidance based on any criterion or method, was held to introduce new technical matter. As a result, retroactive effect of the filing date under Article 44, paragraph 2 of the Patent Act was denied, and the patent at issue, which was of the seventh generation, lacked novelty over the publication of the original application. The Intellectual Property High Court judgment of the same date in 2025 (Ne) No. 10035, the [Vehicle Guidance System] case <Presiding Judge

Honda>, likewise limited “entrance/exit for ordinary vehicles” and “guidance means” in accordance with the specification and found non-infringement. At each generation of a divisional-application tree, the deletion of essential configurations and unrestricted generalization should be examined.

2. An Untimely Allegation Not Saved Even by a Statement of Reasons for Appeal — [Women’s Garment] Case <Presiding Judge Nakadaira>

The Intellectual Property High Court judgment in 2024 (Ne) No. 10010, the [Women’s Garment] case, held that a ground for invalidation based on U.S. patent documents submitted for the first time in the statement of reasons for appeal was untimely because it could have been asserted in the court of first instance and there were no circumstances making submission difficult. Nevertheless, because the appellee made a rebuttal in the alternative and the appellant made no further rebuttal, the court also ruled on the invalidity issue, finding that the allegation could not be said to delay completion of the litigation. Even an allegation made at the initial stage of an appeal is not necessarily permitted, and arguments in the alternative must also be fully presented in the court of first instance. In addition, the [Smoking-Article Cartridge] case <Presiding Judge Shibuya> denied an interest in obtaining a declaratory judgment of nonexistence after the claim for damages had been waived, while the [Video Viewing Device] case <Presiding Judge Takemiya> held that an infringement report to Amazon constituted an act of unfair competition on the premise of non-infringement. Attention is required both to the timing of submission of claims and defenses and to the manner of exercising rights.

3. Scientific Accuracy of the Specification and the Limits of Supplementation by Common General Technical Knowledge

The Tokyo District Court judgment in 2023 (Wa) No. 70114, the [Brake Control Device for a Motorcycle] case <Presiding Judge Shibata>, and the appellate judgment <Presiding Judge Honda> held that the only formula for deriving corrected lateral G was a formula that subtracted physical quantities having different dimensions and therefore had no meaning in physics. Although the existence of an error could be understood, the method of correction was not

uniquely determined and inconsistencies with other descriptions would also arise; therefore, the assertion that the description contained an error was rejected and a violation of the support requirement was found. By contrast, the Intellectual Property High Court judgment in 2023 (Gyo-Ke) No. 10147, the [RNA-Dependent Targeted DNA Modification] case <Presiding Judge Hibiku Shimizu>, found substantive disclosure based on the first application documents as a whole and the common general technical knowledge as of the filing date, and upheld the benefit of priority. Common general technical knowledge may supplement a disclosure, but it does not reconstruct an error whose content cannot be uniquely determined. Pre-filing verification of formulas, units, and mechanisms is important.

4. Precisely Reading Claim Language, Flows Between Devices, and the Essence of the Invention

The Intellectual Property High Court judgment in 2024 (Ne) No. 10012, the [R Badge, Receiving Device] case <Presiding Judge Hibiku Shimizu>, excluded from the determination of the gist of the invention a limitation concerning the counterpart mobile telephone because it did not specify the structure or function of the receiving device itself, and denied inventive step. On the other hand, the interlocutory judgment of the Intellectual Property High Court in 2024 (Ne) No. 10034, the [Elasto-Plastic Hysteretic Damper] case <Presiding Judge Honda>, did not limit “input” to a horizontal force in a specified direction and found the cause of the damages claim well founded for some products. By contrast, non-infringement was found in the [Remotely Controlled Unmanned Boat] case for lack of a configuration in which one control device determines two conditions; in the [Reservation Management Device] case for lack of direct transmission from the server to the image printing device; in the [Shopping Payment System] case for lack of a camera that acquires images; and in the [Game System and Game Program] case for lack of a configuration that separately stores two types of quantities. Mapping the processing order, information path, and even operations and effects is indispensable to claim drafting and proof of infringement.

5. Cross-Border Enforcement, Standard-Essential Patents, and Employee Inventions

The Osaka District Court judgment in 2024 (Wa) No. 2705, the [Angle-Adjustable Hinge] case <Presiding Judge Takemiya>, denied Japanese jurisdiction over claims for registration of transfer of German and Chinese patent rights on the ground that the courts of the countries of registration had exclusive jurisdiction. The Tokyo District Court judgment in 2023 (Wa) No. 70022, the “LEGAL FORCE” case <Presiding Judge Takahashi>, likewise dismissed claims for trademark infringement and other relief on the ground that the website did not target consumers in Japan, while recognizing jurisdiction concerning a Japanese domain name. The Osaka District Court judgment in 2023 (Wa) No. 7855, the [Method for Mapping a Physical Hybrid Automatic Repeat Request Indicator Channel] case <Presiding Judge Matsuami>, held that Google had indicated willingness to take a license on FRAND terms, had presented counterproposals, and had negotiated sincerely, and therefore held that the injunction claim based on an SEP constituted an abuse of rights. The [Spindle Motor] case denied joint inventorship for lack of contribution to the core of the invention, and the [Article Conveying Facility] case recognized the reasonableness of employee-invention regulations in light of consultation with the labor union, dissemination, solicitation of opinions, and the evaluation system.

Also important are the [Pharmaceutical Composition/Registration of Patent Term Extension] case, which did not regard revision of a package insert as a disposition eligible for patent-term extension; the [Antipruritic Agent] case, which treated the consumption-tax equivalent differently under paragraphs 1 and 3 of Article 102 of the Patent Act; and the [Patent Royalties Relating to a Fulvic Acid Production Method] case, which did not derive a broad exemption from an abstract cautionary clause. The decisions in this issue should be used to review applications, contracts, litigation, and internal corporate systems.

Three-Line Summaries of All Articles

Category	Article Title and Three-Line Summary
Patent	**2024 (Gyo-Ko) No. 10007 [Pharmaceutical Composition/Registration of Patent Term Extension] <Presiding Judge Nakadaira>** **① The issue was whether revision of a pharmaceutical product's package insert constituted a "disposition" providing a basis for registration of a patent-term extension.** **② It was held to be outside the scope of extension registration because the administration rate was not an approved matter, the PMDA's instruction was merely administrative guidance, and a notification of revision of the package insert was not a disposition changing rights or obligations.** **③ This case shows that the dispositions under Article 2, item 2 of the Enforcement Order of the Patent Act are exhaustively enumerated and that a package-insert revision not expressly provided for cannot be extended by analogy to the subject matter of extension registration.**
Patent	**2024 (Ne) No. 10076 [Retractable Temporary Protective Fence] <Presiding Judge Nakadaira>** **① The issue was whether the accused product's "square tube," a square pipe-shaped post, satisfied or was equivalent to the patented invention's "pivoting plate-shaped member."** **② Because the configuration of making the member thin as a "plate" and housing it in the web portion of H-shaped steel was the essential part of the invention, literal infringement was denied and Requirement 1 of the doctrine of equivalents was also held not satisfied.** **③ This case identified, from the problem and effects stated in the specification, a technical idea not found in the prior art, and determined the essential part for Requirement 1 of the doctrine of equivalents.**

Category	Article Title and Three-Line Summary
Patent	**2024 (Gyo-Ke) No. 10024 [X-Ray Inspection Device] <Presiding Judge Nakadaira>** **① Of the two cooling circulation systems described in Cited Document 2, the issue was whether the decision properly extracted only the sensor section's "cold-air circulation system" and recognized it as a technical matter.** **② Because the cold-air circulation system for the sensor section and the liquid-refrigerant circulation system for the signal-processing circuit section could be understood as separate technical ideas, the decision was held not to have erred in recognizing only the cold-air circulation system.** **③ This case shows that where multiple configurations in a cited document can be understood as different technical ideas, only one may be objectively and specifically extracted to identify the cited invention.**
Patent	**May 27, 2025; 2021 (Ne) No. 10037 [Antipruritic Agent] <Presiding Judge Hibiku Shimizu>** **① In a case in which the court found infringement of the extended patent right, modified the first-instance judgment, and awarded a total of more than JPY 21.7 billion, the issue was whether the consumption-tax equivalent could be added when calculating damages under paragraphs 1 and 3 of Article 102 of the Patent Act.** **② Lost profits under paragraph 1 were not consideration for a transfer of assets, etc., and consumption tax could not be added, while the reasonable-royalty amount under paragraph 3 could be regarded as such consideration and the consumption-tax equivalent could be added.** **③ This case shows that the consumption-tax treatment of patent-infringement damages differs between lost profits under paragraph 1 and a reasonable royalty under paragraph 3.**

Category	Article Title and Three-Line Summary
Copyright / Trademark	**[Copyrighted Works and Trademark Rights] Tokyo District Court, 2021 (Wa) No. 32244 <Presiding Judge Nakashima>** **① The defendant, a skateboarder and artist, disputed with the plaintiff, its licensee, ownership of copyright and registration of transfer of trademark rights.** **② Copyright in album cover art and the like belonged to the defendant; the plaintiffs had obligations to return the trademark rights and cooperate in their return; and because use premised on the return obligation lacked an intention to possess for oneself, acquisitive prescription did not arise.** **③ This case distinguished, in accordance with the contractual language, transfer of copyright from the grant of an exclusive right of use, and shows that a trademark-return clause also affects whether acquisitive prescription arises.**
Patent	**Osaka District Court, 2024 (Wa) No. 2705 [Angle-Adjustable Hinge] <Presiding Judge Takemiya>** **① The issue was the lawfulness of an action seeking procedures in a Japanese court for registration of transfer of German and Chinese patent rights.** **② Japanese jurisdiction over the transfer-registration claim was denied because of the exclusive jurisdiction of the country of registration. Jurisdiction by appearance was recognized for the alternative claim for a declaration of ownership, but that claim was dismissed for lack of a legal interest in such a declaration.** **③ This case shows that when disputing ownership of a foreign patent, it is necessary to consider the exclusive jurisdiction of the country of registration and whether a Japanese judgment would have legal effect there.**

Category	Article Title and Three-Line Summary
Patent	**Osaka District Court, 2023 (Wa) No. 10970 [Video Viewing Device] <Presiding Judge Takemiya>** **① The issues were whether the accused device had the "compression" of limitations F and G and whether an infringement report to Amazon constituted an act of unfair competition.** **② The limitations were not satisfied because "compression" required temporal shortening of vehicle-travel information so that it fit within a period shorter than the original period, and the damages claim concerning the infringement report was partially granted.** **③ This case shows that a patent-infringement report to a sales platform may give rise to damages liability as an act of unfair competition where the targeted product does not satisfy the patented invention.**
Patent	**2025 (Ne) No. 10008 [Method for Deodorizing a Room in Which a Deceased Person and/or an Animal Has Been Left] <Presiding Judge Nakadaira>** **① The issue was whether limitation E was satisfied in special cleaning, namely that filth remained at a place exposed by dismantling work and that place was covered with paint.** **② The limitation was held not satisfied because an estimate merely predicted the need for coating, and cleaning agents and coating could also be used preventively, so the presence of remaining filth could not be inferred.** **③ This case shows that proof of satisfaction requires objective evidence that filth remained at a place exposed after dismantling, not merely an estimate for the work or the fact that chemicals were used.**

Category	Article Title and Three-Line Summary
Patent	**2024 (Ne) No. 10084 [Remotely Controlled Unmanned Boat] <Presiding Judge Nakadaira>** **① The issue was whether the "first control device" in limitation J required a mechanism capable of determining both automatic-return activation conditions: signal loss and low remaining power.** **② The flowchart in Figure 8 of the specification and other descriptions required one mechanism that determined both conditions, rather than two inventions separately having each condition; literal infringement was denied, as were Requirements 1 and 5 of the doctrine of equivalents.** **③ This case shows that the relationship among multiple conditions is construed not only from claim language but also from flowcharts in the specification, and a configuration separately providing each condition may fail to satisfy the claim.**
Patent	**2024 (Ne) No. 10078 [Porous Air-Permeable Bag Containing Feed for Mites] <Presiding Judge Honda>** **① The issue was whether the accused product, in which mite attractant was sandwiched between two nonwoven sheets, gauze, or the like, satisfied the "porous air-permeable bag" in limitation A-3.** **② A "bag" required an internal space and an opening that could be closed, retaining its contents and preventing dispersion. The accused product lacked that structure. Limitation A-1 concerning "impregnation" and the first and second requirements for equivalence were also found not satisfied.** **③ This case shows that, in determining whether a "bag" limitation is satisfied, not only external form but also the internal space and opening and the function of retaining contents internally and preventing dispersion is a key matter of proof.**

Category	Article Title and Three-Line Summary
Patent	**2024 (Ne) No. 10012 [R Badge, Receiving Device] <Presiding Judge Hibiku Shimizu>** **① The issue was whether the matter concerning the mobile telephone “according to claim 4,” cited in a subcombination claim for a receiving device, should be treated as a matter specifying the receiving-device invention.** **② Because the matter had no meaning for specifying the receiving device, it was excluded from the determination of the gist of the invention, and inventive step was denied because applying well-known techniques to the Exhibit Otsu 52 invention would have been easy.** **③ This case shows that a description that specifies only the counterpart device of a subcombination and does not specify the structure or function of the claimed device may be excluded from determination of the gist of the invention.**
Patent	**2024 (Gyo-Ke) No. 10042 [Melting Furnace] <Presiding Judge Masuda>** **① The issue was whether there was motivation to replace the regenerative burner of the primary-reference invention with a well-known flat-flame burner and further add a heat exchanger.** **② Inventive step was affirmed because, despite the existence of the well-known technique, the primary-reference invention deliberately adopted another burner for energy efficiency and other reasons and already included a heat exchanger for waste-heat recovery, so there was no motivation for the replacement or addition.** **③ This case shows that even a well-known technique may lack motivation for application where the primary-reference invention intentionally adopts a different configuration and already solves the same problem.**

Category	Article Title and Three-Line Summary
Patent	**[Patent ★★★] It was held that, because the fifth-generation divisional application violated the divisional requirements, the seventh-generation patent had a ground for invalidation based on lack of novelty over the publication of the original application. — Intellectual Property High Court, 2024 (Gyo-Ke) No. 10086 [Vehicle Guidance System] <Presiding Judge Honda> —** **① The issue was whether the fifth-generation divisional application satisfied the divisional requirements after removing limitations concerning the cases in which vehicles were returned and the determination method, which the fourth-generation specification as originally filed had treated as indispensable to solving the problem.** **② The unrestricted generalization introduced new technical matter and therefore violated the divisional requirements; the seventh-generation application at issue likewise did not receive retroactive effect to the original filing date and lacked novelty over the publication of the original application.** **③ This case shows that a violation of the divisional requirements in the middle of a divisional chain can cause subsequent applications to lose the benefit of retroactivity to the original filing date, so it is necessary to confirm at each generation that the invention remains within the disclosure of the immediately preceding specification and drawings.**

Category	Article Title and Three-Line Summary
Patent	**[Patent ★★] A case in which, on appeal in a patent-infringement action, a new ground for invalidation asserted in the statement of reasons for appeal was held untimely because it could have been asserted in the court of first instance — Intellectual Property High Court, 2024 (Ne) No. 10010 [Women's Garment] <Presiding Judge Nakadaira> — (First Instance: Tokyo District Court, 2021 (Wa) No. 18262 <Presiding Judge Kokubu>)** **① The issue was whether first asserting in the statement of reasons for appeal a new ground for invalidation based on Exhibits Otsu 31 through 33, which could have been submitted in the first instance, constituted an untimely allegation or defense.** **② It was held that the late submission involved gross negligence and ordinarily would have had to be dismissed, but because the appellee rebutted it and the oral argument concluded without a further rebuttal, there was no litigation delay; the court therefore ruled on the merits and rejected the ground for invalidation.** **③ This case shows that even a ground for invalidation submitted in a statement of reasons for appeal may be deemed untimely if it could have been asserted in the first instance, and therefore invalidity materials and defenses should be submitted as fully as possible at the first-instance stage.**

Category	Article Title and Three-Line Summary
Patent	**[Patent ★] A case holding that the configuration and the like of the counterpart of a subcombination were not matters specifying the invention. ⇒ No inventive step — Intellectual Property High Court, July 10, 2025, 2024 (Ne) No. 10012 [R Badge, Receiving Device] <Presiding Judge Hibiku Shimizu> —** **① The issue was the standard for recognizing a feature of the counterpart device stated in a subcombination claim as a matter specifying the claimed device's invention.** **② Matters that specify only the counterpart device and do not specify the structure, function, or the like of the claimed device were excluded from determination of the gist of the invention, and internal circumstances of the mobile telephone and the like were found to produce no difference on the receiving-device side.** **③ To make a limitation on the counterpart device a matter specifying the invention, it is useful to reflect corresponding signal processing, physical shape, timing control, or the like in the claim as a structure or function of the claimed device.**

Category	Article Title and Three-Line Summary
Patent	**[Patent ★] A case in which the description in the detailed description of the invention concerning the method for deriving a parameter in a claim was erroneous, the assertion that the description contained an error was rejected, and the support requirement was denied — Tokyo District Court, 2023 (Wa) No. 70114 [Brake Control Device for a Motorcycle] <Presiding Judge Shibata> — (Same holding on appeal: Intellectual Property High Court, 2024 (Ne) No. 10038 <Presiding Judge Honda>)** **① The issues were whether the formula in the specification for deriving corrected lateral G was physically valid and whether the formula could be corrected as an unambiguous error in the description so that the support requirement was satisfied.** **② The formula subtracting velocity from acceleration had inconsistent dimensions and no meaning in physics; because there were possible solutions other than the correction asserted by the plaintiff and inconsistencies with other descriptions would arise, it was not found to be an error in the description, and the support requirement was denied.** **③ This case shows that calculations and methods for deriving parameters forming the core of problem-solving must be described in the specification with physical consistency and so that a person skilled in the art can understand them unambiguously.**

Category	Article Title and Three-Line Summary
Patent	**2025 (Ne) No. 10001 “Patent Royalties Relating to a Fulvic Acid Production Method” <Presiding Judge Honda>** **① Concerning an agreement intended to transfer an exclusive patent license and sublicense a non-exclusive license, the issues were the validity of termination for breach due to lack of licensing authority and the exemptive effect of Article 7 of the agreement.** **② The article was merely a cautionary clause recognizing the possibility that registration might be unavailable in the future, and was not an exemption for a situation in which the licensing obligation could not be performed from the time of contracting; accordingly, the appellee’s termination was held valid.** **③ This case shows the distinction between a cautionary clause indicating a future risk of failure to register and an exemption from inability to perform the principal obligation existing from the time of contracting.**
Patent	**2023 (Gyo-Ke) No. 10147 [RNA-Dependent Targeted DNA Modification] <Presiding Judge Hibiku Shimizu>** **① The issue was whether the first application documents sufficiently disclosed a PAM sequence, NLS and codon optimization, and application to eukaryotic cells, so that the invention at issue could enjoy the benefit of the priority claim.** **② The court found that the existence and role of PAM sequences were common general technical knowledge, that NLS and codon optimization were applicable well-known techniques, and that application to eukaryotic cells did not require undue experimentation. It therefore recognized substantive disclosure and the benefit of priority.** **③ This case shows that disclosure serving as the basis for priority is judged not only from the wording of the first application documents but also in light of the common general technical knowledge at the filing date and whether undue experimentation was required.**

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court, 2025 (Wa) No. 70003 [Smoking-Article Cartridge] <Presiding Judge Shibuya>** **① The issue was whether, after the defendant waived its claim for damages following the filing of an action for a declaration that the claim did not exist, there remained an interest in immediate determination while customs procedures and the like were still pending.** **② The court denied an interest in immediate determination because there was no actual dispute over nonexistence of the damages claim and a declaratory judgment would not prevent assertion of an injunction claim or the like.** **③ This case shows that after a rights holder conclusively waives a claim for damages, a party seeking to dispute an injunction claim must directly seek a declaration that the injunction claim does not exist.**
Trademark	**[Trademark/Domain] Tokyo District Court, 2023 (Wa) No. 70022, “Legal Force” Case <Presiding Judge Takahashi>** **① The issues were Japan’s international jurisdiction and infringement and the like concerning use of the “LEGAL FORCE” trademark on an English-language website by a U.S. corporation and use of a Japanese domain name.** **② The court denied jurisdiction over the trademark-related claims because the website did not target consumers in Japan; although it recognized jurisdiction over the .JP domain, it denied an improper purpose and dismissed the claims.** **③ This case shows that, for international jurisdiction over web services, the reality of targeting consumers in Japan is important, while for a domain name the location of the administering organization and the purposes of acquisition and use are separately considered.**

Category	Article Title and Three-Line Summary
Patent	**Interlocutory Judgment; 2024 (Ne) No. 10034 [Elasto-Plastic Hysteretic Damper] <Presiding Judge Honda>** **① For an elasto-plastic hysteretic damper, the issues were the direction of "input" in limitation G and whether the "pair of plates" in limitation D was satisfied.** **② The Intellectual Property High Court did not limit "input" to a specified direction, held that the two connecting plates or stiffeners of Σ-shaped Dampers 5 and 6 were a "pair of plates," and held that the cause of the damages claim was well founded with respect to some accused products.** **③ This case did not add a directional limitation to "input" where the claims and specification had none, and determined whether there was a "pair" based on the shape, arrangement, and connection relationships of the members.**
Patent	**Tokyo District Court, 2024 (Wa) No. 70283 [Reservation Management Device] <Presiding Judge Sugiura>** **① The issue was whether "transmission" from the reservation management device to the image printing device included the accused system, which printed image data through a pharmacy terminal.** **② The court denied satisfaction by the accused system because neither the claims nor the specification disclosed or suggested a configuration in which the reservation management device transmitted through another device.** **③ This case shows that satisfaction of a transmission-path limitation should be determined, based on the claims and specification, by distinguishing direct communication between a server and printer from communication through a terminal.**

Category	Article Title and Three-Line Summary
Patent	**Osaka District Court, 2024 (Wa) No. 4500 [Shopping Payment System] <Presiding Judge Matsuami>** **① For a shopping payment system, the issues were whether a barcode scanner was a “camera,” whether it was “associated” with a customer terminal, and whether the “abnormality” detection limitations were satisfied.** **② The court found non-infringement because a scanner acquiring a code was not a camera acquiring an image, correspondence with a membership number was not association with a customer terminal, and detection based on a weight change was not an abnormality based on success or failure of image identification.** **③ This case shows the need to individually confirm whether the information acquired, the object with which a correspondence relationship is established, and the trigger for abnormality detection match the technical configurations defined in the claim.**
Patent	**2024 (Ne) No. 10068 [Leak-Preventing Sealing Material] <Presiding Judge Hibiku Shimizu>** **① The issues were the state in which “diameter” was measured and whether an accused product installed by a third party was an article used exclusively for production of a product infringing the patent at issue.** **② The Intellectual Property High Court construed “diameter” as thickness in the original-yarn state and found non-infringement, and denied indirect infringement because there was no proof that Canon installed the product at the prescribed angle or that there was no other economic, commercial, or practical use.** **③ This case shows that the measurement state of a term is determined from the specification and common general technical knowledge, and that application of Article 101, item 1 of the Patent Act requires proof of the prescribed actual use and absence of other uses.**

Category	Article Title and Three-Line Summary
Patent	**2025 (Ne) No. 10005 [Jig for a Lifeline Post] <Presiding Judge Masuda>** **① The issues were whether the accused product's hook was a "bent portion" formed by bending the end of a rectangular plate into a U shape and whether infringement under the doctrine of equivalents was established.** **② The Intellectual Property High Court denied literal infringement and infringement under the doctrine of equivalents because the hook was not formed by bending the bottom plate into a U shape and the essential part also differed, and affirmed the first-instance judgment finding notification and dissemination of false facts.** **③ This case shows that where not only a member's shape but also its method of formation is specified in a limitation and relates to the essential part, both literal infringement and infringement under the doctrine of equivalents may be denied.**
Patent	**Tokyo District Court, 2024 (Wa) No. 70128 [Box-Shaped Vessel] <Presiding Judge Nakashima>** **① The issue was whether maintenance involving replacement of a pH sensor with a one-year service life and other components constituted "production" under Article 2, paragraph 3, item 1 of the Patent Act.** **② The court held that the pH sensor was a consumable, was not an essential part of the invention, and had extremely slight economic value compared with the box-shaped vessel as a whole; accordingly, replacement did not destroy the product's identity and did not constitute "production."** **③ This case shows that whether replacement constitutes "production" is determined from the service life of the replacement part, its relationship to the essential part, its economic value, and the identity of the product as a whole, and that only the act of installation should not be isolated.**

Category	Article Title and Three-Line Summary
Patent	**2025 (Ne) No. 10004 [Wireless Scuff Plate] <Presiding Judge Nakadaira>** **① The issues were the meaning of "a control module that adjustably switches the backlight module on and off with respect to the time interval between the on and off states" and whether the appellee's products satisfied that limitation.** **② The Intellectual Property High Court construed "adjustable" to mean actively varying the light-emission duration, and found non-infringement because the products did not include a control module that variably adjusted it independently of the timing of magnetic detection.** **③ This case shows that the functional language "adjustable" is judged not merely by whether switching on and off is possible, but by whether there is a configuration capable of variably controlling the target time.**
Patent	**Tokyo District Court, 2024 (Wa) No. 70463 [Connecting Fixture for Faucet Elbows] <Presiding Judge Sugiura>** **① The issues were claims for royalties, etc. under a joint-application agreement concerning a patent right co-owned with the defendant, and contractual claims and tort liability concerning a patent application or application invention for a connecting fixture for faucet elbows that had received a decision of rejection.** **② The court denied the claims because there were no circumstances showing establishment of a right, the invention was not found to be within the agreement at issue, and the defendant's involvement in the application process or working of the invention was not found.** **③ This case shows that imposing contractual or tort liability based on a rejected application invention requires support for establishment of a right, inclusion within the contractual subject matter, and the other party's specific involvement.**

Category	Article Title and Three-Line Summary
Design	**[Design] Osaka District Court, 2023 (Wa) No. 2668, “Vegetated Earth-Retaining Sandbag” Case <Presiding Judge Matsuami>** **① The issues were identification and similarity of a design for an earth-retaining vegetated sandbag including the natural object “grass,” and infringement under the doctrine of equivalents concerning the configuration fixing the vegetation sheet.** **② After specifying the shape of the grass within the range of regularity and reproducibility, the court held that the accused sandbag was dissimilar because, in particular, the manner in which the grass grew differed greatly, and it also denied infringement under the doctrine of equivalents because the fixing configuration was an essential part of the invention.** **③ This case shows that similarity of a design including a natural object may be judged as a reproducible shape, and that a distinctive fixing configuration producing operations and effects may be an essential part under the doctrine of equivalents.**
Patent	**Tokyo District Court, 2024 (Wa) No. 70223 [Game System and Game Program] <Presiding Judge Nakashima>** **① The issues were quantity management and priority consumption of purchased items and in-game acquired items in the game system, and satisfaction of “cumulative number acquired” in the game program.** **② The court denied satisfaction of each patent because the accused system did not distinguish the free portion granted upon purchase from the portion acquired in the game and had no priority-consumption function, and because the relevant value also included the number of skill-ticket uses. It also found Invention 2 at issue to lack inventive step.** **③ This case shows that whether quantities are managed in aggregate or separately, and whether another element is mixed into the target value, affects satisfaction of a claim specifying a data configuration.**

Category	Article Title and Three-Line Summary
Patent	**Osaka District Court, 2023 (Wa) No. 7855 [Method for Mapping a Physical Hybrid Automatic Repeat Request Indicator Channel] <Presiding Judge Matsuami>** **① For an injunction based on a standard-essential patent, the issue was whether Company G's conduct in license negotiations constituted bad-faith holdout.** **② The court held that the time required for NDA negotiations and review of numerous claim charts was unavoidable and that Company G had sincerely negotiated by presenting a reasoned counterproposal and revised proposals; it therefore dismissed the injunction claim as an abuse of rights.** **③ This case shows that sincerity in FRAND negotiations is judged not only by the length of the negotiation period but also by the need for confidentiality and patent review, responses to the basis for the royalty rate, and the reasonableness of counterproposals.**
Patent	**2025 (Ne) No. 10035 [Vehicle Guidance System] <Presiding Judge Honda> (PXZ v. East Nippon Expressway Company Limited)** **① The issues were the scope of "entrance/exit for ordinary vehicles" and whether there was a "guidance means" for returning a vehicle for which ETC toll collection was impossible to a prescribed route.** **② The Intellectual Property High Court found non-infringement because an entrance/exit for ordinary vehicles at a separate adjacent interchange was not included, and a driver's voluntary U-turn without a sign or the like was not guidance by the facility.** **③ This case held that the "entrance/exit for ordinary vehicles" meant an entrance/exit at the same facility where the vehicle guidance system was installed, did not include an entrance/exit at another adjacent interchange, and that a driver's voluntary U-turn without a sign or the like was not "guidance" by the facility.**

Category	Article Title and Three-Line Summary
Patent	**2025 (Ne) No. 10025 [Spindle Motor] <Presiding Judge Nakadaira> ⇒ Claim for Employee-Invention Remuneration** **① The issue was whether the appellant could claim employee-invention remuneration as a joint inventor of patented inventions in Japan, the United States, and China concerning a spindle motor.** **② The Intellectual Property High Court denied joint inventorship and dismissed the claim because the appellant's explanatory document did not address the specific configuration of the communication hole forming the core of the Japanese invention, and the through-holes of the U.S. and Chinese inventions differed from the appellant's idea of a groove.** **③ This case shows that proof of joint inventorship requires materials showing involvement in the specific configuration forming the core of the invention, and that an explanatory document describing a different problem and solution is insufficient.**

Category	Article Title and Three-Line Summary
Patent	**Osaka District Court, 2024 (Wa) No. 7193 [Article Conveying Facility] <Presiding Judge Matsuami> ⇒ Claim for Employee-Invention Remuneration Dismissed** **① The issues were whether the establishment, operation, dissemination, and content of internal employee-invention rules were unreasonable under Article 35, paragraph 5 of the Patent Act and whether a reasonable benefit could be claimed under paragraph 7 of that Article.** **② In light of consultation with the labor union, solicitation of opinions from all employees, continuous access and training, performance rewards based on objective indicators, and opportunities to state opinions, the court held that the rules were not unreasonable and dismissed the claim.** **③ This case shows that consultation and solicitation of opinions when rules are established, dissemination of the system, objective evaluation, rewards according to performance, and opportunities for inventors to state opinions are emphasized as circumstances supporting the reasonableness of the rules.**

2024 (Gyo-Ko) No. 10007 [Pharmaceutical Composition/Registration of Patent Term Extension] <Presiding Judge Nakadaira>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b310007%e3%80%90%e5%8c%bb%e8%96%ac%e7%b5%84%e6%88%90%e7%89%a9-%e5%ad%98%e7%b6%9a%e6%9c%9f%e9%96%93%e5%bb%b6%e9%95%b7%e7%99%bb%e9%8c%b2%e3%80%91%ef%bc%9c/

2024 (Gyo-Ko) No. 10007 [Pharmaceutical Composition/Registration of Patent Term Extension] <Presiding Judge Nakadaira>

<Issue> Does a “revision of the package insert” for a pharmaceutical product constitute a “disposition” that provides a basis for registration of a patent-term extension (Article 67, paragraph 4 of the Patent Act and Article 2 of the Enforcement Order of the Patent Act)?

⇒ A revision of a package insert does not constitute a “disposition” eligible for registration of an extension.

(1) Legal Nature of the Revision of the Package Insert (Related to Issue 1)

<Distinction from Approved Matters>

In the marketing approval for the pharmaceutical product at issue, the “administration rate” was not applied for as an approved matter (dosage and administration) and was not subject to review. The PMDA’s instruction concerning the administration rate remained administrative guidance and was not a legally binding disposition.

<Not a Lifting of a Prohibition>

Even before the revision of the package insert, the administration method at issue (administration at a high rate) was not prohibited by law. Accordingly, the revision

of the package insert did not lift any prohibition (and thereby make working of the patented invention possible).

<Difference from Partial-Change Approval>

Filing a notification of revision of the package insert is performance of an obligation by the marketing authorization holder, and does not in itself mean that an administrative agency changed rights or obligations (a disposition). It therefore differs in legal nature from “partial-change approval” under the Pharmaceuticals and Medical Devices Act.

(2) Whether the Enforcement Order May Be Applied by Analogy (Related to Issue 2)

The “dispositions” that provide a basis for registration of an extension under Article 2, item 2 of the Enforcement Order of the Patent Act are understood to be an exhaustive enumeration.

Although the Enforcement Order has been amended repeatedly, it has not been amended to include revision of a package insert as a disposition even after introduction of the package-insert revision consultation system.

In view of the foundation of the patent system (the public interest), under which anyone may freely use an invention after expiration of the patent term, a “revision of a package insert,” for which there is no express provision, should not be made eligible for registration of an extension by analogical interpretation.

2024 (Ne) No. 10076 [Retractable Temporary Protective Fence] <Presiding Judge Nakadaira>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%8d10076%e3%80%90%e8%b5%b7%e4%bc%8f%e5%8f%8e%e5%ae%b9%e5%bc%8f%e4%bb%ae%e8%a8%ad%e9%98%b2%e8%ad%b7%e6%9f%b5%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%ef%bc%9e/

2024 (Ne) No. 10076 [Retractable Temporary Protective Fence] <Presiding Judge Nakadaira>

The accused product's "square tube" (a square pipe-shaped post) does not literally satisfy the "pivoting plate-shaped member" of the patented invention.

The problem addressed by the invention is "to provide a raisable and stowable temporary protective fence that can reduce the width of the raising and lowering members of a temporary protective fence and achieve reduced weight, compactness, and the like, while enabling improved efficiency of installation and removal work," as described in paragraph [0007] of the corrected specification, etc.

⇒ Paragraph [0009] of the corrected specification, etc. states that "because the pivoting plate-shaped member has thickness in the short-side direction, its width in the short-side direction can be made thin" (judgment, p. 12). In summary, the effect described in the holding is that making the pivoting plate-shaped member thin enables the guardrail and the pivoting plate-shaped member to be lowered and housed within the width of the web portion of the base frame (H-shaped steel).

⇒ The configuration of making the post thin by making it "plate-shaped," so that it fits in the recess (web portion) of the H-shaped steel, is a distinctive technical idea not found in the prior art (= the essential part).

⇒ No infringement under the doctrine of equivalents (Requirement 1 not satisfied).

2024 (Gyo-Ke) No. 10024 [X-Ray Inspection Device] <Presiding Judge Nakadaira>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110024%e3%80%90%ef%bd%98%e7%b7%9a%e6%a4%9c%e6%9f%bb%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%ef%bc%9e/

2024 (Gyo-Ke) No. 10024 [X-Ray Inspection Device] <Presiding Judge Nakadaira>

Cited Document 2 describes a “cold-air circulation system” for the sensor section and a “liquid-refrigerant circulation system” for the signal-processing circuit section, but these can be understood as separate technical ideas in terms of cooling configurations.

⇒ Accordingly, the decision did not err in extracting and finding only the “cold-air circulation system” related to cooling of the sensor section.

(Excerpt from the Holding)

The decision at issue is found to have objectively and specifically identified, as a cooling configuration and on the basis of the above descriptions in Cited Document 2, the cold-air circulation system that removes heat from the sensor section, which is one of the two circulation systems that can be understood as embodying different technical ideas. In light of the foregoing, no error is found in the decision’s identification of the technical matter described in Cited Document 2.

2021 (Ne) No. 10037 [Antipruritic Agent] <Presiding Judge Hibiku Shimizu>

<Damages> Treatment of the Consumption-Tax Equivalent

Article 4 and Article 2, paragraph 1, item 8 of the Consumption Tax Act, and Basic Circular 5-2-5 on the Consumption Tax Act

⇒ Lost profits calculated as “sales quantity × profit per unit” under Article 102, paragraph 1 of the Patent Act cannot be regarded as “consideration for a transfer of assets, etc.,” and consumption tax therefore cannot be added.

On the other hand, the “amount of money the patentee would have been entitled to receive for the working of the patented invention” under Article 102, paragraph 3 of the Patent Act is an amount equivalent to a royalty determined after the fact between the patentee and the infringer, and can be regarded as “consideration for a transfer of assets, etc.”; accordingly, the consumption-tax equivalent may be added to that extent.

Note: The determinations on the grounds for invalidity of the term-extension registration are to the same effect as the judgment of the same date in 2024 (Gyo-Ke) No. 10033 [Antipruritic Agent (Nalfurafine Hydrochloride/Patent-Term Extension)] <Presiding Judge Hibiku Shimizu>.

[Copyrighted Works and Trademark Rights] Tokyo District Court, 2021 (Wa) No. 32244 <Presiding Judge Nakashima>

The defendant (AI), a skateboarder and artist, sought registration of transfer of the trademark rights from the plaintiff SI, with which the defendant had entered into a license agreement and conducted business (counterclaim).

① Copyright in each of the copyrighted works at issue belongs to the defendant.

Plaintiff SI asserted that it had acquired the copyright under the 2000 music agreement at issue. Under the proper construction of that agreement, however, musical works and the like were subject to transfer (“shall be transferred”), whereas album cover art and the like were merely subject to the grant of an exclusive right of use for promotional purposes (“shall have the exclusive rights”).

② The plaintiffs are obligated to return each of the trademark rights at issue to the defendant and to cooperate in effecting the return.

Article 11 of the license agreement at issue provides that marks such as “MARK GONZALES” may be registered for protection of the rights, on the condition that the trademark registrations be returned to the defendant upon the defendant’s

request.

The plaintiffs asserted acquisitive prescription, but because their use presupposed an obligation to return the rights and no “intention to possess for oneself” was found, acquisitive prescription did not arise.

Note: U.S. and Korean judgments were cited as evidence. Because California law was the governing law, citation of the U.S. judgment is understandable, but citation of the Korean judgment is interesting.

Osaka District Court, 2024 (Wa) No. 2705 [Angle-Adjustable Hinge] <Presiding Judge Takemiya>

Claims seeking procedures for registration of transfer of German and Chinese patent rights

⇒ Dismissed as inadmissible.

An action concerning patent registration is subject to the exclusive jurisdiction of the courts of “the place where registration is to be made (that country).” Japanese courts have no jurisdiction.

For the alternative claim for a declaration of ownership, jurisdiction by appearance was recognized under Article 3-8 of the Code of Civil Procedure because the Defendant argued the merits without objecting to jurisdiction. The following discussion of litigation in China, Germany, and Japan concerns the legal interest in that declaratory claim.

(China) Because there is no reciprocity for recognition of judgments between Japan and China, a final Chinese judgment in the defendant’s favour would not be recognised in Japan. Therefore, there is no legal interest in obtaining a declaration of ownership of the patent rights in Japan in order to prevent recognition of that Chinese judgment on the ground of inconsistency with an earlier Japanese judgment.

(Germany) No concrete possibility that the plaintiff would conduct business in Germany was shown, and the legal dispute had not matured.

(Risk of Suit in Japan) The judgment examined territoriality and Article 22 of the Act on General Rules for Application of Laws in relation to claims based on

instructions or proposals made in Japan. It also recognized that a damages claim could succeed if the actor in China was merely an instrument and the individual Plaintiff was found to be the direct infringer in China. Nevertheless, the dispute was insufficiently mature in this case to justify an abstract declaration of ownership in anticipation of future litigation. The judgment does not generally exclude claims in Japan based on infringement of foreign patents.

2025 (Ne) No. 10008 [Method for Deodorizing a Room in Which a Deceased Person and/or an Animal Has Been Left] <Presiding Judge Nakadaira>

Court of first instance: Tokyo District Court, 2023 (Wa) No. 70512

Limitation E: “a coating step of covering with paint a place where filth remains and that was exposed by the dismantling work”

⇒ Limitation not satisfied.

(Summary of the Holding)

<Description in the Estimate>

Inclusion in the estimate merely showed a “prediction” that coating work would probably be necessary, and did not provide a basis for finding the objective fact that filth actually remained at a place exposed after dismantling.

<Use of Chemicals>

Even if a cleaning agent or coating was used in special cleaning, its use was not limited to cases in which filth remained and could have been preventive or merely precautionary.

Accordingly, the fact that such work was performed, by itself, cannot support an inference that filth remained at a place exposed by dismantling.

2024 (Ne) No. 10084 [Remotely Controlled Unmanned Boat] <Presiding Judge Nakadaira>

The “first control device” in limitation J is a mechanism capable of making determinations concerning both automatic-return activation condition ① (loss of signal) and condition ② (low remaining power). … It is also clear from Figure 8 of the specification—namely, the flowchart provides that automatic return occurs if no signal is received within a prescribed time; if receipt is confirmed, the process proceeds to determine whether the remaining power is at or below a prescribed value; and, if automatic return has not occurred, both conditions are checked—that the specification does not describe two separate inventions, one having condition ① and the other having condition ②.

⇒ No literal infringement.

No infringement under the doctrine of equivalents either; Requirements 1 and 5 not satisfied.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94196.pdf

2024 (Ne) No. 10078 [Porous Air-Permeable Bag Containing Feed for Mites] <Presiding Judge Honda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10078%e3%80%90%e3%83%80%e3%83%8b%e7%94%a8%e9%a3%9f%e9%a4%8c%e5%85%a5%e3%82%8a%e3%81%ae%e5%a4%9a%e5%ad%94%e8%b3%aa%e9%80%9a%e6%b0%97%e6%80%a7%e8%a2%8b%e3%80%91/

2024 (Ne) No. 10078 [Porous Air-Permeable Bag Containing Feed for Mites] <Presiding Judge Honda>

★ The patent is the same as in the court of first instance, Osaka District Court, 2022 (Wa) No. 11025.

* The invention at issue has a structure capable of retaining the attractant internally.

⇒ The accused product merely sandwiches the mite attractant between two nonwoven fabric sheets, gauze, or the like, and the mite attractant falls out from around the perimeter; therefore, the limitation is not satisfied.

Note: … Is the accused product really like that? Should it have been proved through experiments or the like that the material did not fall out?

Supplement: The preceding question is the author's observation on proof. The court required the structure of a "bag," including an internal space and an opening that could be closed; an allegation that more than 80% of the attractant was retained was insufficient. It separately rejected "impregnation" in Limitation A-1 and the first and second requirements for equivalence. Proof that the material did not fall out would therefore not, by itself, change the outcome.

(Court of First Instance — Excerpt from the Holding)

According to the specification, the invention at issue aims to exhibit a high mite-capturing capability. Its means are to attract mites over a broad area by diffusing a mite attractant from a woven sheet impregnated with the mite attractant, and then to arrange inside the mat an adhesive tape for capturing mites and porous air-permeable bags containing mite feed attached to the adhesive tape in a

staggered pattern, so that mites attracted by the mite attractant further enter the inside from both the front and back surfaces of the mat, contact the adhesive tape, and are captured there. In addition, because the configuration impregnates a woven sheet with “fragrance” as the substance that attracts mites and arranges the porous air-permeable bags containing “feed” on both the front and back surfaces of the double-sided adhesive tape, thereby luring the mites inside the porous air-permeable cover and bringing them into contact with an unmixed adhesive layer so that they are captured, the “porous air-permeable bag” in the invention is expected to have a function that keeps the feed at the same location and does not reduce the adhesiveness of the adhesive layer. Moreover, the structure of the porous air-permeable bag makes it possible to achieve these results with one bag and to reduce the number of constituent materials.

In light of the foregoing, it is appropriate to construe “porous air-permeable bag” in limitation A-3, both according to its dictionary meaning and the specification, as requiring at least a structure capable of retaining the enclosed material inside and preventing its dispersion. In the accused product sold, by contrast, the mite attractant is merely sandwiched between two nonwoven fabric sheets, gauze, or the like, and falls out from around the perimeter; accordingly, the product cannot be found to have a structure capable of retaining the attractant inside.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94224.pdf

2024 (Ne) No. 10012 [R Badge, Receiving Device] <Presiding Judge Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c%ef%bc%96%e5%b9%b4%e3%83%8d10012%e3%80%90%ef%bd%92%e3%83%90%e3%83%83%e3%82%b8%e3%80%81%e5%8f%97%e4%bf%a1%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%ef%bc%9e/

2024 (Ne) No. 10012 [R Badge, Receiving Device] <Presiding Judge Hibiku Shimizu>

* A case in which a subcombination limitation was held not to be a matter specifying the invention.

As of the priority date of the patent at issue, techniques of incorporating smart-card functionality into a mobile telephone and communicating by RFID (Exhibit Otsu 19), and of communicating between a mobile telephone and a receiving terminal instead of using an IC card (Exhibits Otsu 9 and 11), were well-known techniques to a person skilled in the art. The invention of Exhibit Otsu 52 and these well-known techniques shared a technical field, and a person skilled in the art could easily have conceived of adopting a configuration in which the contactless data carrier of the Exhibit Otsu 52 invention was a mobile telephone.

⇒ No inventive step.

(Excerpt from the Holding)

The matter concerning the mobile telephone “according to claim 4,” which is the “other subcombination” in corrected claim 5, can be said to have no meaning for specifying the invention of the “receiving device” in Corrected Invention 5.

Accordingly, in determining the gist of Corrected Invention 5, it is appropriate to exclude the matter “according to claim 4.”

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94282.pdf

2024 (Gyo-Ke) No. 10042 [Melting Furnace] <Presiding Judge Masuda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c%ef%bc%96%e5%b9%b4%e8%a1%8c%e3%82%b110042%e3%80%90%e6%ba%b6%e8%a7%a3%e7%82%89%e3%80%91%ef%bc%9c%e5%a2%97%e7%94%b0%ef%bc%9e/

2024 (Gyo-Ke) No. 10042 [Melting Furnace] <Presiding Judge Masuda>

① Although flat-flame burners were well known, the primary reference deliberately adopted a regenerative holding burner for reasons including energy efficiency.
② The primary reference already included a heat exchanger for exhaust-heat recovery, and there was no motivation to add another heat exchanger.
⇒ Inventive step affirmed.

(Excerpt from the Holding)

Although flat-flame burners were well known for uses such as aluminum melting when the tower-type nonferrous-metal melting and holding furnace of the Exhibit Ko 3 invention was placed on the market, it can be found that a regenerative burner was deliberately adopted as the holding burner from the standpoint of energy efficiency and the like. Accordingly, it cannot be found that a person skilled in the art who encountered the Exhibit Ko 3 invention would have been motivated to deliberately adopt a flat-flame burner in place of that holding burner.

The holding burner of the Exhibit Ko 3 invention is found to employ a regenerative burner, and a regenerative burner has a self-contained waste-heat recovery function, namely, a function of drawing in exhaust gas, exchanging heat in a heat-storage body, and preheating air, and therefore includes a heat exchanger; … thus, no motivation can be said to exist to additionally provide a further heat exchanger.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94212.pdf

[Patent ★★★] It was held that, because the fifth-generation divisional application violated the divisional requirements, the seventh-generation patent had a ground for invalidation based on lack of novelty over the publication of the original application. — Intellectual Property High Court, 2024 (Gyo-Ke) No. 10086 [Vehicle Guidance System] <Presiding Judge Honda> —

Original Article URL:
https://www.nakapat.gr.jp/ja/legal_updates_jp/%e3%80%90%e7%89%b9%e8%a8%b1%e2%98%85%e2%98%85%e2%98%85%e3%80%91%e7%ac%ac%ef%bc%95%e4%b8%96%e4%bb%a3%e5%88%86%e5%89%b2%e5%87%ba%e9%a1%98%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e5%88%86%e5%89%b2%e8%a6%81/

◆ Judgment Text

[Summary of This Judgment and Some Observations]

1. Overview of the Case

The fourth-generation specification, etc. as originally filed states, as indispensable configurations in the invention of a vehicle guidance system, (i) the matter of causing a vehicle that cannot use ETC to travel on a branch lane and return when that vehicle enters an ETC-only lane, and (ii) the matter of determining whether a vehicle is one to be returned according to whether wireless communication between an ETC on-board unit and a roadside antenna is possible; and it does not disclose a technical concept that does not make items (i) and (ii) above essential configurations.

By contrast, each invention recited in the claims of the fifth-generation divisional application introduces, in a three-way branching lane provided with either a lane that branches from an entrance-side lane extending from an ordinary road toward a parking area or service area of a toll road and returns to the ordinary road, or a lane that branches from an exit-side lane extending from a parking area or service

area of a toll road toward an ordinary road and returns to the parking area or service area, a new technical matter whereby, with respect to opening and closing the two barriers on the left and right beyond the branch, no determination means is specified, so that, according to any criterion or method not limited to one involving a determination as to whether an inability or failure of wireless communication has occurred between the roadside antenna and the on-board unit of the ETC system, one of the barriers remains closed while the other opens, thereby guiding a vehicle either to continue traveling on the main lane or to enter the branch lane. Because (i) there is no limitation on the circumstances in which the vehicle is caused to travel on the branch lane and return and (ii) there is no limitation on the method for determining a vehicle to be returned, these two configurations constitute an unlimited generalization of the essential configurations described in the fourth-generation specification, etc. as originally filed

Accordingly, each fifth-generation invention should be regarded as introducing new technical matter in relation to the technical matter derived from all the descriptions in the fourth-generation specification, etc. as originally filed. The fifth-generation divisional application is therefore not entitled to application of the main clause of Article 44(2) of the Patent Act, and its filing date is its actual filing date, December 2, 2014.

It follows that the filing date of the application at issue, which is the seventh-generation divisional application, can relate back only as far as December 2, 2014.

Exhibit Ko 9 (Japanese Unexamined Patent Application Publication No. 2006-79580, which is the publication of the first original application), which was distributed in Japan before December 2, 2014, describes the configuration of a vehicle guidance system installed at a toll-road tollgate that includes the respective configurations of Inventions 1 and 2 at issue, and states that a vehicle guidance system having the same configuration may be installed at a service area or parking area.

Accordingly, each invention at issue is an invention described in Exhibit Ko 9 and cannot be patented under Article 29(1)(iii) of the Patent Act.

2. Excerpts from the Holding

According to the wording of the claims, each fifth-generation invention is described as a smart interchange having an ETC-only entrance tollgate, an ETC-only exit tollgate, or both, and including, as its configuration, a three-way branching lane consisting of the lane on which that tollgate is installed (hereinafter the “main lane”) and a lane branching from the main lane on which a vehicle returns (hereinafter the “branch lane”); barriers installed at one location before the branch of the three-way branching lane and at two locations on the left and right beyond the branch; and a vehicle detection device installed on the main lane before the branch of the three-way branching lane. Each invention is further described as opening only one of the barriers installed at the two locations on the left and right beyond the branch when detection of a vehicle by the vehicle detection device serves as the trigger.

By contrast, in each fifth-generation invention, at least (i) the circumstances in which a vehicle is caused to travel on the branch lane and return (Claim 1 of the fourth-generation specification, etc. as originally filed: "when an inability or failure to communicate occurs between the roadside antenna and the on-board unit") and (ii) the determination, by wireless communication of the ETC system, of whether the vehicle is one that should be returned (a matter such as Claim 3 thereof: "the roadside antenna has a pre-gate antenna for determining whether wireless communication with the on-board unit is possible and an ETC antenna for transmitting and receiving entrance information and toll information") are not recited as matters specifying the invention.

Accordingly, each fifth-generation invention has (i) no limitation on the circumstances in which a vehicle is caused to travel on the branch lane and return and (ii) no limitation on the method for determining a vehicle to be returned.

...

The fourth-generation specification, etc. as originally filed states, in relation to the problem that, if a vehicle that cannot use ETC enters an ETC-only lane, there is a risk of congestion or collision with a following vehicle, as means for solving that problem, matters such as providing means by which such vehicles that cannot use ETC can leave the ETC-only lane, providing, as the leaving means, a lane branching from the ETC-only lane, and guiding a vehicle by lowering a barrier when entry of the vehicle is detected; and it is recognized that it discloses a vehicle guidance system that, upon detecting a vehicle that cannot use ETC, guides the vehicle so as to cause it to leave the ETC-only lane. In addition, as the method for detecting and identifying a vehicle that cannot use ETC, it is stated, as seen in paragraphs [0010] and [0012], that this is done according to whether there is an "inability or failure to communicate between the roadside antenna and the on-board unit"; and, in the description of the embodiments, paragraphs [0031] to [0053] and [0066] to [0068], Figures 3 to 8, and Figure 12 disclose that this is done according to whether the vehicle is capable of ETC wireless communication. Further, paragraphs [0054] to [0062], Figures 9 and 10, which are an example of an interchange with an enhanced reverse-entry prevention function, and paragraphs [0063] to [0065] and Figure 11, which are an example of a vehicle guidance system for a smart interchange, also state that "Figure 9 is a modified example of Figure 4" ([0055]) and that "except that there are no ordinary-vehicle lanes B and C, the roles of lanes (A→D) and (A→E) at entrance tollgate 12 and the roles of lanes (A→D) and (A→E) at exit tollgate 13 are the same as those in Figures 3, 4, 6 and 7" ([0064]); thus, all of them are premised on guidance according to whether the vehicle is capable of ETC wireless communication. Accordingly, it is recognized that the fourth-generation specification, etc. as originally filed, in the invention of a vehicle guidance system that causes a vehicle unable to use ETC to leave an ETC-only lane in order to solve the problem of congestion and the risk of collision with a following vehicle, respectively describes, as specific means for solving the problem, (i) the matter of causing the vehicle to travel on a branch lane and return when a vehicle unable to use ETC has entered an ETC-only lane, and (ii) the matter of determining whether the vehicle is one to be returned according to whether wireless communication

between the ETC on-board unit and the roadside antenna is possible. Moreover, even considering all descriptions in the fourth-generation specification, etc. as originally filed as a whole, there is no other description disclosing or suggesting the circumstances in which a vehicle is caused to travel on a branch lane and return, or a method for determining a vehicle to be returned. Therefore, items (i) and (ii) above should be regarded as indispensable configurations for solving the problem in the invention disclosed in the fourth-generation specification, etc. as originally filed ...

By contrast, ... each fifth-generation invention introduces, in a three-way branching lane provided with either a lane that branches from an entrance-side lane extending from an ordinary road toward a parking area or service area of a toll road and returns to the ordinary road, or a lane that branches from an exit-side lane extending from a parking area or service area of a toll road toward an ordinary road and returns to the parking area or service area, a new technical matter whereby, with respect to opening and closing the two barriers on the left and right beyond the branch, no determination means is specified, so that, according to any criterion or method not limited to one involving a determination as to whether an inability or failure of wireless communication has occurred between the roadside antenna and the on-board unit of the ETC system, one of the barriers remains closed while the other opens, thereby guiding a vehicle either to continue traveling on the main lane or to enter the branch lane. Because (i) there is no limitation on the circumstances in which a vehicle is caused to travel on the branch lane and return and (ii) there is no limitation on the method for determining a vehicle to be returned, these two configurations constitute an unlimited generalization of the essential configurations described in the fourth-generation specification, etc. Accordingly, each fifth-generation invention should be regarded as introducing a new technical matter in relation to the technical matter derived by considering all descriptions in the fourth-generation specification, etc. as originally filed as a whole. ...

The Defendant alleges that Fifth-Generation Invention 1 merely extracts and recites, from among the inventions described in the fourth-generation

specification, etc. as originally filed, the invention relating to guidance means that uses a vehicle detection device and barriers to guide a vehicle either to continue traveling on the entrance-side lane or to return to the return road. However, if the invention is one of guidance means that uses a vehicle detection device and barriers to guide a vehicle either to continue traveling on the entrance-side lane or to return to the return road, then, in order to associate the vehicle detection device with the barriers, the guidance means cannot function as such unless there is means or a method for deciding to which lane a detected vehicle is to be guided. Yet, ... the fourth-generation specification, etc. as originally filed describes, as the means or method for deciding to which lane a detected vehicle is to be guided, only the method of determining whether wireless communication between the ETC on-board unit and the roadside antenna is possible. It must therefore be said that extracting from the fourth-generation specification, etc. as originally filed an invention of guidance means that uses a vehicle detection device and barriers to guide a vehicle to one of the lanes without specifying the means or method for deciding to which lane the detected vehicle is to be guided introduces a new technical matter in relation to the technical matter described in the fourth-generation specification, etc. as originally filed The Defendant also alleges that, where the invention of the original application is a manufacturing method consisting of a first step and a second step, amending it to an invention of only the first step does not constitute the addition of new matter, and therefore, in this case as well, filing a divisional application directed only to the downstream configuration of the invention described in the fourth-generation specification, etc. as originally filed does not constitute the addition of new matter. However, what is described in the fourth-generation specification as originally filed is a vehicle guidance system having a processing flow such as that shown in Figure 5 below, namely, a system in which the processes of vehicle detection by the vehicle detection device, communication between the pre-gate antenna and the ETC on-board unit, determination of whether ETC toll collection is possible, guidance by the vehicle guidance device, and opening and closing of the barriers are carried out in sequence and achieve the objective as a whole; a system omitting its

principal processes (S04, S06, and S07 in the example of Figure 5) cannot function as guidance means. Therefore, it cannot automatically be equated with an invention of a method for manufacturing an article consisting of a first step for obtaining an intermediate product and a second step for obtaining a final product, so as to permit a divisional application directed only to the downstream configuration. Accordingly, the Defendant’s allegation cannot be accepted. ([Figure 5])

The Defendant alleges that Fifth-Generation Invention 1 is an independent invention that has the object of preventing unauthorized vehicles and that prevents unauthorized vehicles from entering in reverse from the lanes by keeping the two barriers installed on the left and right beyond the branch of the three-way branching lane constantly "closed" and opening one of the barriers upon detecting passage of a vehicle. However, in paragraphs [0054] to [0062] of the fourth-generation specification, etc. as originally filed, which refer to preventing entry of unauthorized vehicles, it is stated, as means for solving such a problem, that a new barrier and vehicle detection device are installed in each of the two branched lanes to form a closed section. In addition, it expressly states: "The embodiment described with reference to Figure 4 has the problem that it cannot prevent an unauthorized vehicle, for such a purpose as nonpayment of a toll, from entering an ETC vehicle lane in reverse from the exit of the ETC vehicle lane or the exit of the leaving lane" ([0054]); thus, it is expressly stated that the configuration in which one of the two barriers on the left and right beyond the branch remains closed while the other opens (the configuration described in paragraphs [0034] and [0035] with reference to Figure 4) does not solve the problem alleged by the Defendant. In light of such descriptions, a person skilled in the art could not recognize that the fourth-generation specification, etc. as originally filed describes an invention that has the object, as alleged by the Defendant, of preventing reverse entry of unauthorized vehicles and uses the configurations of the respective fifth-generation inventions as the means for solving that problem. Accordingly, the Defendant’s allegation cannot be accepted. ...

3. Infringement Judgment of the Same Date (2025 (Ne) No. 10035) — Non-Satisfaction Under the Same Logic as This Judgment

(1) Non-Satisfaction of "Entrance/Exit for Ordinary Vehicles" (Limitation 2E)

Based on the description of the specification at issue and other matters, the court held that the term "entrance/exit for ordinary vehicles" does not include the entrance/exit for ordinary vehicles of another interchange adjacent to the toll-road tollgate, service area, parking area, or the like at which the vehicle guidance system according to Invention 2 at issue is installed.

(Excerpt from the Holding)

It cannot be read from the description of the parent-application specification at issue that the use, by a vehicle that could not use the smart interchange because ETC toll collection was impossible, of an entrance/exit for ordinary vehicles at another adjacent interchange is the result of guidance by the guidance means according to Invention 2 at issue. Accordingly, the "entrance/exit for ordinary vehicles" in Limitation 2E cannot be construed as including the entrance/exit for ordinary vehicles of another interchange adjacent to the toll-road tollgate, service area, or parking area at which the vehicle guidance system according to Invention 2 at issue is installed.

(2) Non-Satisfaction of "Guidance Means" (Limitation 2E)

The court held that "guidance" means inviting and leading toward a destination and that, where there are no signs or the like (including no sign or the like instructing a U-turn), even if the driver could make a U-turn and return to a point before the ETC-only entrance/exit, this does not constitute "guidance means" for a route returning to a point before the ETC-only entrance/exit.

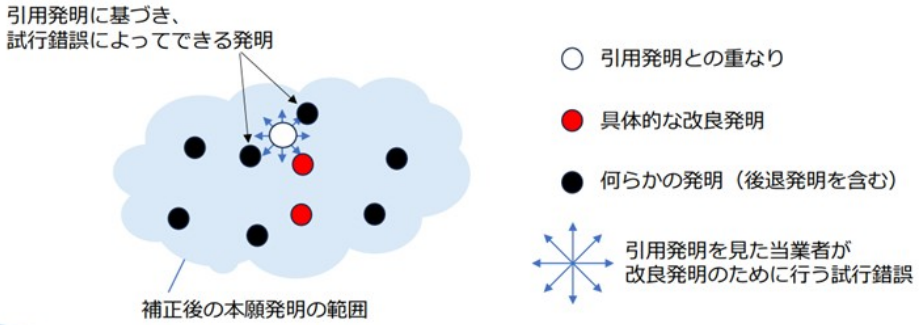
(Excerpt from the Holding)

"Guidance" means inviting and leading toward a destination. Because no sign or the like instructing a U-turn exists within any of the Plaintiff’s facilities, it cannot be said that the Plaintiff’s facilities invite and lead a vehicle for which ETC toll

collection is impossible onto a route returning it again to a point before the ETC-only entrance/exit. Even if it is factually possible for the driver of that vehicle, by the driver's own choice, to make a U-turn and return again to a point before the ETC-only entrance/exit, it must be said to be unreasonable to characterize such travel of the vehicle based on the driver's intention as being attributable to guidance means installed at the Plaintiff's facilities. Accordingly, none of the Plaintiff's facilities can be said to include guidance means that guide a vehicle for which ETC toll collection is impossible onto a "route returning it again to a point before the ETC-only entrance/exit."

4. Some Observations

At a time when the proportion of divisional applications is increasing, there is concern that instances will increase in which the addition of new matter in a patent application partway through a divisional tree prevents the filing date from relating back to the filing date of the original application, resulting in denial of novelty or inventive step. Although there have previously been few cases in which courts have so held, such cases are expected to increase.



In particular, in 2025 the Japan Patent Office issued a message suggesting revision of the Examination Guidelines in the direction of making the amendment requirements for so-called "excluding claims" stricter. If inventions claimed in issued patents by means of "excluding claims" begin to be held to have a ground for invalidation based on the addition of new matter, the problem described above will surface, and there is concern that patent practice will become confused in the future. (See the materials of the 18th Working Group of the Examination Standards Subcommittee, Patent System Subcommittee, Intellectual Property Committee, Industrial Structure Council.)

https://www.jpo.go.jp/resources/shingikai/sangyo-kouzou/shousai/kijun_wg/18-shiryou.html

Timing and interpretation note: The preceding passage expresses the author's assessment and forecast as of the original article's publication in January 2026. The characterization as "stricter" is not a holding of this judgment and does not mean that every disclaimer claim adds new matter or is automatically invalid.

必須の構成が除かれても進歩性が否定される場合の例

- 引用発明において必須とされている構成を除く補正がなされたとしても、**引用発明の発明者ではなく、当業者にとって、さらなる改良発明等のために、当該構成以外の何らかの構成に設計変更を試みることは、当業者の通常の創作能力の発揮である**といえる場合がある。
- そして、引用発明において当該構成が必須と記載されていたとしても、その他のあらゆる構成への置換を完全に妨げるほどの強い阻害要因があったとまでは認められず、また、本願発明において当該構成を除くことに有利な効果があるとはいえない場合がある。
- このような場合には、**現在の審査基準の考え方に従って、依然として進歩性が否定される**。

7

新規事項の判断に係る審査基準の記載（３）

3.3.1 特許請求の範囲の補正

(1) 発明特定事項を上位概念化、削除又は変更する補正の場合

(2) 発明特定事項を下位概念化又は付加する補正の場合

b 請求項の発明特定事項を下位概念化する補正が当初明細書等に明示的に記載された事項又は当初明細書等の記載から自明な事項までは下位概念化しない補正であっても、**この補正により新たな技術上の意義が追加されないことが明らかな場合であれば、新たな技術的事項を導入するものではない**。したがって、このような補正は許される。

(3) 数値限定を追加又は変更する補正の場合

(4) 除くクレームとする補正の場合

「除くクレーム」とは、請求項に記載した事項の記載表現を残したままで、請求項に係る発明に包含される一部の事項のみをその請求項に記載した事項から除外することを明示した請求項をいう。

補正前の請求項に記載した事項の記載表現を残したままで、補正により当初明細書等に記載した事項を除外する「除くクレーム」は、**除外した後の「除くクレーム」が新たな技術的事項を導入するものではない場合には、許される**。

以下の(i)及び(ii)の「除くクレーム」とする補正は、新たな技術的事項を導入するものではないので、補正は許される。

(i) 請求項に係る発明が引用発明と重なるために新規性等（第29条第1項第3号、第29条の2又は第39条）が否定されるおそれがある場合に、その重なりのみを除く補正

・・・（後述）

(ii) 請求項に係る発明が、「ヒト」を包含しているために、第29条第1項柱書の要件を満たさない、又は第32条に規定する不特許事由に該当する場合において、「ヒト」のみを除く補正

・・・

(5) マーカッシュ形式等の択一形式のクレームについてする補正の場合

14

「除くクレーム」とする補正の類型と審査基準との関係

A) 特定の事項を含まないという技術的事項が、当初明細書等に明示的に記載されている場合

→ その補正は、新たな技術的事項を導入するものではないから**許される**。（審査基準の**3.1**）

B) 特定の事項を含まないという技術的事項が、当初明細書等の記載から自明な事項といえる場合

→ その補正は、新たな技術的事項を導入するものではないから**許される**。（審査基準の**3.2**）

C) 特定の事項を含む場合には第29条第1項柱書の要件を満たさない、又は第32条に規定する不特許事由に該当する場合

→ 請求項に係る発明が「ヒト」を包含しているために、第29条第1項柱書の要件を満たさない、又は第32条に規定する不特許事由に該当する場合において、「ヒト」を発明対象から除外することによって、上記拒絶理由を解消する補正は、補正前の明細書等から導かれる技術的事項に何らかの変更を生じさせるものとはいえない。したがって、このような補正は新たな技術的事項を導入しないものであることが明らかであるから、**許される**。（審査基準の**3.3.1(4)(ii)**）

D) 類型A～Cのいずれにも該当しない場合

→ **新たな技術的事項を導入するものではない場合には許される。**

その一例として、「請求項に係る発明が引用発明と重なるために新規性等(第29条第1項第3号、第29条の2又は第39条)が否定されるおそれがある場合に、その重なりのみを除く補正」（審査基準の**3.3.1(4)(i)**）は、「新たな技術的事項を導入するものではないので、**許される**」とされている。

そのほかにも、例えば、下位概念化であって新たな技術上の意義が追加されないことが明らかな場合（審査基準の**3.3.1(2)b**）に該当すれば、「補正は許される」とされている。

15

審査基準の3.3.1(4)(i)の記載について（１）

- 審査基準の3.3.1(4)(i)で例示しているのは、**引用発明と技術的思想としては顕著に異なり本来進歩性を有するが、たまたま引用発明と重なることで新規性の拒絶理由が通知された場合**に、その重なりを除くことで、新規性の拒絶理由を解消すると同時に、進歩性も有する発明となる場合等である。

(i)請求項に係る発明が**引用発明と重なるために新規性等(第29条第1項第3号、第29条の2又は第39条)が否定されるおそれがある場合に、その重なりのみを除く**補正

(説明)

上記(i)における「除くクレーム」は、第29条第1項第3号、第29条の2又は第39条に係る引用発明である、刊行物等又は先願の明細書等に記載された事項(記載されたに等しい事項を含む。)のみを除外することを明示した請求項である。

上記(i)の「除くクレーム」とする補正は、引用発明の内容となっている特定の事項を除外することによって、補正前の明細書等から導かれる技術的事項に何らかの変更を生じさせるものとはいえない。したがって、このような補正は、新たな技術的事項を導入しないものであることが明らかである。

なお、**「除くクレーム」とすることにより特許を受けることができる発明は、引用発明と技術的思想としては顕著に異なり本来進歩性を有するが、たまたま引用発明と重なるような発明である。引用発明と技術的思想としては顕著に異なる発明ではない場合は、「除くクレーム」とすることによって進歩性欠如の拒絶理由が解消されることはほとんどないと考えられる。**

図６　多世代分割出願と補正・取下げの関係

⑤平成 28 年（行ケ）10263：「分割出願が適法であるための実体的要件としては，①もとの出願の明細書又は図面に二以上の発明が包含されていたこと，②新たな出願に係る発明はもとの出願の明細書又は図面に記載された発明の一部であること，③新たな出願に係る発明は，もとの出願の当初明細書等に記載された事項の範囲内であることを要する。本件出願は，第１出願から数えて５世代目になる分割出願であるため，本件出願が第１出願の出願時にしたものとみなされるには，本件出願，第４出願，第３出願及び第２出願が，それぞれ，もとの出願との関係で，上記①ないし③の分割の要件を満たし，かつ，本件発明が第１出願の出願当初の明細書等に記載した事項の範囲内のものであること，という要件を満たさなければならない。」

同旨：①大阪高判平成 14 年（ネ）2776＜若林＞、②東京高判平成 15 年（行ケ）65＜篠原＞。

子出願時は適法でも、子を出願後に補正すると、補正の遡及効により、子出願が分割要件違反となる場合がある。その場合、孫出願日は子出願日までしか遡及しない。

補正後が新規事項追加であると、分割要件違反となる。③東京地判平成 16 年（ワ）第 14649 号＜設樂＞。

分割要件＝補正要件：⑧東京地判平成 15 年（ワ）第 9215 号＜三村＞。

補正の遡及効：親出願日、子出願日、子の補正、孫の出願日の順序で検討する。補正により分割要件違反（要旨変更）が治癒されると、分割要件違反を免れる。④東京高判昭和 50 年（行ケ）第 75 号。

「本件訂正によって請求項の全部が削除されたことにより、本件実用新案登録は、初めから存在しなかったものとみなされる」⑥平成 13 年（行ケ）421＜山下＞。

子が取り下げられても、孫の出願日は親の出願日に遡及する。⑦平成 27 年（ワ）8517【畦塗り機事件】＜嶋末＞。同事件では、取下げ前に分割要件違反はなかった。特許法 39 条 5 項以外、出願取下げに遡及効はない（平成 1 年審 123 号）。

分割出願が新規事項追加のまま拒絶・無効確定すると、孫の出願日が親出願日に遡及しない。拒絶で終わる場合にも、新規事項追加を解消する補正を試みるべきである。

Figure 6, case ③: Tokyo District Court, April 13, 2006, 2004 (Wa) No. 14649 (Telephone Call Control System).

図７　画像形成装置事件と分割出願の新規事項

令和元年（ワ）23164【画像形成装置】＜田中＞。参照：令和２年（行ケ）10131＜大鷹＞。

子出願が分割要件違反であれば、孫出願の出願日は子出願の現実の出願日までしか遡及せず、親出願日まで遡及しない。大阪高判平成14年（ネ）2776、東京高判平成15年（行ケ）65も同旨。

明細書の追加記載が新規事項追加とされた例として、【人工乳首事件】（平成14年（行ケ）539）と比較する。

「本件出願２が分割出願された時点における本件出願１の明細書等…と、本件出願２の明細書等（本件出願２分割時明細書…）とを比較すると、本件出願２分割時明細書は、例えば、指定キープ指示部によって、電源OFF後も加工条件をキープし、次回以降最初に表示される画面に表示することに関する記載が追加されている点（段落【0100】）、倍率を指示する「一つ上」や「一つ下」の表示によって、使用頻度の高い加工条件である倍率の設定数を減らし、メニューの設定数を減らすことに関する記載が追加されている点（段落【0105】）、登録されたメニューを変更不可にロックする手段を設けることによって、安易なメニュー変更による誤指示を防止することに関する記載が追加されている点（段落【0145】）、図７ないし図15及びこれに関連する記載が追加されている点（段落【0041】…）で、本件出願１査定時明細書の記載と相違しており、本件出願２分割時明細書は、本件出願１査定時明細書には存在しない記載事項を含むものであるから、本件出願１査定時明細書に記載された事項の範囲内であるとはいえない…。そうすると、本件出願２は、…②の分割要件を満たさない…」

親出願日後、子出願日前の引用発明に基づき、進歩性欠如とされた。

優先権主張時は「部分優先」が有り得るが、分割出願時の明細書への追記には注意を要する。原明細書等に開示があれば追記は不要であり、開示がなければ新規事項追加となる。

Figure 7, related decision: Intellectual Property High Court, October 13, 2021, 2020 (Gyo-Ke) No. 10131 (Image Forming Apparatus).

[Related Court Decisions (Concerning Divisional Requirements)]

(1) Intellectual Property High Court, 2024 (Gyo-Ke) No. 10086 [Vehicle Guidance System] <Presiding Judge Honda> (This Judgment)

* The child application violates the divisional requirements ⇒ the filing date of the grandchild application does not relate back to the filing date of the parent application.

<Excerpt from the Holding>

The fourth-generation specification, etc. as originally filed states, in relation to the problem that, if a vehicle that cannot use ETC enters an ETC-only lane, there is a risk of congestion or collision with a following vehicle, as means for solving that problem, matters such as providing means by which such vehicles that cannot use ETC can leave the ETC-only lane, providing, as the leaving means, a lane branching from the ETC-only lane, and guiding a vehicle by lowering a barrier when entry of the vehicle is detected; and it is recognized that it discloses a vehicle guidance

system that, upon detecting a vehicle that cannot use ETC, guides the vehicle so as to cause it to leave the ETC-only lane. In addition, as the method for detecting and identifying a vehicle that cannot use ETC, it is stated, as seen in paragraphs [0010] and [0012], that this is done according to whether there is an "inability or failure to communicate between the roadside antenna and the on-board unit"; and, in the description of the embodiments, paragraphs [0031] to [0053] and [0066] to [0068], Figures 3 to 8, and Figure 12 disclose that this is done according to whether the vehicle is capable of ETC wireless communication. Further, paragraphs [0054] to [0062], Figures 9 and 10, which are an example of an interchange with an enhanced reverse-entry prevention function, and paragraphs [0063] to [0065] and Figure 11, which are an example of a vehicle guidance system for a smart interchange, also state that "Figure 9 is a modified example of Figure 4" ([0055]) and that "except that there are no ordinary-vehicle lanes B and C, the roles of lanes (A→D) and (A→E) at entrance tollgate 12 and the roles of lanes (A→D) and (A→E) at exit tollgate 13 are the same as those in Figures 3, 4, 6 and 7" ([0064]); thus, all of them are premised on guidance according to whether the vehicle is capable of ETC wireless communication. Accordingly, it is recognized that the fourth-generation specification, etc. as originally filed, in the invention of a vehicle guidance system that causes a vehicle unable to use ETC to leave an ETC-only lane in order to solve the problem of congestion and the risk of collision with a following vehicle, respectively describes, as specific means for solving the problem, (i) the matter of causing the vehicle to travel on a branch lane and return when a vehicle unable to use ETC has entered an ETC-only lane, and (ii) the matter of determining whether the vehicle is one to be returned according to whether wireless communication between the ETC on-board unit and the roadside antenna is possible. Moreover, even considering all descriptions in the fourth-generation specification, etc. as originally filed as a whole, there is no other description disclosing or suggesting the circumstances in which a vehicle is caused to travel on a branch lane and return, or a method for determining a vehicle to be returned. Therefore, items (i) and (ii) above should be regarded as indispensable configurations for solving the

problem in the invention disclosed in the fourth-generation specification, etc. as originally filed ...

⇒ Because each fifth-generation invention lacks items (i) and (ii) above (the indispensable configurations for solving the problem), it constitutes the addition of new matter.

-

(2) Tokyo District Court, 2019 (Wa) No. 23164 [Image Forming Apparatus] <Presiding Judge Tanaka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91102.pdf

* The child application violates the divisional requirements ⇒ the filing date of the grandchild application does not relate back to the filing date of the parent application.

* In 2020 (Gyo-Ke) No. 10131 concerning the same patent, the court held: "Considering together ... that there was an opportunity to cure the state in which Application 2 at issue violated the divisional requirements by making an amendment such as deleting the added portion above, it was not appropriate for the examiner of Application 2 at issue to overlook the above violation of the divisional requirements, but ..."

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-90633.pdf

<Excerpt from the Holding>

... The patent application at issue is a patent application obtained by further dividing Application 3 at issue, which was itself obtained by further dividing Application 2 at issue, which was a divisional application of Application 1 at issue. The Defendant alleges that Application 2 at issue violates the divisional requirements; therefore, the court examines this point.

... Where a divisional application is lawful, its filing date relates back to the filing date of the original application (main clause of Article 44(2) of the Patent Act); where a divisional application is unlawful, substantive examination is conducted based on the date on which the divisional application was actually filed. In order

for the filing date of a divisional application to relate back to the filing date of the original application, it is reasonable to construe that it is necessary that (i) the matters described in the specification, etc. of the divisional application fall within the scope of matters described in the specification, etc. of the original application as filed, and (ii) the matters described in the specification, etc. of the divisional application fall within the scope of matters described in the specification, etc. of the original application immediately before the division. Where a patent application is divided during a period in which the specification, etc. of the original application may be amended, it is understood that satisfaction of requirement (i) above also satisfies requirement (ii). However, because Application 2 at issue ... was not filed during a period in which the specification, etc. of Application 1 at issue could be amended ..., it is understood that, as a divisional requirement for Application 2 at issue, requirement (ii) above must also be satisfied separately from requirement (i). ...

... Comparing the specification, etc. of Application 1 at issue at the time Application 2 at issue was filed as a divisional application, namely, the specification, etc. of Application 1 at issue at the time of the decision to grant a patent, ... with the specification, etc. of Application 2 at issue (the specification at the time of division of Application 2 at issue ...), the latter differs from the former in, for example, that it adds a description relating to maintaining machining conditions even after power-off by means of a designated-keep instruction unit and displaying them on the first screen shown on the next and subsequent occasions (paragraph [0100]); that it adds a description relating to reducing the number of settings for the magnification, which is a frequently used machining condition, and reducing the number of menu settings by means of displays indicating magnification, such as "one above" and "one below" (paragraph [0105]); that it adds a description relating to preventing erroneous instructions caused by casual menu changes by providing means for locking a registered menu so that it cannot be changed (paragraph [0145]); and that it adds Figures 7 to 15 and related descriptions (paragraph [0041] ...). The specification at the time of division of Application 2 at issue therefore contains matters not present in the specification of Application 1 at

issue at the time of the decision to grant a patent and cannot be said to fall within the scope of matters described in the latter specification. ... Accordingly, Application 2 at issue fails to satisfy divisional requirement (ii) above and should be regarded as violating the divisional requirements; Article 44(2) of the Patent Act does not apply to Application 2 at issue.

... According to the foregoing, even if the patent application at issue satisfies the divisional requirements in relation to Application 3 at issue and Application 3 at issue satisfies the divisional requirements in relation to Application 2 at issue, Application 2 at issue does not satisfy the divisional requirements in relation to Application 1 at issue. Therefore, the filing date of Application 2 at issue does not relate back to the filing date of Application 1 at issue and is its actual filing date ..., and likewise, the filing date to which the patent application at issue relates back is the filing date of Application 2 at issue ....

-

(3) Osaka High Court, 2002 (Ne) No. 2776 [Concrete Embedded Object] (Mirai Kogyo v. Nichido Denko)

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-11279.pdf

* The child application came to violate the divisional requirements due to the retroactive effect of a procedural amendment.

⇒ The filing date of the grandchild application does not relate back to the filing date of the parent application.

* The fact that invalidity of the child application became final is unrelated to whether the filing date of the grandchild application relates back to the filing date of the parent application.

<Excerpt from the Holding>

Considering the divisional filing of the child application, the amendment to the child application ... included matters neither described in the specification or drawings of the parent application as filed nor described in the specification or drawings of the child application as filed, and the specification of the child

application after the amendment contained matters outside the scope of the specification or drawings of the parent application as filed. The child application therefore could not be said to have been lawfully divided from the parent application under Article 44(1) of the Patent Act. The child application was subsequently patented, and the invalidation decision at issue became final; there was therefore no longer any room to correct, by a procedural amendment or a request for correction, ... the content of the procedural amendment. Because the content after the amendment had become final, the child application cannot be said to have been lawfully divided from the parent application under Article 44(1) of the Patent Act and is not deemed to have been filed at the time of the parent application. Because it is not deemed to have been filed at the time of the parent application, ... the filing date of the child application is deemed to be ... the date on which the amendment was submitted .... In this regard, the Plaintiff alleges that the child application was a divisional application lawfully divided under Article 44 of the Patent Act and that, by the amendment in the procedural amendment, its filing date was merely postponed under Article 40 of the Patent Act, and the division of the child application itself did not become unlawful or invalid. However, ... it is clear that the division of the child application did not satisfy the divisional requirements and was unlawful in the first place, and the Plaintiff's allegation above cannot be accepted. ...

Application 1 at issue (the grandchild application) may be considered lawful as a divisional application having the child application as its parent application because it may be said to satisfy the other divisional requirements. However, in relation to the parent application, ... because the child application cannot be said to have been lawfully divided from the parent application, Application 1 at issue (the grandchild application) likewise is not deemed to have been filed at the time of the parent application, but is deemed to have been filed at the time of the child application, and is deemed to have been filed on the date ... deemed to be the filing date of the child application. ...

Enjoyment of the benefit of retroactivity of the filing date of the grandchild application is, after all, enjoyment of the benefit of the filing date of the child

application, and is premised on the child application satisfying the divisional requirements and having been lawfully divided; the filing date of the grandchild application does not relate back without limitation to the time of the parent application, independently of the child application and removed from the time at which division was originally possible. The Patent Act recognizes ... that an amendment has effect retroactive to the beginning of the procedure, and patent procedures are administered on the premise of such retroactive effect of amendments. In fact, with respect to divisional applications as well, where the invention of the original application and the invention of the divisional application were identical at the time of division but subsequently an amendment to the specification or drawings of the original application rendered the two inventions non-identical, the divisional application is deemed lawful; conversely, where the invention of the original application and the invention of the divisional application were not identical at the time of division but subsequently an amendment to the specification or drawings of the original application rendered the two inventions identical, the divisional application is deemed unlawful. Moreover, even if the retroactive effect of such an amendment gives rise to a situation in which a division is unlawful, the person who made the amendment may cure the ground of unlawfulness by making a further amendment correcting it. In light of these points, where a parent application, a child application, and a grandchild application are divided in sequence, even if the division from the child application to the grandchild application had no defect in the divisional requirements, it is unavoidable that whether the division of the child application from the parent application satisfies the requirements may vary depending on whether and how the child application is amended, thereby changing the filing date of the child application and, in turn, changing the filing date of the grandchild application. ...

(4) Tokyo High Court, 2003 (Gyo-Ke) No. 65 [Concrete Embedded Object] (Mirai Kogyo v. Nichido Denko)

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-10885.pdf

* The child application came to violate the divisional requirements due to the retroactive effect of a procedural amendment.

⇒ The filing date of the grandchild application does not relate back to the filing date of the parent application.

<Excerpt from the Holding>

... In this case, the patent application at issue (grandchild application) is a further divisional application of the child application, which was a divisional application from the parent application. Therefore, if each of the divisions of the grandchild application (the patent application at issue) and the child application satisfies the divisional requirements under former Article 44(1) of the Patent Act, and Inventions 1 and 2 at issue fall within the scope of matters described in the original specification, etc. of the parent application, the filing dates of Inventions 1 and 2 at issue relate back to the filing date of the parent application. However, the invention of the child application was amended by the procedural amendment dated October 29, 1993 (Exhibit Ko 17), such that it no longer fell within the scope of matters described in the original specification, etc. of the parent application. After registration of establishment of the patent right, the invalidation decision became final with the invention as so amended, and the patent right for the child application was deemed never to have existed. Accordingly, there is no longer any room to correct the amended invention, and the invention of the child application no longer falls within the scope of matters described in the original specification, etc. of the parent application; it is therefore clear that the child application does not satisfy the substantive requirements for division. Thus, without even examining whether the division of the grandchild application was proper, there is no room for the filing date of the patent application at issue, which is the grandchild application, to relate back to the filing date of the parent application. ...

... The amendment to the child application ... should originally have been rejected as impermissible, but was not rejected; after registration of establishment of the patent right with the invention as amended, the invalidation decision became final and the patent right relating to the child application was deemed never to have existed. ... The child application did not satisfy the divisional requirements and was not lawfully divided. ...

... The Plaintiff further alleges that, under the Examination Guidelines prepared by the Japan Patent Office in May 1983 and applicable to the patent application at issue, a divisional application filed on the same date on which the original application was withdrawn or abandoned is lawful, except that, where the original application is withdrawn, abandoned, or invalidated, a divisional application is unlawful if the invention of the original application and the invention of the divisional application are identical at the time of such act; and therefore it is the practice of the Japan Patent Office that invalidation of the right relating to the child application after it has become final does not also invalidate the grandchild application. However, as stated above, the child application was deemed, under former Article 40 of the Patent Act, to have been filed on the date on which the procedural amendment was submitted; it was not deemed withdrawn or abandoned. It is also clear that the decision does not hold that the grandchild application is invalid because the child application became invalid. The Plaintiff's allegation above merely criticizes the decision at issue based on a misunderstanding of it and cannot be accepted.

(5) Tokyo District Court, 2003 (Wa) No. 9215 [Fastener and Cord Fastening Device] (JP3367651) <Presiding Judge Mimura>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-10373.pdf

* Divisional applications and amendments are permitted within the same scope.

= Tokyo District Court, 1998 (Wa) No. 8345 [Ear-Hanging Device for Cultured Shellfish] <Presiding Judge Mimura>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-13449.pdf

<Excerpt from the Holding>

Regarding the division of a patent application, Article 44(1) of the Patent Act provides that "only within the period during which an amendment may be made to the specification or drawings attached to the application, a patent applicant may make a part of a patent application containing two or more inventions into one or more new patent applications." In order for such a divisional application to be recognized as lawful, the original application must be pending before the Japan Patent Office and must contain two or more inventions; containing two or more inventions is understood not to require that they be contained only in the claims, but is satisfied if the specification contains two or more inventions. A divisional application must also be filed within a period during which an amendment may be made (Article 44(1) of the Patent Act). Further, a divisional application is deemed to have been filed at the time of the original patent application (paragraph (2) of the same Article), and novelty, inventive step, and the like are assessed as of the filing date of the patent application from which the divisional application originated. In light of these matters, division of an application may be said to have a function similar to that of an amendment (Article 17 of the Patent Act); therefore, the permissible scope of a divisional application should likewise be construed as limited to the scope within which the original application may be amended. (If division were permitted even where the requirements for amendment were not satisfied, it would in substance permit circumvention of the amendment requirements by means of the divisional procedure, which would be unreasonable.) Thus, the specification or drawings of a divisional application should be construed not to include anything outside the scope of matters described in the specification or drawings of the original application as filed. ...

(6) Tokyo District Court, 2004 (Wa) No. 14649 [Telephone Call Control System] <Presiding Judge Shitara>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-32912.pdf

* A case in which the divisional requirements were assessed based on the claims after amendment (retroactive effect of amendment) — the same logic and conclusion as for the amendment requirements

= Tokyo High Court, 2003 (Gyo-Ke) No. 65; cf. 2016 (Gyo-Ke) No. 10114

<Excerpt from the Holding>

... The first and second amendments to Application 2 at issue added a description of an embodiment in which, before a customer pays a deposit, the amount of the deposit and a special code are stored in advance in memory means of a special exchange unit, and should be regarded as additionally describing an invention producing a new operation and effect, "...", that was not described in the original specification of Application 2 at issue. Accordingly, the first and second amendments to Application 2 at issue cannot be recognized as amendments that increased, decreased, or changed the claims of the original specification of the divisional application within the scope of matters described in the original specification or drawings of Application 2 at issue. Therefore, the divisional application at issue does not satisfy the divisional-application requirements of former Article 44(1) of the Patent Act and is deemed to have been filed on May 7, 1997. Furthermore, because the first and second amendments to Application 2 at issue cannot be recognized as having been made within the scope of matters described in the original specification or drawings of the divisional application at issue, they violate Article 17-2(3) of the Patent Act. ...

(7) Tokyo High Court, 1975 (Gyo-Ke) No. 75

A discussion of the possibility of curing a divisional defect should not be read as a finding that the defect was cured in that case or as an unconditional remedy under current law.

* A violation of the divisional requirements may be cured by an amendment (retroactive effect of amendment).

(Reference) Tokyo High Court, 2003 (Gyo-Ke) No. 65, [Concrete Embedded Object] ⇒ The filing date of a grandchild application divided from a child application does not relate back to the filing date of the parent application where the child application ceases to satisfy the divisional requirements due to an amendment.

⇒ The filing date of the child application is the date on which the procedural amendment was submitted!!

<Excerpt from the Holding>

Insofar as the original specification and drawings of the patent application at issue are concerned, the application does not satisfy, in relation to the original patent application, the divisional requirements concerning the technical matter described above and therefore cannot be regarded as a lawful divisional application. Consequently, retroactivity of the filing date is not recognized, and the application is treated as having been filed on its actual filing date, April 23, 1964.

However, if the divisional requirements above subsequently came to be satisfied by an amendment to the patent application at issue, retroactivity of the filing date may newly be recognized as a result, and therefore the court examines whether the amendment at issue falls within such a case. If the amendment at issue changes the gist of the specification or drawings in relation to the patent application at issue (which is a divisional application and a new application) itself, the amendment is not permitted; not only does the patent application at issue fail, by virtue of the amendment, to satisfy the divisional requirements above, but regardless of whether it falls within the scope of matters described in the original specification or drawings of the original patent application, it cannot be accepted under the former Act and must also be dismissed under the new Act. ...

It is recognized that the amendment at issue ... does not fall within the scope of matters described in the original specification or drawings of the patent application at issue (and the evidence cited above also establishes that the matter in question is not described in the original specification or drawings of the original patent application). Accordingly, it cannot be said that, by virtue of the

amendment at issue, the patent application at issue came to satisfy the divisional requirements above.

(8) Tokyo District Court, 2015 (Wa) No. 8517 [Ridge Plastering Machine] <Presiding Judge Shimasue>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-85939.pdf

* A third-generation patent in a sequence of original application ⇒ first generation ⇒ second generation ⇒ third generation.

* The second-generation application had been withdrawn, but whether its filing date could relate back to the first-generation application and the original application was not disputed.

* Tokyo High Court, 2003 (Gyo-Ke) No. 65, and Osaka High Court, 2002 (Ne) No. 2776, held that invalidity of the child application itself was irrelevant.

<Excerpt from the Holding>

[Defendant's Allegation]

The configuration in Claim 1 that "the connecting piece is fixed to the rear surface of the ridge-forming surface of the ridge-forming plate positioned on the front side in the direction of rotation among the adjacent ridge-forming plates and does not extend to the ridge-forming surface of the ridge-forming plate positioned on the rear side in the direction of rotation" (the configuration added by the amendment at issue), and the configuration of "a connecting piece provided along the boundary portion," are each outside the scope of matters described in the specification, claims, and drawings immediately before the division (filing of the patent at issue) of the original application for the patent at issue (Japanese Patent Application No. 2014-78397) (hereinafter collectively the "Specification, etc. at the Time of Division of the Original Application"). ... Accordingly, the application relating to the patent at issue (the divisional application of Japanese Patent Application No. 2014-78397) is not a lawful divisional application (Article 44(1)(i) of the Patent Act), and its filing date does not relate back to the filing date of the

original application. As a result, each invention at issue lacks novelty or inventive step (Article 29(1)(iii) or (2) of the Patent Act) over the published patent application relating to the original application for the patent at issue (Japanese Unexamined Patent Application Publication No. 2014-128287, distributed on July 10, 2014 [Exhibit Otsu 15]).

...

[Court's Determination]

Of the descriptions in the Specification, etc. at the Time of Division of the Original Application, the description ... relating to the configuration that "the connecting piece is fixed to the rear surface of the ridge-forming surface of the ridge-forming plate positioned on the front side in the direction of rotation among the adjacent ridge-forming plates and does not extend to the ridge-forming surface of the ridge-forming plate positioned on the rear side in the direction of rotation" may be inferred to be the same as the description ... in the original specification, etc.; therefore, that configuration should be regarded as self-evident from the above description in the Specification, etc. at the Time of Division of the Original Application. The configuration of "a connecting piece provided along the boundary portion" is likewise recognized as self-evident from the description in the specification at the time of division of the original application. ... According to the foregoing, the patents for the respective inventions at issue cannot be found not to relate to lawful divisional applications. ...

(9) Intellectual Property High Court, 2016 (Gyo-Ke) No. 10263 [Wiring Box] (Mirai Kogyo v. Nichido Denko) <Presiding Judge Takabe>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-87087.pdf

* General method for assessing the divisional requirements of a fifth-generation (great-great-grandchild) patent

<Excerpt from the Holding>

The substantive requirements for a divisional application to be lawful are that (i) the specification or drawings of the original application contained two or more inventions, (ii) the invention of the new application is part of an invention described in the specification or drawings of the original application, and (iii) the invention of the new application falls within the scope of matters described in the original specification, etc. of the original application. Because the application at issue is a fifth-generation divisional application counted from the first application, in order for the application at issue to be deemed to have been filed at the time of filing of the first application, the application at issue, the fourth application, the third application, and the second application must each satisfy divisional requirements (i) to (iii) above in relation to their respective original applications, and the invention at issue must fall within the scope of matters described in the original specification, etc. of the first application.

◆ Judgment Text

[Summary of This Judgment and Some Observations]

1. Claims (Claim 1)

A. A women's garment covering at least the bust portion of a woman, comprising:

B. a cup member covering at least the bust portion of the woman;

C. left and right front-body members disposed on the front-surface side of the cup member in a state separated from the cup member,

the left and right front-body members being provided from the respective left and right underarm portions of the bust portion to a central portion of the lower bust while covering the sides of the bust; and

D. a plurality of connecting members provided so as both to connect the left and right front-body members to each other near the central portion of the lower bust and to permit adjustment of the connecting width of the left and right front-body members,

E. the women's garment being characterized thereby.

2. Infringement Analysis (First-Instance Judgment / Tokyo District Court, 2021 (Wa) No. 18262 [Women's Garment] <Presiding Judge Kokubu>)

First-instance judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92632.pdf

The sixth edition of Kojien sets out two meanings of the term "tomoni": (i) "as one; together; in company; alike" and (ii) "at the same time."

The Defendant (the alleged infringer) alleged that, when Kojien sets out two meanings, the meaning listed first is the more general meaning, but this allegation was not accepted.

The Tokyo District Court stated: "There is insufficient evidence to establish that the sixth edition of Kojien adopted an editorial policy of listing meanings beginning with those in broad and general use. Further, ... the items specifically exemplified as 'connecting members' in the specification ... are inconsistent with the Defendant's ... construction. ..." It construed the claim term "tomoni" in the patented invention to have meaning (ii), "at the same time," and found infringement. (The patentee prevailed.)

(Excerpt from the Holding / First-Instance Judgment)

The Defendant alleges that, with respect to "tomoni" in Limitation D, because, when a dictionary is compiled, the meanings of each word or phrase are listed beginning with those in broad and general use, the term should have the meaning listed first in the sixth edition of Kojien, namely, "as one;

together; in company; alike." However, which meanings of a word or phrase are given priority in the description is considered to depend on the editorial policy of each dictionary, and ... there is insufficient evidence to establish that the sixth edition of Kojien adopted an editorial policy of listing meanings beginning with those in broad and general use. Further, ... each item specifically exemplified as a "connecting member" in the specification at issue is such that its connecting width cannot be adjusted unless the connecting members are disconnected from each other, and is therefore inconsistent with the Defendant's proposed construction of "tomoni." ...

3. Invalidity Analysis (Although Held Untimely, It Was Nevertheless Considered.)

Grounds for invalidity alleged by the Appellant in the court of first instance

- **Lack of novelty and inventive step based on Otsu 8 as the primary reference**
- **Lack of inventive step based on Otsu 9 and Otsu 10 as secondary references**

Grounds for invalidity first alleged by the Appellant on appeal

- **Lack of novelty and inventive step based on Otsu 31 to 33 (U.S. patent documents)**

<u>The Appellee's Arguments on Untimeliness and the Intellectual Property High Court's Determination</u>

1. The Appellee's argument: There was a time at which it should have been alleged in the court of first instance

- **On August 31, 2022, at a procedural session, the court disclosed its preliminary view on infringement.**
- **It was possible to allege the new grounds for invalidity by that time.**

2. The Appellee's argument: They were neither submitted nor alleged at all in the court of first instance

- **“The Appellant did not even submit Otsu 31 to 33 through the end of the proceedings.”**
- **“Nor did it make any allegations of invalidity based on those documents.”**

3. The Appellee’s argument: There were no circumstances making the allegation difficult

- **“There are no circumstances suggesting that it was difficult to allege an invalidity defense based on the documents Otsu 31 to 33.”**

4. The court’s determination: Delay in concluding the proceedings was not established in this case

- A change in the level of court or in counsel did not justify the late submission. However, the Appellee had responded in the alternative, and the proceedings closed without a further response from the Appellant. To that extent, the court did not find that consideration would delay the conclusion of the proceedings.
- **5. Conclusion**

The failure to make the allegation in the court of first instance, despite being able to do so, was held “untimely.” However, delay in concluding the proceedings was not established, and the court addressed the invalidity grounds on their merits.

6. “It cannot be said that it would delay completion of the proceedings”

Because a response to the grounds for invalidity had been made and oral argument was concluded without any further response, the court held that it could not be said that consideration of the grounds would delay completion of the proceedings and therefore decided the invalidity issues.

(Excerpt from the Holding / Appellate Judgment (This Judgment))

First, in examining whether this constitutes an untimely allegation or defense, the Appellant’s new allegation of grounds for invalidity in this appellate instance was made in the statement of reasons for appeal dated February 6, 2024. In a patent infringement action, an invalidity defense may be alleged

without awaiting finalization of an invalidation decision in a patent invalidation trial, in order to resolve a dispute concerning patent infringement as promptly as possible within the patent infringement proceedings. Because the defense is made within civil litigation proceedings, which are separate from a patent invalidation trial, it should be dismissed as an untimely allegation or defense when, in light of the course of the proceedings, it would unduly delay the proceedings.

On that basis, reviewing the course of the proceedings in the court of first instance, the Appellant, which was the first-instance Defendant, denied in its answer dated October 22, 2021 and submitted on October 27, 2021 that the Appellee's product satisfied the limitations of the invention at issue, and alleged a ground for invalidity based on lack of inventive step, using Otsu 8 as the primary reference and combining it with well-known art or using Otsu 9 as a secondary reference. After receiving the Appellee's response and other submissions, the Appellant added, in Preparatory Brief (3) dated March 18, 2022, a ground for invalidity based on lack of novelty over Otsu 8. After receiving the Appellee's further response, it additionally alleged, in Preparatory Brief (4) dated May 27, 2022, a ground for invalidity based on lack of inventive step, using Otsu 8 as the primary reference and Otsu 10 as a secondary reference. In response to the Appellee's arguments on that point, it further replied in Preparatory Brief (5) dated August 29, 2022.

Then, on the premise that the parties had fully presented their allegations and evidence on infringement, in a preparatory proceeding conducted by web conference on August 31, 2022, the court disclosed its preliminary view that the proceedings would move to damages (the progress table for the preparatory proceeding on August 31, 2022 states in the "result of discussion" column: "Both parties: allegations and proof regarding infringement have been completed"; and "Presiding Judge: hereafter, the proceedings will address damages"). Proceedings on damages then continued. At the oral-argument hearing held on September 22, 2023, the Appellant stated that it

had no further allegations or evidence, the oral argument in the court of first instance was concluded, and the original judgment was rendered.

In light of this course of proceedings in the court of first instance, the new allegation of grounds for invalidity in this appellate instance constitutes an untimely allegation or defense, and the Appellant was grossly negligent in delaying its submission. It would therefore ordinarily have to be dismissed. However, the Appellee has, albeit in the alternative, responded to the grounds for invalidity submitted in this appellate instance, and the oral argument in this appellate instance has been concluded without any further responsive allegation by the Appellant. To that extent, it cannot be said that considering the grounds would delay completion of the proceedings; therefore, the court will decide them below. ...

4. Some Observations

The course of allegations and proof in the court of first instance was ordinary for a patent infringement action. Thus, if, under the reasoning of this judgment, new grounds for invalidity "made in the statement of reasons for appeal" are held untimely, it may in substance become impossible to make any new allegation beginning in the appellate instance.

In the Ichitaro case (discussed below), the assertion of a new ground for invalidity beginning on appeal was permitted because the first-instance proceedings were short and the new primary reference was a foreign-language document. In this case, however, the assertion of a new ground for invalidity using the invention in Otsu 31, an English-language document, as the primary reference was held, in principle, to be untimely.

The Appellee argued that "the Appellant did not even submit Otsu 31 to 33 through the end of the proceedings." In response to that argument, one might think they should simply have been submitted and alleged even after disclosure of the first-instance court's preliminary view. Yet another Intellectual Property High Court judgment held an allegation untimely

because it had been dismissed as untimely in the first instance; there is therefore no way out.

Separately from whether an allegation is untimely, one possible strategy for obtaining an appellate holding, as in this judgment, that "it cannot be said that it would delay completion of the proceedings" is to make all allegations in the statement of reasons for appeal and then refrain from making a further response to the Appellee's response. Because the proceedings in this case followed that course, the invalidity issues were decided on the ground that "it cannot be said that it would delay completion of the proceedings."

If so, when a new ground for invalidity is alleged in the statement of reasons for appeal, the Appellee could adopt a strategy of not responding to its substance and alleging only untimeliness. However, although it would ordinarily be difficult to imagine that the appellate court would close oral argument at that point, uphold the invalidity defense, and reverse in favor of the alleged infringer, a strategy of making no response entails risk. In many cases, therefore, the Appellee will likely respond on the merits as a precaution.

Regarding allegations first made on appeal and untimeliness, many prior Intellectual Property High Court judgments did not find an allegation untimely if made in the statement of reasons for appeal, but found it untimely if made in a preparatory brief after that statement; this judgment is extremely strict. A comprehensive strategy should be formulated while bearing in mind that other Intellectual Property High Court judgments have found that new grounds for invalidity alleged beginning on appeal were not untimely.

For example, 2016 (Ne) No. 10100 [Electric Fishing Reel] <Presiding Judge Takabe> involved a correction defense that had been alleged after the court of first instance disclosed its view that the patent was invalid and had been dismissed as untimely. When the correction defense dismissed below was alleged in the statement of reasons for appeal, however, it was not dismissed as untimely.

That judgment held: "In light of the course of proceedings in the court of first instance and this court, it may be said that it would have been desirable to make the correction defense earlier. Nevertheless, because the Appellant, after the original judgment was rendered and advance notice of the trial decision was issued, set out the correction defense in detail in the statement of reasons for appeal and promptly submitted that allegation in this appellate instance, it cannot be said that the Appellant's submission of the correction defense was untimely." This is close to practical sensibilities. Where the first-instance judgment contains an unexpected determination, should not an allegation made on the basis of that determination be permitted on appeal, so long as it is made in the statement of reasons for appeal, at the outset of the appellate proceedings?

[Related Court Decisions Concerning the Timeliness of New Allegations on Appeal]

1. Court decisions addressing the timeliness of allegations made at the outset of the appeal in the statement of reasons for appeal

Intellectual Property High Court, 2024 (Ne) No. 10010 [Women's Garment] <Presiding Judge Nakadaira> (This Judgment)

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93355.pdf

* A new invalidity defense alleged in the statement of reasons for appeal was held untimely. (On this reasoning, nothing new could be alleged beginning on appeal ...)

Supplement: In this case, delay in concluding the proceedings was not established and the invalidity defense was not dismissed. The parenthetical observation is the author's criticism; the judgment does not impose a categorical prohibition on new allegations on appeal.

"The Appellant's new allegation of grounds for invalidity in this appellate instance was made ... in the statement of reasons for appeal. ...

... After receiving the court's disclosure of its preliminary view that the proceedings would move to damages, ... proceedings on damages continued, and ... at the oral-argument hearing, the Appellant stated that it had no further allegations or

evidence; the oral argument in the court of first instance was concluded; and the original judgment was rendered. ... In light of this course of proceedings in the court of first instance, the new allegation of grounds for invalidity in this appellate instance constitutes an untimely allegation or defense, and the Appellant was grossly negligent in delaying its submission. It would therefore ordinarily have to be dismissed. However, the Appellee has, albeit in the alternative, responded to the grounds for invalidity submitted in this appellate instance, and the oral argument in this appellate instance has been concluded without any further responsive allegation by the Appellant. To that extent, it cannot be said that considering the grounds would delay completion of the proceedings; therefore, the court will decide them below. ... The allegation of lack of inventive step is without merit."

Intellectual Property High Court, 2017 (Ne) No. 10055 [Continuous Shellfish Fastening Tool] <Presiding Judge Mori>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-88166.pdf

* Although untimely, the next hearing had been scheduled and completion of the proceedings would not be delayed. ⇒ Not dismissed. ⇒ Lack of novelty.

"It is recognized that the Appellants could have submitted the defense concerning Ground for Invalidity 3 (lack of novelty) no later than January 26, 2017; therefore, it constitutes an 'allegation or defense submitted untimely' (Article 157(1) of the Code of Civil Procedure).

However, at the first oral-argument hearing in this appeal, ... Appellant Shinwa alleged that, before the date on which the patent at issue was deemed filed, it had sold a product satisfying the limitations of each invention at issue and that the patent at issue therefore lacked novelty. At that hearing, a further hearing was scheduled and additional allegations and proof were contemplated. In those circumstances, there was insufficient basis to find that the allegation at that time would delay completion of the proceedings." (* January 26, 2017 was the date on which oral argument in the court of first instance was concluded.)

Intellectual Property High Court, 2023 (Ne) No. 10071 [Chip-Type Fuse] <Presiding Judge Miyasaka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92795.pdf

* An allegation concerning a different claim that had been dismissed as untimely in the court of first instance was also dismissed as untimely on appeal.

“The facts stated in the attached ‘Course Leading to the Addition of the Cause of Action at Issue’ are recognized as the course of proceedings and other matters in the court of first instance leading to the addition of the cause of action at issue. Specifically, at the answer stage (dated February 28, 2022), the Appellee submitted detailed allegations disputing satisfaction of the fourth requirement of the doctrine of equivalents, specifically identifying such publicly known documents as Otsu 1 and Otsu 3. Thereafter, by November of that year, the Appellant and Appellee exchanged two rounds of briefs containing arguments on that issue and fully presented allegations and proof. During that period, the record of the preparatory proceedings included the Appellee’s procedural position that it would ‘submit a responsive brief focusing on the fourth requirement of the doctrine of equivalents,’ and satisfaction of the fourth requirement was recognized as at least one of the central issues in the case. At a discussion by web conference on November 28, when allegations and proof on infringement had reached a preliminary stopping point (a discussion in written preparatory proceedings; the same applies below), the court disclosed to both parties its preliminary view that the Appellee’s product did not fall within the technical scope of Invention 1 at issue, and the parties were to consider settlement. Settlement negotiations soon failed. At the discussion on January 27, 2023, the Appellant stated that it would submit a preparatory brief setting out a further response concerning the arc-extinguishing action (note: relating to the second requirement of the doctrine of equivalents), supplementation of its prior allegations, and other matters. Nevertheless, in a preparatory brief dated February 27, 2023, the Appellant then alleged the addition of the cause of action at issue. In response, by a preparatory brief dated April 13, 2023, the Appellee moved for dismissal as an untimely method

of attack or for a ruling refusing the amendment of the action as one that would substantially delay the proceedings.

... On the basis of the foregoing, first examining whether addition of the cause of action at issue was "untimely," the Appellant sought that addition because, as long as the issue was whether Invention 1 at issue under Claim 1 fell within the technical scope, it was highly likely, in relation to the publicly known documents submitted by the Appellee, ... that the fourth requirement of the doctrine of equivalents (non-equivalence to publicly known art, etc.) would be held unsatisfied; the Appellant therefore attempted to satisfy the fourth requirement by putting at issue Invention 2 under Claim 3, which includes the additional configuration at issue. However, ... the Appellee's allegation disputing the fourth requirement of the doctrine of equivalents had already been submitted in detail and with specificity at the answer stage, and it was possible to consider addition of the cause of action at issue as a countermeasure. Thereafter, the parties exchanged two rounds of briefs over approximately nine months and fully presented allegations and proof on this issue. The Appellant then suddenly added the cause of action at issue after disclosure of the court's preliminary view and despite having itself stated the procedural position that it contemplated only a supplemental submission. It is clear that this constituted submission of an untimely method of attack."

Intellectual Property High Court, 2017 (Ne) No. 10072 [Personal-Network Relationship Registration System] <Presiding Judge Tsuruoka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-87419.pdf

* An allegation under the doctrine of equivalents made at the first appellate hearing was dismissed as untimely.

Cf. 2017 (Ne) No. 10029 and 2015 (Ne) No. 10076, in which the allegations were not dismissed.

"At the first oral-argument hearing in this appellate instance, ... this Court dismissed the allegation of infringement under the doctrine of equivalents as

an untimely allegation or defense. The reasons are as follows. ... The Appellant should naturally have anticipated from the outset that the conclusion on satisfaction or non-satisfaction of the limitations could change depending on the claim construction regarding ... and the manner of internal processing by the Appellee's server. Accordingly, the Appellant had ample opportunity, at the issue-organizing stage in the court of first instance, to consider whether to allege infringement under the doctrine of equivalents even in the alternative and to make that allegation as necessary. (In light of the actual use of planned proceedings in patent infringement litigation, it is reasonable to view the matter in this way; and at least no objective circumstances preventing the Appellant from making the allegation are recognized.) Nevertheless, the Appellant did not make the allegation at the issue-organizing stage below, stated that there were 'no further allegations or proof regarding infringement,' and allowed the issue-organizing procedure to conclude. In these circumstances, the Appellant's addition of an allegation of infringement under the doctrine of equivalents in this appellate instance, as stated above, was clearly untimely even though made before the first oral-argument hearing, and the Appellant is found to have acted intentionally or with gross negligence in that regard. ..."

Cf. Intellectual Property High Court, 2015 (Ne) No. 10076 [Circular Table] <Presiding Judge Takabe>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-85463.pdf

* An allegation under the doctrine of equivalents made at the first appellate hearing was not dismissed as untimely (because the appeal was dismissed at the first hearing, meaning the patentee lost).

"The Appellant's allegation above was set out in ... the preparatory brief stating the reasons for appeal, the Appellee also admitted or denied and responded to it, and it could be decided based on evidence already submitted. This Court then ... concluded oral argument at the first appellate oral-argument hearing. Accordingly,

the Appellant's allegation above cannot be found to 'delay completion of the proceedings' (Article 157(1) of the Code of Civil Procedure), and therefore should not be dismissed as untimely."

Cf. Intellectual Property High Court, 2014 (Ne) No. 10111 [Method for Mixing Granular Material and Removing Fine Powder] <Presiding Judge Takabe>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-85366.pdf

* An allegation under the doctrine of equivalents made at the first appellate hearing was held untimely, but was decided.

"In light of the course of the proceedings, including that the issues in the first instance concerned exclusively satisfaction of Limitations 2E and 1B; that the notice of appeal did not state reasons for appeal; that the statement of reasons for appeal did not include ... an allegation of infringement under the doctrine of equivalents or give notice of such an allegation; and that the Appellant's first preparatory brief was submitted only five days before ... the first oral-argument hearing in this appellate instance, the Appellant's allegation of infringement under the doctrine of equivalents must be regarded as untimely. However, because the Appellee also admitted or denied and responded to the allegation, the court will decide below whether infringement under the doctrine of equivalents is established."

Cf. Intellectual Property High Court, 2022 (Ne) No. 10078 [Display Device Capable of One-Handed Support] <Presiding Judge Kanno>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91824.pdf

*** Three correction defenses were alleged in the court of first instance ⇒ a fourth correction defense was alleged in the statement of reasons for appeal; in light of the course of the proceedings, the court stated that it ordinarily would have to be dismissed as untimely. However, because a response had been made, the court decided it.**

“Reviewing the course of the proceedings in the court of first instance, after the invalidity defense alleging that the patent at issue lacked novelty and inventive step was made at the first preparatory-hearing date (November 18, 2019) (Defendant’s Preparatory Brief No. 1), the Appellant submitted, by the third preparatory-hearing date (July 27, 2020), Plaintiff’s Preparatory Brief No. 2 concerning a correction defense based on the second correction. In conjunction with correction requests in the patent invalidation trial, it then submitted Plaintiff’s Preparatory Brief No. 5 dated March 3, 2021 and Plaintiff’s Preparatory Brief No. 6 dated May 27, 2021, setting out a correction defense based on the third correction (those briefs, including corrected versions, were stated at the fourth preparatory-hearing date (December 16, 2021)). The original judgment held that neither the correction defense based on the second correction nor that based on the third correction satisfied the correction requirements, and that the patent at issue should be invalidated in a patent invalidation trial. The Appellant then added, in the statement of reasons for appeal, a correction defense based on the fourth correction. In light of this course of proceedings below, the fourth correction constitutes an untimely allegation or defense, and the Appellant was grossly negligent in delaying its submission, so it would ordinarily have to be dismissed. However, the Appellee responded to the correction defense based on the fourth correction, including that the fourth correction does not satisfy the correction requirements. To that extent, it cannot be said that considering the defense would delay completion of the proceedings; therefore, the court will decide it below.”

2. Court decisions in which the allegation was not held untimely on appeal (because, for example, an invalidation decision had issued. ⇒ A similar effect may be expected if proceedings have reached advance notice of the trial decision.)

Intellectual Property High Court, 2018 (Ne) No. 10033 [Aerosol Can Product] <Presiding Judge Otaka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-88388.pdf

* The same ground for invalidity dismissed below was alleged in the statement of reasons for appeal. ⇒ Not dismissed.

"... The commissioned judge in the court of first instance granted the Appellee's motion above and dismissed the Appellant's allegations and evidence relating to the invalidity defense above. The Japan Patent Office, ... finding a violation of the support requirement ... and the existence of the ground for invalidity relating to the invalidity defense at issue, rendered a separate decision invalidating the patent. ...

The Appellant's invalidity defense in this appellate instance is the same in substance as the allegation dismissed below as an untimely allegation or defense because it was submitted after the infringement phase had concluded and the damages phase had begun. However, the Appellant resubmitted it in this appellate instance after a separate decision invalidating the patent at issue had been rendered before conclusion of oral argument below, recognizing the existence of the ground for invalidity relating to the invalidity defense at issue and other matters. It is also recognized that the Appellant set out the invalidity defense at issue in the statement of reasons for appeal and alleged it from the outset of the appellate proceedings. Therefore, submission of the Appellant's invalidity defense in this appellate instance cannot be said to have been untimely. In light of the course of the appellate proceedings, it is also not recognized that submission of the invalidity defense by the Appellant would delay completion of the proceedings. Accordingly, ... the court will not dismiss it as an untimely allegation or defense."

Intellectual Property High Court, 2019 (Ne) No. 10066 [Information Management Program] <Presiding Judge Mori>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-89631.pdf

* The same ground for invalidity that was dismissed below. ⇒ Not dismissed.

In the court of first instance, an invalidity defense based on lack of novelty over the Otsu 14 invention had been dismissed as untimely.

⇒ The first-instance Defendant reasserted in the statement of reasons for appeal, in light of the invalidation decision, the lack-of-novelty defense based on the Otsu 14 invention that had been dismissed as untimely below. The appellate court addressed that invalidity ground on its merits.

⇒ The patentee lost on reversal based on lack of novelty. (★ Three months earlier, the same Second Division of the Intellectual Property High Court had rendered a judgment in the action to rescind the trial decision, 2019 (Gyo-Ke) No. 10109, and had upheld the invalidation decision based on lack of novelty.)

-

3. Other Cases

Intellectual Property High Court, 2016 (Ne) No. 10100 [Electric Fishing Reel] <Presiding Judge Takabe>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-86595.pdf

* A correction defense alleged after the court of first instance disclosed its view that the patent was invalid had been dismissed as untimely.

⇒ When the correction defense dismissed below was alleged in the statement of reasons for appeal, it was not dismissed as untimely.

“The Appellant did not submit a correction defense in the court of first instance before conclusion of the preparatory proceedings, but first alleged it in a preparatory brief submitted after those proceedings had concluded, and it was therefore dismissed by the court of first instance as untimely. (The correction alleged below was identical to the correction in this appellate instance, except for the presence or absence of the words ‘with one hand.’) After the original judgment was rendered on September 8, 2016, the Appellant filed an appeal on September 21. On September 30, advance notice of the trial decision was issued in each patent invalidation trial concerning Patents 1 to 3 at issue. The Appellant therefore set out the correction defense in the statement of reasons for appeal submitted on

November 10 of that year. In light of the course of proceedings in the court of first instance and this court described above, it may be said that it would have been desirable to make the correction defense earlier. Nevertheless, because the Appellant, after the original judgment was rendered and advance notice of the trial decision was issued, set out the correction defense in detail in the statement of reasons for appeal and promptly submitted that allegation in this appellate instance, it cannot be said that the Appellant's submission of the correction defense was untimely. In addition, in light of the content of the correction defense at issue, its submission is not recognized as delaying completion of the proceedings. The court therefore will not dismiss the Appellant's correction defense as untimely."

-

Intellectual Property High Court (Grand Panel), 2005 (Ne) No. 10040 [Ichitaro Case]

Judgment: https://www.courts.go.jp/ip/vc-files/ip/file/10040.pdf

"Whether an allegation or defense should be dismissed under Article 157 of the Code of Civil Procedure as untimely must be determined, in accordance with the specific progress of the litigation, based on whether there were objective circumstances under which it could have been expected to be submitted earlier than it was. Each of the circumstances alleged by the Appellant merely concerns matters unrelated to the specific progress of this litigation concerning the Appellee's claim.

In the court of first instance, only slightly more than two months elapsed from the first oral-argument hearing until oral argument was concluded at the third hearing, and less than four months elapsed even from filing of the action. Thus, the first-instance proceedings were conducted extremely quickly over a short period. Except for certain supplemental portions, the Appellant's new allegations and proof in this appellate instance concerning satisfaction of the limitations and the grounds for invalidity of the patent at issue were basically made together with the statement of the reasons for appeal at the first oral-argument hearing in this

appellate instance, and were submitted at the outset of the appellate proceedings. Turning to the substance of the additional allegations and proof above, the part concerning satisfaction of the limitations merely supplemented, from a somewhat different angle, the Appellant's allegation already made below concerning satisfaction of the limitation (the meaning of 'icon'). The part concerning the grounds for invalidity of the patent at issue was based on newly added documents, but each was an English-language document distributed abroad and had been distributed before the filing date of the patent at issue, which was nearly fifteen years before this action was filed. It was therefore unavoidable that investigating and searching for such publicly known documents would require a certain amount of time. Considering all these circumstances together, the Appellant's additional allegations and proof newly submitted in this appellate instance concerning satisfaction of the limitations and the grounds for invalidity of the patent at issue cannot be said to have been untimely."

Intellectual Property High Court, 2018 (Ne) No. 10044 [Optical Information Reading Device] <Presiding Judge Otaka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-88010.pdf

* A correction defense made four days before the first appellate hearing was dismissed as untimely.

"A correction defense to an invalidity defense should originally be alleged at an appropriate time in the court of first instance. Moreover, although the Appellant could have alleged the correction defense in this appellate instance no later than the deadline for submitting the statement of reasons for appeal, it did not do so and first submitted a preparatory brief setting out the correction defense at issue only four days before the first oral-argument hearing. The correction defense at issue should therefore be regarded as an untimely allegation or defense submitted due at least to the Appellant's gross negligence."

Intellectual Property High Court, 2018 (Ne) No. 10031 [Lower-Limb Garment] <Presiding Judge Takabe>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-88234.pdf

* An invalidity defense made after the deadline for submitting the statement of reasons for appeal was dismissed as untimely.

"... More than one month after ... the deadline for submitting their statement of reasons for appeal, ... the first-instance Defendants submitted ... 'Statement of Reasons for Appeal (3).' ... The addition of the invalidity defense and publicly known-art defense should be dismissed as an untimely allegation or defense under Article 157(1) of the Code of Civil Procedure. ...

In addition to the circumstances above, ... the grounds for invalidity sought to be added in this appellate instance ... number at least six. Addition on appeal of an invalidity defense based on such a large number of grounds for invalidity must be regarded as having been submitted for the purpose of unduly delaying the proceedings. Accordingly, the additional invalidity-defense allegations should also be dismissed under Article 104-3(2) of the Patent Act."

Intellectual Property High Court, 2021 (Ne) No. 10084 [Printed Retroreflective Sheet] <Presiding Judge Miyasaka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-92685.pdf

* A new invalidity defense at the first appellate hearing was dismissed as untimely.

Allegations (i) and (ii) of lack of inventive step first made on appeal were dismissed as untimely!!

- The primary reference alleged below + other secondary references
- An allegation changing the construction of the primary reference alleged below (the determination of the primary-reference invention)

Intellectual Property High Court, 2022 (Ne) No. 10008 [Information Providing Device] <Presiding Judge Otaka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91603.pdf

* Correction defense alleged after conclusion of written preparatory proceedings on appeal ⇒ dismissed as untimely

The court of first instance found lack of novelty, but the patent was maintained in the JPO invalidation trial. The patentee therefore did not allege a correction defense from the outset of the appeal and did not do so during the appellate issue-organizing procedure before conclusion of the written preparatory proceedings, but alleged it after those proceedings had concluded. ⇒ Dismissed as untimely. <Because the sequence was a decision maintaining the patent followed by the original judgment, the correction defense should have been asserted in the alternative.> The alleged infringer changed its comparison with the primary reference so as to cover the decisive difference on which the decision maintaining the patent had found the patent maintainable, and the original judgment found lack of novelty.

Intellectual Property High Court, 2021 (Ne) No. 10094 [... Work Glove] <Presiding Judge Kanno>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91303.pdf

* A correction defense alleged after the court of first instance disclosed its view that the patent was invalid had been dismissed below as untimely. ⇒ Although the correction defense dismissed below was alleged in the statement of reasons for appeal, it was again dismissed as untimely.

“The Appellant alleges in the statement of reasons for appeal that the invention at issue should be corrected (a correction defense), but this Court dismissed the allegation as an untimely allegation or defense. The reasons are as follows. According to the record, the correction defense was made after the court of first instance disclosed its view that the patent at issue was invalid and was therefore dismissed below as an untimely allegation or defense. No

circumstances are found showing that it could not have been alleged at an appropriate time in the court of first instance. The above allegation in this appellate instance is therefore plainly untimely, the Appellant was at least grossly negligent in that regard, and permitting this allegation or defense would plainly cause substantial delay in completion of these proceedings."

Intellectual Property High Court, 2020 (Ne) No. 10044 [Fluid Supply Device and ... Program] <Presiding Judge Tsuruoka>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-90472.pdf

* The invalidity allegation was made after disclosure of the court of first instance's preliminary view, but there was a problem with the organization of allegations below (whether there was a judicial admission).

⇒ Whether and when an invalidity argument should be submitted must be assessed in light of the course of the allegations and evidence on infringement. In this case, there were deficiencies in the first-instance court's organization of the issues, and submission after disclosure of the court's provisional view did not, by itself, make the argument untimely. — Not dismissed.

"Regarding whether the allegations constituted 'untimely allegations or defenses': Invalidity Allegations A, B, and D were made after disclosure of the court of first instance's preliminary view on infringement and were therefore treated below as untimely. However, as already noted in the section concerning infringement, the organization of allegations in the court of first instance concerning satisfaction of Limitation 1C1 (Non-Infringement Allegation (iv)) and satisfaction of Limitations 1A, 1C, 1F3, and 1F4 (Non-Infringement Allegation (v)) was deficient in that issues that should have been treated as disputed were treated as undisputed. The necessity and timing of allegations concerning invalidity cannot be considered separately from the development of allegations and proof on infringement. Therefore, in this case, where further allegations and proof should originally have been presented on infringement, it is not appropriate to characterize the invalidity allegations as untimely merely because they were made after disclosure of the

court of first instance’s preliminary view. The invalidity allegations concerning the above grounds for invalidity were also made promptly after appeal. Accordingly, neither from the perspective of viewing the proceedings below and on appeal as a whole nor from the perspective focused on the appellate proceedings can the first-instance Defendant’s invalidity allegations above be characterized as untimely.”

End

(Appellant) FLORe Co., Ltd.

(Appellee) MIC Co., Ltd.

[Patent ★] A case in which the configuration, etc. of the counterpart subcombination was held not to be a matter specifying the invention. ⇒ No inventive step — Intellectual Property High Court, July 10, 2025; 2024 (Ne) No. 10012 [R Badge, Receiving Device] <Presiding Judge Hibiku Shimizu> —

Original Article URL:
https://www.nakapat.gr.jp/ja/legal_updates_jp/%e3%80%90%e7%89%b9%e8%a8%b1%e2%98%85%e3%80%91%e3%82%b5%e3%83%96%e3%82%b3%e3%83%b3%e3%83%93%e3%83%8d%e3%83%bc%e3%82%b7%e3%83%a7%e3%83%b3%e3%81%ae%e7%9b%b8%e6%89%8b%e6%96%b9%e3%81%ae%e6%a7%8b%e6%88%90/

(1) Criteria for Determining Matters Specifying the Invention in a Subcombination Claim

This judgment has important practical significance because, in determining the gist of a subcombination invention (an invention of a device constituting part of a multifunctional system), it provided guidance on when matters concerning the "other subcombination (counterpart device)" recited in the claim are taken into account as matters specifying the invention (or are ignored).

This judgment confirmed the framework that a description concerning the counterpart device of a subcombination is excluded (ignored) in determining the gist of the invention "where the matters concerning that other subcombination are matters specifying only that other subcombination and do not specify the structure, function, or the like of the subcombination under the claim."

Quotation source: Judgment, p. 17. Here, the other subcombination refers to the counterpart device, and the subcombination under the claim refers to the claimed device itself.
https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94282.pdf

That is, even if the claim wording merely includes a limitation concerning the counterpart device (for example, a high-function mobile phone, an application-download function, or the like), it is excluded (ignored) from determination of the gist of the invention at issue, which is the premise for assessing novelty and inventive step, if it does not affect the structure, function, or the like of the device

under that claim (for example, the receiving device) itself (= if it has no meaning in specifying that device).

(2) Whether the Feature Is Reflected in the "Structure, Function, or the Like" (Comparison with Related Court Decisions)

Viewing this judgment together with the [Related Court Decisions] below (affirmative and negative examples), the dividing line for whether a subcombination claim is recognized as stating a matter specifying the invention may be said to be whether the feature of the counterpart device of the subcombination specifies (limits) the "structure, function, or the like" of the claimed device itself.

(i) Cases in Which the Matter Was Not Recognized as a Matter Specifying the Invention (This Judgment, the "Information Processing Device" Judgment, the "Lock and Key" Judgment, etc.)

In this judgment, whether the mobile phone (the counterpart) had "means for downloading an application and adding a function," a "credit-card function," or the like caused no difference, from the perspective of the receiving device, in the basic operation of receiving transmitted identification information (ID). In other words, where only the "internal circumstances" of the counterpart device or the "semantic content of the information" handled by it are described, and the signal format or physical shape at the interface between the two devices does not change, that description is excluded from the gist of the invention.

The "Information Processing Device" judgment discussed below held that the statement concerning the "basis" on which the server extracts information did not specify the content of the information-processing device's publication-notification means. In the "Rotary Disc Tumbler Lock and Key" judgment, the invention was identified by the matters specifying the key itself. Adding limitations concerning the lock did not limit the key itself and therefore did not constitute a correction for narrowing the claims or another permitted purpose. The latter decision thus also concerns the requirements for correction.

(ii) Cases in Which the Matter Was Recognized as a Matter Specifying the Invention (the “Waste Storage Device” Judgment, the “Liquid Container” Judgment, etc.)

By contrast, in the “Waste Storage Device” judgment discussed below, the existence of the rotating device directly determined the engagement structure and the manner in which the cassette was supported. In the “Liquid Container” judgment, the light-emitting portion of the ink container and the light-receiving portion of the printer body cooperated as a system, and one directly controlled or detected the operation of the other.

As the author’s synthesis of these cases, where the configuration of the counterpart device of a subcombination “necessarily defines” the configuration of the claimed device itself (where there is physical fitting or an inseparable interaction as a system), it is recognized as a matter specifying the invention.

(3) Practical Guidance

In light of this judgment, in drafting a subcombination claim, merely stating “(the claimed device) communicates with (a counterpart device) having the configuration ...” entails a risk that the matter will not be regarded as specifying the invention because it does not specify (limit) the structure, function, or the like of the claimed device itself.

For effective acquisition and enforcement of patent rights, it is useful to claim the “reflection” in the structure and function of the claimed device itself corresponding to the characteristic configuration of the counterpart device, such as “what signal processing is performed (decoding, authentication, etc.),” “what physical shape is required (fitting, arrangement, etc.),” and “how timing control changes.”

Going further, where both the claimed device and the counterpart device are manufactured and sold separately, as with a printer and an ink cartridge, one patent-application strategy would be to design them so that each device’s structure and function are specified (limited) by the other device, allowing

subcombination claims to be patented for each, and to consider some technical significance of that structure and function and describe it in the specification.

◆ Judgment Text

[Summary of This Judgment and Some Observations]

1. Claims (Claim 1)

1A. A brake control device used in a vehicle that is a so-called motorcycle and has at least two wheels,

1B. the brake control device being composed of a vehicle-speed detection device, a vehicle-behavior detection device, an ECU (control unit), and a braking device;

1C. the vehicle-speed detection device being a wheel-speed sensor and obtaining vehicle traveling speed from a detected signal;

1D. the vehicle-behavior detection device being a sensor that detects states in left and right roll directions and left and right lateral directions relative to the traveling direction, and obtaining bank angular velocity (Ψ) and lateral

acceleration (Gken) from the detected signal;

1E. the ECU performing calculation of detected signals, calculation of a target braking force according to vehicle behavior, and issuance of a braking command to the braking device;

1F. as the signal calculation, at least having a method of deriving corrected lateral G (Ghosei), obtained by performing a calculation that removes the effect of roll on an acceleration sensor that detects lateral acceleration;

1G1. the braking device being a mechanism that decelerates the vehicle in response to a braking command from the ECU;

1G2. having means for engine braking and for increasing and decreasing pressure on a brake disk;

1H. in the vehicle, vehicle behavior being determined based on a combination of the bank angular velocity (Ψ) and the corrected lateral G (Ghosei); and

1I. a target braking force according to the vehicle behavior being determined, braking being performed at the wheels, and behavior in the roll direction being suppressed by braking, the vehicle brake control device being characterized thereby.

2. This Judgment

(1) Summary of This Judgment

This judgment held that the description in the detailed description of the invention concerning the "method of deriving ... lateral G," a parameter in the claims, was erroneous, rejected the Plaintiff's (patentee's) allegation that the

description contained a correctable clerical error, and denied compliance with the support requirement.

Paragraph [0073] of the specification states the formula "Ghosei = Gken − (Ψ·Rhsen)" (Formula A). The judgment pointed out that, although Ψ is understood as bank angular velocity and Rhsen as the height of the sensor position, this formula subtracts velocity from acceleration, so the dimensions do not agree and the formula has no meaning in physics. In other words, because Formula A is physically invalid, the court held that a person skilled in the art could not actually use it to derive corrected lateral G.

The Plaintiff alleged that Formula A contained an error and should be corrected to Formula A′ by correcting Ψ in the formula to (the symbol Ψ with a dot above it), which represents bank angular acceleration. The judgment held, however, that because the specification at issue consistently used bank angular velocity Ψ throughout, and correcting it to acceleration would create portions inconsistent with other descriptions and render them incomprehensible, the specification could not be understood as uniquely supporting the alleged correction of the clerical error; therefore, the correction alleged by the Plaintiff could not be assumed.

"Although a person skilled in the art can understand that there is some error because the terms in Formula A have different dimensions, the method of resolving the problem of different dimensions is not limited to the correction alleged by the Plaintiff, and there is insufficient evidence to establish that, from the content of Formula A and other matters, a person skilled in the art would understand that there is no method other than correction to Formula A′ for resolving the problem of different dimensions. Further, if the portions of the specification at issue concerning Formula A are corrected so as to be consistent with the correction of Formula A, it is recognized that the purport of descriptions that previously presented no problem becomes incomprehensible or inconsistent. In light of these circumstances, it cannot be

said that the specification at issue would be understood as showing that Formula A is an erroneous description of Formula A′. Accordingly, the Plaintiff's allegation, which is premised on Formula A being understood as an erroneous description of Formula A′, lacks its premise. ... None of the inventions at issue can be said to be an invention described in the specification at issue, and each fails to satisfy the support requirement."

(2) Excerpts from This Judgment Concerning Violation of the Support Requirement

"(1) Invention 1 at Issue

A. Limitation 1F of Invention 1 at issue is: 'as the signal calculation, at least having a method of deriving corrected lateral G (Ghosei), obtained by performing a calculation that removes the effect of roll on an acceleration sensor that detects lateral acceleration'; Limitation 1H is: 'in the vehicle, vehicle behavior is determined based on the combination of the bank angular velocity (Ψ) and the corrected lateral G (Ghosei), ...'; and Invention 1 at issue is stated to be a vehicle brake control device (Limitation 1I) that appropriately brakes the wheels by means of an ECU using the calculated corrected lateral G (Ghosei), thereby suppressing behavior in the roll direction.

As stated in Section 1 above, Invention 1 at issue solves the problem that conventional control devices for motorcycles and the like could not accurately detect a bank angle, and makes it possible to detect accurate lateral G while the vehicle is traveling. In light of these matters, the 'lateral G (Ghosei)' in Limitations 1F and 1H is recognized as accurate lateral G during banked travel of the vehicle, calculated after, among other things, accurately detecting the bank angle, which could not previously be done.

Because the 'lateral G (Ghosei)' serving as the premise for a braking command is stated to be one 'obtained by performing a calculation that removes the

effect of roll on an acceleration sensor that detects lateral acceleration' (Limitation 1F), 'lateral G (Ghosei)' may be understood as a value obtained by applying a correction to the detected value of an acceleration sensor that detects lateral acceleration. However, the claims of Invention 1 at issue merely state, regarding 'lateral G (Ghosei),' that a 'calculation that removes the effect of roll' is performed on the acceleration-sensor value (Limitation 1F), and do not expressly state what calculation is performed. Accordingly, the claims state only that something capable of solving the conventional problem is used, but do not state the configuration for solving that problem.

B. As stated in Section 1 above, the specification at issue describes the significance of the invention at issue as solving the problem that it had not been possible to detect an accurate bank angle and therefore had not been possible to detect accurate lateral G, thereby making it possible to detect accurate lateral G while the vehicle is traveling.

However, the specification at issue contains no description of how to detect the accurate bank angle that previously could not be detected, or what correction is to be performed to calculate accurate lateral G once that bank angle is known.

On the other hand, as a method of correcting a sensor detection result and calculating lateral G, the specification at issue states Ghosei = Gken − (Ψ · Rhsen) (Formula A) ([0073]). Paragraph [0073] of the specification at issue states that 'Gken' is detected lateral G detected during actual banked travel, that 'Ψ' is bank angular velocity, and that 'Ghosei' is lateral G after correction of Gken using Ψ. (Although 'Rhsen' is not defined in the specification at issue, there are descriptions suggesting that 'hsen' is the distance between the road surface and the sensor ([0050], [0058], [0061], and Figures 8 and 9); a description that 'R is the height at which G sensor #23 is installed on the actual vehicle (Figure 8 bhsen)' ([0063]); and, regarding Ψ · Rhsen, after

substituting 1 for Rhsen, a description stating 'provided, however, that the sensor installation height R is 1 m' ([0074]). It is therefore possible, at least tentatively, to infer that 'Rhsen' is the height of the sensor installation position when the vehicle body is upright.) That 'Ghosei' may be understood as the 'accurate lateral G' referred to as the problem of the invention at issue. Further, from its form, Formula A may be understood as a formula describing a method of calculating 'accurate lateral G' using Gken detected by the 'lateral G sensor' and Ψ detected by the 'angular-velocity sensor,' as stated in the description of the significance of the invention at issue (see Section 1 above).

However, the bank angle is not calculated from 'Ψ · Rhsen,' and Formula A cannot be understood as solving, without calculating the bank angle, the 'various problems caused by the inability to detect an accurate bank angle.' Further, Ghosei and Gken have the dimension of acceleration (length/time^2), whereas Ψ · Rhsen has the dimension of velocity (length/time), and Formula A is therefore plainly meaningless in physics (the entire purport of the oral argument).

The specification at issue contains no description, other than Formula A, of a method for calculating 'accurate lateral G' based on values measured by the sensors.

C. According to the specification at issue, the invention at issue states as its problem that acquisition of 'accurate lateral G' is necessary for vehicle control, but the value of an acceleration sensor detecting lateral acceleration cannot be used as-is; and that, to calculate accurate lateral G from that value, it is necessary to acquire the bank angle but this cannot be done. The invention at issue is stated to solve that problem by calculating accurate lateral G during banked travel of the vehicle. Thus, the calculation concerning 'lateral G (Ghosei),' described as 'performing a calculation that removes the

effect of roll on an acceleration sensor that detects lateral acceleration,' is the core part of solving the problem of the invention at issue.

However, the claims do not recite, with respect to that calculation, a configuration sufficient to solve the conventional problem. The relevant descriptions in the detailed description of the invention in the specification at issue are also as stated in B above. Formula A in the specification at issue ([0073]) may tentatively be understood as the above calculation, but there is no other relevant description. As stated in B above, Formula A does not calculate the bank angle that is identified as the problem of the invention at issue and is, in the first place, physically meaningless. A person skilled in the art could not understand that lateral G (Ghosei) usable for vehicle control can be calculated using Formula A.

D. (a) The Plaintiff alleges that the descriptions in the specification at issue contain errors in the description as shown in the attached comparison table and should correctly read as stated in the 'After Correction' column of that table. With respect to the 'calculation' in Limitation 1F, only Formula A could possibly correspond to it. As found in B above, Formula A subtracts physical quantities having different dimensions and is therefore physically meaningless; a person skilled in the art could understand that Formula A contains some error. On this point, if Formula A were understood, as the Plaintiff alleges, to be an error in the description for

Ghosei = Gken − (Ψ：Rhsen) (Formula A′)

(where 'Ψ' is bank angular acceleration),

the problem that the physical quantities being subtracted have different dimensions would be resolved. However, if the sole purpose is to make the dimensions consistent, the method of correction is not limited to changing it

to Formula A′; other methods of resolution may be conceived, and there is insufficient evidence to establish that such conceivable methods would be unreasonable in light of physical laws, technical common knowledge based thereon, or the like. Therefore, the wording of Formula A alone does not uniquely determine the nature of the error.

(b) The Plaintiff further proposes, when correcting 'Ψ' in Formula A to 'Ψ̈,' to correct not only Formula A but also the other references to 'Ψ' in paragraph [0073] to 'Ψ̈,' and one reference to 'bank angular velocity' to 'bank angular acceleration,' because otherwise a contradiction would arise with other descriptions in paragraph [0073] explaining Formula A.

However, under the correction alleged by the Plaintiff, corrected paragraph [0073] would include the following description: 'This corrected lateral G (Ghosei) is a correction of Gken in Formula (0063) using bank angular acceleration (Ψ̈), and, in relation to Formula (0067), is a condition in which the bank angle does not change. That is, because the term "Ψ̈：Rhsen" in the formula becomes zero, organizing and expressing the two formulas gives ...' Yet even if bank angular acceleration (Ψ̈) is zero, when bank angular velocity (Ψ) is not zero (when banking at a constant speed), the bank angle is changing. Therefore, the fact that the term 'Ψ̈：Rhsen' relating to bank angular acceleration (Ψ̈) is zero does not immediately mean 'a condition in which the bank angle does not change.' If the correction alleged by the Plaintiff is made, the purport of that description becomes incomprehensible. By contrast, if 'Ψ' is not corrected to Ψ̈ at that location, the content is comprehensible.

Similarly, with respect to the following description in paragraph [0073] as corrected by the Plaintiff: '... In this way, data in which the term "Ψ̈：Rhsen" in the formula is set to zero are sometimes called data obtained during steady-state circular turning. ...,' during steady-state circular turning the bank angle is constant and therefore the 'bank angular velocity' is zero. However, even if

a term relating to 'bank angular acceleration' is zero, the 'bank angle' is not necessarily unchanging (a bank angular acceleration of zero also includes banking at a constant speed). Thus, if the correction is made, the purport of that description becomes incomprehensible. On this point as well, the content is comprehensible if the location is not corrected.

Furthermore, Formula A may be regarded as a formula that corrects measured acceleration (Gken) by the value of angular velocity (Ψ), and this most closely follows, as a matter of wording, the method expressly stated in the specification at issue as the basic method for solving the problem, namely, 'solving various problems caused by the conventional inability to detect an accurate bank angle by associating the lateral G sensor and the angular-velocity sensor during travel' (Section 1 above). By contrast, if Formula A is corrected to Formula A′, its content no longer, at least directly, most closely follows that wording.

(c) The Plaintiff further alleges that paragraph [0063], after correction of the errors in the description, shows that an acceleration component (Ψ：Rhsen), which is the effect of a change in roll velocity, is superimposed on detected lateral G (Gken) detected during banked travel, and that the superimposed acceleration component can be removed by subtracting bank angular acceleration (Ψ'), which is the change in velocity of the bank angular-velocity sensor.

However, as explained in B above, the only acceleration mentioned in the specification at issue as an acceleration used for control and obtained by correcting an acceleration value acquired by a sensor is the lateral G (Ghosei) in paragraph [0073]; paragraph [0063] does not describe the method for calculating the 'lateral G (Ghosei)' of Invention 1 at issue. Even if paragraph [0063] could be evaluated as containing a description suggesting that the 'calculation that removes the effect of roll on the acceleration sensor'

according to Invention 1 at issue means subtracting 'Ψ：Rhsen,' paragraph [0073] is more directly a description of a method of calculating corrected acceleration used for control, yet Formula A has the problem explained in B above.

Paragraph [0063] also states the formula

Gken = g · cos Φ · tan ρ − Ψ · Rhen

(after correction, 'Gken = g · cos Φ · tan ρ + Ψ：Rhsen').

Although the corrected formula contains the term 'Ψ：Rhsen,' there is insufficient evidence to establish that, as a matter of physics, 'g · cos Φ · tan ρ,' obtained by subtracting it (adding it in the corrected formula), corresponds to the 'accurate lateral G' that the invention at issue has the problem of calculating, or that knowing this physical quantity would solve the 'various problems caused by the inability to detect an accurate bank angle.' Accordingly, even if the description in paragraph [0063] could be found to be an error in the description as alleged by the Plaintiff, it cannot be understood from that formula alone that subtracting 'Ψ：Rhsen' from 'Gken,' the value detected by the sensor, leads to solving the problem and constitutes the 'calculation that removes the effect of roll' in Limitation 1F.

The Plaintiff's allegations also include an assertion that the descriptions in paragraphs [0061] and [0062] before paragraph [0063] make it possible to understand that the description in paragraph [0063] is an error in the description. However, paragraphs [0061] and [0062] also contain numerous errors in the description, including not only errors concerning 'Ψ' and 'Ψ' but also errors concerning '−' and '+'; it is difficult to find that which portions are errors in the description can readily be understood. From the beginning of its explanation and throughout, the specification at issue was originally written,

basically consistently, on the premise of a formula that adds or subtracts a physical quantity having the dimension of angular velocity (circumferential velocity) to or from a physical quantity having the dimension of acceleration; as explained in D above, even portions not directly related to that formula were written so as not to contradict it. Correcting that formula in such a specification creates contradictions with other portions. In light of these matters, even if a person skilled in the art would understand that there is an error in the specification at issue, it cannot be found that such a person could understand what was originally intended to be written or which portions contain which errors in the description.

(d) As stated above, although a person skilled in the art can understand that there is some error because the terms in Formula A have different dimensions, the method of resolving the problem of different dimensions is not limited to the correction alleged by the Plaintiff, and there is insufficient evidence to establish that, from the content of Formula A and other matters, a person skilled in the art would understand that there is no method other than correction to Formula A′ for resolving the problem of different dimensions. Further, if the portions of the specification at issue concerning Formula A are corrected so as to be consistent with the correction of Formula A, it is recognized that the purport of descriptions that previously presented no problem becomes incomprehensible or inconsistent.

In light of these circumstances, it cannot be said that the specification at issue would be understood as showing that Formula A is an erroneous description of Formula A′. Accordingly, the Plaintiff's allegation, which is premised on Formula A being understood as an erroneous description of Formula A′, lacks its premise. ...”

(3) Supplemental Allegations in the Appellate Judgment, Intellectual Property High Court, 2024 (Ne) No. 10038 <Presiding Judge Honda>

Appellate judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93712.pdf

"Focusing on the 'return angle (ρ)' alleged by the Appellant, the detailed description of the invention states: 'Hybrid sensor 20 compactly incorporates acceleration sensor 21 for detecting acceleration in the traveling direction, bank angular-velocity sensor 22 for detecting roll velocity in the traveling direction, and acceleration sensor 23 for detecting acceleration in the roll direction, and is arranged near the combined center of gravity including the rider's weight. In hybrid sensor 20, both the theoretical bank angle (Φ) occurring during banking and the return angle (ρ) arising from a change in the tire's load-contact point due to banking are present at the same time. (See Figure 8 as well.) A deviation arises between the force generated at sensor 20 (vector A) and the force actually generated (vector A′). Analysis showed that accurate lateral G could be detected from this deviation angle (return angle (ρ)).' ([0060]); and 'The formula can be transformed to Gken = g·cos Φ·tan ρ − Ψ·Rhen, yielding a simple formula. Here, Φ represents the theoretical bank angle of the vehicle, which is also the theoretical inclination angle, and is an angle obtained by time-integrating angular velocity Ψ (rad/sec) detected by bank angular-velocity sensor 22; ρ represents the bank-return angle; and R represents the height at which G sensor #23 is installed on the actual vehicle (Figure 8 bhsen).' ([0063]). However, these descriptions merely show that, as a result of analyzing 'lateral acceleration (Gken),' it can be expressed by a formula using bank angle Φ, bank-return angle ρ, bank angular velocity Ψ, and the like. By contrast, although the claims specify that the 'lateral acceleration (Gken)' of Invention 1 at issue is detected by an 'acceleration sensor that detects lateral acceleration,' they do not specify that it is derived from the calculation Gken = g·cos Φ·tan ρ − Ψ·Rhen based on bank angle Φ, bank-return angle ρ, bank angular velocity Ψ, and Rhen. The Appellant's allegation therefore lacks its premise.

Further, if the ‘lateral acceleration (Gken)’ detected by the ‘acceleration sensor that detects lateral acceleration’ were accurate lateral G, detection of accurate lateral G would be an inherent function of the ‘acceleration sensor that detects lateral acceleration’ and would be unrelated to detection of an accurate bank angle. That would also contradict the problem alleged by the Appellant, namely, ‘(i) enabling detection of “accurate lateral G” during travel by “associating the lateral G sensor and angular-velocity sensor during travel” and “detecting an accurate bank angle.”’ The Appellant’s allegation is therefore an independent view inconsistent with the specification at issue and cannot be accepted.”

Quotation note: The Japanese version retains the original judgment’s wording “小型に内蔵されおり” as written (sic).
Judgment, p. 6.
https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93712.pdf

3. Some Observations

The support requirement is determined by examining “whether the invention recited in the claims is an invention described in the detailed description of the invention and falls within the scope in which a person skilled in the art can recognize, based on the detailed description, that the problem of the invention can be solved, or, even without such description or suggestion, within the scope in which a person skilled in the art can recognize, in light of technical common knowledge as of the filing date, that the problem of the invention can be solved.”

Where no specific challenge is made to the specification, the analysis may proceed on the basis of its description. The absence of a challenge does not, however, automatically establish compliance with the support requirement. It remains necessary to consider whether the claimed scope is within the range in which a person skilled in the art could recognize that the problem can be solved, in light of the detailed description and common general technical knowledge at the filing date.

Where an error in a mechanism, mode of action, example, comparative example, or the generalization across the claimed scope is specifically disputed, allegations and proof appropriate to the issue are required. Case law places the burden of proving compliance with the support requirement on the patent applicant or patentee, and some decisions also address the applicant's allegations and proof concerning enablement (see below). The requirements and the procedural contexts, including refusal, invalidation, and infringement proceedings, must nevertheless be distinguished. They cannot be combined into a single proposition concerning the burden of proof that also encompasses qualification as an invention. The party alleging invalidity for lack of inventive step must substantiate that ground, while a patentee or applicant relying on an unpredictable remarkable effect must address the concrete evidence supporting that effect. What must be alleged and proved about the effect should be considered case by case, separately from the debate between the independent-requirement and overall-consideration theories. There are also decisions in which the reliability of an effect stated in the specification was rejected and inventive step was denied (see below).

An allegation that a description in the detailed description is scientifically erroneous (contrary to a law of nature) is often proved by replication testing, publicly known documents (including documents after the filing date), expert opinions, and the like.

[Related Court Decisions (Cases in Which Patentability Requirements Were Denied Because a Description in the Detailed Description of the Invention Was Erroneous)]

1. Court Decisions Denying the Support, Enablement, or Other Disclosure Requirements

(1) Intellectual Property High Court, 2005 (Gyo-Ke) No. 10645 [Method for Inspecting Sealed Packages] <Presiding Judge Tsukahara>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-33052.pdf

Classification note: This judgment rejected compliance with enablement and clarity. It should not be classified as a ruling on the support requirement under Article 36(6)(i) of the Patent Act.

“The trial decision’s determination regarding violations of Article 36(4) and (6) of the Patent Act ...

Paragraph [0008] states: ‘Accordingly, when electrode 4 from the voltage-output terminal of high-voltage power supply 6 is brought into contact with or close to side portion 31 of sealed package 3, electrically conductive contents 1 in sealed package 3 are charged by the negative or positive potential of the high voltage (0.6 kV to 30 kV) applied to electrode 4, and negative (−) ions or positive (+) ions are generated.’ Figure 1 depicts only negative (−) ions as if generated throughout the contents. However, it is unclear how these ‘negative (−) ions or positive (+) ions’ are generated, and a person skilled in the art cannot readily carry this out. Specifically, if there is no closed circuit and no displacement current flows, or if charge does not move along side portion 31 of sealed package 3, it is unclear from where the charge for generating negative (−) ions or positive (+) ions is supplied. If negative (−) ions or positive (+) ions are generated in the contents without charge being supplied from outside the contents, this violates the law of conservation of charge.

...

Court’s Determination

...

As in the invention of the application, “bringing ... a single electrode 4 into contact with or close to side portion 31 of sealed package 3 ... and charging contents 1 in sealed package 3 through electrically insulating coating 2” violates the law of conservation of charge and cannot be realized by anyone. Such an invention must therefore be regarded as unclear, and the detailed description of the invention in

the specification of the application cannot be said to describe the invention clearly and sufficiently to such an extent that a person skilled in the art can carry it out. ...”

(2) Intellectual Property High Court, 2021 (Gyo-Ke) No. 10094 [PCSK9 (Second Litigation)] <Presiding Judge Kanno>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-91751.pdf

* Successfully proved that the technical significance of the invention at issue (as alleged by the patentee) did not hold true!!

⇒ Support requirement not satisfied.

“... The technical significance of the invention at issue lies in specifying that an antibody competing with the 31H4 antibody has the functional characteristic of being an antibody that neutralizes binding between PCSK9 and the LDLR protein by the same mechanism as the 31H4 antibody. ... In the absence of any particular explanation of a mechanism supporting that antibodies of this kind in general exhibit functional characteristics similar to the 31H4 antibody, it cannot be said that ‘an antibody that competes with the 31H4 antibody for binding to PCSK9’ in the invention at issue ‘exhibits functional characteristics similar’ to the 31H4 antibody. ...

A person skilled in the art would find it difficult to understand that an antibody competing with the 31H4 antibody is a binding-neutralizing antibody.

... Dr. [name omitted] expressed the opinion that “it is certainly erroneous to say that all antibodies competing with the 31H4 antibody ... would have the effect of neutralizing binding.” ... According to the foregoing, neither Invention 1 nor Invention 5 at issue is recognized as complying with the support requirement.”

(3) Intellectual Property High Court, 2016 (Gyo-Ke) No. 10064 [Polyvinyl-Alcohol-Based Polymer Film] <Presiding Judge Mori>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-86905.pdf

* It could not be recognized that the problem could be solved by every substance falling within the invention, regardless of type.

* Although the detailed description stated, “The inventors ... found that the above objective is achieved by a PVA-based polymer film having a pH within a certain range when dissolved in water ...,” the court held that the mechanism could not be recognized.

“... Even when a person skilled in the art encounters the disclosure that, in an example adopting the lauric-acid diethanolamide mixture at issue as the surfactant, setting the numerical range for the content of the nonionic surfactant at ‘0.3 parts by mass’ and setting the numerical range for the pH of the PVA-based polymer film at ‘3.6 to 6.2’ produced an effect of suppressing yellowing in a 30°C long-term storage test and an 80°C short-term storage test, it cannot be recognized that the person skilled in the art could understand that, for any ‘nonionic surfactant (B)’ of Corrected Invention 1 at issue regardless of its type, setting the numerical range for the content of the nonionic surfactant at ‘0.001 to 1 part by mass’ and setting the numerical range for the pH of the PVA-based polymer film at ‘2.0 to 6.8’ would solve the problem of Corrected Invention 1 at issue, namely, providing a PVA-based polymer film capable of suppressing yellowing during long-term storage at room temperature. Accordingly, Corrected Invention 1 at issue exceeds the scope described in the corrected specification at issue in such a manner that a person skilled in the art having the technical common knowledge as of the filing date could recognize that the problem of Corrected Invention 1 at issue can be solved, and cannot be said to comply with the support requirement prescribed in Article 36(6)(i) of the Patent Act.”

(4) Intellectual Property High Court, 2015 (Gyo-Ke) No. 10201 [Beverage in a Container] <Presiding Judge Shimizu>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-86483.pdf

* The problem was specifically identified ⇒ Support requirement not satisfied.

The mechanism for solving the problem could not be read from the examples.

* Although the detailed description stated, “The inventors found that a beverage whose appearance is maintained with little change in color tone even after long-term storage is obtained by causing specified amounts of alcohols to be contained together with isoquercitrin and its sugar adducts and further adjusting the pH within a specified range,” the court held that a person skilled in the art could not recognize that mechanism.

“... It cannot be said that a person skilled in the art would understand that, because isoquercitrin and its sugar adducts were blended in addition to L-ascorbic acid under the conditions of the examples and comparative examples in the specification at issue, browning of L-ascorbic acid did not occur (and therefore that changes in color tone caused by browning of L-ascorbic acid were not included in the changes in color tone of the beverages in the examples and comparative examples of the specification at issue). ...

According to the foregoing, in light of the detailed description of the invention in the specification at issue and the technical common knowledge as of the filing date, it cannot be said that a person skilled in the art could recognize that Corrected Inventions 9 to 16 at issue solve the problem of providing a method for suppressing a change in the color tone of a beverage in a container by suppressing changes in the color tone of isoquercitrin and its sugar adducts contained in that beverage.”

(5) Tokyo High Court, 2000 (Gyo-Ke) No. 176 [Continuous Forming and Trimming Method]

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-11944.pdf

* Burden of proof where the specification contains no description

⇒ The court found a description deficiency because the specification's disclosure was insufficient.

(Summary of the holding) A party asserting that the technology recited in the claims is such that a person skilled in the art can readily implement it without further explanation must present sufficient allegations and proof for the court to make that finding. Without them, the specification is treated as deficient.

"The detailed description of the invention must describe the above configuration to such an extent that a person skilled in the art can readily carry it out. ... However, where the matter stated in the claims is technology of such a degree that a person skilled in the art, merely upon encountering the wording, can readily carry it out without any further particular explanation, it is a reasonable construction, in light of the purpose of the above provision, that exceptionally it is not always necessary to describe that explanation in the specification. Nevertheless, if, in an action to rescind a trial decision, it becomes disputed whether the matter stated in the claims is technology of the above degree, then unless the party asserting that it is technology of that degree presents allegations and proof sufficient for even a court, which is not a person skilled in the art, to make that finding, the court has no choice but to treat the specification as deficient. ..."

(6) Intellectual Property High Court, 2013 (Gyo-Ke) No. 10250 [Polyimide Film]

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-85069.pdf

* The applicant bears the burden of proof regarding the enablement requirement.

⇒ (Summary of the holding) Concerning the enablement requirement: The applicant originally bears the burden of allegation and proof regarding compliance

with the enablement requirement. Although the specification at issue lacks specific guidance for reducing the coefficient of thermal expansion, the Defendant (applicant) has presented no specific proof.

"... The specification at issue provides no specific guidance whatsoever on how to control solvent content, temperature conditions, stretching speed, and the like so as to reduce the coefficient of thermal expansion to the level of Invention 9 at issue. Although the burden of allegation and proof regarding the enablement requirement originally rests on the Defendant, which is the applicant, the Defendant makes no specific allegation or proof that a two-component ODA/BPDA polyimide film satisfying the range of coefficients of thermal expansion in Invention 9 at issue can be manufactured. ..."

2. Court Decision Denying Qualification as an Invention

(1) Tokyo High Court, 2003 (Gyo-Ke) No. 166 [... Topical Agent for Treating Atopic Dermatitis] <Presiding Judge Tsukahara>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-9822.pdf

"Although the specification at issue ... describes the results of the clinical trial at issue, it must be said that there is insufficient evidence to establish (i) that the clinical trial at issue was actually conducted, (ii) that the drugs used in the clinical trial were in fact ... the topical ointment and topical cream, and (iii) that the results of the clinical trial were accurately stated in the specification at issue. Further, even considering the various points alleged by the Defendant other than the clinical trial at issue, there is insufficient evidence to establish that the drug at issue has a therapeutic effect. It therefore cannot be inferred that the technical content (technical means) of the invention at issue can produce the intended technical effect. The subject matter asserted to be the invention at issue is thus incomplete as an invention, does not constitute an 'invention' under the introductory clause of Article 29(1) of the Patent Act, and cannot be patented. ..."

3. Court Decision Denying Inventive Step (Unlike the First Judgment, the Unpredictable Remarkable Effect Was Denied)

(1) Intellectual Property High Court, 2012 (Gyo-Ke) No. 10419 [Carvedilol (Second Judgment)] <Presiding Judge Shitara>

Judgment: https://www.courts.go.jp/assets/hanrei/hanrei-pdf-83666.pdf

⇒ (Although the holding concerns a remarkable effect for inventive-step purposes,) a case in which the effect stated in the examples in the specification was denied by post-filing documents and other evidence. No inventive step.

“As explained above, the results of the U.S. carvedilol study had low reliability due to the short treatment period and other factors. Accordingly, even though the study was discontinued because an advantageous effect over placebo was confirmed in the U.S. carvedilol study, it cannot be said that the invention at issue has a remarkable effect.”

(Plaintiff) Individual

(Defendant) Yamaha Motor Co., Ltd.

2025 (Ne) No. 10001 “Patent Royalties Relating to a Fulvic Acid Production Method” <Presiding Judge Honda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%8d10001%e3%80%8e%e3%83%95%e3%83%ab%e3%83%9c%e9%85%b8%e8%a3%bd%e9%80%a0%e6%96%b9%e6%b3%95%e9%96%a2%e9%80%a3%e7%89%b9%e8%a8%b1%e4%bd%bf%e7%94%a8%e6%96%99%e3%80%8f/

2025 (Ne) No. 10001 “Patent Royalties Relating to a Fulvic Acid Production Method” <Presiding Judge Honda>

⇒ The Appellee’s termination was valid.

The purpose of Article 7 of the agreement is merely to serve as a cautionary provision stating that the three related companies recognize that “among the patents and patent applications covered by the exclusive patent-license agreement executed today, there may be defects that could prevent preservation of registration at the registration authority in the future.”

⇒ It is a provision recognizing the risk of a future unforeseen event, namely, that registration “may not be obtained / may be refused”; it is not a provision exempting liability for a breach of obligation such as the fact that, as of execution of the agreement, authority to grant a license for Patent Rights 1 and 3 at issue had not been obtained from the co-owners (that is, the obligation to grant the license was impossible to perform from the outset).

The principal purpose of the agreement at issue was “assignment of an exclusive patent license + sublicense of a non-exclusive license.” It would be unnatural to derive from the abstract wording of Article 7 an exemption clause broad enough to mean that even a failure to perform this principal obligation “does not constitute a breach of obligation.”

⇒ The “exemption” effect that the Appellant attempted to read into Article 7 was denied.

2023 (Gyo-Ke) No. 10147 [RNA-Dependent Targeted DNA Modification] <Presiding Judge Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c%ef%bc%95%e5%b9%b4%e8%a1%8c%e3%82%b110147%e3%80%90%ef%bd%92%ef%bd%8e%ef%bd%81%e4%be%9d%e5%ad%98%e6%80%a7%e6%a8%99%e7%9a%84%ef%bd%84%ef%bd%8e%ef%bd%81%e4%bf%ae%e9%a3%be%e3%80%91/

2023 (Gyo-Ke) No. 10147 [RNA-Dependent Targeted DNA Modification] <Presiding Judge Hibiku Shimizu>

* Based on the descriptions in the first-application documents as a whole and the technical common knowledge at the filing date, the subject matter should be regarded as having been disclosed in substance; the invention at issue was therefore entitled, under Article 4A of the Paris Convention, to the benefit of the priority claim based on the first application.

(Excerpt from the Holding)

That is, it can be said that, as of the priority date at issue, the requirement of a PAM sequence for DNA cleavage using the CRISPR/Cas system of bacteria (prokaryotes) had been described in many documents and was well known to persons skilled in the art. ... No circumstances are found suggesting that, as of the priority date at issue, it was ordinarily considered that, where DNA is cleaved using that mechanism, a PAM sequence is required only in prokaryotic cells and becomes unnecessary in eukaryotic cells. Accordingly, the fact that, as of the priority date at issue, a PAM sequence must also be present downstream of the target DNA sequence when DNA is cleaved in a eukaryotic cell using the CRISPR/Cas9 system should be regarded as a matter that a person skilled in the art could easily have predicted and confirmed. ... Based on the foregoing, it is reasonable to find that, as of the priority date at issue, the existence and role of PAM sequences in the

CRISPR/Cas9 system fell within the scope of the technical common knowledge of persons skilled in the art, and the Plaintiff's allegation cannot be accepted.

The Plaintiff alleges that, as of the priority date at issue, NLS and codon optimization were not well-known art, among other things. ... Accordingly, it is reasonable to find that, as of the priority date at issue, although NLS and codon optimization were not indispensable technologies in the CRISPR/Cas9 system, implementation of each had been reported in many documents, and each was well-known technology applicable also to the CRISPR/Cas9 system.

However, the mere fact that the inventors had not succeeded in their experiments as of the priority date at issue does not make the disclosure of the invention in the first-application documents insufficient. If it is recognized that the invention at issue could be carried out based on the descriptions in the first-application documents without requiring undue experimentation, the disclosure is sufficient. In life-science experiments, finding optimal conditions by changing experimental conditions is considered part of ordinary experimentation. The emails and other materials identified by the Plaintiff merely reflect exchanges of views on hypothetical possibilities or concerns in the course of ordinary experimentation; those materials alone make it difficult to recognize the existence of a barrier that would require undue experimentation by a person skilled in the art. Rather, after the inventors published the CRISPR/Cas9 system relating to the first priority application in a publication (Otsu 12, June 28, 2012), it is found that many researchers reported, during the short period from October 2012 to January 2013, that the CRISPR/Cas9 system had been applied to eukaryotic cells and had enabled genome editing (see 2-4 above). This shows that a person skilled in the art could carry out the invention at issue based on the descriptions in the first-application documents without undue experimentation.

Tokyo District Court, 2025 (Wa) No. 70003 [Smoking-Article Cartridge] <Presiding Judge Shibuya>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%af70003%e3%80%90%e5%96%ab%e7%85%99%e5%85%b7%e7%94%a8%e3%82%ab%e3%83%bc%e3%83%88%e3%83%aa%e3%83%83%e3%82%b8%e3%80%91%ef%bc%9c/

Tokyo District Court, 2025 (Wa) No. 70003 [Smoking-Article Cartridge] <Presiding Judge Shibuya>

* The right to claim damages was waived during the litigation.

⇒ Although customs proceedings concerning an injunction remained, an action seeking a declaration only that the right to claim damages did not exist lacked an interest in immediate determination.

(Excerpt from the Holding)

It is recognized that, on February 27, 2025, after the actions at issue were filed, the Defendant notified the Plaintiffs that it waived the right to claim damages at issue and would not exercise that right; and, at the second oral-argument hearing in these cases held on April 23 of that year, stated that it waived the right to claim damages at issue and would not allege its withdrawal, revocation, or invalidity, whether within or outside the litigation.

Accordingly, the Defendant admits that it has no right to claim damages against the Plaintiffs. There is no present dispute between the parties on that point, nor can it be said that there is uncertainty or danger concerning the Plaintiffs' rights or legal status. An interest in immediate determination is therefore not recognized.

Each action at issue seeks a declaration that the right to claim damages at issue does not exist. Even if a judgment granting that relief became final, the

determination in the reasons concerning whether the patent right at issue was infringed would not become final with res judicata effect; therefore, the Defendant would not be prevented from exercising against the Plaintiffs a right to seek an injunction based on infringement of the patent right at issue or a claim involved in separate litigation. Rather, to dispute the Defendant's right to seek an injunction against the products at issue based on infringement of the patent right at issue, the Plaintiffs may directly bring an action seeking a declaration that the right to seek the injunction does not exist. Thus, obtaining a declaratory judgment that the right to claim damages at issue does not exist cannot be said to be necessary and appropriate to remove danger or uncertainty concerning the Plaintiffs' rights or legal status.

The Plaintiffs also allege that there is a difference in the amount of filing fees between a case in which the Defendant brings an action seeking partial damages and a case in which the Plaintiffs bring an action seeking a declaration that the right to seek an injunction does not exist. Such a circumstance does not directly affect the interest in immediate determination and does not alter the determination above.

[Trademark / Domain Name] Tokyo District Court, 2023 (Wa) No. 70022, “Legal Force” Case <Presiding Judge Takahashi>

Original Article URL:
https://www.nakapat.gr.jp/ja/note/%e3%80%90%e5%95%86%e6%a8%99%ef%bc%8f%e3%83%89%e3%83%a1%e3%82%a4%e3%83%b3%e3%80%91%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70022%e3%80%8elegal-force%e3%80%8f%e4%ba%8b/

[Trademark / Domain Name] Tokyo District Court, 2023 (Wa) No. 70022, “Legal Force” Case <Presiding Judge Takahashi>

Trademark infringement and other relief were sought with respect to the U.S. corporate Defendant’s provision of services in English under the mark.

⇒ The court denied Japan’s international jurisdiction and dismissed the action on the grounds, among others, that the Defendant’s website was not directed to consumers in Japan.

* Did U.S. attorneys residing in Japan not use it?

— Regarding Japanese customers of the Defendant’s trademark-application services: “It is recognized that the Defendant filed trademark applications for 44 Japanese customers.” The legalforcelaw website stated in English: “LegalForce RAPC represents clients in more than 100 countries worldwide”; “Outside the United States, LegalForce RAPC Trademarkia’s top filing countries are as follows: / (... omitted ...) Japan 97 /”; and “LegalForce RAPC has supported trademark filings in 88 countries worldwide since 2009 / (... omitted ...) Japan.”

“No evidence was found showing that, with respect to ‘AI-based review of contracts and email accounts’ on the Defendant’s website at issue, services were provided to users in Japan.”

⇒ If there had been a person in Japan using the “AI-based review of contracts and email accounts” on the Defendant’s website at issue, would that have changed the conclusion!?

By contrast, with respect to the claim concerning use of a Japanese domain name (.jp), the court recognized jurisdiction because the domain-name administrator was located in Japan.

However, the Defendant had used the name in the United States before the Plaintiff, and automatically directing the domain name to the Defendant’s business website had a legitimate purpose. The court therefore denied both a “purpose of obtaining an illicit gain” and a “purpose of causing damage to another” under the Unfair Competition Prevention Act and dismissed the claim.

Interlocutory Judgment, 2024 (Ne) No. 10034 [Elasto-Plastic Hysteretic Damper] <Presiding Judge Honda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%b8%ad%e9%96%93%e5%88%a4%e6%b1%ba%e3%83%bb%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10034%e3%80%90%e5%bc%be%e5%a1%91%e6%80%a7%e5%b1%a5%e6%ad%b4%e5%9e%8b%e3%83%80%e3%83%b3%e3%83%91%e3%80%91%ef%bc%9c/

Interlocutory Judgment, 2024 (Ne) No. 10034 [Elasto-Plastic Hysteretic Damper] <Presiding Judge Honda>

By interlocutory judgment, the court held that, with respect to houses incorporating the Defendant's Σ-shaped Dampers 5 and 6, the cause of the claim for damages based on the tort of infringement of the patent right at issue (excluding the amount) is well founded (first instance: Tokyo District Court, 2021 (Wa) No. 15964).

Limitation G provides that "the shear portion deforms and absorbs energy when it receives a load from an input." The court of first instance construed "input" as limited to a horizontal force in a specific direction, such as the bridge-axis direction, and found the limitation not satisfied; the Intellectual Property High Court rejected that construction.

According to the corrected claims and corrected specification at issue, Corrected Invention 1 at issue has a configuration in which "a pair of plate-shaped shear portions" are "provided with mutually different orientations" ([0007]) and does not limit the direction of an "input" to the "shear portions" in any way. Accordingly, it is reasonable to construe "input" in Limitation G as encompassing any load externally applied to a "shear portion" and as not being limited to a particular direction.

According to the underlying facts, each web portion included in the

Defendant's dampers "deforms and absorbs energy when it receives a load from an input"; therefore, the Defendant's dampers satisfy Limitation G.

Limitation D: "a pair of plates"

In Defendant's Σ-shaped Dampers 1 to 4, one end of each parallel-plate portion and web portion is welded to a vertical plate portion, and the vertical plate portion is bolted to a column constituting a load-bearing panel. By contrast, the other end of each parallel-plate portion and web portion is directly welded to a steel pipe constituting the load-bearing panel (Defendant's Σ-shaped Dampers 1 to 3) or to channel steel (Defendant's Σ-shaped Damper 4). A vertical plate portion and a steel pipe or channel steel cannot be said to be two thin, flat pieces of metal constituting one set. Therefore, Defendant's Σ-shaped Dampers 1 to 4 cannot be recognized as including "a pair of plates."

The web portion and parallel-plate portion constituting Defendant's Σ-shaped Damper 5 are arranged between two connecting plates, and both ends of the web portion and parallel-plate portion are directly welded to the respective connecting plates. The two connecting plates are rectangular metal plates of the same shape and are disposed on the left and right sides so as to sandwich the web portion and parallel-plate portion. They are therefore recognized as constituting "a pair of plates."

In the load-bearing panel in which Defendant's Σ-shaped Damper 6 is used, the web portion and parallel-plate portion constituting Defendant's Σ-shaped Damper 6 are arranged between two stiffeners, and both ends of the web portion and parallel-plate portion are directly welded to the respective stiffeners. The two stiffeners are rectangular metal plates of the same shape and are disposed on the left and right sides so as to sandwich the web portion and parallel-plate portion. They are therefore recognized as constituting "a pair of plates."

Tokyo District Court, 2024 (Wa) No. 70283 [Reservation Management Device] <Presiding Judge Sugiura>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%af70283%e3%80%90%e4%ba%88%e7%b4%84%e7%ae%a1%e7%90%86%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e6%9d%89%e6%b5%a6%ef%bc%9e/

Tokyo District Court, 2024 (Wa) No. 70283 [Reservation Management Device] <Presiding Judge Sugiura>

In the patented invention at issue, the reservation management device (server), in response to operation of a store terminal, transmits received image data to an image printing device (printer/fax).

Flow: server → printer

Defendant's system: the server sends image data to a pharmacy terminal (PC/tablet), and the pharmacy terminal sends the data to a printer for printing. The server does not communicate directly with the printer.

Flow: pharmacy terminal → printer

An expansive construction under which it is sufficient for the reservation management device to send the data "through another device" lacks support in the specification.

(Excerpt from the Holding)

"According to the wording of the claims, there is no description suggesting that the reservation management device may transmit image data to the image printing device through another device. The specification at issue likewise contains no description disclosing or suggesting inclusion of a configuration in which, at a store terminal that has received prescription image data from the reservation management device and displays the image data, the image data are printed by

the image printing device directly from the store terminal through a user's operation of the store terminal, without transmitting a legibility instruction or the like to the reservation management device."

Osaka District Court, 2024 (Wa) No. 4500 [Shopping Payment System] <Presiding Judge Matsuami>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e5%a4%a7%e9%98%aa%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%af4500%e3%80%90%e8%b2%b7%e7%89%a9%e6%b1%ba%e6%b8%88%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c%e6%9d%be%e9%98%bf/

Osaka District Court, 2024 (Wa) No. 4500 [Shopping Payment System] <Presiding Judge Matsuami>

The “camera” of the patented invention at issue acquires an image (video image) in order to identify a product.

By contrast, the “barcode scanner” in the Defendant’s product acquires barcode information (a code), not an image, and performs a different function.

⇒ Limitation not satisfied.

The patented invention at issue requires linking the camera and a “customer terminal” by means of a specific ID or the like.

However, the Defendant’s product establishes a correspondence between the store terminal (cart) and only a membership number (customer identification information), and does not technically “link” the customer terminal itself.

⇒ Limitation not satisfied.

The patented invention at issue treats as an “abnormality” a case in which a product cannot be identified from a camera image.

By contrast, the Defendant’s product detects an abnormality based on a “change

in the weight sensor” when an item is placed in the basket without scanning, not based on success or failure of image identification.

⇒ Limitation not satisfied.

(Excerpt from the Holding)

According to the description in the specification at issue and the ordinary understanding of a person skilled in the art, the “camera” of the invention at issue is recognized as a device that uses an optical system to form an image of a subject on the surface of an imaging element or the like (see Kojien, seventh edition). With respect to the barcode scanner in the Defendant’s product, there is insufficient evidence to establish that it performs such a function. Further, in general, a barcode scanner acquires “information” embodied in a barcode and does not acquire an “image,” that is, does not perform imaging. The barcode scanner in the Defendant’s product therefore does not constitute the “camera” in Limitation B.

...

The Plaintiff’s allegation concerning the technical significance of “linking” in Limitation D is unclear. Invention 1 at issue includes as elements that the camera transmits imaging information concerning a product to be purchased to the management server (Limitation E), and that the management server notifies the customer terminal of the product-identification result (Limitation F). “Linking” is therefore construed as establishing, as a premise, a correspondence between the camera and the customer terminal. On this point, the Plaintiff does not dispute that, in the Defendant’s product, the processing under Limitation F is performed by the “store terminal” (and is not performed by the customer terminal). Further considering, as stated above, that shopping can be completed normally in the Defendant’s product even without a customer terminal (that the customer terminal is not an indispensable configuration for realizing the technical concept of the Defendant’s product), it is recognized that the store terminal establishes a

correspondence only with customer identification information (the membership number). Beyond that, the “customer terminal” and the barcode scanner of the store terminal are not recognized as being “linked” in the sense described above.

2024 (Ne) No. 10068 [Leak-Preventing Sealing Material] <Presiding Judge Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10068%e3%80%90%e3%82%82%e3%82%8c%e9%98%b2%e6%ad%a2%e7%94%a8%e3%82%b7%e3%83%bc%e3%83%ab%e6%9d%90%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%ef%bc%9e/

2024 (Ne) No. 10068 [Leak-Preventing Sealing Material] <Presiding Judge Hibiku Shimizu>

<The same issues and the same conclusion as in the first-instance judgments, Osaka District Court, 2022 (Wa) Nos. 9112 and 11173 <Presiding Judge Matsuami>.>

“The diameter of the warp or weft of the ground yarn is made smaller than the diameter of the pile yarn” (Limitation 1C)

⇒ “Diameter” is measured in the original-yarn state, not in the product state.

⇒ Limitation not satisfied.

“In the state of use, the direction of the arrangement is inclined relative to the rotational direction of the rotating body such that the direction of the arrangement forms, relative to the rotational direction, an angle ϕ greater than the predetermined angle θ” (Limitation 1E)

The Defendants were not involved in how the Defendant’s product was installed in toner cartridges manufactured by Canon or its affiliates; the installation position and method were determined by Canon. There was insufficient evidence to establish that Canon installed the Defendant’s product at angle θ < angle ϕ, and there was no proof that installation by a different method or use was not economic, commercial, or practical.

Accordingly, there was insufficient proof that the Defendant's product was an article used exclusively for the production of an article infringing the patent at issue (Article 101(i) of the Patent Act), and the Plaintiff's allegation of indirect infringement could not be accepted.

(Excerpt from the Holding)

The specification at issue includes descriptions concerning the "diameter" of yarn in the original-yarn state and the relative magnitudes thereof, such as: "Figures 4 and 5 each schematically show an example in which yarn having a larger diameter than ground warp yarn 21 and ground weft yarn 22 is used as pile yarn 4 ..." (paragraphs [0043], [0033], [0050], and [0052]). As discussed below, it is reasonable to construe "diameter" as synonymous with "thickness" indicated by methods generally used to refer to the "thickness" of fibers. Because the "diameter" of each yarn in the original-yarn state is uniform, the meaning of the "diameter" of each yarn can be understood unequivocally, and on that basis the relative "magnitudes" of the "diameters" of the respective yarns can also be compared. Accordingly, it is reasonable to construe "diameter" and the relative "magnitudes" thereof in Limitation 1C of Corrected Invention 1 at issue as meaning the "diameter" and relative "magnitudes" of yarn in the original-yarn state. D. According to the technical common knowledge in paragraph (3) above, with respect to "thickness," an important property of fibers, methods indicating fiber thickness by weight per unit length, such as denier, are generally used. Where fibers are made of different materials and have different specific gravities (densities), their thicknesses cannot immediately be compared using denier values, but it is recognized as technical common knowledge that cross-sectional areas can readily be calculated and compared from the fibers' specific gravities and denier values.

Accordingly, "diameter" of the ground-yarn warp and weft and pile yarn in Limitation 1C of Corrected Invention 1 at issue means the "thickness" of each yarn

in the original-yarn state as indicated by a generally used method. It is reasonable, in light of the technical common knowledge of a person skilled in the art at the filing date, to construe the relative “magnitudes” as meaning that the cross-sectional areas of the fibers of the yarns in the original-yarn state are calculated on the premise of that method and the relative magnitudes of the “diameters” are determined. (According to the foregoing, Limitation 1C also cannot be said to be unclear.)

As stated in the original judgment, the Defendants were not involved in how the Defendant’s product was installed in toner cartridges manufactured by Canon or its affiliates; the installation position and method were determined by Canon. There was insufficient evidence to establish that Canon installed the Defendant’s product at angle θ < angle ϕ, and there was no proof that installation by a different method or use was not economic, commercial, or practical. Accordingly, there was insufficient proof that the Defendant’s product was an article used exclusively for the production of an article infringing the patent at issue (Article 101(1)(i) of the Patent Act), and the Plaintiff’s allegation of indirect infringement could not be accepted.

Quotation note: “Article 101(1)(i)” in the preceding translated excerpt reproduces the judgment’s own citation. The correct statutory reference is Article 101(i) of the Patent Act.

Tokyo District Court, 2024 (Wa) No. 70128 [Box-Shaped Vessel] <Presiding Judge Nakashima>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%af70128%e3%80%90%e7%ae%b1%e5%9e%8b%e8%88%b9%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b3%b6%ef%bc%9e/

Tokyo District Court, 2024 (Wa) No. 70128 [Box-Shaped Vessel] <Presiding Judge Nakashima>

* Replacement of a pH sensor having a one-year service life did not constitute manufacture of a new product.

⇒ No infringement by that maintenance activity.

The judgment as a whole found patent infringement with respect to other conduct and awarded JPY 932,500 in damages. The statement of “no infringement” here concerns the replacement activity described above.

(Excerpt from the Holding)

No particular service life was specified for the box-shaped vessel itself in the Defendant’s product. Among the components subject to the maintenance at issue, only the pH sensor had a specified service life of one year and was therefore replaced with a new one during the annual maintenance. ...

Because the maintenance at issue replaced only the pH sensor, whose service life was one year, out of the entire box-shaped vessel, it may be said merely to replace, in accordance with ordinary use, the pH sensor, which is a consumable component of the box-shaped vessel. Moreover, as to the technical function of the pH sensor, Otsu 4 discloses a box-shaped vessel including a stock-solution supply device that automatically adjusts the supply amount of an acid stock solution based on a value detected by a pH sensor. The pH sensor therefore cannot be said to be a configuration relating to the essential part of the invention at issue. In addition, the economic value of the pH sensor is ... extremely small compared with the value

of the entire box-shaped vessel falling within the technical scope of the invention at issue. Under these circumstances, the maintenance at issue cannot be said to restore satisfaction of a configuration relating to the essential part of the invention after the product came to lack that configuration. Accordingly, the maintenance at issue cannot be regarded as newly manufacturing a box-shaped vessel lacking identity with the Defendant's box-shaped vessel, and cannot be construed as constituting "production" under Article 2(3)(i) of the Patent Act.

In response, the Plaintiff alleges that the maintenance at issue changes a product outside the technical scope of the invention at issue (one lacking a pH sensor and therefore lacking Limitation F) into a product within the technical scope, and therefore constitutes "production" under the same item.

However, as explained above, whether an act constitutes "production" should be assessed by considering the circumstances stated above from the perspective of whether the act may be said to restore satisfaction of a configuration relating to the essential part of the invention after the product came to lack that configuration. It is therefore inappropriate to isolate and assess only the act of newly installing a pH sensor after it was absent; the same reasoning applies to the tube alleged by the Plaintiff.

From the foregoing perspective, replacement of the pH sensor alleged by the Plaintiff and replacement of a tube due to deterioration or damage are acts that should be regarded as repair or maintenance itself, and cannot be said to newly manufacture a box-shaped vessel lacking identity. The maintenance at issue therefore cannot be construed as constituting "production" of the invention at issue.

In the first place, the box-shaped vessel alleged by the Plaintiff should be regarded as having already been manufactured before registration of the patent at issue. Even if the Plaintiff did not obtain a benefit relating to that box-shaped vessel,

because it predates registration of the patent at issue, the result is not unreasonable as alleged by the Plaintiff.

2025 (Ne) No. 10004 [Wireless Scuff Plate] <Presiding Judge Nakadaira>

= First instance: Tokyo District Court, 2023 (Wa) No. 70346 <Presiding Judge Nakashima>

* “Adjustable” means capable of being actively varied.

⇒ Limitation not satisfied.

The “control module that, in accordance with the sensing signal, opens and closes the backlight module with the time interval between its on and off states being adjustable” in Limitation F is construed as meaning a control module that can turn the backlight module on and off in accordance with the sensing signal and can also vary the interval after it is turned on in accordance with the sensing signal until it is turned off after a certain time even without another sensing signal, namely, the duration of illumination.

⇒ None of the Appellee’s products was recognized as including a control module that variably adjusts and controls the illumination duration independently of the timing at which magnetism relating to opening or closing is sensed.

Tokyo District Court, 2024 (Wa) No. 70463 [Connecting Fixture for Faucet Elbows] <Presiding Judge Sugiura>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%af70463%e3%80%90%e6%b0%b4%e6%a0%93%e3%82%a8%e3%83%ab%e3%83%9c%e9%80%a3%e7%b5%90%e5%9b%ba%e5%ae%9a%e5%85%b7%e3%80%91%ef%bc%9c/

Tokyo District Court, 2024 (Wa) No. 70463 [Connecting Fixture for Faucet Elbows] <Presiding Judge Sugiura>

The patent application at issue received a decision of refusal, and no specific circumstances suggest that any right was thereafter established for the invention of the application at issue.

Nor can the invention of the application at issue be regarded as included in the subject matter of the agreement at issue.

Further, no specific circumstances suggest any involvement by the Defendant in the patent application at issue or in practicing the invention of the application at issue. Therefore, no tort by the Defendant against the Plaintiff can be found in connection with the application process or practice of the invention. ...

[Design] Osaka District Court, 2023 (Wa) No. 2668, “Vegetated Earth-Retaining Sandbag” Case <Presiding Judge Matsuami>

Original Article URL:
https://www.nakapat.gr.jp/ja/note/%e3%80%90%e6%84%8f%e5%8c%a0%e3%80%91%e5%a4%a7%e9%98%aa%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af2668%e3%80%8e%e5%9c%9f%e7%95%99%e3%82%81%e6%a4%8d%e7%94%9f%e5%9c%9f%e5%9a%a2%e3%80%8f/

[Design] Osaka District Court, 2023 (Wa) No. 2668, “Vegetated Earth-Retaining Sandbag” Case <Presiding Judge Matsuami>

The shape of the “grass” in Registered Design 1 at issue should be identified, even though grass is a natural object, to the extent that it has regularity and reproducibility as a design.

⇒ The appearance of the Defendant’s sandbag, particularly the manner in which the grass grew, differed substantially from Registered Design 1 at issue and was therefore dissimilar.

* With respect to patent infringement (infringement under the doctrine of equivalents) as well, the configuration in which the vegetation sheet is detachably fixed to the bag body “only at the opening-edge portion” is a characteristic part constituting a distinctive technical concept for producing the operation and effect of preventing deformation of the vegetation sheet and the like, and constitutes an essential part of the invention.

⇒ No infringement under the doctrine of equivalents.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93781.pdf

Tokyo District Court, 2024 (Wa) No. 70223 [Game System and Game Program] <Presiding Judge Nakashima>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%af70223%e3%80%90%e3%82%b2%e3%83%bc%e3%83%a0%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e5%8f%8a%e3%81%b3%e3%82%b2%e3%83%bc%e3%83%a0/

Tokyo District Court, 2024 (Wa) No. 70223 [Game System and Game Program] <Presiding Judge Nakashima>

<Non-Satisfaction ((i) Game System)>

Patent 1 at issue requires a configuration that separately stores the quantities of purchased items (first items) and items acquired in the game (second items), and preferentially consumes the first items.

However, in the Defendant's system (LINE: Disney Tsum Tsum), free portions received at purchase and portions acquired in the game are not distinguished but are managed in the aggregate, and the quantity of the second items alone is not stored.

Further, because the two are not distinguished, the system does not have a function of preferentially consuming the first items. It therefore does not satisfy Limitations 1B and 1C.

<Non-Satisfaction ((ii) Game Program)>

Patent 2 at issue is an invention that changes data according to the "cumulative number acquired" of the same item.

However, the relevant value in the Defendant's program (the value relating to an increase in skill level) includes not only the number of items themselves acquired

but also another element, namely, the “number of skill tickets used.” This differs from the pure “cumulative number acquired” specified by the patent.

Supplement: In addition to rejecting literal satisfaction of the limitations, the court found Invention 2 at issue to lack inventive step based on the Otsu 6 and Otsu 39 inventions. This invalidity determination should not be extended to Invention 1 at issue.

Osaka District Court, 2023 (Wa) No. 7855 [Method for Mapping a Physical Hybrid Automatic Repeat Request Indicator Channel] <Presiding Judge Matsuami>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e5%a4%a7%e9%98%aa%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af7855%e3%80%90%e7%89%a9%e7%90%86%e3%83%8f%e3%82%a4%e3%83%96%e3%83%aa%e3%83%83%e3%83%89%e8%87%aa%e5%8b%95%e5%86%8d%e9%80%81/

Osaka District Court, 2023 (Wa) No. 7855 [Method for Mapping a Physical Hybrid Automatic Repeat Request Indicator Channel] <Presiding Judge Matsuami>

* Standard-essential patent (SEP) — abuse of rights

⇒ Claim for injunction dismissed.

1. Defendant’s Negotiating Conduct

The Plaintiff proposed license negotiations on June 12, 2020, and Company G (Google) expressed its willingness on July 7 of that year to take a license on FRAND terms.

The NDA negotiations took a total of five months, and review of 22 claim charts took approximately eight months. However, an NDA accompanies disclosure of trade secrets, and the time required was unavoidable as a period for reviewing numerous patents.

Company G presented a counterproposal (Company G’s First Proposal) and subsequent revised proposals in response to the Plaintiff’s proposal. As of the end of November 2023, no lack of good faith in the negotiations was recognized.

2. Proposals of the Plaintiff and Company G

With respect to the Plaintiff's First Proposal (0.75%), Company G questioned, among other matters, the age of the underlying information, but the Plaintiff did not respond sufficiently. The premise that aggregate royalties should be capped at 27% formed part of the calculation underlying the Plaintiff's First Proposal, not Company G's counterproposal. As to Company G's counterproposal, the court did not regard its calculation method as one that should automatically be excluded from consideration of FRAND terms. It also considered that Company G could not simply be criticized for giving weight to the fact that smartphone prices depend heavily on performance other than communications. The judgment did not, however, determine that 27%, or the royalty rate in Company G's counterproposal, was the proper FRAND rate.

Calculation note: The Plaintiff's First Proposal, using aggregate royalties and its share of SEPs, can be characterized as following a top-down approach. The published judgment redacts parts of the specific calculation underlying Company G's proposals. Those proposals should therefore not be characterized as a top-down calculation using a 27% cap.

⇒ The court found that, even at the relevant time, the end of November 2023, Company G continued sincerely to negotiate toward concluding a license agreement and held that its conduct could not be characterized as bad-faith holdout.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94591.pdf

2025 (Ne) No. 10035 [Vehicle Guidance System] <Presiding Judge Honda> (PXZ v. East Nippon Expressway Company Limited)

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%8d10035%e3%80%90%e8%bb%8a%e4%b8%a1%e8%aa%98%e5%b0%8e%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c%e6%9c%ac%e5%a4%9a%ef%bc%9e-%ef%bc%88pxz-v-%e6%9d%b1/

2025 (Ne) No. 10035 [Vehicle Guidance System] <Presiding Judge Honda>

(PXZ v. East Nippon Expressway Company Limited)

* On the same substantive reasoning by which 2024 (Gyo-Ke) No. 10086 found a violation of the divisional requirements in the grandparent application, this judgment found the limitation not satisfied.

“It cannot be construed that the ‘entrance/exit for ordinary vehicles’ in Limitation 2E includes an entrance/exit for ordinary vehicles of another interchange adjacent to the toll-road tollgate, service area, or parking area at which the vehicle guidance system according to Invention 2 at issue is installed.”

⇒ Limitation not satisfied.

“Guidance” means inviting and leading toward a destination. Where no signs or the like instructing a U-turn exist, a U-turn voluntarily made by the driver cannot be characterized as guidance by the function of the facility.

⇒ “It cannot be said that the Plaintiff’s facilities invite and lead vehicles for which ETC toll collection is impossible onto the route returning them again to a point before the ETC-only entrance/exit.”

⇒ Limitation not satisfied.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94616.pdf

2025 (Ne) No. 10025 [Spindle Motor] <Presiding Judge Nakadaira> ⇒ Claim for Employee-Invention Remuneration

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%8d10025%e3%80%90%e3%82%b9%e3%83%94%e3%83%b3%e3%83%89%e3%83%ab%e3%83%a2%e3%83%bc%e3%82%bf%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%ef%bc%9e-%e2%87%92%e8%81%b7%e5%8b%99/

2025 (Ne) No. 10025 [Spindle Motor] <Presiding Judge Nakadaira>

⇒ Claim for employee-invention remuneration dismissed

(Status as a joint inventor denied)

The core of the Japanese invention at issue lay in forming a particular "communication hole," but the written explanation submitted by the Appellant did not mention that specific configuration and explained a completely different problem and solution. The Appellant's idea therefore did not show the characteristics of the Japanese invention at issue.

(The "Invention/Utility Model Explanation" submitted by the Appellant to the employer merely described a different problem and solution and did not address the specific configuration of the communication hole.)

The U.S. and Chinese patented inventions were based on "Invention A," which provides a through-hole in a sleeve. Because this configuration clearly differs from the Appellant's idea of providing a groove between the sleeve and the housing, they were different from the Appellant's invention.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94960.pdf

Osaka District Court, 2024 (Wa) No. 7193 [Article Conveying Facility] <Presiding Judge Matsuami> ⇒ Claim for Employee-Invention Remuneration Dismissed

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e5%a4%a7%e9%98%aa%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%af7193%e5%8f%b7%e3%80%90%e7%89%a9%e5%93%81%e6%90%ac%e9%80%81%e8%a8%ad%e5%82%99%e3%80%91%ef%bc%9c%e6%9d%be%e9%98%bf%e5%bd%8c/

Osaka District Court, 2024 (Wa) No. 7193 [Article Conveying Facility] <Presiding Judge Matsuami>

⇒ Claim for employee-invention remuneration dismissed.

(i) Process for Establishing and Operating the Rules

Following the 2016 amendment to the Patent Act and publication of the Guidelines, the Defendant consulted with the labor union and explained the reward system and calculation method. When revising the rules, it also solicited opinions from all employees and responded to the Plaintiff's opinion, following a careful and sincere process. These measures were reasonable.

(ii) Dissemination of the Rules

The rules were available for viewing at all times on the internal system and were also explained during new-employee training. The Plaintiff received rewards while employed and was in a position to understand the system.

(iii) Content of the Rules

Under the system, the business division and intellectual-property division evaluated performance rewards based on objective indicators and determined grades, and inventors were given an opportunity to state their views. The rules

were therefore not unreasonable.

(Excerpt from the Holding) “It is questionable whether the reasonableness of the amount of compensation, which in itself might be regarded as entrusted to private autonomy, is naturally included in the viewpoints for determining unreasonableness under Article 35(5) of the Patent Act. Even if it could be one factor for consideration, the matter might be different where, for example, rules provide only small lump-sum filing and registration rewards and do not distribute any of the profits subsequently obtained by the company through practice of the patent right. The Detailed Rules at issue, however, evaluate the economic value of practiced patent rights and the like from various perspectives, including contribution to profits and exclusion of competitors, and pay commensurate performance rewards in stages. No basis for finding them unreasonable can be identified.”

In conclusion, because the rules at issue were not unreasonable, the statutory claim for reasonable benefits under Article 35(7) of the Patent Act, premised on non-application of the rules, was without merit.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-95035.pdf

Appendix: English Translations of Text Embedded in Figures

This appendix provides English translations of the Japanese text in Figures 1–7.

Embedded Figure 1 — Example in Which Inventive Step Is Denied Even When an Essential Configuration Is Excluded

• Even where an amendment has been made to exclude a configuration described as essential in the cited invention, a person skilled in the art may ordinarily carry out design changes to some configuration other than that configuration for the purpose of further improving the invention. Such work may constitute the ordinary exercise of creative ability by a person skilled in the art.

• Further, even if the configuration is described as essential in the cited invention, unless an impediment is recognized that is strong enough to prevent replacement with any of various other configurations, there may be cases in which excluding that configuration in the claimed invention cannot be said to produce an advantageous effect.

• In such cases, under the current approach of the Examination Guidelines, inventive step is still denied.

Diagram labels:
- Invention obtainable by trial and error based on the cited invention
- Scope of the amended claimed invention
- Overlap with the cited invention
- Specific improved invention
- Some invention (including a regressive invention)
- Trial and error carried out by a person skilled in the art who reviewed the cited invention, for the purpose of an improved invention

Embedded Figure 2 — Description in the Examination Guidelines Concerning Determination of New Matter (3)

3.3.1 Amendment of the Scope of Claims

(1) Where an amendment generalizes, deletes, or changes a matter specifying the invention

(2) Where an amendment narrows a matter specifying the invention to a subordinate concept or adds such a matter

b. Even where an amendment narrowing a matter specifying the invention in a claim to a subordinate concept does not narrow it to a matter expressly stated in the original specification, etc. or to a matter self-evident from the descriptions in the original specification, etc., the amendment does not introduce new technical matter if it is clear that the amendment adds no new technical significance. Such an amendment is therefore permitted.

(3) Where an amendment adds or changes a numerical limitation

(4) Where an amendment uses an “excluding claim”

An “excluding claim” means a claim that expressly excludes, from the matters stated in the claim, only part of the matters included in the invention under the claim while retaining the wording of the matters stated in the claim.

An amendment that retains the wording of the matters stated in the claim before amendment and converts the claim into an “excluding claim” by excluding matters stated in the original specification, etc. is permitted if the “excluding claim” after the exclusion does not introduce new technical matter.

The following amendments using an “excluding claim” do not introduce a new technical matter and are therefore permitted:

(i) Where the claimed invention overlaps the cited invention and novelty, etc. (Article 29(1)(iii), Article 29-2, or Article 39) might therefore be denied, an amendment excluding only that overlap.

(ii) Where a claimed invention includes a “human” and therefore fails to satisfy the requirement in the introductory clause of Article 29(1), or falls under an unpatentable invention prescribed in Article 32, an amendment excluding only the “human.”

(5) Where an amendment concerns a Markush-type or other alternative-form claim

Embedded Figure 3 — Relationship Between Types of Amendments Using an "Excluding Claim" and the Examination Guidelines

A) Where the technical matter of not including a specific matter is expressly described in the original specification, etc.
→ The amendment does not introduce a new technical matter and is permitted. (Examination Guidelines 3.1)

B) Where the technical matter of not including a specific matter is self-evident from the descriptions in the original specification, etc.
→ The amendment does not introduce a new technical matter and is permitted. (Examination Guidelines 3.2)

C) Where inclusion of a specific matter causes failure to satisfy the requirement in the introductory clause of Article 29(1), or causes the invention to fall under an unpatentable invention under Article 32
→ For example, where the claimed invention includes a "human" and therefore fails to satisfy the requirement in the introductory clause of Article 29(1) or falls under Article 32, an amendment excluding "human" from the claimed invention makes the invention no longer fall under the above ground for refusal. It is clear that such an amendment does not introduce a new technical matter and is therefore permitted. (Examination Guidelines 3.3.1(4)(ii))

D) Where none of Types A to C applies
→ The amendment is permitted if it does not introduce a new technical matter.

One example is an "amendment excluding only the overlap where the claimed invention overlaps the cited invention and novelty, etc. might therefore be denied" (Examination Guidelines 3.3.1(4)(i)); the Guidelines state that this is permitted because it does not introduce a new technical matter.

Other examples include amendments that narrow a matter to a subordinate concept where it is clear that no new technical significance is added (Examination Guidelines 3.3.1(2)b); such amendments are stated to be permitted.

Embedded Figure 4 — Regarding the Description in Section 3.3.1(4)(i) of the Examination Guidelines (1)

• The example given in Section 3.3.1(4)(i) of the Examination Guidelines is a case in which the cited invention and the claimed invention have inherently and markedly different inventive concepts, but an overlap happens to cause a novelty rejection; excluding the overlap resolves the novelty rejection while leaving an invention having inventive step.

(i) Where the claimed invention overlaps the cited invention and novelty, etc. (Article 29(1)(iii), Article 29-2, or Article 39) might therefore be denied, an amendment excluding only that overlap

(Explanation)

The “excluding claim” in (i) above is a claim expressly excluding only matters that form part of a cited invention under Article 29(1)(iii), Article 29-2, or Article 39, as stated in a publication or in the specification, etc. of an earlier application (including matters equivalent to those described). The amendment converting the claim into the “excluding claim” in (i) above excludes specific matter forming the content of the cited invention and therefore cannot be said to make any change to the technical matter derived from the specification, etc. before amendment. Accordingly, it is clear that such an amendment does not introduce new technical matter and is therefore permitted.

An invention that can be patented by use of an “excluding claim” is an invention that, as a technical concept, is markedly different from the cited invention and inherently has inventive step, but happens to overlap the cited invention. Where an invention is not markedly different from the cited invention as a technical concept, it is considered that a rejection based on lack of inventive step will almost never be resolved by converting the claim into an “excluding claim.”

Embedded Figure 5 — Regarding the Description in Section 3.3.1(4)(i) of the Examination Guidelines (2)

• When Section 3.3.1(4)(i) of the Examination Guidelines was revised in 2010, the Japan Patent Office published the following response to comments submitted in the public-comment procedure.

Q15. Are amendments falling under Type (i) or Type (ii) judged to fall within those types without separately examining the specific amendment content or the content of the invention?

A15. No. However, where the prior art and the technical concept are identical or similar, so that merely converting the claim into an “excluding claim” does not make the invention inventive, and the applicant argues in a written opinion or the like that the “excluding claim” has inventive step, for example because it produces a remarkable effect, a notice of reasons for refusal may be issued on the ground that the amendment falls under neither Type (i) nor Type (ii) and introduces new technical matter. Further, where the prior art and the technical concept are identical or similar, if a reason for refusal under Article 29(2) is notified in addition to Article 29(1)(iii) or Article 29-2, the application may be finally rejected under Article 29(2) even after conversion to an “excluding claim.”

As stated in the explanation of Type (i), an invention for which a patent can be obtained by converting the claim into an “excluding claim” is an invention that is markedly different from the prior art in technical concept and inherently has inventive step, but merely happens to overlap the prior art.

• Accordingly, the mere fact that an amendment excludes overlap with the cited invention does not immediately mean that it falls under Type (i) and is permitted.

Embedded Figure 6 — Divisional Applications, Amendments, and Retroactive Effect
General rule quoted from Intellectual Property High Court, 2016 (Gyo-Ke) No. 10263:
“The substantive requirements for a divisional application to be lawful are that (i) the specification or drawings of the original application contained two or more inventions, (ii) the invention of the new application is part of an invention described in the specification or drawings of the original application, and (iii) the invention of the new application falls within the scope of matters described in the original specification, etc. of the original application. Because the application at issue is a fifth-generation divisional application counted from the first application, in order for the application at issue to be deemed filed at the time of the first application, the application at issue, the fourth application, the third application,

and the second application must each satisfy requirements (i) to (iii) above in relation to the application from which it was divided, and the invention at issue must fall within the scope of matters described in the specification, etc. of the first application as filed.”

Important note:
Even if a child application is lawful when filed, if the child application is amended after filing, the retroactive effect of the amendment may cause the child application to violate the divisional requirements.

Key authorities and labels:
1. Osaka High Court, 2002 (Ne) No. 2776 <Presiding Judge Wakabayashi>
2. Tokyo High Court, 2003 (Gyo-Ke) No. 65 <Presiding Judge Shinohara>
→ The filing date of the grandchild application relates back only to the filing date of the child application.
Note: If the post-amendment content constitutes the addition of new matter, the divisional requirements are violated.
3. 2004 (Wa) No. 14649 <Presiding Judge Shitara>
4. Tokyo High Court, 1975 (Gyo-Ke) No. 75
→ If an amendment cures a violation of the divisional requirements (a change of gist), the violation of the divisional requirements is avoided.
8. Tokyo District Court, 2003 (Wa) No. 9215 <Presiding Judge Mimura>
→ Divisional requirements = amendment requirements.

Timeline: Parent filing date → Child filing date → Amendment of the child → Grandchild filing date
“The amendment has retroactive effect.”

“Because all claims were deleted by correction, the utility model registration at issue is deemed never to have existed from the beginning.” 2001 (Gyo-Ke) No. 421 <Presiding Judge Yamashita>

Even if the child application is withdrawn, the filing date of the grandchild application relates back to the filing date of the parent application. 2015 (Wa) No. 8517 [Ridge Plastering Machine] <Presiding Judge Shimasue>. In that case, there

had been no violation of the divisional requirements before withdrawal. (Except under Article 39(5) of the Patent Act, withdrawal of an application has no retroactive effect. 1989 Trial Decision No. 123.)

If a divisional application is finally refused or invalidated while still containing added new matter, the filing date of the grandchild application does not relate back to the filing date of the parent application. Therefore, even if the case is likely to end in refusal, an amendment curing the addition of new matter should be attempted.

Embedded Figure 7 — 2019 (Wa) No. 23164 [Image Forming Apparatus] <Presiding Judge Tanaka>

Cf. 2020 (Gyo-Ke) No. 10131 <Presiding Judge Otaka>.

• If a child application violates the divisional requirements, the filing date of a grandchild application relates back only to the actual filing date of the child application. It does not relate back to the filing date of the parent application. This is the same holding as Osaka High Court, 2002 (Ne) No. 2776, and Tokyo High Court, 2003 (Gyo-Ke) No. 65.

• Has adding descriptions to the specification constituted the addition of new matter since the [Artificial Nipple] case (2002 (Gyo-Ke) No. 539)!?

When the specification, etc. of Application 1 at issue at the time Application 2 at issue was divided is compared with the specification, etc. of Application 2 (the specification of Application 2 at the time of division), the latter differs in that it adds descriptions concerning maintaining machining conditions after the power is turned off and displaying them on the first screen shown on the next and subsequent occasions (paragraph [0100]); reducing the number of magnification settings and menu settings by means of “one above” and “one below” displays (paragraph [0105]); preventing erroneous instructions by locking a registered menu against change (paragraph [0145]); and adding Figures 7 to 15 and related descriptions (paragraph [0041], etc.). Because the specification of Application 2 at the time of division contains matters absent from the specification of Application 1 at the time of the decision to grant a patent, it does not fall within the scope of matters described in the latter specification. Application 2 therefore fails to satisfy

divisional requirement (ii). → Lack of inventive step over a cited invention published after the parent filing date and before the child filing date.

• In a priority claim, “partial priority” may be available; however, adding descriptions to the specification when filing a divisional application has no benefit and only causes harm. If the matter is disclosed in the original specification, etc., no additional description is needed; if it is not disclosed there, the additional description constitutes the addition of new matter.

Legal Update (Items Posted in February 2026)

Scope: Articles published in February 2026 by attorneys of Nakamura & Partners: Hideki Takaishi (32 articles), Reiko Tonomura (1 article), and Kei Iida (1 article)

<Highlights of the Month> Key Points in the February 2026 Intellectual Property and Legal Affairs Update

This month's legal update addresses 34 judicial decisions and commentaries across a broad range of intellectual property practice, from claim construction, inventive step, inventorship and employee inventions, pharmaceutical patents and standard-essential patents, to expert-appraisal evidence, statutory procedures, and exceptions under copyright law. The particularly noteworthy decisions and practical points are as follows.

1. Scope of Rights Determined by Claim Language and the Specification

The Tokyo District Court Judgment, 2023 (Wa) No. 70380 [Rod-Shaped Light] <Presiding Judge Takahashi>, found that the accused products, including those using different inputs for storing and emitting a recommended color, did not satisfy the claim elements, and also found a violation of the support requirement because there was no description or suggestion of solving the problem by using the same input method. 2024 (Ne) No. 10074 [Filler for Electronic Cigarette] <Presiding Judge Masuda> construed "cut" as a slit formed artificially and actively with a blade and found that the linear portions formed by crimping did not satisfy the claim element. By contrast, the Tokyo District Court Judgment, 2023 (Wa) No. 70594 [Mattress], did not limit "pressure-bonded" to strong compression, construed it as a state in which pressure is applied to the extent that no gap is formed, and found the claim element satisfied. 2024 (Ne) No. 10080 [Under-Coping Ventilation Structure] <Presiding Judge Nakadaira> held that the ventilation member "itself" must have ventilation and waterproofing performance. It is necessary to take into account the problem, means for solving the problem, effects, and means of formation described in the specification.

2. Common General Technical Knowledge, Predictability, Motivation, and Disincentives that Determine Inventive Step

2024 (Gyo-Ke) No. 10037 [Wood Composite Material] <Presiding Judge Hibiku Shimizu> approved separate consideration because no particular synergistic effect was shown for density, dimensions, and random orientation, and treated them as optimization and selection based on well-known art and the like. 2024 (Ne) No. 10032 [Portable Information Communication Device] <Presiding Judge Hibiku Shimizu> and 2024 (Ne) No. 10001 [Yarn Color Placement System] <Presiding Judge Hibiku

Shimizu> likewise emphasized common general technical knowledge regarding image processing and the fact that the adjustments were substantially included in the cited invention or could readily have been conceived by applying common general technical knowledge. By contrast, 2024 (Gyo-Ke) No. 10022 [... Antimicrobial Agent] <Presiding Judge Honda> affirmed inventive step because there was no reasonable expectation that the active ingredient would permeate the nail plate and exert a therapeutic effect. 2024 (Gyo-Ke) No. 10043 [Elasto-Plastic Hysteretic Damper] <Presiding Judge Honda> held that there was no motivation to apply a two-dimensional arrangement to the cited invention premised on unidirectional input and that there was a disincentive, while the Intellectual Property High Court Judgment, 2024 (Ne) No. 10048 [Battery] <Presiding Judge Nakadaira>, emphasized the close relationship between the position of a member in the prior art and its effect. Common general technical knowledge, predictability, motivation, and disincentives should be argued separately.

3. Inventorship and Employee Inventions Are Determined by Involvement in the Characteristic Portion and Application of the Rules

2023 (Gyo-Ke) No. 10078 [Audio Controller] <Presiding Judge Hibiku Shimizu> denied joint inventorship on the ground that persons on the commissioning side had obtained a conception accompanied by a specific means of solution and had completed the invention through the experimental device, while the contractors had merely solved a different problem. 2024 (Ne) No. 10029 "Claim for Confirmation of the Right to Obtain a Patent" <Presiding Judge Masuda> found the professor who had recorded the problem and solution of the vascular plug in a research notebook to be the inventor, and [Employee Invention] Tokyo District Court Judgment, 2023 (Wa) No. 70495 <Presiding Judge Nakashima>, likewise denied the plaintiff's inventorship after finding that other employees had independently conceived and embodied the invention at issue without the plaintiff's involvement and that the asserted time of completion was also unsubstantiated. The Osaka District Court Judgment, 2023 (Wa) No. 10217 [Three-Dimensional Network Fiber Assembly] <Presiding Judge Matsuami>, dismissed the claims in light of the procedure for establishing the reward rules and the product's commercial track record, whereas the Osaka District Court Judgment, 2022 (Wa) No. 11405 [Heterocyclic Derivative] <Presiding Judge Takemiya>, awarded statutory reasonable remuneration of approximately JPY 94 million because there was no provision or agreement applying the rules. Involvement in the characteristic portion should be documented, and the scope and procedures of the rules should be clarified.

4. Scope of Rights and Remedies for Pharmaceutical Patents and Standard-Essential Patents

2023 (Ne) No. 10107 "PCSK9 (Second Litigation)" <Presiding Judge Nakadaira> held that, although "competes" includes competition through steric hindrance, it could not be said that an antibody competing with a reference antibody neutralizes by the same mechanism as the reference antibody, and the specification contained no disclosure at all of the neutralizing activity of antibodies competing through steric

hindrance, and found a violation of the support requirement. As to the patentee's rebuttal based on correction, it rejected that rebuttal without deciding the remaining correction items because Correction Items 1 and 2, which deleted statements from the specification, did not fall within the statutory purposes of correction. The Tokyo District Court Judgment, 2023 (Wa) No. 70527 [Cyclic Protein Tyrosine Kinase Inhibitor] <Presiding Judge Sugiura>, held that the plaintiff's product was not substantially identical to Sprycel tablets because there was no reliable evidence sufficient to find that the addition or replacement of excipients, made in light of problems arising from the adoption of the anhydrous form and other factors, was based on well-known or commonly used art, and it rather appeared that the plaintiff had made it on the basis of its own technology. It is also noteworthy that the preliminary-injunction decision (granting an injunction) and this judgment (dismissing the main action as inadmissible and the counterclaim on the merits) by the same presiding judge reached different conclusions. The Tokyo District Court Judgment, 2022 (Wa) No. 7976 [Communication Equipment] <Presiding Judge Nakashima>, found infringement of an LTE standard-essential patent but held that the claim for an injunction constituted an abuse of rights, apportioned the royalty under FRAND terms, and did not allow an infringement premium because the defendant had been willing to take a license on FRAND terms.

5. Expert-Appraisal Evidence, Statutory Procedures, and Exceptions under Copyright Law

In the [Plant Variety Protection and Seed Act ★] breeder's-right infringement case, the credibility of the expert appraisal was denied because of the possibility that mycelium had been mixed in advance into test tubes prepared by the plaintiff and because subsequent verification had become impossible owing to disposal of the parent strain. The judgment held that, under the circumstances of this case, at a minimum, preparation of the test tubes by a third-party institution and preservation of the parent strain were indispensable. The Tokyo District Court Judgment, 2024 (Gyo-U) No. 5001 <Presiding Judge Shibuya>, held that a defect arising from a request for examination made before submission of a translation in a foreign-language patent application was not cured later and that there was no practical benefit in revoking the disposition. 2024 (Ne) No. 10072 [Draft Difference Measuring Device] <Presiding Judge Nakadaira> held that the opposition to the grant of a patent could not be found to have been unlawful and also held that the other patent-application and maintenance expenses lacked an adequate causal relationship with the conduct. The Intellectual Property High Court Judgment of July 31, 2025 (2024 (Ne) No. 10075) [Copyright Act ★] recognized quotation with respect to news photographs found to be related to the purpose of criticism in the text of the posts, and recognized exploitation of incidentally included works with respect to photographs that appeared only slightly on the same newspaper page, adjacent to the criticized article or the masthead. The collection and preservation of evidence, the sequence of statutory procedures, the causal relationship to damages, and each requirement for quotation should be reviewed.

In addition, this issue includes decisions spanning litigation, prosecution, contracts, and internal systems, including a finding of being "objectively unable to pay" under a contract, the denial of a joint tort based on an offer to sell a product under a different name, the technical significance of numerical limitations, and grounds for retrial. This issue should be used to review the organization of issues and the design of evidence.

Three-Line Summaries of All Articles

Category	Article Title and Three-Line Summary
Patent	**2024 (Gyo-Ke) No. 10037 [Wood Composite Material] <Hibiku Shimizu>** ① This case concerned whether, with respect to a wood composite material, density, the dimensions of small flakes, and random orientation of the fiber direction should be considered as an integrated difference having a synergistic effect, or whether obviousness should be considered separately for each of them. ② The court approved the separate consideration on the ground that, although the individual effects of each element were recognized, no particular synergistic effect from their combination was recognized, and denied inventive step on the ground that density, dimensions, and random orientation could each be readily selected or optimized on the basis of well-known art and the like. ③ The decision indicates that, unless a particular synergistic effect from the combination is shown in the specification or experimental data, multiple differences may be considered separately.

Category	Article Title and Three-Line Summary
Patent	**2024 (Ne) No. 10032 [Portable Information Communication Device] <Shimizu>** ① This case concerned, in relation to the inventive step of a portable information communication device, the findings regarding the invention of Exhibit Hei B9 (differences in resolution from an external monitor, storage of dot data in image memory, and the like) and whether the differences relating to processing of received digital signals by the CPU, generation of display data having the same resolution as the display panel, and the like could readily have been conceived. ② The court held that the differences in resolution and the like were disclosed in the Exhibit Hei B9 document and that the differences not described in that document could readily have been conceived by applying common general technical knowledge at the priority date at issue (or were not substantial differences), denied inventive step, affirmed the judgment of the court of first instance dismissing the claims, and dismissed the appeal. ③ The decision indicates that inventive step may be denied where a configuration not described in a publicly known document could readily have been conceived by applying common general technical knowledge at the priority date at issue.

Category	Article Title and Three-Line Summary
Patent	**2024 (Ne) No. 10001 [Yarn Color Placement System] <Hibiku Shimizu>** ① This case concerned the inventive step of a configuration that, in consideration of yarns hidden by high-low control, sets the actual tufting density higher than the desired apparent density and controls the feed speed of the backing material. ② The court held that the prior art contained a system for controlling yarn supply and substrate feed, that it was self-evident that the desired appearance would not be obtained if the tufting density were set equal to the desired apparent density, and that adjusting the substrate feed speed to increase the tufting density in consideration of the hidden yarns was substantially included in the invention of Exhibit Otsu No. 4 or, even if not, could readily have been conceived by a person skilled in the art by applying common general technical knowledge at the priority date at issue; it therefore denied inventive step, affirmed the judgment of the court of first instance dismissing the claims, and dismissed the appeal (the judgment expressly states that its determination is not based on a matter of design). ③ The decision indicates that expressing, under a different conceptual name, an adjustment that is substantially included in the cited invention or could readily have been conceived by applying common general technical knowledge may not support inventive step.
Patent	**Tokyo District Court Judgment, 2023 (Wa) No. 70079 [Vehicle Guidance System] <Kokubu>** ① This case concerned whether vehicle guidance at an SIC by opening and closing barriers and using display devices satisfied claim elements including a “system for guiding vehicles entering and exiting through ETC-only entrances and exits.” ② The court of first instance found that vehicles seeking to use ETC-only entrances and exits were guided to prescribed lanes by start-control devices and roadside display devices, and found satisfaction of the claim elements, including Claim Elements A and F, as well as patent infringement. ③ In the court of first instance, the specific operation by which the start-control devices and roadside display devices guided vehicles to prescribed lanes was used in determining whether the vehicle guidance system satisfied the claim elements. The Intellectual Property High Court judgment of October 20, 2025, 2025 (Ne) No. 10043, however, denied satisfaction of Claim Element F, set aside the part of the first-instance judgment adverse to the defendant, and dismissed the claim.

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court Judgment, 2023 (Wa) No. 70380 [Rod-Shaped Light] <Takahashi>** ① This case concerned whether the button inputs used to store and emit the recommended color of a rod-shaped light constituted the same input method prescribed in the claims or detection of the "first predetermined input," and whether that configuration was supported by the specification. ② The court held that Accused Products 1 and 2 did not satisfy the claim elements because they used different input methods for storage and recall, and that Accused Products 3 and 4 likewise did not satisfy the claim elements because they did not emit light solely upon detection of the first predetermined input; it also found a violation of the support requirement because the specification neither described nor suggested solving the problem by the same input method. ③ The decision indicates that whether the input methods used for storage and emission are identical and whether light is emitted solely upon detection of the predetermined input affect satisfaction of the claim elements, and that claims including the same input method require a corresponding description or suggestion in the specification.
Intellectual Property—General	**A Container Capable of Carrying 10 Cubic Centimeters of Liquid and/or Solid** ① This article considers, using "a container capable of carrying 10 cubic centimeters of liquid and/or solid" as an example, whether a correction changing "A and/or B" to "B" may constitute an expansion or alteration. ② The article presents an example of a correction deleting an alternative and also refers, as the converse pattern, to a case in which adding the wording "electrically" may constitute an expansion or alteration, but does not itself state a conclusion. ③ The article presents the issue that, when making a correction, the possibility of an expansion or alteration should be considered both for deletion of an alternative and for addition of wording.

Category	Article Title and Three-Line Summary
Patent	**2024 (Gyo-Ke) No. 10043 [Elasto-Plastic Hysteretic Damper] <Honda>** ① This case concerned lack of inventive step based on a combination of a building damper and a bridge damper and the like, and a violation of the support requirement based on an alleged lack of support although the invention was specified as if it could accommodate a load from any direction, with respect to an elasto-plastic hysteretic damper. ② The court held that there was no motivation to apply a two-dimensional arrangement to the invention of Exhibit Ko No. 1, which was premised on unidirectional input, that there was a disincentive, and that the other cited references likewise did not suggest a pair of shear portions oriented differently from each other; it further denied a violation of the support requirement because the invention at issue did not require maximum energy absorption with respect to loads from all directions. ③ The decision indicates that the direction of load presupposed by a cited invention affects the determination of motivation or disincentive for a combination, and that the support requirement is determined in light of the scope of problem-solving actually required by the claims.

Category	Article Title and Three-Line Summary
Patent	**Intellectual Property High Court Judgment, 2024 (Ne) No. 10048 [Battery] <Nakadaira>** ① In this patent-infringement action concerning a battery, the issues included whether the power-generating element included a stacked type, whether bonding through a member was included in the claims, whether Claim Element A4 could readily have been conceived from the prior art, and whether the appellant's Product 2 fell within the technical scope of Patent 2 at issue (including under the doctrine of equivalents). ② The court found satisfaction of the claim elements because the power-generating element was not limited to a wound type and included a stacked type, and because bonding through a member was not excluded; on the other hand, it found inventive step because the flange position in the invention of Exhibit Otsu No. 12 was closely related to its effect and the other cited references did not lead to Claim Element A4 either and there was no motivation, and it affirmed the first-instance judgment awarding damages of JPY 529,285,945 and delay damages and dismissing the remaining claims on the ground that the appellant's Product 2, the subject of the claims for an injunction and disposal, did not fall within the technical scope of Patent 2 at issue, including under the doctrine of equivalents; both the appeal and the incidental appeal were dismissed. ③ The decision indicates that, in claim construction, it is necessary to ascertain from the specification whether there is a structural limitation and, in determining obviousness, to consider the close relationship between the placement of a member in the prior art and the effect of the invention.

Category	Article Title and Three-Line Summary
Intellectual Property—General	**[Plant Variety Protection and Seed Act ★] Case in Which the Plaintiff's Claims Were Dismissed Because the Credibility of the Expert Appraisal Purporting to Prove Infringement of the Breeder's Right Was Not Established** ① In this breeder's-right infringement action concerning shiitake mushrooms, the credibility of the subculturing acts, which were conducted using test tubes prepared by the plaintiff itself and after which the parent strain was discarded, and of the expert appraisal premised on those acts was disputed. ② The court denied the credibility of the expert appraisal because the possibility that mycelium of the plaintiff's variety had been mixed into the test tubes in advance could not be sufficiently ruled out and subsequent verification had become impossible owing to disposal of the parent strain, and dismissed the plaintiff's claims without needing to determine the remaining points. ③ In separating and subculturing samples used to prove breeder's-right infringement, it is important to have a fair and neutral third-party institution prepare the test tubes and to preserve, rather than discard, the parent strain after subculturing, thereby ensuring the fairness and transparency of the expert appraisal and the subsequent verifiability of the subculturing acts.
Patent	**2024 (Ne) No. 10056 [Van-Type Motor Vehicle for Cleaning Work] <Nakadaira>** ① This case concerned whether the appellee, which received delivery from KCS of Appellee Product 2 (which the first-instance judgment found to fall within the technical scope, granting an injunction and other relief) and offered it for sale under a name different from that of Appellee Product 1 sold by KCS, was liable in joint tort for KCS's sale of Appellee Product 1. ② The court denied a joint tort, holding that, even if the appellee offered for sale Appellee Product 2, which bears a name different from that of Appellee Product 1, it could not be found that this assisted or facilitated KCS's sale of Appellee Product 1. ③ The decision indicates that merely offering for sale, under a different name, a product delivered by another infringer does not, even if the two products have the same structure, amount to assisting or facilitating that other infringer's sales, and does not constitute a joint tort.

Category	Article Title and Three-Line Summary
Intellectual Property—General	**[New YouTube Video] Infringement Analysis (Other than Typical Literal Satisfaction) (Reading Through the Encyclopedia of Patent Judicial Decisions, 4th Edition) November 5, 2025** ① This article introduces a video covering major judicial decisions concerning the doctrine of equivalents, numerical limitations, use inventions, and the like as infringement analyses other than typical literal satisfaction. ② According to the title, the video is a reading of the Encyclopedia of Patent Judicial Decisions, 4th Edition, and the introductory description states that viewers can grasp together, in a single video, major judicial decisions concerning infringement analysis, including the doctrine of equivalents, numerical limitations, and use inventions. ③ The video serves as a starting point for reviewing, across subject matters, major judicial decisions concerning infringement analyses other than typical literal satisfaction.
Intellectual Property—General	**[Contract] Tokyo District Court Judgment, 2022 (Wa) No. 9422 <Shibuya>** ① This case concerned a claim for return of the contract fee of JPY 210 million paid under the contract at issue, a joint development and business alliance agreement, as restitution following termination on the ground of a "state of being objectively unable to pay" under Article 17(2) of the contract (the defendant did not actively dispute the ground for termination). ② Based on the evidence, the court found that the defendant had been in a state of being objectively unable to pay no later than February 7, 2025, held the termination of the contract valid, and granted in full the claim for return of the contract fee of JPY 210 million. ③ This is a case-specific decision in which the defendant did not actively dispute the ground for termination, and it may be referred to as an example in which it was shown by evidence that the counterparty was objectively unable to pay at the time of the declaration of termination.

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court Judgment, 2023 (Wa) No. 70449 [Fastening Hardware] <Takahashi>** ① This case concerned whether the language “for inducing deformation when an excessive load acts” in the fastening hardware limited the configuration of the invention and whether novelty existed over hardware described in a design gazette. ② The court denied novelty, holding that the language merely indicated the purpose or an operation or effect necessarily obtained by the configuration in which the front portion and rear-edge portion were integrated by multiple branch-like portions, and that the invention of Exhibit Ko No. 5 necessarily obtained the same effect from the same shape. ③ When asserting a difference from the prior art based on claim language indicating a purpose or an operation or effect, it is necessary to consider whether the language limits the configuration and whether that effect necessarily arises from the same configuration.
Patent	**Osaka District Court Judgment, 2023 (Wa) No. 10217 [Three-Dimensional Network Fiber Assembly] <Matsuami>** ① This case concerned, with respect to a three-dimensional network fiber assembly that was an employee invention, the unreasonableness of payment of remuneration under internal reward rules and whether there was reasonable remuneration (profits from exclusivity) apart from those rules (the court examined the latter from the standpoint of the reasonableness of the defendant's determination not to pay an implementation reward). ② The court held that it was not unreasonable to pay remuneration for employee inventions under the reward rules because, in the process of establishing and revising them, general employment rules and the like were referred to, opinions were obtained from persons with knowledge of intellectual property, and the proposed rules were disclosed to employees and their opinions were heard; it further dismissed the claims, holding that there was no unreasonable aspect in the defendant's determination that the requirements for payment of an implementation reward were not satisfied under circumstances including that the defendant's product received a low evaluation as a mattress and commercialization had ended. ③ In determining rewards for employee inventions, it is important, in addition to the procedures for establishing and revising the rules, to specifically record and prove the sales performance, evaluation, and contribution to the business of the relevant product.

Category	Article Title and Three-Line Summary
Patent	**[Employee Invention] Tokyo District Court Judgment, 2023 (Wa) No. 70495 <Nakashima>** ① In response to a claim by the plaintiff, a former employee, for JPY 100 million as reasonable remuneration for an employee invention, this case concerned whether the plaintiff was the inventor or a joint inventor of the invention at issue, including the time of completion of the invention and the plaintiff's involvement in conception and embodiment. ② The court denied the plaintiff's inventorship and joint inventorship, finding that the invention at issue had been independently conceived and embodied by Bi, Di, and others without the plaintiff's involvement, in light of the facts that the plaintiff had no contact with Bi and the others, that the plaintiff's explanatory document was not even circulated to them, and that the Di invention had already been presented before Di received the plaintiff's explanatory document (the court reached the same conclusion after two rounds of requests for clarification), and holding that there was also no reliable evidence substantiating the time of completion asserted by the plaintiff; it dismissed the claim. ③ To assert inventorship, it is necessary to substantiate, by specific materials, the time of completion of the invention and actual involvement in its conception and embodiment.
Patent	**Osaka District Court Judgment, 2022 (Wa) No. 11405 [Heterocyclic Derivative] <Takemiya>** ① This case concerned whether internal employee-invention rules applied to an employee invention relating to a heterocyclic derivative and the amount of reasonable remuneration under the Patent Act before the 2004 amendment. ② The court calculated the statutory reasonable remuneration because there was no provision or agreement applying the employee-invention rules to the invention at issue, and awarded approximately JPY 94 million (after deducting JPY 6,519,000 already paid) after taking into account, for the employer's own working and third-party working, an employer contribution of 99%, a joint-inventor share of one-third, and other factors. ③ Employee-invention rules should clearly specify their scope of application; where the rules do not apply, excess sales, a hypothetical royalty rate, licensing revenue, the employer's contribution, the patent's contribution ratio, and the joint-inventor share should be considered as materials for calculating remuneration.

Category	Article Title and Three-Line Summary
Patent	**2023 (Ne) No. 10107 “PCSK9 (Second Litigation)” <Nakadaira>** ① This case concerned whether the support requirement was met and the merits of the patentee's rebuttal based on correction with respect to an antibody invention defined by the functions of neutralizing the binding between PCSK9 and LDLR and competing with a reference antibody. ② The court held that “competes” included direct competition and competition through steric hindrance, but that it could not be said that an antibody competing with a reference antibody neutralizes by the same mechanism as the reference antibody (in the verification experiments, roughly 80% or more of the antibodies competing with the reference antibodies lacked binding-neutralizing activity) and that the specification contained no disclosure at all of the neutralizing activity of antibodies competing through steric hindrance, and found a violation of the support requirement. As to the patentee's rebuttal based on correction, it rejected that rebuttal without deciding the remaining correction items because Correction Items 1 and 2 did not fall within the statutory purposes of correction. ③ For antibody claims defined by function, it is necessary to confirm whether the entire scope of the claims, including mechanisms of action different from those in the examples, is supported by the specification, and, when asserting correction, to examine separately its admissibility and whether it actually excludes unsupported embodiments. A correction adding conditions concerning neutralization or competition by Fab fragments should be distinguished from a correction limiting the subject matter of the invention to Fab fragments themselves.

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court Judgment, 2022 (Wa) No. 7976 [Communication Equipment] <Nakashima>** ① This case concerned, in connection with infringement of an LTE standard-essential patent, whether the claim for an injunction constituted an abuse of rights and how damages and an infringement premium based on FRAND terms should be treated. ② While finding patent infringement, the court held that the claim for an injunction constituted an abuse of rights because the failure to reach agreement resulted from the difference in royalty rates and it could not be said that the defendant lacked willingness to obtain a license; it calculated damages by apportioning the royalty rate for the entire standard by the number of patents and, because the defendant had been willing to take a license on FRAND terms, did not allow an increase based on an infringement premium in light of the nature of FRAND terms. ③ In enforcing a standard-essential patent, it is necessary to distinguish a difference of views concerning the royalty rate from an implementer's willingness to obtain a license, and to consider damages in light of the royalty rate for the entire standard, the number of patents, and the relative contribution of each standard.
Patent	**2024 (Ne) No. 10074 [Filler for Electronic Cigarette] <Masuda>** ① This case concerned the meaning of “cut” in Claim Element B relating to a filler for an electronic cigarette and whether linear portions of the accused product formed by crimping satisfied that claim element. ② Based on dictionary descriptions and examples of means for formation in the specification, the court construed “cut” as meaning a slit or cut formed artificially and actively using a blade, and held that the claim element was not satisfied because the linear portions of the accused product were not formed with a blade. ③ Where the meaning of claim language is unclear, it may be construed restrictively based on dictionary meanings and the means for formation described in the specification (including whether other means are described or suggested); therefore, attention should be paid to the choice of terms that may specify the means for formation and to the description in the specification.

Category	Article Title and Three-Line Summary
Patent	**2024 (Gyo-Ke) No. 10109 [Assistance Device] <Honda>** ① This case concerned whether the relationship between the original trial decision and the subsequent fourth retrial decision constituted a ground for retrial under Article 338(1)(x) of the Code of Civil Procedure, as applied mutatis mutandis by Article 171(2) of the Patent Act. ② The court rejected the claim, holding that a conflict with the fourth retrial decision, which was issued after the original trial decision that was the subject of the request for retrial, did not constitute a ground for retrial of the original trial decision; even assuming that the fourth retrial decision was the subject, the original trial decision was a decision holding that the request for an appeal against the examiner's decision of refusal was groundless, whereas the fourth retrial decision was a decision dismissing the request for retrial as inadmissible, and they therefore did not conflict with each other. ③ When asserting a ground for retrial against a trial decision, it is necessary to identify the trial decision that is the subject of the retrial and then consider, from the chronology, operative parts, and legal nature of each decision, whether they actually conflict.
Patent	**Tokyo District Court Judgment, 2024 (Gyo-U) No. 5001 <Shibuya>** ① This case sought revocation of the JPO's disposition dismissing as unlawful a request for examination made, with respect to an international patent application in a foreign language, before submission of the translation. ② The court held that Article 184-17 of the Patent Act made it a procedural requirement to request examination after submission of the translation, that the defect in the order of those procedures was not cured by a later submission of the translation, and that there was no interest in the action because the JPO would have no choice but to dismiss the request again even if the disposition were revoked; it therefore dismissed the action as inadmissible. ③ For a foreign-language patent application, a request for examination must be made after submission of the translation, and attention should be paid to the fact that an error in the order of procedures cannot be cured by submitting the translation afterward.

Category	Article Title and Three-Line Summary
Patent	**2024 (Gyo-Ke) No. 10022 [... Antimicrobial Agent] <Honda>** ① This case concerned whether the corrected invention relating to a therapeutic agent for onychomycosis using KP-103 could readily have been conceived from each primary cited invention directed to treating tinea pedis (the invention of Exhibit Ko No. 1-1) or dermatomycosis (the invention of Exhibit Ko No. 1-2). ② The court denied obviousness based on the primary cited invention, holding that there was an obstacle making it difficult for an antifungal agent to penetrate and permeate into the nail plate, that a person skilled in the art could not reasonably have expected delivery of KP-103 to the infected site and a therapeutic effect, and that the effect was also difficult to predict. ③ In determining inventive step for a medical-use invention, it is necessary to consider not only commonality of the causative fungus or keratin, but also whether it could reasonably have been expected that the active ingredient would pass through the target tissue, be delivered to the infected site, and exert a therapeutic effect.
Patent	**2024 (Ne) No. 10029 “Claim for Confirmation of the Right to Obtain a Patent” <Masuda>** ① This case concerned who was the inventor who actually participated in completing the characteristic portion of a vascular-plug invention, and whether a dispute seeking confirmation of the right to obtain foreign patents in connection with a PCT application was ripe for adjudication. ② The court found that it was Professor A, who recorded the problem of the invention at issue and the means for solving it in a research notebook, rather than Y1, who was not found to have a background in clinical knowledge, who actually participated in completing the characteristic portion; it further held that, at the present time, when no new filing or national-phase entry had been made in any foreign country and no specific plan therefor had been disclosed, the ripeness of a dispute seeking confirmation of the right to obtain foreign patents was not established. As a result, the court dismissed the appeal of the plaintiff in the first instance and, on the appeal of the defendant company in the first instance, set aside paragraph 1 of the operative part of the first-instance judgment (the part granting Claim 1-2) and dismissed that claim. ③ With respect to inventorship, actual involvement in the characteristic portion of the invention should be proved by specific materials; when seeking confirmation of the right to obtain a foreign patent, the target countries and specific plans for a new filing or national-phase entry and the like must be clarified.

Category	Article Title and Three-Line Summary
Patent	**2023 (Gyo-Ke) No. 10078 [Audio Controller] <Shimizu> (Defendant: Pixie Dust)** ① This case concerned whether Contractor C and others were joint inventors of the invention at issue and, on that premise, whether misappropriation or violation of the joint-application requirement was established. ② The court held that the invention at issue had already been completed through the experimental device developed by A and B, on the commissioning side (PDT), on the basis of a conception accompanied by specific means for solving the problem, and that the inventors were A and others (A and D) listed in the patent gazette, and that the functions realized by Contractor C and others merely solved a problem different from that of the invention at issue and did not constitute creative involvement in the characteristic portion; it therefore did not find misappropriation or violation of the joint-application requirement. ③ The case indicates that, in determining joint inventorship, it is necessary to consider not contribution in general at the implementation stage, but whether the person embodied the characteristic portion that solves the technical problem of the invention at issue.
Patent	**2023 (Wa) No. 70563 [Transaction Management System] <Shibuya> (Keysoft v. Sankaku Kikaku)** ① This case concerned whether, in the accused system relating to the Furusato Nozei program, a local public body constituted an “intermediate trader” of the invention at issue. ② The court held that Furusato Nozei and the provision of return gifts were not sales transactions and that there was no relationship in which the local public body received an order from the donor and placed an order with a business operator; the local public body therefore did not constitute an “intermediate trader” conducting transactions in goods in stages. ③ The case indicates that satisfaction of a claim element relating to a transaction system must be considered not only from the form of notification but also in light of the actual relationship, including whether the transaction is for consideration and whether order information is received and transmitted in stages.

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court Judgment, 2023 (Wa) No. 70594 [Mattress]** ① This case concerned the construction of the claim element requiring multiple cushion bodies to be incorporated into a mattress cover in a “pressure-bonded” state and whether the accused product satisfied that claim element. ② The court construed “pressure-bonded” as not requiring a state in which the cushion bodies are strongly compressed and adhere, but as meaning a state in which some pressure is applied to the extent that no gap is formed between the cushion bodies, and found satisfaction because measurement showed that pressure of at least 0.2 MPa was applied between the inner materials of Accused Products 1 and 4 and the same was inferred for the other accused products of the same type; it granted an injunction against manufacture, transfer, and the like and an order for disposal (and dismissed the remaining claims). ③ The case indicates that, in construing claim terms, it is important to consider together not only dictionary meanings but also the embodiments, drawings, and purpose and effects of the invention in the specification, and, with respect to an accused product, to prove by measurement the physical state corresponding to the claim element. The appellate court (Intellectual Property High Court Judgment of November 17, 2025, 2025 (Ne) No. 10045) dismissed the appeal.
Patent	**2023 (Ne) No. 10114 [Layered Body Having Cube-Corner Elements, and Retroreflective Sheet] <Nakadaira>** ① This case concerned whether the numerical limitation setting the dihedral-angle error of cube-corner elements at 1 to 60 arcminutes had technical significance and supported inventive step. ② The court held that there was no basis in the specification for regarding the numerical range as preferable, that examples below 1 arcminute also produced the operation and effect, and that neither a basis for setting the upper limit at 60 arcminutes nor an operation and effect peculiar to the range was shown; accordingly, the numerical range had no particular technical significance and merely reflected the exercise of ordinary creative ability; it therefore found lack of inventive step over the invention of Exhibit Otsu No. 12, rejected the patentee's rebuttal based on correction, and dismissed the appeal. ③ The case indicates that, to support inventive step by a numerical limitation, it is important to substantiate in the specification the basis for the numerical range and its upper and lower limits, as well as an operation and effect peculiar to that range.

Category	Article Title and Three-Line Summary
Patent	**2023 (Gyo-Ke) No. 10121 [Imaging Device] <Masuda>** ① This case concerned whether the support requirement was satisfied in relation to the statement “orthogonal” in the claims and the depiction of Axis A in Figure 4B. ② The court held that “orthogonal” indicated not the angle of intersection between the first axis and the second axis, but the positional relationship in which two sides of the rectangular display intersected at a right angle; it further held that the depiction of Axis A as moving in Figure 4B could not support the assertion because the claims do not state that Axis A can be moved and, even setting that point aside, was an obvious error from which a person skilled in the art could readily understand the correct configuration; it therefore denied a violation of the support requirement (also rejecting the assertions of violations of the clarity and enablement requirements) and dismissed the claim. ③ The case indicates that, even where a drawing contains an error, a violation of the support requirement does not immediately result if a person skilled in the art can readily understand the error and the correct configuration from the claims and the specification as a whole.
Patent	**2023 (Wa) No. 70004 [Portable Information Communication Device] <Takahashi>** ① This case concerned whether, with respect to a portable information communication device, the configurations relating to Difference ① (reception of a radio signal, conversion into a digital signal, and transmission to the CPU) and Difference ② (reading of bitmap data of an image having the same resolution as the screen resolution) could readily have been conceived by applying common general technical knowledge to the invention of Exhibit Otsu No. 6. ② The court denied inventive step, holding that a person skilled in the art at the priority date could readily have conceived, by applying common general technical knowledge to the invention of Exhibit Otsu No. 6, a configuration in which, to import image information from outside, the communication unit received a radio signal, converted it into a digital signal, and transmitted it to the CPU (Difference ①), and a configuration reading bitmap data of an image having the same resolution as the screen resolution (Difference ②); it dismissed the plaintiff's claim under Article 104-3(1) of the Patent Act. ③ The case indicates that whether a difference from the prior invention can be specifically derived by applying common general technical knowledge at the priority date is an important consideration in determining inventive step.

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court Decision, 2023 (Yo) No. 30214, Petition for a Preliminary Injunction <Sugiura>** ① The text of the original article does not state the specific facts or issues of the petition for a preliminary injunction and refers to the judgment by the same Presiding Judge Sugiura in the main action and counterclaim (2023 (Wa) No. 70527). ② The original article states that the outcome for the patent owner differed between the preliminary injunction and the judgment in the main action and counterclaim; this does not mean that an appellate court set aside a first-instance judgment. The operative part and other particulars of the preliminary-injunction decision can be confirmed in the published copy. Apart from the statement that the creditor's petition is found to be reasonable, the published copy (certified copy) of the decision contains no detailed statement of reasons. ③ The article indicates that the difference in conclusions between the preliminary-injunction decision (granting an injunction) and the judgment in the main action and counterclaim (dismissing the main action as inadmissible and the counterclaim on the merits) by the same presiding judge should be reviewed together with the article concerning that judgment linked from this article.

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court Judgment, 2023 (Wa) No. 70527 [Cyclic Protein Tyrosine Kinase Inhibitor] <Sugiura>** ① This case concerned whether the effect of an extended pharmaceutical patent right reached the plaintiff's product as a product “substantially identical as a pharmaceutical product,” despite differences in the hydrate or anhydrous form of the active ingredient and in the composition of excipients. ② The court held that the plaintiff's product appeared to have added or replaced excipients (replacement of PEG and addition of carnauba wax) in light of problems arising from the difference in active ingredient (adoption of the anhydrous form) and other factors, that there was no reliable evidence sufficient to find that this was based on well-known or commonly used art, and that it rather appeared that the plaintiff had done so on the basis of its own technology to bring the dissolution behavior closer to that of Sprycel Tablets or to obtain bioequivalence, and therefore held that the plaintiff's product was not substantially identical to the originator pharmaceutical product and that the extended patent right did not extend to it. ③ If an appeal is filed, a point of practical interest will be whether the logic of this judgment, which treats the problems and technical significance relating to differences in excipients as material, will be maintained, or whether its scope will be limited to cases in which the active ingredient differs. The operative part dismissed as inadmissible the main action for a negative declaration and dismissed on the merits the defendant patentee's counterclaim for damages.

Category	Article Title and Three-Line Summary
Patent	**2024 (Ne) No. 10080 [Under-Coping Ventilation Structure] <Nakadaira> = Court of First Instance: Osaka District Court Judgment, 2023 (Wa) No. 8403** ① This case concerned whether the plate-shaped portion of the appellee's product constituted a “ventilation member that exhibits ventilation performance and waterproof performance” and satisfied Claim Element C. ② In light of the claim language and the specification, the court construed the ventilation member itself as being required to have ventilation performance and waterproof performance, and denied satisfaction of Claim Element C because the plate-shaped portion (Sloped Portion ⑤) of the appellee's product was not found itself to have that performance, the appellant's "contribution" test lacked a reasonable basis, and, even under that test, Sloped Portion ⑤ reduced ventilation performance and therefore did not contribute to that performance. ③ The case indicates that, for a claim element specifying performance, it should be considered in accordance with the claim language and specification whether the member itself is required to have that performance, and that mere “contribution” to performance cannot be used as the standard without a reasonable basis.
Patent	**2024 (Ne) No. 10072 [Draft Difference Measuring Device] <Nakadaira>** ① This case concerned whether expenses for responding to opposition proceedings and other patent-application and maintenance expenses could be recovered as damages based on the tort of the defendant in the court of first instance. ② The court held that no tort was established because the opposition to the grant of the patent could not be found to have been unlawful, and that the other expenses had been incurred by the plaintiff in the court of first instance on its own judgment and lacked an adequate causal relationship with the conduct of the defendant in the court of first instance. ③ The case indicates that, to claim expenses for responding to a patent opposition or patent-application and maintenance expenses as damages, the unlawfulness of the other party's conduct and an adequate causal relationship between that conduct and the expenditure must be specifically proved.

Category	Article Title and Three-Line Summary
Copyright	**[Copyright Act ★] Case in Which, Regarding the Appellee's (Defendant's) Acts of Photographing, to the Extent Included in a Single Smartphone Photograph, Articles (Headlines, Article Text, and the Photographs at Issue) in a Newspaper Published by the Appellant (Plaintiff), and Posting Them Together with the Text of Posts on Twitter (X) via the Internet on 25 Occasions, the Appellant Alleged Infringement of Copyright (Right of Making Transmittable) in the Photographs at Issue and Sought Damages in Tort, and the Court Held that the Quotation Defense (Article 32(1) of the Copyright Act) or the Defense of Exploitation of Incidentally Included Works (Article 30-2 of the Copyright Act) Applied and that the Appellant's Claims Should Be Dismissed** ① This case concerned whether the quotation defense or the defense of exploitation of incidentally included works applied to infringement of the right of making the photographs transmittable arising from the defendant's acts of photographing articles and photographs in the Seikyo Shimbun with a smartphone and posting them on Twitter (X), together with the text of posts, on 25 occasions. ② With respect to photographs found to be related to the purpose of criticism in the text of the posts, the Intellectual Property High Court found clear distinguishability from the text of the posts, a principal-subordinate relationship, the ability to recognize the source, relevance to the purpose of quotation, and appropriateness of the scope and quantity, and upheld the quotation defense; with respect to photographs that appeared only slightly on the same newspaper page, adjacent to the criticized article or the masthead (Photographs 10 and 27-29 at issue), it found exploitation within a justifiable extent as incidentally included works, and dismissed the appeal. ③ The decision is practically instructive in that, with respect to quotation when posting newspaper pages containing news photographs, it specifically considered clear distinguishability, the principal-subordinate relationship, fair practice, and the justifiable extent for the purpose, while separately treating slight inclusion of material not subject to criticism as exploitation of incidentally included works.

2024 (Gyo-Ke) No. 10037 [Wood Composite Material] <Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e8%a1%8c%e3%82%b110037%e3%80%90%e6%9c%a8%e8%b3%aa%e8%a4%87%e5%90%88%e6%9d%90%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%ef%bc%9e/

2024 (Gyo-Ke) No. 10037 [Wood Composite Material] <Hibiku Shimizu>

Date of judgment: February 20, 2025.

Inventive Step: ×

The plaintiff asserted that the three elements of density, dimensions of small flakes, and orientation (direction) operated together to produce a synergistic effect and therefore should be considered as a single difference. This judgment, however, approved the JPO's method of considering them separately, holding that, the specification did not show the effects of the density and orientation configurations as effects of the invention at issue, and the experimental results certificate (Exhibit Ko No. 20) showed only the effects of the individual configurations separately and did not establish a synergistic effect resulting from their combination.

(1) Difference 1: Density (400-550 kg/m³)

The invention of Exhibit Ko No. 1 does not specify density, but it was well known in the prior art (Exhibits Otsu Nos. 2-4) that a density of 0.40-0.65 g/cm³ (400-650 kg/m³) was suitable for a wood board.

⇒ A person skilled in the art could readily optimize or select a preferable numerical density range according to the use (a substrate for flooring material).

(2) Difference 2: Dimensions of the Small Wood Flakes (Thickness of 0.2-0.5 mm, etc.)

The invention at issue specifies the flake size in detail, but similar dimensions were disclosed in the prior art (Exhibits Ko Nos. 4 and 5, among others).

⇒ It was common general technical knowledge that making the flakes smaller produces uniformity and smoothness but reduces strength (a trade-off), and optimizing the numerical values within that relationship was within the ordinary creative ability of a person skilled in the art. The absence of "knots" was also a natural result of reducing the material to small pieces.

(3) Difference 3: Random Orientation of the Fiber Direction

In the invention at issue, the flakes are randomly oriented.

⇒ In OSB, imparting orientation or using a random orientation were well-known alternatives, and it was common general technical knowledge that random orientation eliminates variations in strength depending on direction (anisotropy). It was therefore easy to select random orientation according to the use.

[Supplement] The heading of the original article reads "2025 (Gyo-Ke) No. 10037," but the case number of the judgment is 2024 (Gyo-Ke) No. 10037 (judgment, p. 1, line 2). Further, regarding the statement in the original article that each element individually

produces an effect, the judgment held that the effects of the density-related configuration and the orientation-related configuration are not shown as effects of the invention (judgment, p. 22, lines 8-9), and its statement that the effects produced by each configuration alone were merely shown individually concerned the experimental results certificate (Exhibit Ko No. 20) (judgment, p. 22, line 15 to p. 23, line 8).

2024 (Ne) No. 10032 [Portable Information Communication Device] <Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10032%e3%80%90%e6%90%ba%e5%b8%af%e6%83%85%e5%a0%b1%e9%80%9a%e4%bf%a1%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%ef%bc%9e/

2024 (Ne) No. 10032 [Portable Information Communication Device] <Shimizu>

Inventive Step: ×

⇒ The judgment of the court of first instance dismissing the claims was affirmed.

At the priority date at issue, it was common general technical knowledge that a mobile telephone receives a radio signal, demodulates it into a digital signal, and that the CPU processes the signal and displays an image.

⇒ The judgment identified Difference 6BDG′ because Exhibit Hei B9 did not describe transmission of a signal from communication unit 12 to CPU 11, and then held that the configuration would have been obvious through application of common general technical knowledge and was not a substantive difference.

In the Exhibit Hei B9 document as well, because data that cannot be fully viewed on the mobile screen is output to an external monitor, there is a "difference in resolution."

VRAM (image memory) and bitmap data (dot data) were considered in identifying the cited invention, namely how a person skilled in the art would understand Exhibit Hei B9 in light of common general technical knowledge. The court also found that, at the priority date at issue, it was common general technical knowledge to generate and display data having the same resolution as the display panel from display data having a higher resolution, and to view the entire image by scrolling.

Priority date at issue: December 24, 2004.

[Supplement] Regarding the statement in the original article that a person skilled in the art would naturally understand this even if it is not expressly stated in a publicly known document, the judgment found that the Exhibit Hei B9 document contains no statement that any signal is transmitted from communication unit 12 to CPU 11 and recognized Difference 6BDG' (judgment, p. 12, lines 14-17; p. 18, line 26 to p. 19, line 4), and then held that the configuration could readily have been conceived by applying common general technical knowledge (or that the difference was not substantial in the first place) (judgment, p. 22, lines 13-18). The statement that the use of VRAM and bitmap data was common general technical knowledge was addressed in the judgment as part of the finding of the Exhibit Hei B9 invention, namely how a person skilled in the art would understand the Exhibit Hei B9 document (judgment, p. 15, lines 7-13). The common general technical knowledge found by the judgment is that display data having the same resolution as the display panel is generated from display data larger than the panel resolution and displayed, and the entire image can be viewed by scrolling (judgment, p. 22, lines 20-26); "reducing" is not mentioned in the judgment.

The relevant date for the judgment is the priority date at issue (judgment, p. 2, line 15; p. 22, lines 8-12).

2024 (Ne) No. 10001 [Yarn Color Placement System] <Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10001%e3%80%90%e3%83%a4%e3%83%bc%e3%83%b3%e8%89%b2%e9%85%8d%e7%bd%ae%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%ef%bc%9e/

2024 (Ne) No. 10001 [Yarn Color Placement System] <Hibiku Shimizu>

Inventive Step: × ⇒ Appeal Dismissed

"High-Low Control" = A conventional technique in which, when creating a pattern, yarns of colors intended to appear on the surface are left high, while yarns of colors intended to be hidden are pulled back low (or pulled out).

The invention at issue = Because some yarns are hidden, the number actually tufted (the effective rate) is set at a "higher density" than the apparent density of the finished product (the desired rate), and the feed speed of the backing material is controlled accordingly.

⇒ In the prior art (the invention of Exhibit Otsu No. 4), a system already existed that controlled the supply of yarn and the feed of the substrate (backing material) to create a desired pattern.

When some yarns are hidden by using "High-Low Control," it is self-evident that the actual tufting density (stitch rate) must be increased so that gaps are not created by the hidden yarns; otherwise, the desired apparent density cannot be obtained.

⇒ In order to obtain the "desired apparent density," setting the "actual tufting density" higher in consideration of the hidden yarns and adjusting the feed speed of the substrate was substantially encompassed by the invention of Exhibit Otsu No. 4; alternatively, it would have been obvious through application of common general technical knowledge to that invention.

(The concept of an "effective stitch rate" asserted by the plaintiff was not a new invention, but merely expressed in different words an adjustment that was necessarily made when carrying out conventional "High-Low Control.")

[Supplement] Regarding the statement in the original article that this was merely a matter of design that a person skilled in the art would naturally implement, the judgment stated that its determination was based on the grounds that the invention of Exhibit Otsu No. 4 substantially included Corrected Invention 3 and, even if not, that Corrected Invention 3 could readily have been conceived by applying common general technical knowledge to that invention, thereby expressly indicating that its determination was not based on a matter of design (judgment, p. 42, lines 14-20). This judgment is an appellate judgment, and its operative part dismisses the appeal (judgment, p. 1, line 26).

Tokyo District Court Judgment, 2023 (Wa) No. 70079 [Vehicle Guidance System] <Kokubu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70079%e3%80%90%e8%bb%8a%e4%b8%a1%e8%aa%98%e5%b0%8e%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c%e5%9c%8b%e5%88%86/

Tokyo District Court Judgment, 2023 (Wa) No. 70079 [Vehicle Guidance System] <Kokubu>

* The court of first instance found patent infringement. The Intellectual Property High Court judgment of October 20, 2025, 2025 (Ne) No. 10043, set aside the part of the first-instance judgment adverse to the defendant and dismissed the claim because Claim Element F was not satisfied. The discussion below introduces the reasoning of the court of first instance.

With respect to satisfaction of Claim Element A (a system for guiding vehicles entering and exiting through ETC-only entrances and exits), the court found, in substance, that the claim elements of the invention at issue were satisfied because, at the SIC, vehicles seeking to use an ETC-only entrance or exit were guided, by opening and closing barriers and using display devices, to the entry/exit route (Lane c) or the exit/general-road route (Lane d).
The court also found Claim Element F (guidance means, etc.) and the other claim elements satisfied.

(Excerpt from the Judgment)
Because each accused system can be said to guide a vehicle seeking to pass through an ETC-only entrance in order to enter a toll-road tollgate, service area, or the like, and a vehicle seeking to pass through an ETC-only exit in order to leave a toll-road tollgate, service area, or the like, to either Lane c or Lane d by means of the respective start-control devices and roadside display device ⑧ described above, it falls within a "system for guiding vehicles entering and exiting through ETC-only entrances and exits."

[Supplement] The original article began with "* Patent infringement was found." and "⇒ Reversed to non-satisfaction in the appellate judgment," and, in the excerpt from the judgment, joined the two types of vehicles with "or" where the judgment lists them side by side. The judgment lists the vehicles side by side (judgment, p. 48, line 26 to p. 49, line 6).

Tokyo District Court Judgment, 2023 (Wa) No. 70380 [Rod-Shaped Light] <Takahashi>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70380%e3%80%90%e6%a3%92%e7%8a%b6%e3%83%a9%e3%82%a4%e3%83%88%e3%80%91%ef%bc%9c%e9%ab%99%e6%a9%8b%ef%bc%9e/

Tokyo District Court Judgment, 2023 (Wa) No. 70380 [Rod-Shaped Light] <Takahashi>

Claim Elements Not Satisfied + Violation of the Support Requirement

Accused Products 1 and 2 use a "long press" to store and a "short press" to recall, and therefore do not satisfy Claim Element J4, which requires the same input method.
Accused Products 3 and 4 do not emit light in the recommended color solely upon "detection" of the "aforementioned first predetermined input" on the second button, and therefore do not satisfy the configuration "when the aforementioned first predetermined input is detected, ... cause light to be emitted."

"Although the detailed description of the invention in the specification at issue can be said to state that, with respect to storing the recommended color and emitting light in the recommended color, the problem is solved by a configuration using different input methods for the second button, it neither states nor suggests solving the problem by a configuration using the same input method for storing the recommended color and emitting light in the recommended color."
⇒ Violation of the support requirement

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94101.pdf

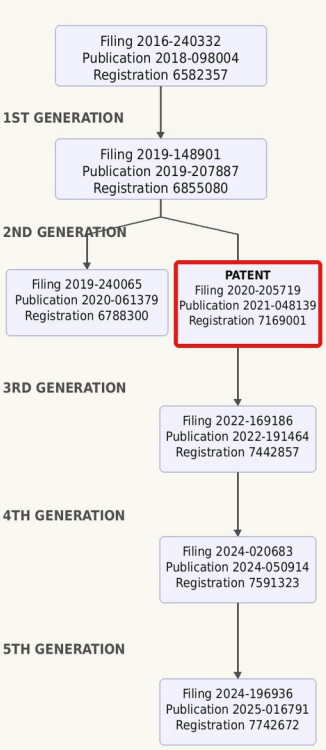
REIWA 5 (WA) NO. 70380 [ROD-SHAPED LIGHT] <TAKAHASHI>

— CLAIM ELEMENTS NOT SATISFIED + VIOLATION OF THE SUPPORT REQUIREMENT

Accused Products 1 and 2 store the recommended color by a "long press" and recall it by a "short press." Accordingly, they do not satisfy Claim Element J4, which requires the same input method ("the aforementioned first predetermined input on the second button").

Accused Products 3 and 4 do not emit the recommended color solely upon "detection" of the "aforementioned first predetermined input" on the second button. Accordingly, they do not satisfy the configuration "when the aforementioned first predetermined input is detected, ... cause [the light] to emit light."

"The detailed description of the invention in the specification at issue can be said to describe solving the problem, with respect to storing the recommended color and emitting light in the recommended color, by a configuration using different input methods on the second button; however, it neither describes nor suggests solving the problem, with respect to storing the recommended color and emitting light in the recommended color, by a configuration using the same input method."



⇒ VIOLATION OF THE SUPPORT REQUIREMENT

*** THE DISCLOSURE OF THE ACCUSED PRODUCTS IS THE SAME AS THE DISCLOSURE IN PARAGRAPH [0074] OF THE DETAILED DESCRIPTION OF THE INVENTION!!**

⇒ THE CLAIM LANGUAGE WAS CONSTRUED AS DEPARTING FROM THE DISCLOSURE OF THE SPECIFICATION.

CLAIM ELEMENT J1 STATES THAT "THE FIRST PREDETERMINED INPUT IS THE AFOREMENTIONED SHORT PRESS OR THE AFOREMENTIONED LONG PRESS."

IN LIGHT OF THE DETAILED DESCRIPTION OF THE INVENTION, COULD SATISFACTION ALSO HAVE BEEN FOUND? (DID THE SAME CORRECTED CLAIM INTEND TO ASSERT THAT EITHER OPERATION MAY BE A "SHORT PRESS" OR A "LONG PRESS"?)

2024 (Gyo-Ke) No. 10043 [Elasto-Plastic Hysteretic Damper] <Honda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110043%e3%80%90%e5%bc%be%e5%a1%91%e6%80%a7%e5%b1%a5%e6%ad%b4%e5%9e%8b%e3%83%80%e3%83%b3%e3%83%91%e3%80%91%ef%bc%9c%e6%9c%ac%e5%a4%9a%ef%bc%9e/

2024 (Gyo-Ke) No. 10043 [Elasto-Plastic Hysteretic Damper] <Honda>

1. <Invention of Exhibit Ko No. 1 + Invention of Exhibit Ko No. 2, etc.>
The plaintiff asserted that it would have been easy to apply the arrangement of the "invention of Exhibit Ko No. 2 (bridge damper)," which accommodates two-dimensional movement, to the "invention of Exhibit Ko No. 1 (building damper)," which accommodates movement in one direction.
However, the invention of Exhibit Ko No. 1 is premised on a load from one direction along the plane of a building structure.
The invention of Exhibit Ko No. 2 is arranged in multiple directions in order to accommodate two-dimensional movement of a bridge.
There is no motivation to apply the arrangement of the invention of Exhibit Ko No. 2 to the invention of Exhibit Ko No. 1; rather, the premise of the invention of Exhibit Ko No. 1 (unidirectional input) creates a disincentive to arranging the components in different orientations.

2. <Invention of Exhibit Ko No. 12 + Invention of Exhibit Ko No. 13>
The invention of Exhibit Ko No. 12 does not have a configuration in which a pair of shear portions is arranged with their orientations differing from each other.
Exhibit Ko No. 13 provides a "recess" in place of a vertical rib, and making only one "recess" results in a configuration in which one portion is recessed and the other is a flat plate; it does not suggest the "pair of shear portions oriented differently from each other" of the invention at issue.

3. <Violation of the Support Requirement>
The plaintiff asserted that the invention at issue is claimed as if it can accommodate "loads from every direction," but that the specification lacks support for accommodating all directions.
⇒ From the description in the specification, a person skilled in the art can recognize that the problem of a conventional damper having only "one shear portion" (such as being able to accommodate only one direction) can be solved by the invention at issue (arranging two shear portions in different orientations).
The invention at issue does not require "maximum energy absorption with respect to loads from all directions."

(Excerpt from the Judgment)
The plaintiff asserts that Corrected Invention 1 at issue is specified only as "when a

load is received by input, it deforms and absorbs energy," and is functionally specified as if it could accommodate a load from any direction, whereas the decision at issue, despite recognizing that Corrected Invention 1 at issue cannot absorb energy from all directions, found no violation of the support requirement, and is erroneous in this respect.
However, even in light of the description in the specification at issue, Corrected Invention 1 at issue cannot be found to require maximum energy absorption with respect to loads from all directions. The plaintiff's assertion is therefore erroneous in its premise and has no merit.

[Supplement] The reason stated in the original article that the corrugated steel plate of Exhibit Ko No. 12 is a single continuous member and therefore differs in configuration is not found in the court's reasoning. The judgment held that "the shear portion" in Claim 2 refers to one of the "pair of shear portions" in Claim 1, and that the invention of Exhibit Ko No. 12 cannot be found to have a configuration in which a pair (two) of such shear portions are arranged in different orientations (judgment, p. 20, lines 10-14). The expression "loads from every direction" in the original article does not appear in the judgment; the plaintiff's assertion as stated in the judgment was that Corrected Invention 1 at issue is functionally specified as if it could accommodate a load from any direction (judgment, p. 23, lines 20-24).

Intellectual Property High Court Judgment, 2024 (Ne) No. 10048 [Battery] <Nakadaira>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e7%9f%a5%e8%b2%a1%e9%ab%98%e5%88%a4%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10048%e3%80%90%e9%9b%bb%e6%b1%a0%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%ef%bc%9e/

Intellectual Property High Court Judgment, 2024 (Ne) No. 10048 [Battery] <Nakadaira>

The judgment of the court of first instance awarding damages of JPY 529,285,945 and delay damages, and dismissing the remaining claims, including the claims for an injunction and disposal, was affirmed.

The operative part states: "Both the appeal and the incidental appeal are dismissed." JPY 1,277,650,000 was the amount sought in the incidental appeal, not the amount awarded (judgment, p. 1, line 23; p. 2, lines 11-13; p. 3, lines 9-15).

According to the description in the specification at issue, the power-generating element is not limited to a wound type and includes a laminated type. The claim language "outer surface of the uncoated active-material portion" and "the surfaces are joined" likewise does not exclude joining through a member such as a clip.

⇒ Satisfied

The position of the flange in Exhibit Otsu No. 12 is inseparable from the effect of the invention of Exhibit Otsu No. 12, and cannot be construed as not being limited to the specifically disclosed location. ... Even if combined, the invention at issue would not be reached.

Exhibit Otsu No. 22 does not lead to Configuration A4, in which terminal-connection members are provided on both the positive and negative electrodes. In Exhibit Otsu No. 23, conductor element 5 cannot be said to be outside the battery casing. Nor was motivation to apply these to the invention of Exhibit Otsu No. 9 found (the same applies to the inventions of Exhibit Otsu No. 10 and Exhibit Otsu No. 11).

⇒ Inventive Step: ○

(Excerpt from the Judgment)

According to the statements in [Claim 1] of the claims of the Exhibit Otsu No. 12 publication and the statements in the detailed description of the invention in the Exhibit Otsu No. 12 publication, it is found that the "flange portion" described in the Exhibit Otsu No. 12 publication is provided on the lower surface of the lid body, and that a rotation-preventing portion engaging an engaging portion of the flange portion is provided on the lower surface of the lid body, thereby producing the effect that the terminal pole does not rotate even when an external force is applied to the terminal pole. ...

Further, according to paragraph [0080] of the Exhibit Otsu No. 12 publication, it is also found that an effect of the invention described in that publication is that, by interposing

an annular packing between the upper surface of a planar flange portion integrally formed with the terminal pole and the lower surface of the lid body, and by locking an annular compression spring to the pole portion to secure the terminal pole to the lid body, the annular packing is compressed in the vertical direction, thereby allowing the terminal pole to be securely sealed and fixed to the lid plate.
Thus, in the invention described in the Exhibit Otsu No. 12 publication, the provision of the flange portion on the lower surface of the lid body is closely related to the effect of the invention. Accordingly, ... the Exhibit Otsu No. 12 publication is found to disclose a configuration in which the flange portion is provided on the lower surface of the lid body; it cannot be said that the Exhibit Otsu No. 12 publication effectively discloses a configuration corresponding to Claim Element A4 of Invention 1 at issue; it also cannot be said that whether to install the flange portion inside or outside the container is a matter of design; and applying the Exhibit Otsu No. 12 configuration to the invention of Exhibit Otsu No. 9 does not reach the configuration of Invention 1 at issue.

[Supplement] The statement in the original article that the court affirmed the first-instance judgment granting an injunction plus JPY 1.27 billion differs from the judgment. The first-instance judgment granted the damages claim to the extent of JPY 529,285,945 and delay damages and dismissed the remaining claims (judgment, p. 3, lines 9-15), and JPY 1,277,650,000 was the amount sought in the incidental appeal (judgment, p. 2, lines 11-13). The claims for an injunction and disposal were directed at the appellant's Product 2 on the basis of Patent 2 at issue (judgment, p. 2, line 26 to p. 3, line 1), and the appellant's Product 2 was found not to fall within the technical scope of Invention 2 at issue, with equivalence also rejected (judgment, p. 28, lines 23-25). Further, of the statement in the original article that Exhibits Otsu Nos. 22 and 23 do not reach Configuration A4 in which terminal-connection members are provided on both electrodes, the point concerning both electrodes is a reason relating to Exhibit Otsu No. 22 (judgment, p. 38, lines 19-24); as to Exhibit Otsu No. 23, the judgment held that it could not be found to have a configuration corresponding to Claim Element A4 because conductive element 5 could not be said to be arranged outside the battery casing (judgment, p. 39, lines 13-16; p. 40, lines 2-3).

Tokyo District Court Judgment of April 24, 2025 (2022 (Wa) No. 2829) (Presiding Judge Motoyuki Nakashima)

◆ Full Text of the Judgment

[Overview of the Case]
The plaintiff held a breeder's right in a shiitake mushroom variety (Registration No. 17039) and sought, jointly and severally, payment of JPY 55,485,724 in damages and delay damages under Articles 709 and 719(1) of the Civil Code, alleging that the defendants' importation and transfer of mushroom culture beds and their production and transfer of shiitake mushrooms infringed the plaintiff's breeder's right.

The court narrowed the core issues to: (1) whether mycelium could have been mixed in advance into the culture medium in the test tubes prepared by the plaintiff itself; and (2) why the plaintiff disposed of the parent strain and whether that disposal was appropriate. This judgment held that the possibility that the plaintiff had mixed mycelium of the plaintiff's variety into the test tubes at issue in advance could not be sufficiently excluded, that the results of the expert appraisal premised thereon should be found to lack credibility, and that, without needing to decide the remaining points, the plaintiff's claims lacked merit; it therefore dismissed the plaintiff's claims.

[Preliminary Explanation Based on Prior Judicial Decisions—Proof of Infringement of a Breeder's Right under the Plant Variety Protection and Seed Act]
A "variety" protected by the variety-registration system under the Plant Variety Protection and Seed Act means a single grouping of plants that can be distinguished from other groupings of plants by all or part of its characteristics and can be propagated while retaining all of those characteristics (Article 2(2) of the Act). This makes the actually existing grouping of plants itself the object of legal protection. With respect to the scope of a breeder's right, the Act provides that the holder has the exclusive right to exploit, as a business, "the variety for which variety registration has been obtained (hereinafter referred to as the 'registered variety') and any variety that is not clearly distinguishable from the registered variety by its characteristics" (Article 20(1) of the Act). A "variety that is not clearly distinguishable from the registered variety by its characteristics" means a variety that differs in characteristics from the registered

variety but lacks a clear difference of a degree sufficient to establish distinctness as a requirement for variety registration. Specifically, it is understood that a variety whose differences in characteristics from the registered variety remain within the class values established for each characteristic (numerical values classifying characteristics by class; for example, where the registered variety is a strawberry, characteristics include the "ratio of fruit length to width," "fruit size," and "fruit-skin color") will often fall within a "variety that is not clearly distinguishable from the registered variety by its characteristics." Even where the differences in characteristics do not remain within the foregoing range, it has also been held that there may be cases in which a variety can be found to fall within a "variety that is not clearly distinguishable from the registered variety by its characteristics" through comprehensive consideration of the differing items and the degree of difference, the type and nature of the plant, and other matters. It has also been held that "in order to determine whether a variety is one to which the effect of a breeder's right extends, it is ultimately necessary to compare the plants themselves and examine whether the variety suspected of infringement is not clearly distinguishable from the registered variety by its characteristics (the actual-object principle)" (Intellectual Property High Court Judgment of June 24, 2015, 2015 (Ne) No. 10002, Appeal in an Action Seeking an Injunction Against Infringement of a Breeder's Right; court of first instance: Tokyo District Court Judgment of November 28, 2014, 2009 (Wa) No. 47799 / 2013 (Wa) No. 21905). Under the amended Plant Variety Protection and Seed Act effective in 2022, a presumption concerning the scope of a breeder’s right using examination characteristics and a determination system administered by the Minister of Agriculture, Forestry and Fisheries were introduced. The foregoing explains prior judicial decisions and does not mean that only comparison of the actual plants is always permitted under the current system.

[Summary of the Judgment]
1. Determination Concerning the Credibility of the Subculturing Acts at Issue and Related Acts
According to the foregoing basic facts, the foregoing findings of fact, and the entire purport of the oral argument, it is found that the expert appraisal at issue was conducted on mycelium that had been separated from each accused product and subcultured through each separation act at issue, each subculturing act at issue, and the multiple subculturing acts subsequently performed (hereinafter collectively referred to as the "Subculturing Acts at Issue and Related Acts"). Accordingly, as a premise for determining the credibility of the expert appraisal at issue, the credibility of the Subculturing Acts at Issue and Related Acts (Issue 1-1) is examined.
... In view of the fact that the plaintiff deliberately prepared the test tubes at issue in advance within its own company, rather than at a third-party institution such as the Center for Seeds and Seedlings, NARO, and therefore had sufficient time to mix in mycelium of the plaintiff's variety, it must be said that it was fully possible to mix

mycelium of the plaintiff's variety, of a size not visible to the naked eye, into the test tubes at issue in advance. Moreover, according to the foregoing findings of fact and the entire purport of the oral argument, after the Subculturing Acts at Issue and Related Acts, the plaintiff itself disposed of the parent strain at issue or caused the Center for Seeds and Seedlings, NARO to dispose of it, and has not explained any reasonable ground for doing so. It is therefore found that the plaintiff itself made subsequent verification of the Subculturing Acts at Issue and Related Acts impossible. Considering these circumstances as a whole, the possibility that the plaintiff had mixed mycelium of the plaintiff's variety into the test tubes at issue in advance cannot be sufficiently excluded, and it is appropriate to find that the results of the expert appraisal at issue, which are premised thereon, lack credibility.

2. Other Matters

The Subculturing Acts at Issue and Related Acts should, by their nature, have been conducted by a fair and neutral third-party institution. Even if circumstances made it unavoidable to conduct them within the plaintiff's own company, the defendants are correct that conducting them within the plaintiff's own company inherently created a risk of mixing fungal strains or substituting test tubes. In light also of the matters explained above, when conducting the Subculturing Acts at Issue and Related Acts, it was indispensable, at a minimum, to have a third-party institution such as the Center for Seeds and Seedlings, NARO prepare the test tubes and to preserve the parent strain without disposing of it, given the importance of fairness and transparency in expert appraisals in judicial proceedings. Nevertheless, the plaintiff deliberately failed to take those measures, gave no reasonable explanation of the necessity and appropriateness of preparing the test tubes at issue itself, and, with respect to disposal of the parent strain at issue, merely explained that the parent strain had become unnecessary after the mycelium was subcultured and was therefore disposed of, and that there was no problem. Accordingly, at least the Subculturing Acts at Issue and Related Acts lack credibility, as explained above, and the expert appraisal at issue premised thereon must likewise be said to lack credibility.

[Comment]

This is a valuable judicial decision addressing the credibility of an expert appraisal as evidence proving infringement in a breeder's-right infringement action. In proof under the actual-object principle indicated by prior judicial decisions, an expert appraisal involving comparative cultivation of the registered variety and the variety suspected of infringement is important. The method of proof must be considered according to the case, also taking account of the presumption based on examination characteristics and the determination system effective in 2022. In this regard, the Center for Seeds and Seedlings, NARO (https://www.naro.go.jp/laboratory/ncss/) is an institution that, under Article 15-2(1) of the Plant Variety Protection and Seed Act, conducts "growing tests" to obtain data, such as distinctness between an applied-for variety and existing

varieties, necessary for the national government's examination of variety registration, and has an extremely high level of expertise in comparative growing tests. Litigation parties are therefore thought often to request an expert appraisal from the Center for Seeds and Seedlings, NARO as a fair and neutral third-party institution. This judgment demonstrates the importance, in doing so, of conducting the expert appraisal with extreme care, including asking the institution conducting the expert appraisal to prepare the test tubes and asking a third party to preserve the parent strain after the expert appraisal.
[Supplement] Reference: Ministry of Agriculture, Forestry and Fisheries, Overview of the Act Partially Amending the Plant Variety Protection and Seed Act: https://www.maff.go.jp/j/shokusan/attach/pdf/shubyoho-22.pdf
[Supplement] The Act Partially Amending the Plant Variety Protection and Seed Act (Act No. 74 of 2020) introduced a provision presuming that a variety not clearly distinguishable by the examination characteristics of a registered variety recorded in the variety registry is a variety not clearly distinguishable from that registered variety by its characteristics (Article 35-2 of the Act) and a system of determination by the Minister of Agriculture, Forestry and Fisheries (Article 35-3 of the Act), both effective April 1, 2022. These provisions provide means of proof other than an expert appraisal involving comparative cultivation. This judgment does not refer to these provisions. Since April 1, 2022, the provision under which NARO (the Center for Seeds and Seedlings) conducts growing tests has been Article 15-2(1) of the Act. Further, what the judgment held to be indispensable was, when conducting the Subculturing Acts at Issue and Related Acts, to have a third-party institution prepare the test tubes and to preserve the parent strain without disposing of it (judgment, p. 22, lines 15-19), and preservation of the parent strain was required for subsequent verification of the subculturing acts (judgment, p. 22, lines 3-7).

2024 (Ne) No. 10056 [Van-Type Motor Vehicle for Cleaning Work] <Nakadaira>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10056%e3%80%90%e6%b4%97%e6%b5%84%e4%bd%9c%e6%a5%ad%e7%94%a8%e3%83%90%e3%83%b3%e5%9e%8b%e8%87%aa%e5%8b%95%e8%bb%8a%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%ef%bc%9e/

2024 (Ne) No. 10056 [Van-Type Motor Vehicle for Cleaning Work] <Nakadaira>

* The appellee offered for sale Product 2, which differed from Product 1 sold by KCS. Product 2 was also found infringing at first instance, and an injunction and disposal were ordered; the appellee did not appeal. ⇒ The offer for sale was not found to have assisted or facilitated KCS's sales of Product 1, and a joint tort was denied.

(Excerpt from the Judgment)

Even if the appellee received delivery of Appellee Product 2 from KCS and offered it for sale under the name "ECO ACE JET," which differs from the name of Appellee Product 1 sold by KCS, it cannot be found that this assisted or facilitated KCS's sale of Appellee Product 1.

[Supplement] Regarding the statement in the original article that the appellee offered for sale a product different from the infringing product, the first-instance judgment also found Appellee Product 2 to fall within the technical scope of the invention and granted an injunction against its transfer and the like and an order for its disposal against the appellee (judgment, p. 2, line 26 to p. 3, line 4), and the appellee did not appeal (judgment, p. 4, lines 2-3). In the judgment, the excerpt above is followed by a parenthetical stating that this conclusion would not change even if the structure, performance, and the like of the vehicle and cleaning device of Appellee Product 2 were the same as those of Appellee Product 1 (judgment, p. 11, lines 7-9).

[Contract] Tokyo District Court Judgment, 2022 (Wa) No. 9422 <Shibuya>

Original Article URL:
https://www.nakapat.gr.jp/ja/note/%e3%80%90%e5%a5%91%e7%b4%84%e3%80%91%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c4%e5%b9%b4%e3%83%af9422%ef%bc%9c%e6%be%81%e8%b0%b7%ef%bc%9e/

[Contract] Tokyo District Court Judgment, 2022 (Wa) No. 9422 <Shibuya>

The defendant was found to have been in a "state of being objectively unable to pay" (Article 17(2) of the contract at issue), and the termination was held valid.

"According to the evidence (Exhibits Ko Nos. 27, 28, and 30), it can be found that, no later than February 7, 2025, the defendant was in a state of being objectively unable to pay."

[Supplement] The defendant stated that it did not actively dispute the ground for termination (judgment, p. 3, line 3). The judgment held that the contract at issue, a joint development and business alliance agreement, ended upon termination on February 7, 2025, and ordered payment of the contract fee of JPY 210 million and interest (judgment, p. 1, lines 10-11; p. 2, lines 1-2; p. 3, lines 7-10).

Osaka District Court Judgment, 2023 (Wa) No. 10217 [Three-Dimensional Network Fiber Assembly] <Matsuami>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e5%a4%a7%e9%98%aa%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af10217%e3%80%90%e7%ab%8b%e4%bd%93%e7%b6%b2%e7%8a%b6%e7%b9%8a%e7%b6%ad%e9%9b%86%e5%90%88%e4%bd%93%e3%80%91%ef%bc%9c%e6%9d%be/

Osaka District Court Judgment, 2023 (Wa) No. 10217 [Three-Dimensional Network Fiber Assembly] <Matsuami>

Action Seeking Remuneration for an Employee Invention
⇒ Dismissed

(Excerpt from the Judgment)
Because the reward rules at issue were established after, in the course of their establishment and amendment, general employment rules and the like had been referred to, opinions had been obtained from persons knowledgeable about intellectual property, drafts had been disclosed to employees and others, and opinions had been heard, it cannot be found unreasonable for the defendant to pay remuneration for employee inventions made at the defendant in accordance with the reward rules at issue, which were established through lawful procedures. ...
Although it appears that the defendant's product had some possibility of being used as a cushioning material or the like as a general-purpose three-dimensional network fiber assembly, in the application as a bedding mattress asserted by the plaintiffs as the basis for excess sales, the product was once commercialized and achieved sales for a certain period, but appears to have received a low evaluation for its performance as a mattress, and commercialization was terminated. ...
Under these circumstances, there is nothing unreasonable in the defendant's determination that the condition for payment of an implementation reward—"when, through the exercise of an industrial property right, a major contribution has been made to the company"—was not met and that no implementation reward should be paid for the inventions at issue.

[Employee Invention] Tokyo District Court Judgment, 2023 (Wa) No. 70495 <Nakashima>

* The plaintiff was not recognized as a joint inventor.
—There was no reliable evidence substantiating the time of completion asserted by the plaintiff.

(Excerpt from the Judgment)
Although the plaintiff asserts that the plaintiff's invention was completed before the plaintiff prepared the plaintiff's explanatory document, there is no reliable evidence substantiating that assertion, and the invention at issue was, in the first place, conceived and reduced to a specific form without the plaintiff's involvement. ...
In addition, even after two rounds of assertions and evidence by both parties, the Court found that the actual nature of the plaintiff's involvement in the invention at issue remained unclear and repeatedly sought clarification ... from both parties on two occasions. Even after fully considering the results, in view of the actual nature of the plaintiff's involvement and other circumstances, the invention at issue was conceived and reduced to a specific form without the plaintiff's involvement, and the plaintiff cannot be found to be an inventor or joint inventor of the invention at issue.

[Supplement] According to the judgment, the plaintiff asserted the time of completion of the invention (judgment, p. 15, lines 17-18). However, the main reason in the judgment is the finding that the invention at issue had been independently conceived and embodied by Bi, Di, and others without the plaintiff's involvement (judgment, p. 14, lines 21-23).

Osaka District Court Judgment, 2022 (Wa) No. 11405 [Heterocyclic Derivative] <Takemiya>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e5%a4%a7%e9%98%aa%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c4%e5%b9%b4%e3%83%af11405%e3%80%90%e8%a4%87%e7%b4%a0%e7%92%b0%e8%aa%98%e5%b0%8e%e4%bd%93%e3%80%91%ef%bc%9c%e6%ad%a6%e5%ae%ae%ef%bc%9e/

Osaka District Court Judgment, 2022 (Wa) No. 11405 [Heterocyclic Derivative] <Takemiya>

[Claim for Remuneration for an Employee Invention] Approximately JPY 94 million awarded.
* The employee-invention rules are redacted and unclear, but they were not applied to this invention.
⇒ Patent Act prior to the 2004 amendment
(Reason) Although the defendant had employee-invention rules, no agreement to apply them to a case such as the invention at issue was found, and the statutory "reasonable remuneration" was to be calculated.

Employer's own working portion (the calculation base includes domestic sales and amounts relating to Actelion):
(Excess sales) × (hypothetical royalty rate of 5.9%) × (1 − employer contribution rate of 99%) × (co-inventor's share of 1/3)

Third-party working portion (license revenue):
(License revenue) × (1 − employer contribution rate of 99%) × (patent contribution rate of 25%*) × (co-inventor's share of 1/3)
<* Considering the subject matter of the agreement and other circumstances, the court held that the contribution of the patent at issue did not exceed 25%. Part of the agreement’s contents is redacted in the published judgment.>

(Excerpt from the Judgment)
The employee-invention rules at issue provide that ●●●●●●●●●●●●●●●●●●●●●●●●●●●●●●●●●●●●

However, the employee-invention rules at issue contain no provision stating that the rules also apply to inventions, such as the invention at issue, that do not fall within the inventions described in the foregoing provision, and the record contains no evidence sufficient to find that an agreement was reached between the plaintiff and the defendant to apply the employee-invention rules at issue to such an invention.

[Supplement] Regarding "Employer's own working portion (domestic sales)" in the original article, the judgment held that, in addition to sales of the pharmaceutical at issue in Japan, the amount relating to Actelion (the content of which is redacted in the judgment) should also be included in the sales on which reasonable remuneration is calculated (judgment, p. 30, lines 17-21; p. 31, lines 6-7). The specific subject matter of

the license agreement is redacted in the judgment, and the published judgment does not identify that subject matter as know-how and data provision. The judgment held that the patent's contribution ratio did not exceed 25%, taking into account the technical information at issue, securing of a safety-monitoring system, and other matters (judgment, p. 35, lines 2-24). The awarded amount of approximately JPY 94 million is after deducting JPY 6,519,000 already paid (judgment, p. 36, lines 7-12).

2023 (Ne) No. 10107 "PCSK9 (Second Litigation)" <Nakadaira>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c%ef%bc%95%e5%b9%b4%e3%83%8d10107%e3%80%8epcsk9%ef%bc%88%e4%ba%8c%e6%ac%a1%e8%a8%b4%e8%a8%9f%ef%bc%89%e3%80%8f%ef%bc%9c%e4%b8%ad%e5%b9%b3%ef%bc%9e/

2023 (Ne) No. 10107 "PCSK9 (Second Litigation)" <Nakadaira>

* In the second litigation, declarations and empirical experiments by Dr B and Dr C and other materials were newly submitted, resulting in a finding of violation of the support requirement.

Amgen's patented invention does not limit the specific structure of the antibody (amino-acid sequence), but is an antibody defined by the following functions:
1. Neutralizes: inhibits binding between PCSK9 and LDLR.
2. Competes: competes for binding to PCSK9 with a specified "reference antibody (such as 21B12)" created by Amgen.

The court found that "competes" includes the following two patterns:
1. Direct competition (Direct Blocking): binds to the "same site" as the reference antibody and interferes with it.
2. Competition through steric hindrance (Steric Hindrance): binds to a "different site" from the reference antibody, but, because of the antibody's large size, physically interferes with and inhibits binding.

The specification at issue described "antibodies that bind to the same site (1 above)," but did not contain sufficient disclosure (support) as to whether "antibodies that bind to a different site and interfere through steric hindrance (2 above)" actually have a neutralizing action.
⇒ Violation of the support requirement

[Appellee's submission] The appellee submitted that, even if conditions concerning neutralization or competition by Fab fragments were added, the possibility of including antibodies that compete through steric hindrance and bind to different sites would remain (judgment, p. 41, line 19 to p. 44, line 2). [Supplement] Correction Items 3 and 4 add conditions concerning neutralization and competition, respectively, by the Fab fragments of the antibody; they do not limit the subject matter of the invention to Fab fragments themselves (judgment, p. 12, line 20 to p. 13, line 3).
[Court's holding] The court held that Correction Items 1 and 2 did not fall within the purposes of correction specified in the proviso to Article 134-2(1) of the Patent Act and stated: "Without needing to decide the remaining correction items, the appellant's rebuttal based on correction is without merit" (judgment, p. 67, lines 5-8 and 17-19). Accordingly, the court did not individually examine Correction Items 3 and 4 concerning Fab fragments and then decide a violation of the support requirement after those corrections.

[Supplement] The original article stated that, even if limited to Fab fragments by the correction, the possibility of including antibodies that compete through steric hindrance but bind to different sites would remain. That sentence presented the appellee's submission (judgment, p. 41, line 19 to p. 44, line 2) as if it were the court's holding and summarized Correction Items 3 and 4 as limiting the invention to Fab fragments. Further, regarding the professor's technical opinion mentioned in the original article, the judgment relied on the statements (verification experiments) of Dr. B and Dr. C (judgment, p. 54, line 25 to p. 55, line 10), and the published judgment does not state that they were professors. The "same site" in the original article is, in the judgment, a site on PCSK9 that is identical to or overlaps with the site at which the reference antibody binds to PCSK9 (judgment, p. 49, lines 10-11). The main reasons for the violation of the support requirement are that an antibody competing with a reference antibody cannot be said to neutralize by the same mechanism as the reference antibody (judgment, p. 53, line 13 to p. 54, line 4) and that, in the verification experiments, roughly 80% or more of the antibodies competing with the reference antibodies lacked binding-neutralizing activity (judgment, p. 55, lines 2-10).

Tokyo District Court Judgment, 2022 (Wa) No. 7976 [Communication Equipment] <Nakashima>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c4%e5%b9%b4%e3%83%af7976%e5%8f%b7%e3%80%90%e9%80%9a%e4%bf%a1%e6%a9%9f%e5%99%a8%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b3%b6%ef%bc%9e/

Tokyo District Court Judgment, 2022 (Wa) No. 7976 [Communication Equipment] <Nakashima>

* Standard-essential patent—infringement.

⇒ The claim for an injunction constituted an abuse of rights (the parties failed to reach agreement because of the difference in royalty rates, and it could not be said that the defendant lacked willingness to obtain a license).

⇒ Damages were calculated as: "Sales of the accused products × aggregate royalty rate for the entire LTE standard ÷ total number of patents for the entire LTE standard (1,300 patents) × number of patents at issue (two patents counted as one because they belong to the same patent family)."

As to the "aggregate royalty rate for the entire LTE standard," the rate was 9% for products supporting LTE only and 8% for 5G-compatible products (because LTE's relative contribution is lower).

An increase based on an infringement premium (Article 102(4) of the Patent Act) was not allowed because the defendant was willing to obtain a licence on FRAND terms.

[Supplement] The patents at issue are two patents, Patent 1 and Patent 2 at issue (judgment, p. 2, lines 9-10); because they belong to the same patent family, the court held that they should be counted as one patent to match the unit of the 1,300 patents (judgment, p. 115, lines 18-22). An increase based on an infringement premium was not allowed because the defendant had been willing to take a license on FRAND terms (judgment, p. 112, lines 18-22).

2024 (Ne) No. 10074 [Filler for Electronic Cigarette] <Masuda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10074%e3%80%90%e9%9b%bb%e5%ad%90%e3%82%bf%e3%83%90%e3%82%b3%e7%94%a8%e5%85%85%e5%a1%ab%e7%89%a9%e3%80%91%ef%bc%9c%e5%a2%97%e7%94%b0%ef%bc%9e/

2024 (Ne) No. 10074 [Filler for Electronic Cigarette] <Masuda>

A review of the entries in various dictionaries on the meaning of "cut" (kirikomi) (Claim Element B) shows that they contemplate the active acts of "cutting into," "making a score," and "cutting," and several examples expressly state that the act is performed with a blade.

Accordingly, "cut" (kirikomi) means a structure or state in which a "score" or "slit" (kirime/kireme) has been artificially and actively formed using a blade.

The specification at issue merely gives examples such as a cutter blade, razor blade, and rotary cutter as means for forming the cuts, and contains no description or suggestion of any means of formation other than a blade.

⇒ Turning to the accused product, the three streak-like portions formed on the surface of the tobacco substrate, substantially parallel to one another, along the longitudinal direction of the tobacco stick (rod) were formed by controlling crimping conditions in the crimping process and were not formed by a blade.

⇒ Claim Element Not Satisfied (for the same reasons as the court of first instance, Tokyo District Court Judgment, 2023 (Wa) No. 70407)

2024 (Gyo-Ke) No. 10109 [Assistance Device] <Honda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110109%e3%80%90%e4%bb%8b%e5%8a%a9%e6%a9%9f%e3%80%91%ef%bc%9c%e6%9c%ac%e5%a4%9a%ef%bc%9e/

2024 (Gyo-Ke) No. 10109 [Assistance Device] <Honda>

The subject of the petition for retrial is understood to be the original decision. The fact that the original decision, which became final before the fourth retrial decision, conflicts with the fourth retrial decision does not constitute a ground for retrial of the original decision under Article 338(1)(x) of the Code of Civil Procedure, as applied mutatis mutandis by Article 171(2) of the Patent Act.

Even assuming that the plaintiff's position is construed as making the fourth retrial decision the subject of the petition for retrial and asserting, as a ground for retrial, that it conflicts with the original decision, the original decision was a decision finding the appeal against the examiner's decision of refusal unsuccessful, whereas the fourth retrial decision was a decision dismissing the petition for retrial as unlawful. The fourth retrial decision therefore does not conflict with the original decision, and the plaintiff's claim has no merit.

Tokyo District Court Judgment, 2024 (Gyo-U) No. 5001 <Shibuya>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e6%b1%ba%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%a65001%ef%bc%9c%e6%be%81%e8%b0%b7%ef%bc%9e/

Tokyo District Court Judgment, 2024 (Gyo-U) No. 5001 <Shibuya>

Date of judgment: April 18, 2025.

The plaintiff, having filed an international patent application (PCT application), made a "request for examination" before submitting the "translation" prescribed by the Patent Act. The JPO dismissed the request as unlawful, and the plaintiff sought revocation of that disposition.

⇒ Action dismissed as inadmissible.

Article 184-17 of the Patent Act provides that, for a foreign-language patent application, a request for examination may not be made until "after" procedures such as submission of a translation have been completed.

This provision makes submission of a translation before a request for examination a procedural requirement, and a defect (error) in that sequence is not cured by subsequently submitting the translation.

In this case, it is clear that the translation had not been submitted when examination was requested.

Even if the court were to revoke the disposition at issue, the fact that the request for examination violated the Act would remain unchanged, and there would be no possibility of curing the defect. The JPO would therefore have no choice but to dismiss the request again. Revocation of the disposition at issue would accordingly provide no practical benefit to the plaintiff, and there is no legal interest in bringing the action.

[Supplement] The heading of the original article describes this case as a decision (kettei), but it is a judgment, rendered on April 18, 2025 (judgment, p. 1, line 1).

2024 (Gyo-Ke) No. 10022 [... Antimicrobial Agent] <Honda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110022%e3%80%90%e6%8a%97%e5%be%ae%e7%94%9f%e7%89%a9%e5%89%a4%e3%80%91%ef%bc%9c%e6%9c%ac%e5%a4%9a%ef%bc%9e/

2024 (Gyo-Ke) No. 10022 [... Antimicrobial Agent] <Honda>

In order for it to have been obvious to change the treatment target of the primary cited invention (from tinea pedis or a cutaneous fungal disease) to "onychomycosis" and thereby adopt the configuration relating to the difference,
in light of the technical level at the filing date of the application at issue,
it is necessary that, when the therapeutic agent is simply applied to the nail plate, it could reasonably have been expected that the active ingredient KP-103 would penetrate and permeate into the interior of the nail plate, be delivered to the lower layer of the nail plate and the nail bed, which are the infected sites, and exert a therapeutic effect.

⇒ Inventive Step of the Medical-Use Invention: ○

(Summary of the Judgment)

(1) As common general technical knowledge at the filing date of the application at issue, it is found that: (i) Trichophyton rubrum and Trichophyton mentagrophytes accounted for most of the causative fungi of onychomycosis, as they did for tinea pedis; (ii) in order to treat onychomycosis effectively with a topical agent, it was necessary to cause the antifungal agent to penetrate the keratin of the nail plate and deliver it to the infected site, but, because of the nature of the nail plate, there was an obstacle in that antifungal agents did not readily penetrate or permeate into its interior, and treatment of onychomycosis with a topical agent was considered extremely difficult, while oral agents also presented problems of side effects and development of a topical agent was awaited; and (iii) both nails and hair contain hard keratin and have mutually similar amino-acid compositions.

(2) As technical findings known at the filing date of the application at issue, it is found that: (iv) attempts to deliver a topical antifungal agent to the infected site included development of nail-lacquer preparations and treatments involving chemical or surgical removal of the nail plate, application of an antifungal agent, and use in combination with occlusive dressing therapy (ODT); (v) the Exhibit Ko No. 6 study evaluating the antifungal agent tioconazole as a topical therapeutic agent for onychomycosis had been conducted; (vi) KP-103 had properties such as low adsorption to keratin and high release, without reduction of its anti-Trichophyton mentagrophytes activity even when human hair (keratin) was added; and (vii) there had been research using human hair to evaluate adsorption of antifungal drugs to keratin and reduction in activity upon adsorption to keratin.

(3) (Summary of the judgment) In order for a person skilled in the art to have readily conceived of changing the treatment target of the topical fungal-disease therapeutic agent of the primary cited invention (the invention of Exhibit Ko No. 1-1) to "onychomycosis" and adopting the configuration of the corrected invention at issue relating to the difference, in light of the technical level at the filing date of the application at issue, it is necessary that, when the therapeutic agent is simply applied to the nail plate, it could reasonably have been expected that the active ingredient KP-103 would penetrate and permeate into the interior of the nail plate, be delivered to the lower layer of the nail plate and the nail bed, which are the infected sites, and exert a therapeutic effect. Considering the common general technical knowledge and technical findings in (1) and (2) above as a whole, it cannot be said that a person skilled in the art could reasonably have had such an expectation at the filing date of the application at issue. Further, in light of the common general technical knowledge at the filing date of the application at issue, it would have been difficult for a person skilled in the art to predict the effects of the corrected invention at issue shown in the specification at issue and the like. Accordingly, at the filing date of the application at issue, a person skilled in the art could not readily have made the corrected invention at issue based on the invention of Exhibit Ko No. 1-1.

[Supplement] The second and subsequent sentences of (3) summarize the judgment rather than quote its original text. Further, regarding "external dermatomycosis" in the original article, the treatment target of the invention of Exhibit Ko No. 1-2 is dermatomycosis (judgment, p. 34, lines 4-5).

2024 (Ne) No. 10029 "Claim for Confirmation of the Right to Obtain a Patent" <Masuda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%8d10029%e3%80%8e%e7%89%b9%e8%a8%b1%e3%82%92%e5%8f%97%e3%81%91%e3%82%8b%e6%a8%a9%e5%88%a9%e3%81%ae%e7%a2%ba%e8%aa%8d%e8%ab%8b%e6%b1%82%e3%80%8f%ef%bc%9c%e5%a2%97/

2024 (Ne) No. 10029 "Claim for Confirmation of the Right to Obtain a Patent" <Masuda>

Date of judgment: April 24, 2025.

* Y1 graduated from the Faculty of Environment and Information Studies at Keio University and started a business, but had no clinical knowledge.

⇒ Inventorship: ×

(The cooperating professor was the inventor.)

<Inventorship (Employee Invention)>

It is necessary to have actually participated in the creative act concerning the technical idea of the invention, particularly in completing the characteristic portion of the invention relating to the means for solving the prior technical problem.

The characteristic portion of Invention 1-3 at issue lies in the following: in a vascular plug comprising a pusher wire and a mesh portion for embolizing an aneurysm in order to prevent rupture of an aneurysm within a blood vessel, there were problems in that multiple vascular plugs of different sizes had to be prepared and that rapid expansion of the mesh portion risked damaging the aneurysm; therefore, a configuration was adopted in which, when not housed, the distal end of the stent is pushed out from the distal end of the catheter and expands while curling outward; this provides a high degree of freedom in size with respect to the aneurysm and does not damage a bifurcation aneurysm.

Y1 graduated from a humanities faculty and, after working for a financial institution, established the plaintiff company in the first instance together with Y1's elder brother, who held a doctorate in science; Y1, however, had no clinical knowledge.

By contrast, Professor A, who was a cooperating party, had extensive clinical experience, and Professor A's research notebook clearly described the problems and means for solving them in Invention 1-3 at issue. It is therefore appropriate to find that Professor A actually participated in completing the characteristic portion of Invention 1-3 at issue.

<Claim for Confirmation of the Right to Obtain a Patent Relating to a PCT Application>

The plaintiff in the first instance states that, after obtaining a judgment in this action confirming the right to obtain a patent, it will select, from among the Contracting States to the Patent Cooperation Treaty, the countries or regions in which it actually wishes to obtain patents and pursue new applications or procedures for restoration of rights.

However, in light of the principle of territoriality, how a right to obtain a patent is treated and what effect it has in foreign countries are understood to be determined by the law of the country in which a patent right is registered on the basis of that right to obtain a patent. At present, no new application, national-phase entry, or the like has been made for the invention in any foreign country, and no specific plan has been disclosed. Accordingly, ripeness of the dispute cannot be found with respect to confirmation of the right to obtain a patent for the invention.

[Supplement] The heading of the original article reads "2025 (Ne) No. 10029," but the case number of the judgment is 2024 (Ne) No. 10029 (judgment, p. 1, line 2). The reference to a humanities faculty in the original article does not appear in the judgment. The judgment found that Y1 graduated from the Faculty of Environment and Information Studies of Keio University and, after working at a bank, started a business (judgment, p. 23, lines 11-13), and held that Y1 could not be found to have such a background (judgment, p. 25, lines 17-21).

2023 (Gyo-Ke) No. 10078 [Audio Controller] <Shimizu> (Defendant: Pixie Dust)

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110078%e3%80%90%e3%82%aa%e3%83%bc%e3%83%87%e3%82%a3%e3%82%aa%e3%82%b3%e3%83%b3%e3%83%88%e3%83%ad%e3%83%bc%e3%83%a9%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4/

2023 (Gyo-Ke) No. 10078 [Audio Controller] <Shimizu> (Defendant: Pixie Dust)

C (the contractor) merely solved a problem different from that of the invention at issue.
⇒ Neither misappropriation nor violation of the joint-application requirement was established.

(Supplement: A and B were on the commissioning side (PDT).) (Excerpt from the Judgment)

It is found that A and B had conceived of a "phased-array speaker" before PDT placed an order with the plaintiff for the prototype at issue. ... A and B were researchers in ultrasound and are found to have understood the basic principle of the conventional parametric speaker. They had also developed the experimental device at issue, which, although subject to certain limitations, could generate audible sound at a focal position. Accordingly, the conception of A and B was not at the level of a mere idea, as the plaintiff asserts, but was a conception accompanied by a specific means of solution. ... ...

However, among the functions of the prototype at issue described in (3) A above, the function of emitting the audible-sound waveform with a phase difference such that it converges at the focal position and aligning the audible-sound waveform at the focal position ... improves the sound quality of the audible sound. However, the technical problem of the invention at issue is removal of restrictions on the environment of use, not improvement of the sound quality of audible sound. Therefore, that function of the prototype at issue does not constitute the characteristic portion of the invention at issue.

The remaining points are also merely one specific and objective mode of implementing the characteristic portion of the invention at issue. Depending on their content, they may be said to solve a problem different from that of the invention at issue, but cannot be said to solve the problem of the invention at issue.

In other words, the functions of the prototype at issue do not affect the foregoing finding that, through development of the experimental device at issue, the characteristic portion of the invention at issue had been configured in a sufficiently specific and objective manner to enable a person skilled in the art to implement it, and that the invention at issue had been completed.

Accordingly, C and the others cannot be said to be persons who configured the characteristic portion of the invention at issue in a sufficiently specific and objective

manner to enable a person skilled in the art to implement it, and they are not inventors (joint inventors) of the invention at issue. ...

[Supplement] The persons whom the judgment found to be the inventors of the invention at issue are "A and others" (A and D) listed in the patent gazette (judgment, p. 3, lines 15-16; p. 7, lines 5-7; p. 45, lines 11-13). Further, the passage in the excerpt beginning "Accordingly, among the functions provided in the prototype at issue, ..." begins with "However" in the original text of the judgment (judgment, p. 44, line 22).

2023 (Wa) No. 70563 [Transaction Management System] <Shibuya> (Keysoft v. Sankaku Kikaku)

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70563%e3%80%90%e5%8f%96%e5%bc%95%e7%ae%a1%e7%90%86%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c%e6%be%81%e8%b0%b7%ef%bc%9e-%ef%bc%88%e3%82%ad%e3%83%bc/

2023 (Wa) No. 70563 [Transaction Management System] <Shibuya>
(Keysoft v. Sankaku Kikaku)

In the invention at issue, an "intermediary trader" means a person situated between a "downstream trader," which is the recipient of goods, and an "upstream trader," which is the shipper of goods, and who conducts stepwise sales transactions for specified goods—that is, a person who receives from the downstream trader an order concerning the sale of the subject goods and, based thereon, places with the upstream trader an order concerning the sale of those goods.

The accused system concerns the "Furusato Nozei system." Furusato Nozei is a gratuitous provision of an economic benefit (a donation), and provision of a return gift is likewise a gratuitous act of gratitude for the donation and has no relationship of consideration with the donation.
Accordingly, no sales transaction (transaction for consideration) with the donor can be found, and the local government does not qualify as an "intermediary trader."

Further, as to the operation of the accused system, although an application by a donor causes email notifications to be sent to the local government and the business operator, the system does not contemplate that the local government will receive order information and then notify the business operator, and there is no relationship in which the local government, based on an email from the donor, places an order for goods with the business operator.
Accordingly, the local government cannot be said to be a stepwise trader in goods and, on this ground as well, does not qualify as an "intermediary trader."

Tokyo District Court Judgment, 2023 (Wa) No. 70594 [Mattress]

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70594%e3%80%90%e3%83%9e%e3%83%83%e3%83%88%e3%83%ac%e3%82%b9%e3%80%91%ef%bc%9c%e5%8b%9d%e5%8f%88%ef%bc%9e/

Tokyo District Court Judgment, 2023 (Wa) No. 70594 [Mattress]

In the invention at issue, "pressure-bonded" does not require that the cushion bodies be strongly compressed and stuck together. In light of the purpose of preventing hands, feet, and the like from falling into a gap, it is construed to mean "a state in which some pressure is mutually applied to the cushion bodies to the extent that no gap is formed between them."

The plaintiff's measurements established that pressure of at least 0.2 MPa was applied between the inner materials of accused Products 1 and 4, and the same was inferred for the other accused products; accordingly, the accused product satisfies the requirement of being "pressure-bonded."

⇒ Satisfied

(Excerpt from the Judgment)

A. In the invention at issue, the mattress cover is defined as having a bottomed tubular cover member into which a plurality of cushion bodies can be fitted while being pressure-bonded (Claim Element G), and the plurality of cushion bodies are defined as being incorporated into the mattress cover in a pressure-bonded state (Claim Element H).

The term "pressure-bond" means "to strongly compress and stick together" (Kojien, 7th ed.; Exhibit Otsu No. 1). However, because "pressure" means "to hold down; to press so that something cannot move" (Appendix to Kojien, 7th ed.; Exhibit Ko No. 15), "pressure-bond" can also be said to have a meaning on the order of "to hold down and stick together."

B. Next, the specification at issue contains, with respect to "pressure-bonding," the statement: "For example, when incorporating three cushion bodies, first press the respective side surfaces of two cushion bodies against the inner surfaces on both longitudinal sides of the bottom-side cover, and then press the remaining cushion body (which may be mountain-folded) downward between those cushion bodies, thereby making it possible to readily incorporate all of the cushion bodies into the mattress cover in a pressure-bonded state" ([0017]); the statement: "Figure 5 is a conceptual diagram showing an example of the manner in which cushion bodies 21 to 23 are accommodated in the bottom-side cover 10b while being pressure-bonded, with respect to mattress 1" ([0050]); and the statement: "Figure 5 illustrates, as a method of incorporating a plurality of cushion bodies 21 to 23 into mattress cover 10, a method using side portions 13 on both longitudinal sides of bottom-side cover 10b (the front and rear sides of side portion 13). In this method, first, the side surfaces of two cushion

bodies 21 and 23 are respectively pressed against the front and rear sides of side portion 13, and cushion body 22 is thereafter pressed vertically downward. By this method, the plurality of cushion bodies 21 to 23 can be readily incorporated into mattress cover 10 in a pressure-bonded state" ([0051]). Figure 5, concerning a method of incorporating a plurality of cushion bodies into the mattress cover, depicts another cushion body being pressed downward between two cushion bodies, with the three cushion bodies installed in contact with one another without gaps inside the mattress cover, but does not express that the cushion bodies mutually exert strong pressure in the left-right direction.

In addition, as stated in 1(2) above, the invention at issue produces the effect of providing a mattress in which hands, feet, and the like are less likely to fall into grooves. According to the specification at issue, that effect results from the fact that "a stretch-preventing member is provided on the peripheral surface portion (side portion) of the mattress cover" ([0011]), and is not stated to result from the cushion bodies being strongly compressed and stuck together. Considering these matters as a whole, although the invention at issue can be said to contemplate that no gap into which hands, feet, and the like may fall is formed at the boundaries between the cushion bodies, so that hands, feet, and the like are less likely to fall in, it cannot be found to contemplate a state in which the cushion bodies are strongly compressed and stuck together.

Accordingly, it is appropriate to construe "pressure-bonded" in the invention at issue as meaning a state in which some pressure is mutually applied to the cushion bodies to the extent that no gap is formed between them.

[Supplement] The heading of the original article reads "<Katsumata>," but according to the judgment, Judge Katsumata is an associate judge, as shown by the statement that Judge Katsumata was unable to sign and seal owing to transfer and Judge Yoshikawa owing to retirement (judgment, p. 55). Further, regarding the statement in the original article that pressure of 0.2 MPa or more is applied between the inner materials of the accused product, the measurements were made on Accused Products 1 and 4, and the same was inferred for the other accused products (judgment, p. 37, lines 8-15). The appellate court (Intellectual Property High Court Judgment of November 17, 2025, 2025 (Ne) No. 10045) dismissed the appeal (that judgment, p. 1, lines 1-3 and 21). 2023 (Ne) No. 10114 [Layered Body Having Cube-Corner Elements, and Retroreflective Sheet] <Nakadaira>

= 2023 (Gyo-Ke) No. 10102

* The technical significance of the numerical limitation is not stated in the specification.

⇒ Matter of design

(Excerpt from the Judgment)

The specification at issue states that "the elements preferably have a dihedral-angle error of 1 to 60 arcminutes" ..., but contains no statement whatsoever of the basis for describing that range as preferable.

On the other hand, all of the examples described in the specification at issue ... include examples having dihedral-angle errors of less than 1 arcminute, such as 0.1 arcminute, −0.5 arcminute, and 0.8 arcminute, and each of those examples is stated to have a uniformly distributed spot pattern and to produce the action and effects of the inventions at issue. With respect to the upper limit as well, Claim Elements 1-C4 and 4C-1 set it at 60 arcminutes, as stated above, whereas the maximum dihedral-angle error shown in the examples is −19.8 arcminutes ..., and there is no statement of any basis for setting the upper limit at 60 arcminutes. Moreover, even if spot patterns consisting only of values within the numerical range stated in the foregoing claim elements were extracted from the examples described in the specification at issue and compared, there is no example showing that the action and effect of uniform distribution of the spot pattern is produced. ...

Accordingly, it must be said that the numerical range of the foregoing dihedral-angle error stated in the claim elements of the inventions at issue has no particular technical significance, and it is found to be no more than an exercise of the ordinary creative ability of a person skilled in the art.

2023 (Gyo-Ke) No. 10121 [Imaging Device] <Masuda>

The statement "orthogonal" in the claim does not define the angle of intersection between the first axis and the second axis, but indicates the positional relationship in which two sides of the rectangular display meet at a right angle at a corner.
The depiction in Figure 4B as if Axis A moves is an obvious error, and a person skilled in the art can readily understand the correct configuration (Axis A does not track the movement).

2023 (Wa) No. 70004 [Portable Information Communication Device] <Takahashi>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70004%e3%80%90%e6%90%ba%e5%b8%af%e6%83%85%e5%a0%b1%e9%80%9a%e4%bf%a1%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e9%ab%99%e6%a9%8b%ef%bc%9e/

2023 (Wa) No. 70004 [Portable Information Communication Device] <Takahashi>
(Related cases: 2023 (Wa) No. 70035
and 2022 (Wa) No. 70131)

At the priority date of the patent at issue, a person skilled in the art who encountered the invention of Exhibit Otsu No. 6 could readily have conceived of applying the common general technical knowledge described in A above to that invention and adopting the configuration relating to Difference (1), in which, as a configuration for externally importing image information that could not be clearly displayed on simplified liquid-crystal display panel 23, communication unit 12 receives a radio signal transmitting that image information, converts it into a digital signal, and transmits it to CPU 11, and CPU 11 receives that digital signal.

⇒ Inventive Step: ×

[Supplement] The excerpt in the original article omits, without an ellipsis, the words referring to a person skilled in the art who had access to the invention of Exhibit Otsu No. 6 (judgment, p. 81, lines 16-17). The judgment also held that Difference (2) (reading of bitmap data of an image having the same resolution as the screen resolution) could readily have been conceived (judgment, p. 83, lines 15-20), and dismissed the claim under Article 104-3(1) of the Patent Act because the patent lacked inventive step (judgment, p. 83, lines 22-25). The related case numbers "= 2023 (Wa) No. 70035" and "= 2022 (Wa) No. 70131" in the original article do not appear in the judgment.

Tokyo District Court Judgment, 2023 (Wa) No. 70527 [Cyclic Protein Tyrosine Kinase Inhibitor] <Sugiura>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70527%e3%80%90%e7%92%b0%e7%8a%b6%e3%82%bf%e3%83%b3%e3%83%91%e3%82%af%e8%b3%aa%e3%83%81%e3%83%ad%e3%82%b7%e3%83%b3%e3%82%ad/

Tokyo District Court Judgment, 2023 (Wa) No. 70527 [Cyclic Protein Tyrosine Kinase Inhibitor] <Sugiura>

The "scope of effect of an extended patent right" extends to the product that was the subject of the disposition designated by Cabinet Order (the originator drug "Sprycel Tablets") and to products "substantially identical thereto as pharmaceuticals."
For a patented invention characterized only by the active ingredient of a pharmaceutical product, where the subject product differs in components other than the active ingredient, it is included within substantial identity if the change is based on "well-known and commonly used art."

In this case, the "Sprycel Tablets" that were the subject of the disposition contained "dasatinib hydrate" as the active ingredient and PEG as an excipient, whereas the plaintiff's product contained "dasatinib (anhydrous)" as the active ingredient, did not contain PEG, and added carnauba wax and other substances.
The court held that this difference appeared to be based on the plaintiff’s own technology or other measures addressing problems of stability and dissolution properties arising from adoption of the anhydrous form (for example, its lower photostability and higher solubility than the hydrate).
Specifically, replacing PEG with HPC and adjusting the components of the coating agent (including addition of carnauba wax) was not supported by reliable evidence sufficient to find that it was based on well-known or commonly used art, and appeared to be based on the plaintiff’s own technology or other measures.
Accordingly, the plaintiff's product was not found to be "substantially identical as a pharmaceutical" to Sprycel Tablets, and the effect of the extended patent right at issue did not extend to the plaintiff's product.
⇒ The court dismissed as inadmissible all claims in Sawai Pharmaceutical's main action for a negative declaration and dismissed on the merits the defendant patentee's counterclaim for damages.

[Supplement] The operative part of the judgment dismissed the main action as inadmissible and dismissed the defendant's counterclaim (judgment, p. 1, lines 8-9).
Regarding the statements in the original article that the difference resulted from the plaintiff's own measures and is inferred to have resulted from active formulation design, the judgment held that there was no reliable evidence sufficient to find that the addition or replacement of excipients was based on well-known or commonly used art and that

it appeared that the plaintiff had made it on the basis of its own technology (judgment, p. 38, lines 16-24). Further, regarding the statement in the original article that a change based on well-known or commonly used art falls within substantial identity, the judgment cited, as one category falling within substantial identity, a case in which the target product adds or replaces some different components on the basis of well-known or commonly used art at the time of the application for the cabinet-order disposition (judgment, p. 24, lines 18-23).

[Comment at the time the original article was written] ★ The same Presiding Judge Sugiura reached a different conclusion from the preliminary injunction proceeding (2023 (Yo) No. 30214, Petition for a Preliminary Injunction)!!

⇒ The appeal requires close attention.

Many practitioners and academics have expressed the view that, in light of the Oxaliplatin Intellectual Property High Court judgment, the generic product may well fall within the scope of the extended patent right (i.e., the claim elements are satisfied), and I have not heard the contrary view, so the appeal is noteworthy.

Looking at Remitch as well, the Intellectual Property High Court is pro-patent when it comes to pharmaceuticals.

Even if the conclusion of the dasatinib judgment at first instance does not change, it is also important to watch whether the court maintains the logic of treating the technical significance associated with the problem arising from the difference in excipients as an issue, or whether the scope of the judgment is limited to cases in which the active ingredient differs. If the former is maintained as it stands, a generic company could readily place its product outside the scope of effect by formulating a problem + using different excipients + obtaining a patent.

2024 (Ne) No. 10080 [Under-Coping Ventilation Structure] <Nakadaira> = Court of First Instance: Osaka District Court Judgment, 2023 (Wa) No. 8403

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10080%e3%80%90%e7%ac%a0%e6%9c%a8%e4%b8%8b%e6%8f%9b%e6%b0%97%e6%a7%8b%e9%80%a0%e4%bd%93%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%ef%bc%9e-%ef%bc%9d%e5%8e%9f%e5%af%a9/

2024 (Ne) No. 10080 [Under-Coping Ventilation Structure] <Nakadaira>
= Court of First Instance: Osaka District Court Judgment, 2023 (Wa) No. 8403

In light of the language "a ventilation member that exhibits ventilation performance and waterproofing performance" and the description in the specification at issue (the problem, means for solving the problem, and effects), it is natural to construe the claim as requiring the ventilation member "itself" to have ventilation performance and waterproofing performance.

⇒ The plate-shaped portion of the appellee's product cannot be found, by itself, to satisfy the requirement.

The appellant also asserted that the determination should be based on whether the member "contributes" to waterproofing and ventilation, but the court held that there was neither assertion nor proof of common general technical knowledge or other circumstances supporting the reasonableness of that method.

Even if that method were used, Inclined Portion ⑤ of the appellee's product narrows the ventilation passage and reduces ventilation performance compared with the case in which it is absent. It therefore cannot be said to contribute to ventilation performance, and Claim Element C is not satisfied.

[Supplement] Regarding the statement in the original article concerning the absence of a reasonable basis for that method, the judgment held that there was neither assertion nor proof of common general technical knowledge or other circumstances supporting the reasonableness of the appellant's "second determination method" (judgment, p. 14, lines 11-13), and that, even if that method were used, satisfaction of Claim Element C could not be found (judgment, p. 14, lines 21-23). The judgment also held that, although a ventilation passage (ventilation gap) exists, Inclined Portion ⑤ itself narrows the area through which ventilation is possible (judgment, p. 14, lines 14-20).

2024 (Ne) No. 10072 [Draft Difference Measuring Device] <Nakadaira>

"Of the patent maintenance expenses and other expenses at issue, the expenses incurred for the opposition proceedings were expenses for responding to oppositions to the grant of the patent at issue filed by the defendant in the first instance and Nippon Steel (Exhibit Ko No. 10). However, because the foregoing oppositions to the grant of the patent cannot be found to have been unlawful, no tort by the defendant in the first instance can be found.

As to the expenses other than those for the opposition proceedings among the patent maintenance expenses and other expenses at issue, the plaintiff in the first instance incurred them, at its own discretion, in applying for and maintaining the patent at issue. In the first place, the conduct of the defendant in the first instance did not cause the plaintiff in the first instance to have to incur those expenses. Accordingly, no adequate causal relationship can be found between the conduct of the defendant in the first instance and the expenditures of the plaintiff in the first instance."

[Supplement] The original text of the judgment includes "(Exhibit Ko No. 10)" (judgment, p. 6, line 4). In the original text of the judgment, the quoted passage begins with "Further," and the two sentences form a single paragraph (judgment, p. 6, lines 2-10).

Intellectual Property High Court Judgment of July 31, 2025 (2024 (Ne) No. 10075) (Presiding Judge Hibiku Shimizu)

◆ Full Text of the Judgment

[Overview of the Case]

This case concerns the appellee (the "defendant"), a member of the plaintiff, photographing, to the extent that they were captured in a single smartphone photograph, articles appearing in the Seikyo Shimbun newspaper issued by the appellant, a religious corporation (the "plaintiff")—including the headlines, article text, and the photographs at issue (Photographs 1-37 at issue)—and posting them on Twitter (X), together with the text of the posts, on 25 occasions via the Internet. The plaintiff alleges infringement of copyright in the photographs at issue (the right of making transmittable, Article 23 of the Copyright Act) and seeks damages in tort (Article 709 of the Civil Code and Article 114(3) of the Copyright Act).

The court of first instance (Tokyo District Court, 2023 (Wa) No. 70388) upheld the quotation defense (Article 32(1) of the Copyright Act) with respect to the photographs at issue and dismissed the plaintiff's claims. The plaintiff filed this appeal.

This judgment held that the quotation defense or the defense of exploitation of incidentally included works (Article 30-2(1) of the Copyright Act) applied to the photographs at issue, that the plaintiff's claims should be dismissed, and dismissed the appeal.

[Summary of the Judgment]

1. Quotation Defense (Article 32(1) of the Copyright Act)

(1) Requirements for the Quotation Defense and Their Construction

According to the language of Article 32(1) of the Copyright Act, in order to include and use all or part of a work in one's own creation without the consent of the copyright owner, each of the following requirements must be satisfied: (i) the work being used has been made public; (ii) the use of that work constitutes quotation; (iii) the quotation is consistent with fair practices; and (iv) the quotation is made within a scope justified by the purpose of news reporting, critique, study, or other purposes of quotation.

Considering the purpose of the Copyright Act—to protect the rights of authors and others while giving due regard to the fair exploitation of cultural products such as works, and thereby to contribute to the development of culture (see Article 1 of the Copyright Act)—and the purpose of Article 32(1) of the Copyright Act, which enables fair exploitation of works and other cultural products while protecting copyright, it is appropriate to construe requirement (ii), "quotation," as generally requiring that the work being used be clearly distinguishable and recognizable from the creation in which it is used, and that there be a principal-subordinate relationship between them, with the using creation being principal and the work being used being subordinate. However, this principal-subordinate relationship should not be determined formally based solely on a quantitative comparison; rather, after considering various factors such as the nature of the using creation and of the work being used, the purpose of the quotation, and the method and manner of quotation, it should be determined substantively in light of social conventions. In that event, the determination will partly overlap with the determination under requirement (iv), whether the use is "within a scope justified by the purpose of the quotation."

As to whether the quotation under requirement (iii) is "consistent with fair practices," if fair practices concerning quotation exist in the relevant field, publication medium, or the like, the determination is made based on whether the method and manner of use by quotation are found to conform to those practices. If no such practices exist, the determination is made based on whether the method and the like are found to be reasonable under social conventions. In this connection, disclosure of the source of the work being used may be considered as one factor in determining compliance with the fair practices or with a method that is reasonable under social conventions.

Further, as to whether the quotation under requirement (iv) is made "within a scope justified by the purpose of news reporting, critique, study, or other purposes of quotation," the matter must be comprehensively assessed, in light of the foregoing purpose of the Copyright Act and the purpose of the provision, by considering the content and legitimacy of the purpose of the quotation, the relationship between the

purpose of the quotation and the work being used, the nature of the work being used, the scope and quantity quoted, the method and manner of quotation, the benefit obtained by the user, the degree of disadvantage suffered by the person whose work is used, and other matters.

(2) Application

A. Introduction

The Photographs at Issue (Quotation) (Photographs 1-9, 11-26, and 30-37 at issue) are news photographs published on the same newspaper pages together with the articles in order to report events as an integrated whole. Accordingly, even if they are themselves photographic works, if the purpose of the quotation has a certain relationship to the events reported by the articles, a similar relationship is recognized with respect to the news photographs forming part of those articles. Further, since the language of Article 32(1) of the Copyright Act does not go so far as to require inevitability or strict necessity of quotation, in light of the nature of articles and news photographs, which are intended broadly to inform readers of current events and contribute to the formation of readers' opinions and the like, from the standpoint of harmonizing copyright protection and exploitation, where a relationship is found between the events reported by the articles and news photographs and the purpose of the quotation, the court is not precluded from finding that quotation of the Photographs at Issue (Quotation) is "within a scope justified by the purpose of the quotation," after considering whether there was commercial use, whether the principal-subordinate relationship requirement was satisfied, and other circumstances.

B. Constituting Quotation

The portions consisting of the text of the posts at issue and the quoted portions containing the Photographs at Issue (Quotation) can be clearly distinguished and recognized. Further, in light of the content of the posts at issue, the nature of the photographs at issue and other materials, the purpose of the quotation, the method and manner of expression of the quotation, and other matters, it is found, under social conventions, that the portions posted as the body text on Twitter are principal and the Photographs at Issue (Quotation) are subordinate.

C. Consistency with Fair Practices

The defendant, by stating in the text of the posts at issue that the material was quoted from Seikyo Shimbun, by publishing a photograph in which the "Seikyo Shimbun" masthead was captured, or the like, generally continued to post materials, all in a similar format consisting of a photograph of a newspaper page and text criticizing it. In light of this and of the fact that many readers of the posts at issue are thought to have been members of the plaintiff or related persons, the source of the published Photographs at Issue (Quotation) could readily be understood by referring to the content of the post and the preceding and following posts, and the manner of use conforms to a method that is reasonable under social conventions.

D. Within a Scope Justified by the Purpose of the Quotation

Each post at issue consisted of the text of the post and a photograph taken to the extent that the article and the Photographs at Issue (Quotation) on a page of the Seikyo Shimbun were captured in a single smartphone photograph. The purpose of each post at issue is found to have been to criticize the plaintiff's activities and the like as perceived by the defendant through the article text or the Photographs at Issue (Quotation) in Seikyo Shimbun, the plaintiff's organ newspaper, and no unreasonable or inappropriate aspect is found in that purpose. Each of the Photographs at Issue (Quotation) is found to be related to the purpose of the quotation. It cannot be found that including the Photographs at Issue (Quotation) appearing on the newspaper pages, to the extent captured in a single smartphone photograph, was excessive in scope as quotations for the purpose of enabling the criticism in the posts at issue to be understood. The scope and quantity of the works used through the quotation at issue must therefore be regarded as reasonable. Further, there is no finding that the defendant obtained any commercial benefit from the posts at issue, and there is no evidence sufficient to find that allowing quotation of the Photographs at Issue (Quotation) would cause the plaintiff any economic disadvantage, such as a reduction in circulation.

E. Conclusion

Accordingly, the quotation defense (Article 32(1) of the Copyright Act) applies to the Photographs at Issue (Quotation) published in the posts at issue.

2. Defense of Exploitation of Incidentally Included Works (Article 30-2(1) of the Copyright Act)

With respect to the defense of exploitation of incidentally included works concerning the Photographs at Issue (Incidental) (Photographs 10 and 27-29 at issue), in light of the absence of transitional provisions, the history and purpose of the statutory amendment, and other matters, it is appropriate to construe Article 30-2 of the Copyright Act, as amended by the 2020 Amendment Act, as also applying to acts performed before the 2020 Amendment Act entered into force.

Based on the proportion occupied by the Photographs at Issue (Incidental) in the photographs of the newspaper pages (the creation/transmission materials) published in the posts at issue, the Photographs at Issue (Incidental) are found to be minor constituent portions (incidentally included works). Further, the defendant had no purpose of obtaining a benefit through their use; because they were adjacent to the newspaper articles that were the subject of criticism, it was difficult to photograph them separately; and they played no particular role in the creation/transmission materials. In light of these and other circumstances, they can be said to have been used, as incidentally included works and within a justified scope, in connection with the reproduction/transmission acts.

Accordingly, the defense of exploitation of incidentally included works applies to the Photographs at Issue (Incidental).

[Comment]

1. Regarding Summary of the Judgment 1(1)

The Supreme Court Judgment of March 28, 1980, Minshu Vol. 34, No. 3, p. 244 [Mad Amano Case], held that requirements (i) and (ii) below were necessary for the quotation defense under the former Copyright Act.

(i) The quoted work must be clearly distinguishable from the work quoting it.

(ii) The quoted work must be subordinate to the work quoting it.

By contrast, Article 32(1) of the current Copyright Act provides as follows concerning the quotation defense:

"It is permissible to quote and thereby exploit a work that has been made public. In such a case, the quotation must be consistent with fair practices and must be made within a scope that is justified for the purpose of news reporting, critique, study, or other purposes of quotation."

Further, with respect to the obligation to indicate the source of a quoted work, Article 48(1) of the current Copyright Act requires the source of the quoted work to be indicated in a manner and to the extent considered reasonable.

[Supplement] The original article begins the preceding sentence with "Further, with respect to the quotation defense," instead. However, this obligation is distinguished from the requirements for lawful quotation under Article 32(1) of the Copyright Act. This judgment states that "indication of the source is not made a direct requirement for lawful quotation" and considers the fact that the source is made clear as one factor of the fair practices or of a method or the like that is reasonable under social conventions (judgment, p. 19, lines 6-9 and 12-15).

It is generally considered that the Supreme Court judgment in the Mad Amano Case, which construed the former Copyright Act, may also be applied to the construction of Article 32(1) of the current Copyright Act. Accordingly, concerning the relationship between requirements (i) and (ii) above and the quotation defense under Article 32(1) of the current Copyright Act, there are many divided judicial decisions and academic views, including the following:

A) Requirements (i) and (ii) above are necessary and sufficient requirements (Tokyo High Court Judgment of October 17, 1985, Mutai-shu Vol. 17, No. 3, p. 462 [Tsuguharu Foujita Case], among others).

B) Requirements (i) and (ii) above may be important factors for consideration, but other important factors may also exist, and the determination is made through comprehensive consideration according to the case (Intellectual Property High

Court Judgment of October 13, 2010, Hanrei Jiho No. 2092, p. 135 [Painting Appraisal Certificate Case], among others).

C) Requirements (i) and (ii) above are necessary requirements, and other requirements also exist. (Intellectual Property High Court Judgment of March 29, 2022 (2021 (Ne) No. 10060), Courts Website [KuToo Case], among others.)

There are also many divided judicial decisions and academic views concerning the relationship between requirements (i) and (ii) above and each of the terms "quotation," "consistent with fair practices," and "within a scope justified by the purpose" in Article 32(1) of the current Copyright Act, including the following:

a) Requirements (i) and (ii) above may relate to each of the phrases "quotation," "consistent with fair practices," and "within a scope justified by the purpose" (Tokyo High Court Judgment of October 17, 1985, Mutai-shu Vol. 17, No. 3, p. 462 [Tsuguharu Foujita Case]; Intellectual Property High Court Judgment of October 13, 2010, Hanrei Jiho No. 2092, p. 135 [Painting Appraisal Certificate Case], among others).

b) Requirements (i) and (ii) above relate to the term "quotation" (Intellectual Property High Court Judgment of March 29, 2022 (2021 (Ne) No. 10060), Courts Website [KuToo Case]).

c) Requirement (i) above relates to the term "quotation," and requirement (ii) above relates to the term "within a scope justified by the purpose" (Tamotsu Shoji, "The Quotation Defense," in Makiko Takabe (ed.), Intellectual Property Litigation II: Latest Court Practice Series 11 (Seirin Shoin, 2018), pp. 713-714).

The Intellectual Property High Court Judgment of October 13, 2010, Hanrei Jiho No. 2092, p. 135 [Painting Appraisal Certificate Case], held that the material on the quoting side need not itself be a work.

Against this background of judicial decisions and academic views, Summary of the Judgment 1(1) is understood to have basically adopted C) and b) above.

2. Regarding Summary of the Judgment 1(2)

With respect to whether the quotation defense applies, Summary of the Judgment 1(2) carefully applies to the facts of this case not only the requirements for constituting quotation—clear distinguishability and the principal-subordinate relationship—but also the other requirements of consistency with fair practices and being within a scope justified by the purpose of quotation, under the specific constructions of those requirements stated in Summary of the Judgment 1(1), and is useful in practice.

3. Regarding Summary of the Judgment 2

Whereas the court of first instance upheld the quotation defense with respect to all of the photographs at issue, the appellate court upheld the quotation defense, as stated

in Summary of the Judgment 1(2), only with respect to the Photographs at Issue (Quotation) (Photographs 1-9, 11-26, and 30-37 at issue), and upheld the defense of exploitation of incidentally included works, as stated in Summary of the Judgment 2, with respect to the Photographs at Issue (Incidental) (Photographs 10 and 27-29 at issue). On this point, it is inferred that the appellate court considered it difficult to uphold the quotation defense with respect to the Photographs at Issue (Incidental) (Photographs 10 and 27-29 at issue) because they were not the subject of criticism in the text of the defendant's posts and were unrelated to that text.

[Supplement] According to the judgment, the classification into the Photographs at Issue (Quotation) and the Photographs at Issue (Incidental) depends on which defense the defendant asserted (judgment, p. 2, lines 7-13; p. 12, lines 14-15), and the judgment did not decide whether the quotation defense would be established for the Photographs at Issue (Incidental). The finding that they were unrelated to the text of the posts was made in determining the defense of exploitation of incidentally included works (judgment, p. 39, lines 9-10).

Legal Update

Articles Published in March 2026

Scope: Articles with publication dates in March 2026 on the list page

Number of articles: 29 (15 patent, 9 general IP, 3 trademark, 1 foreign, and 1 copyright article)

List page: https://www.nakapat.gr.jp/ja/note/

<Highlights of This Month> Key Points in the March 2026 Intellectual Property and Legal Affairs Update

This issue contains 29 articles published on the list page in March 2026: 15 patent, 9 general IP, 3 trademark, 1 foreign, and 1 copyright article. They range from patent amendments and inventive step to trademark distinctiveness, character protection, and contractual liability. Applying them in practice begins with distinguishing judicial and administrative holdings from the questions raised by articles and presentations.

1. Understanding the Limits of Disclaimer Claims through Domestic and Overseas Decisions

In [Pet Matching System], 2024 (Gyo-Ke) No. 10081, inventive step was denied despite a disclaimer excluding animal hospitals and similar locations. The court's rejection of the premise that the cited invention limited the handover location is significant. Kenji Tanaka and coauthors' "A Study of the Limits of Disclaimer Claims" organizes four categories: design choices, new references, insufficient exclusion, and exclusion of nonessential features. Kazuo Shibata's "The Umbrella Theory Has Also Returned! But Should Disclaimer Claims Really Be This Unrestricted?" examines the umbrella theory concerning the exclusionary effect of priority and transformation of inventions through amendment. Read together with In re Butler, these materials call for examination of disclosure of excluded features, distinctions from alternatives, and support for the remaining scope. The article's recommendation to explain the difference in technical concepts, beyond merely removing overlap with a reference, also merits attention.

2. Examining Inventive Step, Disclosure Requirements, and Procedure through Specific Technical Content

In [Motor Vehicle], [Embossed Bag], and [Gaming Machine], common technical fields, actions, or functions supported findings of obviousness. [Wood-Based Board] treats differences separately in light of the absence of disclosed synergy. By contrast, [Electronic Money Remittance Method] recognizes inventive step based on the different technical significance of electronic certificates and identifiers such as IDs and account numbers. [System for Electronic Patient Care] establishes the meaning of terms through common general technical knowledge and rejects the finding of a lack of clarity and the finding of non-enablement premised on it. In addition, 2025 (Gyo-Ko) No. 10001 rejects curing the defect of requesting examination before submitting translations for a foreign-language international application. Managing the filing sequence is essential alongside assessing technical substance. Similar numbers or terminology should not automatically be equated with identical technical meaning.

3. Separating Distinctiveness and Similarity in Brand Analysis

Rui Asada and Tomohiko Yamada's article on the current status and issues in distinctiveness appeal decisions addresses falling reversal rates since 2022 and decompositional assessment of composite marks. It considers the problem of being able to use a mark without obtaining exclusivity, together with the structure producing few court challenges. Yamada's article on recent trademark similarity decisions uses Holmes-kun, 富富富, and AWG Treatment to organize separate observation, comprehensive assessment of appearance, pronunciation, and concept, and the limits of similarity group codes. Masako Nishimura's article on onomatopoeia as trademarks compares the relationship to quality descriptions and national approaches. Registrability, conflict with others' rights, and consumer impressions each require examination. The figures' registration-decision rates and factors for separate observation are also worth consulting alongside the text.

4. Reading Monjiro Ika, Avatars, and Generative AI through Expression and Rights

The IP High Court's September 24, 2025 judgment in Monjiro Ika found adaptation and public-transmission infringement because the essential expressive characteristics of images from the Kogarashi Monjiro television works could be directly perceived. Kei Iida's commentary examines the relationship to Popeye Necktie, Candy Candy, and Article 28 of the Copyright Act, and also questions the treatment of individual rights. The holding and commentary should be read separately. Yasuyuki Echi's article on avatar names and likenesses organizes protection of names, appearance, movement, and voice. Taichi Kakinuma's "Generative AI and Intellectual Property Rights, etc." distinguishes development and training from generation and use, and examines non-enjoyment purposes and technical measures. All share a focus on specifying the expression, conduct, and rights involved. The distinction between motion capture and controller operation for avatar movement also deserves attention.

5. Checking the Facts Supporting Enforcement, Contracts, and International Negotiations

In [Wine Cellar], temperature settings and experiments matter; in [Seawall], watertightness throughout the space and its proof matter; and in [Wild Animal Slaughtering Tool], component and circuit structures bear on the findings that limitations were unsatisfied. In [Spindle Motor], proposal timing, communication, and differences in concept underlie the denial of inventor status. Two contract articles on Tokyo District Court case 2023 (Wa) No. 70680 address a representative's personal joint and several guarantee arising from a payment pledge. [Development of Green Laver Spore Collection Technology Using a Waterwheel] distinguishes an existing idea from joint research results and rejects breach of contract. Akiko Araki's SEP presentation, EPO decision T0070/23, and Tatsuya Yabuuchi's patent translation presentation also provide material for considering how differences in jurisdictions, claims, and language affect negotiations and the scope of rights. These articles show the importance of reading contractual wording, research history, actual device behavior, and other evidence in relation to the issue in dispute.

Three-Line Summaries of All Articles

Category	Article Title and Three-Line Summary
Patent	**Osaka District Court, 2023 (Wa) No. 10237 [Wild Animal Slaughtering Tool] <Presiding Judge Takemiya>** **① The dispute concerned satisfaction of limitations relating to the rod's telescopic nature, carrying equipment on the back, the physical parallel arrangement of two electric cords, and the grounding circuit in a wild animal slaughtering tool.** **② The court found the limitations unsatisfied because the defendant's product used a fixed-length rod, required no carrying on the back, had a switch inserted in series along the cord, and had no circuit through the soil.** **③ Infringement analysis requires separate comparison of each limitation's specific structure with the accused product.**
Patent	**IP High Court, 2024 (Gyo-Ke) No. 10008 [Methods and Apparatus for Using Reference Signals for Time and Frequency Tracking in New Radio] <Presiding Judge Hibiku Shimizu>** **① The case concerned construction of an "indication as part of a CSI-RS resource set definition" and inventive step in an amended new-radio reference-signal invention.** **② The court denied inventive step because both inventions received information indicating part of a resource set and configuring that information as part of a definition was obvious.** **③ Inventive-step analysis requires comparison of the information conveyed, as well as the terminology used for the indication.**
Patent	**IP High Court, 2024 (Gyo-Ke) No. 10005 [System for Electronic Patient Care] <Presiding Judge Hibiku Shimizu>** **① The dispute concerned clarity and enablement of "transaction-based web services" in a system for electronic patient care.** **② The court revoked the appeal decision because the terms were clear in light of common general technical knowledge at the filing date, and the finding of non-enablement premised on a lack of clarity was also erroneous.** **③ Assessment of an alleged explanatory deficiency should consider whether skilled persons can understand the terminology through common general technical knowledge.**
Patent	**IP High Court, 2024 (Gyo-Ke) No. 10018 [Motor Vehicle] <Presiding Judge Miyasaka> = IP High Court, 2023 (Ne) No. 10042** **① The case concerned inventive step in prohibiting engine-stop operation upon detecting a braking-force holding device failure.** **② The court denied inventive step, finding motivation to combine based on the common technical field and failure problem, with the choice between a warning and an operation prohibition being a design matter.** **③ Where failure-response control is the distinguishing feature, analysis should address both the cited invention's problem and the available response choices.**
General IP	**<IP Practice Online> "How English-to-Japanese Patent Translators Think in Supporting the Application Process…" (Tatsuya Yabuuchi)** **① Tatsuya Yabuuchi's presentation examines the decisions and thinking that connect technology, law, and language in English-to-Japanese patent translation.** **② It introduces examples from the lecture materials, including the translation of treatment, and considers legal terminology, listing syntax, modifier relationships, and consistency of notation as practical supplementary points.** **③ Translation review should preserve the original technical content and scope of rights while producing natural Japanese.**
Patent	**Tokyo District Court, 2023 (Wa) No. 70495 [Spindle Motor] (Claim for Employee Invention Compensation) <Presiding Judge Nakashima>** **① A claim for employee invention compensation concerning a spindle motor raised the relationship between the plaintiff's proposal and the invention and the plaintiff's inventor status.** **② The court denied inventor status and dismissed the claim based on chronology, absence of contact or circulation to the developers, and differences in concept and configuration.** **③ Inventorship analysis should examine the proposal's substance together with evidence of its communication and involvement in development.**

Category	Article Title and Three-Line Summary
Patent	**IP High Court, 2024 (Gyo-Ke) No. 10081 [Pet Matching System] <Presiding Judge Nakadaira>** **① The case concerned inventive step in a pet matching system limited to exclude animal hospitals and places where a veterinarian is present.** **② The court rejected the plaintiff's premise that the cited invention confined handover to those locations and found the disclaimer obvious.** **③ Use of a disclaimer claim requires careful examination of whether the excluded feature is truly essential to the cited invention.**
Patent	**IP High Court, 2024 (Gyo-Ke) No. 10039 [Embossed Bag] <Presiding Judge Hibiku Shimizu>** **① The dispute concerned combining film-pattern embossing technologies and inventive step in numerical ranges for surface irregularities.** **② The court denied inventive step because the references shared a technical field and function, while the overlapping numerical ranges were design choices responsive to visibility and similar considerations.** **③ Numerical limitations require examination of overlap with prior-art ranges and the technical significance of the selected values.**
Patent	**Tokyo District Court, 2023 (Wa) No. 70738 [Wine Cellar] <Presiding Judge Takahashi>** **① The dispute concerned whether a wine cellar restarted its compressor at a third temperature higher than the second temperature after heater shutdown.** **② The court found the limitation unsatisfied despite a delay timer because the settings were identical and experiments sometimes showed a lower restart temperature.** **③ Satisfaction of temperature-control limitations should be assessed against both settings and measured operation.**
Patent	**IP High Court, 2025 (Gyo-Ko) No. 10001 "Appeal in an Action Seeking Revocation of an Administrative Disposition" <Presiding Judge Masuda>** **① The case concerned legal interest in revoking dismissal of an examination request made before translations were submitted for a foreign-language international application and the procedural defect involved.** **② The court recognized legal interest but dismissed the appeal because later submission did not cure the sequencing defect and the disposition was lawful.** **③ For foreign-language international applications, procedures must be managed so that translations and related formalities precede the examination request.**
General IP	**[EPO Board of Appeal Decision] T0070/23 (Immunogenic Composition/GSK)** **① EPO decision T0070/23 addresses whether unrecited therapeutic efficacy can be read into a claim as an implicit functional feature from the description.** **② This decision rejected restrictive construction of a clear claim and found no support for specific efficacy in the cited passage. The main request and auxiliary requests 2 to 6 lacked inventive step; auxiliary request 1 was not admitted, and the patent was revoked.** **③ Subsequently, G 1/24 required consultation of the description and drawings whenever claims are interpreted. Consultation and importing an unrecited limitation require separate consideration.**
General IP	**<IP Practice Online> The Front Line of Standard Essential Patents (SEPs): Practice in Light of Global Litigation Trends — Akiko Araki** **① Akiko Araki's presentation examines FRAND negotiations and international litigation concerning standard essential patents.** **② It discusses UPC injunctions, Chinese global rate setting, monetary resolution in the United States, ASIs and AASIs, and the proposed EU regulation. The proposal was withdrawn in October 2025.** **③ International SEP negotiations require an integrated understanding of jurisdictional developments, injunctions, and royalty determination across forums.**
Foreign	**[United States] In re Butler (CAFC, September 17, 2025)** **① In re Butler is a nonprecedential decision concerning the written description supporting a negative claim limitation.** **② The CAFC generally required disclosure indicating a reason for exclusion, for which distinguishing alternatives may provide a basis, while recognizing cases where skilled artisans necessarily understand an exclusion despite silence.** **③ A proposed disclaimer should be checked against disclosure of the excluded component and its distinction from alternatives.**

Category	Article Title and Three-Line Summary
General IP	[Article] Protection of Avatar Names and Likenesses under Intellectual Property Law and Other Laws (Yasuyuki Echi, Patent Supplement, 2025, Vol. 78, No. 31, pp. 217–226) ① Yasuyuki Echi's article examines legal protection of avatar names, likenesses, movements, and voices. ② It organizes copyright, trademark and unfair-competition protection, performers' rights, and portrait and publicity rights; the author argues that continued use after awareness of a coincidental likeness should constitute infringement. ③ Avatar protection requires examination of the rights applicable to each name, appearance, movement, voice, and mode of use.
Trademark	[Trademark/Article] "Onomatopoeia as Trademarks—The Current Situation in Japan and Other Countries—" (AIPPI (2025), Vol. 70, No. 11, Masako Nishimura) ① Masako Nishimura's article examines distinctiveness of onomatopoeic trademarks in Japan and other jurisdictions. ② It reviews the relationship to designated goods, dictionary checks, and national examples, emphasizing both registrability and consumer impressions. ③ Adoption of onomatopoeia should consider whether it directly describes quality and what impression it gives consumers.
Patent	[Article/Patent] A Study of the Limits of Disclaimer Claims (Kenji Tanaka et al., Patent, 2025, Vol. 78, No. 7, pp. 85–97) ① Kenji Tanaka and coauthors analyze cases where disclaimer claims fail to overcome inventive-step objections and limits arising from disclosure requirements. ② They organize four categories of denied inventive step and issues of added matter, clarity, support, and enablement, and recommend approaches to exclusions and original disclosure. ③ A disclaimer requires joint assessment of essential prior-art features, clarity of the exclusion, and support for the remaining scope.
Trademark	[Article/Trademark] Recent Court Decisions on Trademark Similarity: Focusing on Article 4(1)(xi) of the Trademark Act (Tomohiko Yamada, Patent, 2025, Vol. 78, No. 11, pp. 20–41) ① Tomohiko Yamada's article examines recent treatment of composite marks, pronunciation, goods and services, and trade conditions, focusing on Article 4(1)(xi). ② Using cases including Holmes-kun, 富富富, and AWG Treatment, it reviews separate observation, comprehensive assessment, and similarity group codes. ③ Similarity analysis should examine appearance, pronunciation, concept, and general enduring trade conditions, avoiding sole reliance on codes or company-specific circumstances.
General IP	<IP Practice Online> "Generative AI and Intellectual Property Rights, etc." (Attorney Taichi Kakinuma) ① Taichi Kakinuma's presentation separates generative-AI copyright issues into development and training, and generation and use. ② It reviews non-enjoyment purposes under Article 30-4, mixed enjoyment purposes, limits on inferences from outputs, and technical measures. ③ Corporate practice should examine training data, infringement-prevention measures, and operational governance including internal guidelines.
Trademark	[Article/Trademark] Current Status and Issues in Recent Appeal Decisions on Trademark Distinctiveness Following Decisions of Refusal (Rui Asada and Tomohiko Yamada, Patent, 2025, Vol. 78, No. 11, pp. 42–60) ① Rui Asada and Tomohiko Yamada examine stricter distinctiveness assessments in appeals against refusals and difficulties in correcting that trend. ② They analyze falling reversal rates since 2022, decompositional treatment of composite marks, and the structure resulting in few revocation actions. ③ Brand strategy should distinguish the ability to use a mark from the ability to obtain exclusive rights.
Patent	IP High Court, 2024 (Gyo-Ke) No. 10035 [Gaming Machine] <Presiding Judge Honda> ① The case concerned inventive step in associating vibration and jackpot likelihood in a gaming machine's image displacement effect. ② The court denied inventive step because both references displayed images appearing different from a reference image and applying vibrating means was routine. ③ Arguments based on different presentation methods should also examine shared display characteristics and the role of added vibration.

Category	Article Title and Three-Line Summary
Copyright	[Copyright Law ★★] A Case Partially Upholding the Appellants' Claims for an Injunction and Damages against the Appellee on the Ground That Manufacturing Products Such as "Monjiro Ika" with Particular Designs on Their Labels or Outer Bags and Posting Images of Those Products on a Website Infringed Copyright (the Rights of Adaptation and Public Transmission) in a Television Drama Based on the Novel "Kogarashi Monjiro" ① The dispute concerned copyright infringement in the Kogarashi Monjiro television works through manufacturing products bearing the Monjiro Ika design and posting them online. ② The IP High Court found adaptation and public-transmission infringement because the images' essential expressive characteristics were directly perceptible, partially upholding injunction and damages claims. ③ Analysis should address Article 28 and identification of the protected expression while distinguishing the court's treatment of individual rights from the author's differing views.
Patent	IP High Court, 2023 (Gyo-Ke) No. 10105 [Electronic Money Remittance Method] <Presiding Judge Nakadaira> ① The case concerned inventive step in an electronic money remittance method, comparing "certification information" with IDs, account numbers, and other cited data. ② The court recognized inventive step because certification information including digital signatures differed technically from mere IDs, and Alipay account numbers and passwords did not qualify. ③ Information-related inventions require comparison of the technical significance of data beyond their names or apparent form.
General IP	[Contract] Tokyo District Court, 2023 (Wa) No. 70680 <Presiding Judge Nakashima> ① A royalty claim under a patent license agreement concerned whether a payment pledge submitted by the company's representative created a personal joint and several guarantee. ② The court found a personal guarantee agreement and ordered the company and representative jointly and severally to pay JPY 22 million plus delay damages. ③ When a representative submits a document concerning company debt, the obligations assumed in a personal capacity require careful review.
Patent	Osaka District Court, 2023 (Wa) No. 12280 [Seawall] <Presiding Judge Takemiya> ① The dispute concerned satisfaction of a seawall limitation requiring "packing for watertightness" between a transparent resin plate and its frame. ② The court required watertightness throughout the intervening space and found the rubber gasket insufficient, with proof still lacking when the glazing bead was included. ③ Functional limitations require attention to the extent of the required effect and proof of actual operation involving multiple components.
General IP	[Contract] Tokyo District Court, 2023 (Wa) No. 70680 <Presiding Judge Nakashima> ① A royalty claim under a patent license agreement concerned whether a payment pledge submitted by the company's representative created a personal joint and several guarantee. ② The court found a personal guarantee agreement and ordered the company and representative jointly and severally to pay JPY 22 million plus delay damages. ③ When a representative submits a document concerning company debt, the obligations assumed in a personal capacity require careful review.
General IP	[Contract] IP High Court, 2024 (Ne) No. 10058 [Development of Green Laver Spore Collection Technology Using a Waterwheel] <Presiding Judge Hibiku Shimizu> ① The dispute concerned whether publication about waterwheel-based green laver spore collection breached a joint research agreement or obstructed patent acquisition. ② The court found neither unauthorized publication of research results nor contractual nonperformance through patent obstruction, because the idea predated the research and no specific technical details were disclosed. ③ Joint research requires distinguishing preexisting ideas from concrete research results and examining what a publication actually discloses.
General IP	<IP Practice Online> The Umbrella Theory Has Also Returned! But Should Disclaimer Claims Really Be This Unrestricted? (Shibata) ① Kazuo Shibata's presentation examines the umbrella theory concerning the exclusionary effect of priority and amendment practice using disclaimer claims as respective topics. ② It raises concerns that later exclusion of undisclosed matter may substantively transform an invention and reviews cases allowing and denying inventive step. ③ A proposed disclaimer requires examination of the invention's technical content before and after amendment, alongside its ability to overcome an objection.

Category	Article Title and Three-Line Summary
Patent	**IP High Court, 2024 (Gyo-Ke) No. 10050 [Information Processing Device] <Presiding Judge Miyasaka>** **① The dispute concerned whether an information processing device qualified as an invention utilizing laws of nature despite not expressly reciting depreciation calculation.** **② The court recognized invention eligibility because software processing was concretely implemented using CPU and memory resources and supported by described embodiments, and dismissed the claim for revocation of the decision rejecting the invalidation request.** **③ Even business-related information processing requires examination of concrete hardware implementation and the description.**
Patent	**IP High Court, 2024 (Gyo-Ke) No. 10053 [Wood-Based Board] <Presiding Judge Hibiku Shimizu>** **① The dispute concerned differences in flake length, homogeneity, and absence of knots in a wood-based board and whether synergistic effects existed.** **② The court denied inventive step, endorsing separate treatment of differences in the absence of disclosed synergy and finding length adjustment obvious and other features insubstantially different or obvious.** **③ Arguments based on combined features require scrutiny of disclosed interrelationships or synergy and the technical significance of numerical ranges.**

Osaka District Court, 2023 (Wa) No. 10237 [Wild Animal Slaughtering Tool] <Presiding Judge Takemiya>

⇒ Claim limitations not satisfied (according to the original article, the limitations were also not satisfied on appeal).

Limitation A (telescopic nature of the rod):

The invention refers to a structure in which the rod itself extends and contracts, whereas the rod of the defendant's product has a fixed length.

Limitation F (carried on the back):

The invention requires a configuration in which the battery and other equipment are carried on the back, whereas the defendant's product is assembled and used at the site, does not need to be carried on the back, and has no such accessories.

Limitation G (physical parallel arrangement of two electric cords):

In the invention, the electric cord connecting the power switch unit to the DC/AC inverter is physically parallel to the electric cord connecting the metal needle to the DC/AC inverter, and the operator holds the rod with one hand and operates the power switch unit with the other. In the defendant's product, the power switch unit is inserted in series along the electric cord connecting the metal needle to the DC/AC inverter, and the distance between the rod and the power switch unit is also short.

Limitation H (grounding electrode in the soil):

The invention forms a circuit passing through the soil, whereas the defendant's product does not use a grounding rod or the like and has a circuit configuration that does not pass through the soil.

IP High Court, 2024 (Gyo-Ke) No. 10008 [Methods and Apparatus for Using Reference Signals for Time and Frequency Tracking in New Radio] <Presiding Judge Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110008%e3%80%90%e6%96%b0%e7%84%a1%e7%b7%9a%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e6%99%82%e9%96%93%e5%8f%8a%e3%81%b3%e5%91%a8%e6%b3%a2%e6%95%b0%e3%83%88/

Publication date on the list page: March 27, 2026

IP High Court, 2024 (Gyo-Ke) No. 10008 [Methods and Apparatus for Using Reference Signals for Time and Frequency Tracking in New Radio] <Presiding Judge Hibiku Shimizu>

The “indication as part of a CSI-RS resource set definition” in the amended invention of the application is information constituting part of the information (definition) that clearly limits the content of the CSI-RS resource set, and indicates “part of the CSI-RS resource set.”

Accordingly, the amended invention of the application and the cited invention are common in having “means for receiving information indicating part of a CSI-RS resource set.”

⇒ Configuring the cited invention’s “information indicating part of a set of single-symbol CSI-RS resources” as an “indication as part of a definition,” as in the amended invention of the application, could readily have been conceived by a person skilled in the art.

⇒ No inventive step.

Publication date on the list page: March 27, 2026

IP High Court, 2024 (Gyo-Ke) No. 10005 [System for Electronic Patient Care] <Presiding Judge Hibiku Shimizu>

The court found that “web services,” meaning “technology that links multiple application systems distributed over the Internet (conforming to standards such as XML),” and “transaction,” meaning “multiple processes treated as a single unit that can ensure data consistency,” were each common general technical knowledge.

Accordingly, “transaction-based web services” clearly means “web services based on transactions” and cannot be said to be unclear even without a specific explanation in the description.

⇒ The court revoked the appeal decision because both its finding of a lack of clarity and its finding of non-compliance with the enablement requirement based on that lack of clarity were erroneous.

Publication date on the list page: March 27, 2026

IP High Court, 2024 (Gyo-Ke) No. 10018 [Motor Vehicle] <Presiding Judge Miyasaka>

= 2023 (Ne) No. 10042 <Presiding Judge Miyasaka>

The invention prohibits operation of the engine stopping device when a failure is detected.

The invention of Exhibit Ko 1 (a vehicle equipped with an idle-stop device and a braking-force holding device) and the matters described in Exhibit Ko 5 (abnormality detection and warning in a hill-start assist device) share a technical field: both concern vehicles equipped with a braking-force holding device and using a function that maintains the brakes in the applied state.

A failure of the braking-force holding device is also an anticipated problem in the invention of Exhibit Ko 1, and it is clear that an abnormality in that device would prevent the brake fluid pressure from being maintained; there is therefore motivation to add the matters described in Exhibit Ko 5 (an abnormality detection signal) to solve that problem.

The invention of Exhibit Ko 1 embodies the technical concept of resolving problems such as sudden acceleration upon restarting after an idle stop by operating the braking-force holding device.

Accordingly, where the braking-force holding device fails and cannot operate, using that detection result as a condition for idle stop and adopting a configuration that prohibits its operation (Difference 3) could readily have been achieved by a person skilled in the art.

Whether simply to issue a warning upon failure (Exhibit Ko 5), prohibit operation of the device (the invention), or do both is a matter of design choice.

⇒ No inventive step.

<IP Practice Online> “How English-to-Japanese Patent Translators Think in Supporting the Application Process: Translators’ Decisions and Thinking That Connect Technology, Law, and Language” (Tatsuya Yabuuchi)

The presentation opens up “what goes on inside translators’ heads (the black box)” and articulates the logic and risk hedging on which their choices of translation terms are based.

1. The Translator’s Role in Connecting “Technology, Law, and Language”

“Word-for-word translation (literal or mirror translation)” is frequently discussed in patent translation, but English and Japanese have fundamentally different linguistic structures.

Translators exercise sophisticated judgment while balancing the following three elements.

• Technology

Accurately visualizing and understanding the invention’s physical operation and mechanism (its actual substance), rather than merely the words on the surface.

• Law

Conforming to Japan’s Patent Act, examination guidelines, and IP industry conventions (established practices), so that the translation functions as a legal document that will not be disadvantageous in examination.

• Language

Constructing natural Japanese that examiners and patent attorneys can understand smoothly and without misunderstanding, without changing the scope of rights by even a millimeter.

2. Translators’ “Thinking” and Specific Examples of Decisions

Distinguishing translations of treatment: The lecture materials present an example translating treatment as ‘処置’ in light of the difference in meaning between therapy and treatment. Where therapeutic treatment and prophylactic treatment appear together, translating them as ‘治療的処置’ and ‘予防的処置’ preserves the relationship between the original terms, avoids unnatural Japanese, and reduces subsequent corrections.

Legal consideration: Whether an invention falls within methods of surgery, therapy, or diagnosis of humans must be examined in light of the substance of the invention; translating ‘治療’ as ‘処置’ alone cannot avoid the issue of industrial applicability.

Lecture materials (Tatsuya Yabuuchi, January 22, 2026, slide 17):
https://drive.google.com/file/d/10HKuyknaSRHI4g7EB1qdaI0h965vco6l/view

Appropriate selection of legal terminology (practical supplementary point): The expression ‘without wishing to be bound by theory’ in an English patent description may be translated as ‘理論に拘束されることを望むものではないが’. The choice between ‘束縛’ and ‘拘束’ should be considered in light of the original context and consistency with terminology throughout the document.

• Handling syntax without changing the scope of rights (practical supplementary points: the “to” listing format and modifier relationships)

In claims listing elements (A, B, and C), rather than simply translating this as “A、B、及び C,” use the “to” listing format, such as “A と、B と、C と,” to indicate at an early stage whether the relationship is inclusive (and) or alternative (or).

In complex English claims containing lengthy sequences of postmodifiers for constituent elements, avoid “free translation” that prioritizes readability in Japanese and arbitrarily limits or narrows the scope of rights.

Logically distinguish whether “at least one of” should be translated as “～の少なくとも 1 つ” (at least one of ~) or “～のうちの少なくとも 1 つ” (at least one among ~).

Style guides and consistency of notation: The importance of maintaining consistency throughout the description, including full-width versus half-width numerals and letters, and the use of kanji versus hiragana, such as “及び／および” (and) and “又は／または” (or).

Publication date on the list page: March 27, 2026

Tokyo District Court, 2023 (Wa) No. 70495 [Spindle Motor] (Claim for Employee Invention Compensation) <Presiding Judge Nakashima>

⇒ Claim dismissed (inventor status denied).

By the time the plaintiff submitted an explanatory document to the plaintiff's supervisor, the invention by Di and others had already been announced.

At the time, the plaintiff worked in Shiga while Bi and others worked in Kyoto; they had no work-related contact, and there was no evidence that the plaintiff's proposal had been circulated to Bi and others.

The plaintiff's proposal was clearly different from the concept underlying the patent at issue.

The plaintiff did not attend the meeting at which Di and others' invention was announced and did not belong to the development department.

The plaintiff's proposal differed in configuration from the invention by Di and others.

IP High Court, 2024 (Gyo-Ke) No. 10081 [Pet Matching System] <Presiding Judge Nakadaira>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110081%e3%80%90%e6%84%9b%e7%8e%a9%e5%8b%95%e7%89%a9%e3%83%9e%e3%83%83%e3%83%81%e3%83%b3%e3%82%b0%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c-2/

Publication date on the list page: March 27, 2026

IP High Court, 2024 (Gyo-Ke) No. 10081 [Pet Matching System] <Presiding Judge Nakadaira>

* No inventive step in the disclaimer claim.

A limitation 'excluding animal hospitals and locations where a veterinarian is present' was added to distinguish the invention from the prior art (a system encompassing handover at animal hospitals and similar locations, but whose handover location was not found to be limited to those locations), but it was held to be obvious.

(Excerpt from the Holding)

The plaintiff argues that … the handover location in the cited invention being "at least one of a veterinarian or an animal hospital" forms the core of the cited invention's technical concept and is an essential requirement for solving its problem; changing the handover location from "at least one of a veterinarian or an animal hospital" to a location other than an animal hospital or a place where a veterinarian is present would change an essential requirement that forms the core of the cited invention's technical concept and solves its problem, and would thus contradict that technical concept, so there is no motivation and, rather, there is a teaching away.

However, this argument by the plaintiff assumes that the animal handover location in the cited invention is limited to an animal hospital or a location where a veterinarian is present; because this assumed premise is not established …, the plaintiff's argument lacks its premise and cannot be accepted.

IP High Court, 2024 (Gyo-Ke) No. 10039 [Embossed Bag] <Presiding Judge Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110039%e3%80%90%e3%82%a8%e3%83%b3%e3%83%9c%e3%82%b9%e3%82%92%e6%9c%89%e3%81%99%e3%82%8b%e8%a2%8b%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%e8%a3%81/

Publication date on the list page: March 27, 2026

IP High Court, 2024 (Gyo-Ke) No. 10039 [Embossed Bag] <Presiding Judge Hibiku Shimizu>

Cited Inventions 1 and 2 both belong to the same technical field of “embossing in which a film is pressed using a roll.”

The “pear-skin textured portion” of Cited Invention 1 and the “multiple rows of waves” in Cited Document 2 share the action and function of “expressing a pattern by forming minute irregularities on the film surface without providing a printing process.”

⇒ Obvious (no inventive step).

★ Numerical ranges are matters of design choice:

The numerical ranges for the period and height of the irregularities (the application’s 0.1 μm–1 mm, etc., overlap with Cited Document 2’s 500 μm–2 mm, etc.) are merely matters of design choice that a person skilled in the art could select as appropriate according to the visibility of the pattern and other considerations.

Publication date on the list page: March 27, 2026

Tokyo District Court, 2023 (Wa) No. 70738 [Wine Cellar] <Presiding Judge Takahashi>

Limitation E3: “Restarting the compressor when the temperature around the cooler after the heating heater has stopped reaches a ‘third temperature (second temperature < third temperature).’”

⇒ In the defendant’s product, the heater stop temperature (P11) and the compressor restart temperature (P6) were set to the same temperature.

The defendant’s product has a “compressor protection function (delay timer),” and restarting may take time even when the temperature settings are the same; however, the experimental results also included cases where the temperature at restart was lower than at heater stop, and it cannot be found that control consistently uses a “third temperature higher than the second temperature.”

⇒ Claim limitation not satisfied.

IP High Court, 2025 (Gyo-Ko) No. 10001 “Appeal in an Action Seeking Revocation of an Administrative Disposition” <Presiding Judge Masuda>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e8%a1%8c%e3%82%b310001%e3%80%8e%e5%87%a6%e5%88%86%e5%8f%96%e6%b6%88%e8%ab%8b%e6%b1%82%e6%8e%a7%e8%a8%b4%e4%ba%8b%e4%bb%b6%e3%80%8f%ef%bc%9c%e5%a2%97%e7%94%b0%e8%a3%81/

Publication date on the list page: March 27, 2026

IP High Court, 2025 (Gyo-Ko) No. 10001 “Appeal in an Action Seeking Revocation of an Administrative Disposition” <Presiding Judge Masuda>

The judgment below held that there was no interest in revocation because, even if the disposition were revoked, the procedure for the request for examination of the application would inevitably be dismissed as procedurally unlawful.

⇒ The appellate judgment found that the appellant had a legal interest in revocation: if the disposition were revoked by judgment, the Commissioner of the Japan Patent Office could not again dismiss the procedure on the same grounds, and the appellant would be able to receive examination.

Next, as to the unlawfulness of the disposition, the Patent Act provides that a request for examination of an international patent application filed in a foreign language cannot be made until after procedures such as submission of translations have been completed (Article 184-17).

The appellant requested examination before submitting the translations, which does not satisfy the requirements of that provision.

The Patent Act contains no provision permitting a defect in this sequence to be cured.

A request for examination lacking translations should be treated in the same way as a patent application lacking an attached description and other documents; because substantive examination cannot be conducted, the defect is fundamental and cannot be cured by amendment.

Accordingly, even though translations were submitted later, the defect was not cured, and the disposition was not unlawful.

The appellant also argued that the Commissioner of the Japan Patent Office made the disposition only after it had become impossible to request examination again, contrary to the purpose of Article 7 of the Administrative Procedure Act and in excess of discretionary authority; the court rejected this argument, holding that the Commissioner could not be understood to have a general duty to issue a dismissal while it was still possible to request examination again.

⇒ Appeal dismissed. Although the first-instance judgment's reasoning for dismissing the action as inadmissible was erroneous, the claim was found to lack merit. Because the appellee had filed neither an appeal nor an incidental appeal, the prohibition on a change disadvantageous to the appellant prevented replacing the judgment with a dismissal on the merits, and the court confined its disposition to dismissing the appeal.

[EPO Board of Appeal Decision] T0070/23 (Immunogenic Composition/GSK)

<Issue>

Whether “therapeutic efficacy,” which is not expressly recited in the claim, should be included in claim construction as an implicit functional feature based on the description.

<Board of Appeal’s Findings in This Decision>

Where the claim itself is clear, the description cannot be used to adopt a restrictive interpretation.

Moreover, the wording of the relevant paragraph is general and does not substantiate any particular efficacy.

⇒ The main request and auxiliary requests 2 to 6 lacked inventive step; auxiliary request 1 was not admitted on procedural grounds, and the patent was revoked.

https://www.epo.org/en/boards-of-appeal/decisions/t230070eu1

Supplement (subsequent Enlarged Board decision): This decision was issued on January 28, 2025. Subsequently, G 1/24 (June 18, 2025) held that, when assessing patentability under Articles 52 to 57 EPC, the description and drawings must always be consulted when interpreting claims, and not only where the claims are unclear or ambiguous. Consulting the description and determining whether an unrecited limitation can be imported into a claim require separate consideration.

<IP Practice Online> The Front Line of Standard Essential Patents (SEPs): Practice in Light of Global Litigation Trends — Akiko Araki

Original Article URL: https://www.nakapat.gr.jp/ja/note/%ef%bc%9c%e7%9f%a5%e8%b2%a1%e5%ae%9f%e5%8b%99%e3%82%aa%e3%83%b3%e3%83%a9%e3%82%a4%e3%83%b3%ef%bc%9e-%e6%a8%99%e6%ba%96%e5%bf%85%e9%a0%88%e7%89%b9%e8%a8%b1%ef%bc%88sep%ef%bc%89%e3%81%ae%e6%9c%80/

Publication date on the list page: March 27, 2026 (Date displayed on the individual article page: March 26, 2026.)

<IP Practice Online> "The Front Line of Standard Essential Patents (SEPs): Practice in Light of Global Litigation Trends" (Akiko Araki, Attorney at Law, Patent Attorney, and California Attorney)

1. Current Status of SEPs and FRAND Licenses

SEPs are patents essential to implementing standardized technology. Their holders' obligations to offer licenses on FRAND (fair, reasonable, and non-discriminatory) terms are based on the applicable standard-setting organization's IPR policy and the holders' declarations or undertakings.

Basis and scope of FRAND obligations: ETSI's official explanation states that "holders are requested to provide an irrevocable undertaking in writing". In summary, the specific basis and scope of FRAND licensing obligations must be examined in relation to each standard-setting organization's IPR policy and the holder's FRAND declaration or undertaking; the statement does not mean that identical obligations automatically arise solely because a patent is standard-essential. Source: ETSI official materials

However, disputes over royalty rate determination and the availability of injunctions are intensifying; in particular, licensing negotiations are becoming more complex as the technology spreads to AI and IoT devices.

2. Changes in International Litigation Trends

Europe (use of the UPC): With the European Unified Patent Court (UPC) becoming operational, right holders can obtain injunctions covering a broad area of Europe in a single proceeding.

This is a powerful weapon for right holders and a factor substantially changing the balance of negotiating power.

• Expansion of Chinese Judicial Authority

Chinese courts are actively asserting jurisdiction to determine worldwide licensing rates (global rate-setting jurisdiction), and China has become a focal point of international jurisdictional disputes.

• Developments in the United States

Injunctions remain difficult to obtain, and the principal issue continues to be monetary resolution: "What is the appropriate royalty?"

3. Battles over Injunctions (ASI/AASI)

Exchanges of anti-suit injunctions (ASIs), prohibiting the continuation of litigation in other countries, and countervailing anti-anti-suit injunctions (AASIs) are occurring frequently.

Conflicts of judicial jurisdiction are particularly evident between China and Europe (including Germany), increasing the importance of strategic selection of jurisdictions (forum shopping).

4. Impact of the Proposed EU SEP Regulation

The SEP regulation proposed by the European Commission included essentiality checks and a procedure for determining FRAND terms through a competence centre to be established at the European Union Intellectual Property Office (EUIPO).

Had it been implemented, the proposal could have prompted a rethinking of conventional negotiation processes.

https://youtu.be/Y3YND0nJzd4

Supplement (status of the proposal): According to the European Parliament's legislative procedure file, the Commission formally withdrew the proposal in October 2025. In November 2025, Parliament approved maintaining its action before the Court of Justice seeking annulment of the withdrawal decision. Accordingly, a March 2026 account should not present the proposal as continuing through the legislative process without mentioning its withdrawal.

Publication date on the list page: March 27, 2026 (Date displayed on the individual article page: March 26, 2026.)

[United States] In re Butler (CAFC, September 17, 2025)

The written description requirement for a negative limitation (disclaimer claim) is assessed by whether the original disclosure conveys to skilled artisans that the inventor possessed the claimed invention remaining after exclusion as of the filing date. Generally, the description must contain some disclosure indicating a reason for exclusion, but the negative limitation need not be recited verbatim.

Distinguishing an element from its alternatives in the description is one way of indicating a reason to exclude it. Even where the description is silent, the requirement may be satisfied if it is established that skilled artisans would always understand the element to be necessarily excluded.

In this case, such support for the limitation excluding germanium was insufficient. Source: judgment, pp. 5 and 7–9.

[Article] Protection of Avatar Names and Likenesses under Intellectual Property Law and Other Laws (Yasuyuki Echi, Patent Supplement, 2025, Vol. 78, No. 31, pp. 217–226)

Bibliographic information: Yasuyuki Echi's "Protection of Avatar Names and Likenesses under Intellectual Property Law and Other Laws" appears in Patent Supplement, 2025, Vol. 78, No. 31, pp. 217–226. Source: J-STAGE publication information

1. Copyright Act

① Names: As with character names, copyright protection is denied because they are merely ideas.

② Likenesses (appearance): Avatars completed by combining parts and finely adjusting parameters using 3D avatar creation software (such as VRoid Studio) are generally recognized as copyrightable works.

Individual parts: If individual parts (eyes, hairstyles, etc.) themselves are creative, unauthorized use of those parts may also constitute infringement.

2. Trademark Act and Unfair Competition Prevention Act

If an avatar serves to indicate the "source" of goods or services (for example, use as a VTuber's logo), protection is possible under trademark rights or the Unfair Competition Prevention Act (Article 2(1)(i) and (ii)).

3. Avatar "Movements" and Neighboring Rights

① Use of motion capture: If the movements of the "person behind the avatar" are reflected with a reasonable degree of accuracy, they are considered a "performance" by the performer (the person behind the avatar), allowing neighboring rights to be exercised against unauthorized recording or live streaming.

② Controller operation: Conduct similar to controlling a game character does not, in principle, constitute a "performance."

③ Voice: Voice acting through an avatar is protected directly by performers' rights (oral performance, recitation, etc.).

4. Examination of Views Concerning Portrait and Publicity Rights

Echi introduces Shinichiro Harada's view that, if a person's likeness is understood as something that identifies or specifies that person, a VTuber's CG avatar may be recognized as the person's likeness even if

it does not reflect the actual appearance of the person behind it. The quoted wording by Harada is ‘彼女・彼の『肖像』と認めることに障害はないはずである’ (translation: ‘there should be no obstacle to recognizing it as her or his likeness’). In summary, this view recognizes protection of an avatar as a likeness on the basis of identification of the person. Echi himself, however, states that there is ‘疑問の余地もある’ (translation: ‘room for doubt’) as to whether identifying information always constitutes a symbol of personality, and also examines the connection with the person’s personality. Source: original article, pp. 223–224 and footnote 41.

5. “Coincidental Similarity” and Liability for Infringement

<Liability after becoming aware> Even if negligence is not established at the time of generation, for example where the likeness was not included in the training data, Echi argues that continued avatar use after becoming aware, through a warning or otherwise, that the likeness is identical to another person’s likeness should constitute infringement of portrait or publicity rights and should give rise to an injunction and damages. This is the author’s view. The original article also states ‘警告前の過去の行為に対する損害賠償は否定される’ (translation: ‘damages for past acts before the warning are denied’), distinguishing generation before awareness from continued use after awareness. Source: original article, p. 226.

[Trademark/Article] “Onomatopoeia as Trademarks—The Current Situation in Japan and Other Countries—” (AIPPI (2025), Vol. 70, No. 11, Masako Nishimura)

Original title and author: The Japanese title is “商標としてのオノマトペ―日本の現状と各国の状況―”; the author is Masako Nishimura. Source: AIPPI Japan official contents

1. Current Status and Distinctiveness of Onomatopoeic Trademarks in Japan

Japanese makes extensive use of onomatopoeia (sound-imitating and mimetic words), and numerous onomatopoeic expressions have been registered as trademarks, including “mochimochi” and “sakusaku,” which describe food textures, and the newly coined word “mofumofu.”

In assessing distinctiveness, registration is generally not permitted where an expression indicates the quality of goods or services (is descriptive), but it is registered where that is not the case.

Trends in Court and Appeal Decisions:

In a past case involving “Sasatto” for designated goods including “tea and coffee,” the IP High Court (judgment of April 26, 2006, 2005 (Gyo-Ke) No. 10851) denied distinctiveness because the expression conveyed meanings such as “can be prepared quickly.”

There has also been a case denying distinctiveness to the newly coined word “pien” for designated apparel goods because it expressed a “feeling of disappointment” and similar sentiments.

Judgment (IP High Court, 2005 (Gyo-Ke) No. 10851, April 26, 2006): https://www.courts.go.jp/assets/hanrei/hanrei-pdf-32931.pdf

When assessing distinctiveness, it is necessary to check entries not only in general dictionaries such as Kojien but also in specialized dictionaries such as onomatopoeia dictionaries.

2. Situation in Other Countries and Regions

According to responses to inquiries addressed to law firms and other entities in various countries and regions, no special examination standards exist for onomatopoeic trademarks; they are assessed under general distinctiveness standards.

Europe and North America (Germany, France, the United States, and Canada): In the United States and Germany, there are examples of animal calls and similar expressions being registered for related goods (for example, “BOW-WOW” for dog toys in the United States and “MUH” for dairy products in Germany). In France, expressions such as “Miam” (delicious) have been registered, but there has recently been a trend toward stricter assessment. In Canada, onomatopoeia expressing sounds inherent in the goods (for example, “DING-DING” for bells) is likely to be refused as descriptive.

Asia (China, Hong Kong, South Korea, and Taiwan): In China, distinctiveness is more likely to be recognized where the connection with the designated goods is weak, but it is denied where the expression directly describes texture or similar qualities. Hong Kong is relatively strict, and registration of the tram sound “Ding Ding” is exceptional. In South Korea, distinctiveness is denied where an expression intuitively conveys the nature of the designated goods (for example, “ppodeuk-ppodeuk,” the sound of wiping something clean, for cleaning implements).

3. Conclusions and Recommendations

Japanese is rich in onomatopoeia, so it is frequently adopted for trademarks, but this is not necessarily the case abroad, where it has not become an issue.

When adopting an onomatopoeic trademark, it is important to consider not only registrability but also whether it creates a favorable impression on consumers; future research is needed in “trademark linguistics,” bridging linguistics and trademark practice.

[Article/Patent] A Study of the Limits of Disclaimer Claims (Kenji Tanaka et al., Patent, 2025, Vol. 78, No. 7, pp. 85–97)

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%89%b9%e8%a8%b1%e3%80%91%e9%99%a4%e3%81%8f%e3%82%af%e3%83%ac%e3%83%bc%e3%83%a0%e3%81%ae%e9%99%90%e7%95%8c%e3%81%ab%e3%81%a4%e3%81%84%e3%81%a6%e3%81%ae%e6%a4%9c%e8%a8%8e/

Publication date on the list page: March 13, 2026

[Article/Patent] A Study of the Limits of Disclaimer Claims (Kenji Tanaka et al., Patent, 2025, Vol. 78, No. 7, pp. 85–97)

1. Analysis of Trends in Japan Patent Office Decisions

A study of examination and appeal cases from fiscal year 2021 found that arguments for inventive step based on disclaimer claims were unsuccessful in approximately 12% of cases. The original article treats this proportion as a reference value because different criteria for removing irrelevant cases were used for cases where the grounds for refusal were overcome and those where they were not.

2. Four Categories in Which Inventive Step in Disclaimer Claims Is Denied

Cases where introducing a disclaimer claim did not overcome a lack-of-inventive-step objection fall into the following four categories.

① Design choices: Cases where the technical difference at the excluded boundary was small and considered to fall within the range a person skilled in the art could modify as appropriate.

② New references: Cases where the original reference was avoided but refusal followed based on different prior art.

③ Insufficient scope of exclusion: Cases where the overlapping portion of the cited invention was found not to have been completely excluded.

④ Not an essential configuration of the reference: Cases where only an optional feature of the reference was excluded and omitting that configuration was considered easy.

⇒ Where a nonessential configuration of the primary reference was excluded, a greater tendency toward refusal on the grounds of “design choices” or “not an essential configuration” was found than where an essential configuration was excluded.

Scope of the original article: The article states (translation): ‘When a nonessential configuration of the primary reference was excluded, a tendency toward refusal on grounds of “(i) design matter” or “(iv) not an essential configuration” was found compared with cases where an essential configuration of the primary reference was excluded’ (p. 90). It further assesses claims excluding an essential configuration of the primary cited invention as having ‘進歩性が認められる可能性が比較的高いと考えられる’ (translation: ‘a comparatively high likelihood of recognition of inventive step’) (p. 92). In summary, while recognizing the comparatively high potential effectiveness of excluding essential configurations, the authors caution that a configuration formally recited in a claim is not necessarily essential and that the cited invention’s problem-solving principle must be understood. Excluding an essential configuration does not automatically establish inventive step; the

guidance below on ‘what to exclude’ also requires examination of the particular cited invention and the invention remaining after exclusion. Source: Kenji Tanaka et al., A Study of the Limits of Disclaimer Claims, pp. 90 and 92–93. Original source

3-1. “Addition of New Matter” Arising from Disclaimer Claims

Using a boundary value absent from the original description (such as a numerical value in a reference) creates a risk of being regarded as introducing new technical matter.

3-2. “Failure to Satisfy the Clarity Requirement” Arising from Disclaimer Claims

Functional or abstract exclusionary expressions such as “those not falling within ~” are considered to prevent an unambiguous understanding of the scope of rights.

3-3. “Failure to Satisfy the Support and Enablement Requirements” Arising from Disclaimer Claims

An insufficiency of specific working examples or supporting disclosure is identified in the description for the scope remaining after the exclusion.

4. Guidelines for Using Disclaimer Claims

① What to exclude: Prioritize exclusion of an essential configuration of the primary reference (an element without which its problem cannot be solved).

② Drafting techniques: Rather than copying unclear wording from the reference, define the excluded scope clearly in light of common general technical knowledge.

③ Arguments in written opinions: Do not merely state that “the overlap has been excluded”; logically explain how the exclusion clarifies the “difference in technical concepts” from the reference.

④ Preparation at filing: Preserve options for ordinary narrowing amendments by including extensive disclosure of varied subordinate concepts and alternative configurations in the original description.

[Article/Trademark] Recent Court Decisions on Trademark Similarity: Focusing on Article 4(1)(xi) of the Trademark Act (Tomohiko Yamada, Patent, 2025, Vol. 78, No. 11, pp. 20–41)

Original Article URL: https://www.nakapat.gr.jp/ja/legal_updates_jp/%e3%80%90%e8%ab%96%e7%a8%bf-%e5%95%86%e6%a8%99%e3%80%91%e5%95%86%e6%a8%99%e3%81%ae%e9%a1%9e%e5%90%a6%e3%81%ab%e9%96%a2%e3%81%99%e3%82%8b%e8%bf%91%e5%b9%b4%e3%81%ae%e8%a3%81%e5%88%a4%e4%be%8b%e3%81%ab/

Publication date on the list page: March 13, 2026

[Article/Trademark] Recent Court Decisions on Trademark Similarity: Focusing on Article 4(1)(xi) of the Trademark Act (Tomohiko Yamada, Patent, 2025, Vol. 78, No. 11, pp. 20–41)

1. <The Courts' Latest Approach>

The "Tsutsumi no Ohinakkoya" case (Supreme Court, September 8, 2008) has tended to be interpreted as permitting separation only in cases such as where "the portion creates a strongly dominant impression."

Regarding recent Intellectual Property High Court decisions (for example, judgment of February 22, 2021, 2020 (Gyo-Ke) No. 10088, the Holmes-kun case), the article argues that, although the trends in similarity determinations do not differ greatly from those in pre-Reiwa decisions, the framework for determining when separation is permissible is becoming clearer. The following organizes that framework.

Judgment (Holmes-kun case)：https://www.courts.go.jp/assets/hanrei/hanrei-pdf-90043.pdf

① "Separation is permissible if the elements are not inseparably integrated": Returning to the standard in the Lila Supreme Court decision (December 5, 1963), separation is permissible unless the combination is so firmly integrated that separation would be unnatural in trade.

② "A 'considerable' impression is enough": There is a tendency to allow separate observation not only at the high threshold of "strongly dominant" in the Tsutsumi decision, but also at the level of "capable of functioning independently as a source-identifying sign (a considerably strong impression)."

2. Similarity in Pronunciation: The Importance of the "Ear" in the Internet and AI Era

The original article explains that, from the middle of the Heisei period onward, decisions began to consider appearance and concept together with pronunciation in light of actual trade conditions. It also points out that many recent decisions continue to find similarity by placing weight on identical pronunciation.

Comprehensive Assessment: There are examples finding non-similarity despite identical pronunciation where appearance or concept differs markedly (for example, 2020 (Gyo-Ke) No. 10014, the 富富富 case). However, the original article also states '観念・外観において相違していても称呼が同一のケースは類似と判断される判決も多い' (translation: 'there are also many judgments finding similarity in cases with identical pronunciation even though concept and appearance differ'). In summary, alongside examples of non-similarity, the continuing importance of pronunciation must be considered in light of the goods or services and actual trade conditions. Source: original article, p. 24.

Dominance of Visual Information: Appearance carries greater weight in transactions where consumers “see and buy,” such as online shopping.

Voice Search as a Countervailing Force: Meanwhile, the spread of AI speakers and voice search creates situations in which the importance of pronunciation is being reassessed. In practice, identical pronunciation remains a significant risk factor for refusal and infringement.

3. Similarity of Goods and Services: How Can the “Presumption” of Similarity Group Codes Be Overcome?

The Japan Patent Office’s “similarity group codes” are a powerful benchmark, but the courts are not bound by them.

Even where the codes indicate non-similarity, goods or services may be found similar if, in actual practice, they are recognized as being provided by the same business operator (for example, 2024 (Gyo-Ke) No. 10028, the AWG Treatment case).

Congestion in 11C01 (Programs): Today, when every industry handles software, similarity group code 11C01, which includes “computer programs” in Class 9, is saturated and presents a major practical obstacle.

4. Taking Actual Trade Conditions into Account: Selecting the “Facts” to Be Considered

Arguments that “there will be no confusion because our company sells in this particular way” (special or limited circumstances) are, in principle, not accepted.

https://jpaa-patent.info/patent/viewPdf/4716

考慮される事情（一般的・恒常的）	考慮されない事情（特殊的・限定的）
業界全体の慣習、周知・著名性の度合い	自社独自の販売キャンペーン、季節限定の使用
需要者の一般的な注意力の程度	引用商標権者との個別の住み分け合意

English translation of the original figure

Circumstances considered (general and enduring): industry-wide practices; degree of recognition or fame; the general level of consumer attention.

Circumstances not considered (special or limited): the company’s own sales campaigns; seasonally limited use; individual coexistence arrangements with the owner of the cited trademark.

●要部とできるかどうかは、商標において占める割合・独自性・造語性・著名性等の要素を考慮する
ということを考慮することは従前から変わっていない。
これをバロメータ化すると以下のように表現でき、これらを総合的に勘案し、また後述するような取引の実情を加味して分離するか否かが決せられるといえよう。

English translation of the original figure

• The approach of considering factors such as the proportion occupied in the mark, originality, coined character, and fame when determining whether a component can be treated as the essential portion has not changed. Expressed as indicators, these factors appear as shown below. Whether to separate the components is determined by considering them comprehensively, together with the actual trade conditions discussed later.

Separation — easier at the left; more difficult at the right.

Visual unity: absent → present.

Pronunciation of the whole: long → short.

Conceptual connection: weak → strong.

Distinctiveness of a constituent element: absent → present.

Recognition or fame of a constituent element: high → low.

Originality of a constituent element: high → low.

<IP Practice Online> “Generative AI and Intellectual Property Rights, etc.” (Attorney Taichi Kakinuma)

Original Article URL: https://www.nakapat.gr.jp/ja/note/%ef%bc%9c%e7%9f%a5%e8%b2%a1%e5%ae%9f%e5%8b%99%e3%82%aa%e3%83%b3%e3%83%a9%e3%82%a4%e3%83%b3%ef%bc%9e%e3%80%8c-%e7%94%9f%e6%88%90ai%e3%81%a8%e7%9f%a5%e7%9a%84%e8%b2%a1%e7%94%a3%e6%a8%a9%e7%ad%89/

Publication date on the list page: March 13, 2026 (Date displayed on the individual article page: March 12, 2026.)

<IP Practice Online> “Generative AI and Intellectual Property Rights, etc.” (Attorney Taichi Kakinuma)

1. The “Development and Training Stage” and the “Generation and Use Stage”

When legally examining generative AI and copyright issues, it is necessary to distinguish clearly between two phases: the “development and training stage,” in which data is fed into AI to create a model, and the “generation and use stage,” in which users enter prompts and obtain outputs.

2. Copyright Act at the “Development and Training Stage” (Article 30-4)

• General rule (lawful)

Under Article 30-4 of Japan’s Copyright Act, works can generally be collected and used for training without the copyright owner’s permission if the purpose is “non-enjoyment,” such as machine-based “information analysis,” rather than enjoying works by viewing or listening to them.

• Exceptions (cases that may constitute copyright infringement)

However, where a “purpose of enjoyment” is included, such as targeting a particular creator’s works to “output their expression as it is (reflecting it in generated outputs for human enjoyment or use),” the exception under that article does not apply, and copyright infringement may arise under the general rule (for example, intentional overfitting).

3. Assessment at the “Generation and Use Stage” and “Technical Measures”

• The “unlawfulness of training” cannot immediately be inferred retrospectively from “output results.”

Even if an output happens to contain expression in common with an original work used to train the AI (similarity), it is ordinarily not possible, “solely from the fact (result) that a similar output was generated,” immediately to infer retrospectively that “a purpose of enjoyment existed (= the training itself was unlawful)” at the earlier development and training stage.

• The Importance of “Technical Measures” to Prevent Infringement

On the other hand, it is important whether AI developers and service providers implement “restrictive technical measures (safeguards such as filters and guardrails)” to avoid generating infringing material similar to existing works.

Implementing effective technical measures may be one circumstance supporting the argument that there was “no purpose of enjoyment” at the development stage.

Purpose of enjoyment: A purpose of enjoyment under Article 30-4 of the Copyright Act is not synonymous with a subjective intent to infringe. The Legal System Subcommittee of the Copyright Subdivision of the Council for Cultural Affairs, in “AI と著作権に関する考え方について” (March 15, 2024), states (translation): “If even one of these multiple purposes includes a purpose of ‘enjoyment,’ the requirements of that article are not met.” In summary, the issue is whether a purpose of enjoyment exists. Footnote 22 on p. 20 of those materials introduces an opinion that effective technical measures may be a circumstance supporting an inference of a non-enjoyment purpose. The presence or absence of technical measures must be evaluated in light of their content, effectiveness, and other circumstances. Source: Subcommittee materials, pp. 19–21. Original source

4. Risk Management and Responses in Corporate Practice

• Risks of Using Pirated Data

Using unlawfully uploaded pirated material (infringing content) as training data while knowing its nature carries very high legal risks in practice.

• Establishing Internal Systems (Governance)

Compliance-conscious operation is required, including implementation of technical measures and establishment of internal guidelines.

[Article/Trademark] Current Status and Issues in Recent Appeal Decisions on Trademark Distinctiveness Following Decisions of Refusal (Rui Asada and Tomohiko Yamada, Patent, 2025, Vol. 78, No. 11, pp. 42–60)

Original Article URL: https://www.nakapat.gr.jp/ja/legal_updates_jp/%e3%80%90%e8%ab%96%e7%a8%bf-%e5%95%86%e6%a8%99%e3%80%91%e8%bf%91%e5%b9%b4%e3%81%ae%e5%95%86%e6%a8%99%e3%81%ae%e8%ad%98%e5%88%a5%e6%80%a7%e3%81%ab%e9%96%a2%e3%81%99%e3%82%8b%e6%8b%92%e7%b5%b6%e6%9f%bb/

Publication date on the list page: March 13, 2026 (Date displayed on the individual article page: March 12, 2026.)

[Article/Trademark] Current Status and Issues in Recent Appeal Decisions on Trademark Distinctiveness Following Decisions of Refusal (Rui Asada and Tomohiko Yamada, Patent, 2025, Vol. 78, No. 11, pp. 42–60)

1. The Reality of Rapidly "Stricter" Distinctiveness Assessment

In recent years, in appeals against decisions of refusal based on Article 3(1) of the Trademark Act (distinctiveness), the proportion in which the grounds for refusal are overturned and registration is achieved (the reversal rate) has fallen markedly.

After peaking in 2021, the proportion of appeal decisions allowing registration has dropped sharply since 2022.

2. Changes in Assessment Methods: From Overall Observation to "Arbitrary" Decomposition

There is a clear difference in how composite marks (A+B) were viewed through 2021 and how they have been viewed since 2022.

Former approach (through 2021): Where there were few examples of use of the mark as a whole, or where the word order was recognized as coined, there was a tendency to recognize distinctiveness as a kind of coined expression (for example, "Jun-nama Udon" was registered).

Current approach (from 2022): Even without examples of use of the mark as a whole, there is a tendency to scrutinize the meanings of its individual words and arbitrarily combine them to conclude that the mark "produces a particular meaning (such as an indication of quality)" (for example, "Jun-nama Sanuki Udon" was refused).

A Method of Concern (Risk of Hindsight): Keeping the goods or services in mind and adding related words to the meanings of individual characters to force a meaning from them resembles the "hindsight" prohibited in patent inventive-step assessment.

3. Impact on Business and Branding

Stricter distinctiveness assessment may dampen corporate brand strategies.

Difficulty Securing Rights in Suggestive Marks: There is a risk of widespread refusal of “bold naming (suggestive marks)” such as “Oi Ocha” and “Hobo Kani,” which evoke the appeal of the goods while stimulating demand.

4. Why Does “Correction” Not Occur? The Barrier to Actions Seeking Revocation of Appeal Decisions

The mechanism for checking stricter appeal practice is not functioning sufficiently. The principal reason is the extremely small number of actions seeking revocation of appeal decisions based on lack of distinctiveness.

<Survey Results (Why Is Litigation Not Pursued?)>

Lack of Distinctiveness: The survey covered 46 members of the relevant Japan Patent Attorneys Association (JPAA) committee and 28 members of the Japan Intellectual Property Association (JIPA) Trademark Committee for fiscal year 2024. According to the paper, the proportions not proceeding to a revocation action where distinctiveness alone was at issue were 89.1% (41 of 46) and 82.1% (23 of 28), respectively. These are not the percentages selecting “there is no problem with use” as their reason. The paper discusses the fact that refusal prevents exclusivity but does not prevent actual use, together with litigation costs, as factors behind decisions not to sue.

Similarity: Because use may conflict with another party’s rights and risk being stopped, the paper explains that litigation is considered on a roughly fifty-fifty basis where similarity is at issue. However, its JPAA non-filing figure of 54.1% is inconsistent with the stated count of 28 out of 46 people. This should not be presented as a definitive actual filing rate of “approximately 50–60%.”

As a result, a structure has developed in which the Intellectual Property High Court has few opportunities to “check the appropriateness of distinctiveness assessments.”

IP High Court, 2024 (Gyo-Ke) No. 10035 [Gaming Machine] <Presiding Judge Honda>

The invention of the application is characterized by providing, in an “image displacement effect” in which an image moves, a “normal mode” in which no vibration occurs and a “special mode” in which vibration occurs and the likelihood of a jackpot is high.

⇒ The Japan Patent Office found it obvious from a combination of the cited invention (Exhibit Ko 1: an image displacement effect with first and second effect modes having different likelihoods) and the technical matters in Exhibit Ko 2 (technology in which an operation button vibrates together with a stereoscopic display effect at times of high expectation, such as a super-reach state).

The plaintiff argued that the cited invention’s “image displacement effect” and Exhibit Ko 2’s “stereoscopic display effect” differ in method and presentation effect, leaving no motivation to combine them.

⇒ The judgment held that “the effects are common in that they display an image that appears different from the reference image, and it cannot be said that there is no motivation to combine them”; it also held that “applying vibrating means to perform an effect involving vibration in the gaming machine of the cited invention is merely something that would naturally be done.”

⇒ No inventive step.

Intellectual Property High Court, September 24, 2025 (2024 (Ne) No. 10007) (Presiding Judge Ken Nakadaira)

◆Judgment Text

Judgment date: September 24, 2025.

[Overview of the Case]

The late novelist Saho Sasazawa (B) wrote the serialized novels in the "Kogarashi Monjiro" series (the Novels), whose protagonist is a wandering gambler named "Monjiro." Manga, television dramas, and films were then produced based on the Novels. After B's death, copyright in the Novels was inherited by B's wife, Plaintiff A. The plaintiff company (Company X) obtained an exclusive license from Plaintiff A to use B's works. The defendant company (Company Y) is a stock company engaged in manufacturing and selling food products and other businesses.

In this case, claims were made on the grounds that Company Y's manufacture and sale of dried squid products under names including "Monjiro Ika" (the Y Products) with the Y Design shown below on their packaging (labels or outer bags), and its posting of images of the Y Products on a website, infringed copyright (the right of reproduction or adaptation, the right of public transmission, and the right of transfer) in the Novels, manga based on the Novels, the television dramas (the Television Works), or films, as well as Company X's status as an exclusive licensee; and that manufacturing and selling the Y Products bearing the Y Design constituted unfair competition under Article 2(1)(i) or (ii) of the Unfair Competition Prevention Act (UCPA). The claims sought an injunction against the manufacture, sale, and other handling of the Y Products and their disposal under Article 112(1) and (2) of the Copyright Act or Article 3(1) and (2) of the UCPA, and damages in tort or under the main clause of Article 4 of the UCPA.

First-instance proceedings and appeal: The first-instance case was Tokyo District Court, 2023 (Wa) No. 70139. The features that the plaintiffs identified as a work in the Novels were those of a wandering

gambler wearing an oversized conical straw hat low over his eyes and a long travelling cape, holding a long bamboo toothpick in his mouth, and carrying a long wakizashi sword. The first-instance court did not recognize these features as concrete creative expression in themselves and also held that the indication asserted by the plaintiffs was not an indication of goods or business under Article 2(1)(i) or (ii) of the UCPA. It dismissed all claims. After the plaintiffs appealed, A died while the appeal was pending, and A's children, the X parties, succeeded to the proceedings. As described below, the appellate court found copyright infringement in relation to the Television Works, modified the first-instance judgment, and partially upheld the claims.

Y Design

[Summary of the Judgment]

1. Ownership of Rights

(1) The late author B held copyright in the Novels; after B's death, the late A acquired that copyright by inheritance, and after A's death, Appellants X2, X3, and X4 acquired the copyright by inheritance.

(2) With respect to the Television Works, which are derivative works based on the Novels, the late B, the author of the original work—the Novels—exclusively held copyright of the same types (the right of reproduction or adaptation, the right of transfer, and the right of public transmission) as, and coexisting with, the copyright held by the authors of the Television Works (the right of reproduction or adaptation, the right of transfer, and the right of public transmission) (Article 28 of the Copyright Act; Supreme Court, First Petty Bench, October 25, 2001, 2000 (Ju) No. 798, Shumin Vol. 203, p. 285). After B's death, the late A acquired those rights by inheritance, and after A's death, Appellants X2, X3, and X4 acquired those rights by inheritance.

2. Reliance on the Existing Work

On a page of its website, Company Y stated, under "Origin of Monjiro Ika," that the product originated from likening the long toothpick held in the mouth of Kogarashi Monjiro, who was popular on television in 1972, to a skewer. This fact establishes that the name "Monjiro Ika" derives from Monjiro, the protagonist of the Television Works, and also permits an inference that the Y Design was created in reliance on the Television Works.

3. Whether Reproduction or Adaptation Occurred

(1) Monjiro in the Image shown below from the Television Works specifically depicts an image of Monjiro in the Television Works. Comparing the Image with the Y Design therefore clarifies the comparison between the image of Monjiro in the Television Works and the Y Design. Moreover, since the Television Works are derivative works of the Novels, such an image of Monjiro from the Television Works is recognized as a derivative work of the Novels.

The Image

(2) Monjiro in the Image is depicted as a person combining all of the following features: ① wearing a sandogasa traveling hat larger than those ordinarily used in television dramas, films, and the like; ② wearing a vertically striped traveling cape longer than those ordinarily used in television dramas, films, and the like; ③ holding a long, thin toothpick in his mouth; and ④ carrying a long wakizashi sword. No drama, film, novel, or similar work featuring a person combining all of these expressive features ① through ④ is established to have existed before the Television Works were broadcast or the Novels written. Accordingly, the combination of all four expressive features constitutes a creative expressive part of the Image and is recognized as forming its essential expressive characteristics.

(3) The Y Design, on the other hand, is a hand-drawn picture exaggerating the person's characteristics; its mode of expression differs from the Image, which is a live-action depiction of an actor. Compared with the Image, it is a separate work to which new creativity has been added through hand drawing, and therefore it does not constitute a reproduction of the Image or the image of Monjiro in the Television Works.

(4) Nevertheless, the person in the Y Design wears a sandogasa traveling hat, and that hat is large. Relative to the size of the person's face, the hat in the Y Design is even larger than the hat worn by Monjiro in the Image; however, this results from emphasizing feature ①, that the hat is large, in the Y Design. It does not prevent perception of feature ①; rather, it makes that perception easier. Accordingly, expressive feature ① of the Image can be directly perceived from the Y Design.

The person in the Y Design also wears a traveling cape, and that cape is long and vertically striped. Relative to the person's height, the cape in the Y Design is even longer than that worn by Monjiro in the Image; however, this results from emphasizing feature ②, that the cape is long, in the Y Design. It does not prevent perception of feature ②; rather, it makes that perception easier. In addition, while the cape

worn by the person in the Image has narrow stripes, those on the cape worn by the person in the Y Design are depicted as wider. This, too, results from emphasizing, in the Y Design, the part of feature ② that the cape is vertically striped, and does not prevent perception of feature ②; rather, it makes that perception easier. Accordingly, expressive feature ② of the Image can be directly perceived from the Y Design.

Furthermore, while Monjiro in the Image holds a long, thin toothpick in his mouth, the person in the Y Design holds a long, thin, rod-like object in his mouth, and it may not be immediately apparent that it is a toothpick. However, it is easy to infer that the long, thin, rod-like object held in the mouth is a toothpick; even if this is not immediately apparent, that does not prevent perception of feature ③. Accordingly, expressive feature ③ of the Image can be directly perceived from the Y Design.

In addition, both the person in the Y Design and Monjiro in the Image carry a long wakizashi sword, so expressive feature ④ of the Image can be directly perceived from the Y Design.

(5) Accordingly, all of expressive features ① through ④, which constitute a creative expressive part of the Image and are recognized as its essential expressive characteristics, can be perceived from the Y Design.

(6) The Image specifically depicts an image of Monjiro in the Television Works, and comparing the Image with the Y Design clarifies the comparison between the image of Monjiro in the Television Works and the Y Design. It is therefore recognized that all of expressive features ① through ④, which constitute a creative expressive part of the image of Monjiro in the Television Works and are recognized as its essential expressive characteristics, can be perceived from the Y Design.

(7) In light of the foregoing, the Y Design relies on the image of Monjiro in the Television Works and, while maintaining the identity of that image's essential expressive characteristics, alters the specific expression to express thoughts or sentiments creatively anew. A person encountering the Y Design can directly perceive the essential expressive characteristics of the image of Monjiro in the Television Works. The Y Design is therefore recognized as an adaptation of the image of Monjiro in the Television Works.

4. Whether Copyright Infringement or Other Infringement Occurred

By manufacturing the Y Products with the Y Design on their packaging (labels or outer bags) and posting images of the Y Products on a website, Company Y is recognized as having infringed the rights of adaptation and public transmission in the Television Works. By contrast, the right of transfer is the right to offer a work to the public through transfer of its original or copies, so transfer of an adaptation of a work is not recognized as having infringed the right of transfer. Company X's status as an exclusive licensee is also recognized as having been infringed by Company Y's copyright infringement.

[Comments]

1. Regarding Judgment Summary 1(2)

Judgment Summary 1(2) follows the Supreme Court decision in the Candy Candy case, October 25, 2001, Hanrei Jiho No. 1767, p. 115. That decision held that the original author of a story manuscript in novel form constituting the original work underlying a derivative serialized manga exclusively holds, under Article 28 of the Copyright Act, rights of the same types as those held by the manga's author, with both

sets of rights coexisting, not only in the serialized manga and thus its panels and cover illustrations featuring the protagonist, but also in newly drawn original illustrations of that protagonist.

2. Regarding Judgment Summary 2

Judgment Summary 2 infers, from the explanation of the Y Products' origins on Company Y's website and the product name "Monjiro Ika" itself, that the Y Design was created in reliance on the Television Works. It may be surmised that this clear inference of reliance had a substantial practical influence on the assessment of reproduction or adaptation in Judgment Summary 3.

3. Regarding Judgment Summary 3

(1) Regarding Judgment Summary 3(1)

At first instance, the plaintiffs identified and asserted as the infringed work the description in the Novels of a wandering gambler who ① wears a larger-than-usual sandogasa traveling hat pulled low over his eyes, ② wraps himself in a longer-than-usual sweeping traveling cape, ③ holds a long bamboo toothpick in his mouth, and ④ carries a long wakizashi sword. However, the Supreme Court decision in the Popeye Necktie case, July 17, 1997, Minshu Vol. 51, No. 6, p. 2714, held: "In a serialized manga consisting of self-contained episodes in which a person with particular characteristics such as a name, appearance, and role is repeatedly depicted, each individual episode depicting that person constitutes a work, but the so-called character of that person cannot be regarded as a work apart from the specific manga. This is because what is called a character is an abstract concept, which might be described as the personality of the person distilled from the manga's specific expression, rather than the specific expression itself, and cannot itself be said to express thoughts or sentiments creatively." Under that decision, the judgment below held that, although "when a copyright owner alleges infringement of copyright in a serialized novel consisting of self-contained episodes, the owner must specifically identify the textual expression in the particular episode of that serialized novel whose copyright has been infringed," "on the premise of X and the others' arguments concerning identification, they fail to identify specifically the work in the books whose copyright is said to have been infringed, and their arguments must therefore be regarded as untenable in themselves." This holding of the judgment below accords with the judicial research official's commentary on the Popeye Necktie Supreme Court decision (Ryoichi Mimura, Commentary on Supreme Court Decisions, Civil Cases, Fiscal Year 1997, Middle Volume, p. 943).

On appeal, by contrast, under Judgment Summary 1(2) based on the Candy Candy Supreme Court decision, the infringed work was identified as a visual image of Monjiro in the Television Works, which are derivative works of the Novels, rather than the verbal descriptions of Monjiro in the Novels relied upon at first instance. In particular, as stated in Judgment Summary 3(1), although it was identified directly by the Image of Monjiro in the Television Works, it was ultimately identified as images of Monjiro generally, as specifically depicted by Monjiro in the Image from the Television Works. It is understood that the images of Monjiro in the Television Works generally, identified in this way, were made the subject of examination and determination as to whether the Y Design constituted reproduction or adaptation.

(2) Regarding Judgment Summary 3(2)

Further, Judgment Summary 3(2) addresses the visual expression of Monjiro in the Image as a person combining all of the following characteristics, common to images of Monjiro in the Television Works generally and scarcely different from the verbal descriptions of Monjiro in the Novels that the plaintiffs identified and asserted as the infringed work at first instance: ① wearing a sandogasa traveling hat larger than those ordinarily used in television dramas, films, and the like; ② wearing a vertically striped traveling cape longer than those ordinarily used in television dramas, films, and the like; ③ holding a long, thin toothpick in his mouth; and ④ carrying a long wakizashi sword. Because no drama, film, novel, or similar work featuring a person combining all of expressive features ① through ④ is established to have existed before the Television Works were broadcast or the Novels written, the court recognized this as a creative expressive part of the Image and as forming its essential expressive characteristics.

In this respect, unlike the judgment below, Judgment Summary 3(1) and (2) may be evaluated as accepting identification, as the infringed work, of creative expressive elements or features generalized and abstracted from individual, specific expressions as features common to multiple works or expressions, although they are visual expressions of a character substantially equivalent to the verbal expressions. It may be evaluated as attempting to open a path to substantive protection of creative character expression under copyright law, even under the Popeye Necktie Supreme Court decision denying copyrightability to a "character" itself. In this connection, even after the Popeye Necktie Supreme Court decision, the view recognizing copyrightability in creative character expression as a persona, rather than illustrations, pictures, designs, images, or the like, remains influential in academic commentary (Tatsuhiro Ueno, "Legal Protection of Characters," Patent Vol. 69, No. 4 (2016), p. 50; Satoshi Ikemura, "Considering 'Characters and Copyright' Today," Copyright Vol. 58, No. 687 (2018), pp. 38–39; Shunji Matsuda, "Legal Protection of Characters in a New Era," Copyright Vol. 62, No. 742 (2023), p. 15; and others).

Nevertheless, disagreement may arise over Judgment Summary 3(2)'s recognition of features ① through ④ alone as the essential expressive characteristics of Monjiro in the Image, as in the judgment below, which rejected this in obiter dicta on the ground that they were commonplace.

(3) Regarding Judgment Summary 3(3)

Judgment Summary 3(3) rejects the proposition that the Y Design reproduces the Image of Monjiro in the Television Works and, by extension, images of Monjiro generally, and is appropriate.

(4) Regarding Judgment Summary 3(4)–(7)

Judgment Summary 3(4)–(7), probably influenced considerably in practice by the clear inference of reliance in Judgment Summary 2, proceeds on the premise of Judgment Summary 3(2) and follows the Supreme Court decision in the Esashi Oiwake case, June 28, 2001, Minshu Vol. 55, No. 4, p. 837. That decision held: "Adaptation (Article 27 of the Copyright Act) means the act of creating another work by relying on an existing work and, while maintaining the identity of its essential expressive characteristics, making modifications, additions, deletions, changes, or the like to its specific expression to express thoughts or sentiments creatively anew, in such a way that a person encountering it can directly perceive the essential expressive characteristics of the existing work." Judgment Summary 3(4)–(7) thus affirms that the Y Design adapts the Image of Monjiro in the Television Works and, by extension, images of

Monjiro generally; in light of Judgment Summary 2 and on the premise of Judgment Summary 3(2), this is appropriate.

On the other hand, if one disagrees with Judgment Summary 3(2), adaptation might also be denied, as in the judgment below, under the Esashi Oiwake Supreme Court decision's further holding that "where a work created in reliance on an existing work shares identity with that work only in portions that are not expression itself, such as thoughts, sentiments or ideas, facts or events, or in portions lacking expressive creativity, it does not constitute adaptation."

4. The Purpose, Interpretation, and Application of Article 28 of the Copyright Act and Copyright Protection of Creative Character Expression

Under the Popeye Necktie Supreme Court decision denying copyrightability to a "character" itself, attention turns to the interpretation and application of Article 28 of the Copyright Act, which prescribes the original author's rights concerning exploitation of derivative works, as a legal framework for nonetheless providing substantive copyright protection to creative character expression, as this judgment does. Neither the Candy Candy Supreme Court decision nor this judgment based on that decision directly or expressly states the purpose of Article 28 itself. Nevertheless, the application of Article 28 in the Candy Candy Supreme Court decision and in this judgment based on it resulted in findings that use of character pictures, designs, and the like infringed the rights of the original authors in the story manuscripts in novel form, novels, and other works in which those characters appear. In relation to the copyright law principle of protecting creative expression, these findings should be substantively justified rather than treated as exceptions to that principle. If so, it does not seem impossible to understand those findings of infringement as substantively affirming, as the purpose and interpretation of Article 28, protection as a work for creative character expression as a persona in the original story manuscripts in novel form, novels, and similar works.

5. Regarding Judgment Summary 4

Through the application of Articles 21–27 of the Copyright Act via Article 28, which prescribes the original author's rights concerning exploitation of derivative works, it is considered that, generally under case law and academic commentary and contrary to Judgment Summary 4, infringement could be recognized separately as follows: creation of the Y Design infringes the right of "adaptation" (Article 27); manufacture of the packaging (labels or outer bags) of the Y Products bearing the Y Design infringes the right of "reproduction" (Article 21); sale of the Y Products in packaging (labels or outer bags) bearing the Y Design infringes the right of "transfer" (Article 26-2(1)); and posting images of those Y Products on a website infringes the right of "public transmission" (Article 23(1)).

Claim for Royalties and Other Payments under a Patent License Agreement

⇒ Granted (joint and several personal guarantee by the defendant company's representative).

Plaintiff: Patent owner

Defendant company: Licensee

Defendant B: Representative director of the defendant company

C (not a party): Finance officer of the defendant company; the contact person with the plaintiff who had been postponing payment.

Defendant B issued a written statement saying: "I, B, pledge to make payment to the fullest extent in the event of default."

The plaintiff argued that because it said "I, B," it meant payment from B's personal assets (= a joint and several guarantee).

⇒ The judgment found that a joint and several guarantee agreement had been formed by Defendant B personally.

Summary of the Disposition

The court ordered the defendants (the company and B personally) jointly and severally to pay JPY 22 million plus delay damages at 8% per annum from July 31, 2023 until payment in full.

Publication date on the list page: March 6, 2026

Osaka District Court, 2023 (Wa) No. 12280 [Seawall] <Presiding Judge Takemiya>

In light of the description and the meaning of the terms, “packing for watertightness between the transparent resin plate and the frame” (Limitation B③) does not mean that “it is sufficient for packing to exist at any part between the transparent resin plate and the frame”; it requires “packing for rendering the entirety of the space between the transparent resin plate and the frame watertight (preventing water leakage).”

⇒ Claim limitation not satisfied (the defendant’s product’s “rubber gasket” alone does not render the whole space watertight).

+ Even treating the aluminum “glazing bead” as metal packing, watertightness was insufficiently proven.

Cf. 2018 (Ne) No. 10034 [Solenoid] <Presiding Judge Kanno>

* “Sealing fit” does not require the end member itself to produce the effect of preventing corrosion of the solenoid.

⇒ The limitation is satisfied because the effect is achieved together with an O-ring.

[Contract] IP High Court, 2024 (Ne) No. 10058 [Development of Green Laver Spore Collection Technology Using a Waterwheel] <Presiding Judge Hibiku Shimizu>

Original Article URL:
https://www.nakapat.gr.jp/ja/note/%e3%80%90%e5%a5%91%e7%b4%84%e3%80%91%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10058%e3%80%90%e6%b0%b4%e8%bb%8a%e3%82%92%e5%88%a9%e7%94%a8%e3%81%97%e3%81%9f%e9%9d%92%e3%83%8e%e3%83%aa%e3%81%ae%e6%8e%a1/

Publication date on the list page: March 6, 2026

[Contract] IP High Court, 2024 (Ne) No. 10058 [Development of Green Laver Spore Collection Technology Using a Waterwheel] <Presiding Judge Hibiku Shimizu>

1. Whether the Joint Research Agreement Was Breached (Unauthorized Publication of Research Results)

The idea itself of collecting green laver spores using a waterwheel had existed since 1998, before the joint research at issue.

The purpose of the joint research was to clarify specific conditions for spore collection and related matters, whereas the publication at issue merely indicated that “attachment using a waterwheel-type spore collection device is possible” and did not disclose specific technical details (suitable circumstances, conditions, etc.).

The idea itself was a premise of the joint research, not an outcome, and the publication did not constitute publication of “research results”; no breach of contract was therefore found.

2. Whether Patent Acquisition Was Obstructed

Since the idea itself of collecting green laver spores using a waterwheel was well known, merely stating that it “had become possible” would not secure a patent; regardless of whether the publication occurred, disclosure of specific technical details was necessary to obtain a patent.

Accordingly, even if the publication was cited during patent examination, it was not recognized as obstructing the plaintiff’s patent acquisition and did not constitute nonperformance of contractual obligations.

<IP Practice Online> The Umbrella Theory Has Also Returned! But Should Disclaimer Claims Really Be This Unrestricted? (Shibata)

Original Article URL: https://www.nakapat.gr.jp/ja/note/%ef%bc%9c%e7%9f%a5%e8%b2%a1%e5%ae%9f%e5%8b%99%e3%82%aa%e3%83%b3%e3%83%a9%e3%82%a4%e3%83%b3%ef%bc%9e%e5%82%98%e7%90%86%e8%ab%96%e3%82%82%e5%be%a9%e6%b4%bb%e3%81%97%e3%81%9f%ef%bc%81%e3%81%97%e3%81%8b/

Publication date on the list page: March 6, 2026

<IP Practice Online> "The Umbrella Theory Has Also Returned! But Should Disclaimer Claims Really Be This Unrestricted? A Horizontal and Vertical Overview of Amendment Practice" (Kazuo Shibata)

In current Japanese practice, disclaimer claims are frequently used as a de facto "standard tactic" for easily avoiding prior-art objections (such as lack of novelty or inventive step).

Drawing on experience as an examiner and appeal examiner, the speaker asks: "Should this really be so unrestricted?"

The Umbrella Theory Concerning Priority and the Risk of Transforming an Invention through Disclaimer Claims

The lecture materials state '証拠除外効＝傘理論' (translation: 'exclusionary effect on evidence = umbrella theory'). In summary, this is a discussion of multiple and partial priority under which publications and other events during the priority period corresponding to a constituent part entitled to priority are excluded as evidence for refusal or invalidation of a later application. The speaker examines this principle of priority and discusses recent examples. Source: lecture materials, slides 2 and 5–6.

As to amendments using disclaimer claims, the presentation examines the risk that later exclusion of matters not originally disclosed may substantively transform the invention before and after amendment. The permissibility of an amendment excluding part of a broader concept must be examined as an issue of added matter and related requirements in relation to the original description and other documents; it is not the same principle as the umbrella theory concerning the exclusionary effect of priority.

The presentation explains, from a distinctive perspective, court cases in which inventive step was recognized for disclaimer claims and cases in which it was not.

IP High Court, 2024 (Gyo-Ke) No. 10050 [Information Processing Device] <Presiding Judge Miyasaka>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110050%e3%80%90%e6%83%85%e5%a0%b1%e5%87%a6%e7%90%86%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e5%ae%ae%e5%9d%82%ef%bc%9e/

Publication date on the list page: March 6, 2026

IP High Court, 2024 (Gyo-Ke) No. 10050 [Information Processing Device] <Presiding Judge Miyasaka>

The decision rejecting the invalidation request was upheld (the claim for revocation of the decision was dismissed).

Judgment text: The operative part of the judgment states (translation): “1. The plaintiff’s claim is dismissed.” In summary, the procedural outcome was dismissal of the claim for revocation of the decision rejecting the invalidation request, leaving that decision in place. Source: IP High Court, 2024 (Gyo-Ke) No. 10050, pp. 1–2

<Qualification as an “Invention” (Utilization of Laws of Nature)>

The plaintiff argued that processing that does not include calculation of depreciation costs is abstract and cannot be described as specific information processing using hardware resources, and is merely a human-made arrangement (business rule), so it is not an “invention.”

⇒ In the invention, information processing by software, such as the respective calculation units and the product optimization unit, is concretely implemented using the hardware resources of a computer (CPU, memory, etc.).

Even if calculation of depreciation costs is not expressly recited in the claim, it is not excluded, and working examples are provided in the description; the subject matter is therefore recognized as a creation of a technical idea (an invention).

IP High Court, 2024 (Gyo-Ke) No. 10053 [Wood-Based Board] <Presiding Judge Hibiku Shimizu>

Original Article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110053%e3%80%90%e6%9c%a8%e8%b3%aa%e3%83%9c%e3%83%bc%e3%83%89%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%ef%bc%9e/

Publication date on the list page: March 6, 2026

IP High Court, 2024 (Gyo-Ke) No. 10053 [Wood-Based Board] <Presiding Judge Hibiku Shimizu>

No inventive step.

The description contains no statement that the respective configurations function in relation to one another or produce a synergistic effect beyond the effects that each achieves individually, nor does it describe a mechanism of action or similar matters. The configurations were not found to act in relation to one another to produce a synergistic effect. The patent revocation decision did not err in identifying Differences 1 and 2 separately.

Judgment text: The court held (translation) that the configurations “are not found to act in relation to one another to produce a synergistic effect.” In summary, even taking account of the description and the experimental-results certificate, a synergistic effect was not established, and there was no error in the patent revocation decision’s identification of the differences separately. Source: IP High Court, 2024 (Gyo-Ke) No. 10053, pp. 24–26

(1) Obviousness of Difference 1 (Length of the Small Wood Flakes)

Although the publication in Exhibit Ko 1 states that the length of the wood flakes “preferably has an average value within the range of 40.0–115.0 mm,” that numerical range is not recognized as having the same technical significance as thickness or width as a means of solving the problem, and selecting a value outside that range does not depart from the technical concept.

On the other hand, it is common general technical knowledge among persons skilled in the art that, as the dimensions of the constituent elements become smaller, the resulting wood-based board becomes more homogeneous and its surface smoother. In light of that knowledge, adjusting the dimensions in the invention of Exhibit Ko 1 according to the intended use of the wood-based board and setting the length to “10 mm or more and 35 mm or less,” as in Invention 1 at issue, is an exercise of the ordinary creative ability of a person skilled in the art and could readily have been conceived. Nor is there any teaching away.

(2) Obviousness of Difference 2 (Homogeneity and Absence of Knots)

In the invention, “uniformly consistent in size and shape” means that dimensions fall within a certain range, which the invention of Exhibit Ko 1 also satisfies.

Moreover, “absence of knots” is a configuration ordinarily present in reconstituted material made by breaking raw wood into small pieces.

⇒ Difference 2 is either not a substantive difference or, even if it is, could readily have been conceived by a person skilled in the art based on the invention of Exhibit Ko 1 and common general technical knowledge.

Legal Update (April 2026 articles)

Scope: Articles with an April 2026 publication date on Nakamura & Partners' listing page.

Articles: 29 (27 patents, 1 intellectual property generally, 1 trademark).

Authors: Hideki Takaishi (28 articles); Kei Iida (1 article).

Listing page: https://www.nakapat.gr.jp/ja/note/ (section "高石弁護士の知財速報" [Attorney Takaishi's IP News]; 28 articles);

https://www.nakapat.gr.jp/ja/legal_updates_jp/ (section "法情報提供" [Legal Update]; 1 article)

Differences between the original articles and the judgments

[Lighting device] The original article gives "2024 (Ne) No. 10101," but page 1 of the linked judgment gives 「令和５年（ネ）第１０１０１号」 (2023 (Ne) No. 10101; judgment of June 18, 2024). According to the judgment, Tamotsu Shoji was the presiding judge (judgment, p. 18). Judgment

[Hand-pushing member] The original article gives "2023 (Gyo-Ke) No. 10100," but page 1 of the linked judgment gives 「令和５年（行ケ）第１０１４３号」 (2023 (Gyo-Ke) No. 10143; judgment of September 25, 2024). Judgment

[Filling material for an electronic cigarette] The original article gives "2024 (Wa) No. 70407," but page 1 of the linked judgment gives 「令和５年(ワ)第70407号」 (2023 (Wa) No. 70407; judgment of September 26, 2024). Judgment

[Ground solidification material] The original article gives "2024 (Gyo-Ke) No. 10132," but page 1 of the linked judgment gives 「令和５年（行ケ）第１０１３２号」 (2023 (Gyo-Ke) No. 10132; judgment of October 30, 2024). Judgment

[Jig for a lifeline support post] The original article also refers to the "second requirement of equivalence," but page 35 of the judgment states 「均等の第１要件を満たすとは認められない。」 (it cannot be found that the first requirement of equivalence is satisfied) and 「その余の要件を検討するまでもなく」 (without needing to examine the remaining requirements). The term 「小型化」 ("reduced size") in the original article does not appear in the judgment. Judgment

<This Month's Highlights> Key Points of the April 2026 IP and Legal Updates

This month's Legal Update comprises 29 articles: 27 on patents, one on intellectual property generally and one on trademarks. The patent articles cover motivation in inventive step, claim interpretation, the doctrine of equivalents, enablement, addition of new matter and litigation procedure. They are accompanied by the revision of the Trade Secret Management Guidelines and a trademark judgment concerning similarity between machinery goods and rental services. Articles are included according to their April publication dates on the listing page; their judgment dates differ.

1 Circumstances supporting and negating motivation in inventive step

The two articles on [Electric impact fastening tool] address the relationship between the well-known problem of increasing torque and the known advantages of an outer rotor type. In [Combustor and boiler], the societal demand to reduce carbon dioxide emissions at filing and common general technical knowledge concerning ammonia use supported motivation to combine. Conversely, in [Sales system], the secondary references were held not to contain the configuration of the differences, so that the premise for combination was lacking, and, even if list creation were well known, the added list creation and output were held incompatible with the primary cited invention's purpose of reducing retailers' workload; in [Hand-pushing member], motivation was denied because the reference (Exhibit Ko 8) has the technical significance of being premised on attachment to the curved part of a squared U-shaped handle, and a factor teaching away was also found. [Ground solidification material] likewise rejected application of injection conditions because solution-type and suspension-type grouts have different solidification principles. In addition to a shared technical field, it is necessary to examine specifically whether the problem, the mechanism of action and the modified configuration are compatible with the cited invention.

2 Grounds for limiting and not limiting claim language

In [Induction heating coil unit], "composed of" was not limited to that material alone, and "unit" was construed as a constituent unit, while specific differences in cooling paths and merging functions supported inventive step for Claims 2 and 3. In [Intraoral OCT with color texture], the alternatives "with or without registration" were held not to change the matters specifying the claimed invention in substance, and "combining" was held not to be limited to particular data dimensionality or display forms. In contrast, "cuts" in [Filling material for an

electronic cigarette], “pivoting plate-like member” in [Tiltable and stowable temporary protective fence], “vertical plate portion” in [Eave] and “oxygen supply means” in [Wastewater treatment apparatus] were considered in relation to dictionary meanings, distinctions between configurations in the claims, and the means for solving the problems and the functions and effects described in the description. It is important to verify the basis for a limitation for each term.

3 Fulfillment of functional configurations requires concrete proof

[Rolling device] is a case in which, although findings of fulfillment differing from the original judgment were obtained for the rolling-path and other elements, a no-load region could not be said to be formed in the appellee’s products, which are used under preload, and proof of the frictional-force relationship was also insufficient. In [Commercial transaction system], seller-entered HS codes and a response of “registration complete” alone could not establish the specified acquisition and notification of customs-duty information. In [Vehicle guidance system], a driver’s ability to return to the destination independently after entering a general road or similar location was distinguished from the specified guidance by the system. [Remotely controlled unmanned boat] addresses the relationship between an activation condition of “at least one” and a mechanism capable of assessing both communication interruption and insufficient power. Functional wording must be related to actual processing, information paths, conditions of use and device configurations.

4 Limits of disclosure in description requirements and corrections

In [Device... formed of a very low resistance material], reduced resistance was distinguished from a superconducting state of zero resistance, and support for a phenomenon contradicting common general technical knowledge and specific methods of implementation were at issue. In [Moving image decoding device], information that changes the candidate count as a consequence was distinguished from control information having the purpose of changing that count, and the correction was held to add new matter, and the claims before correction were also held to violate the support requirement. Showing a technical result is not the same as disclosing the configuration or function required by the claim.

5 Timing of submissions and the substance of what is examined

In [Women’s clothing], the court found untimeliness and gross negligence concerning an invalidity ground added in the statement of reasons for appeal, but also considered its substance because the opposing party had responded and

there had been no rebuttal, so that, to this extent, conclusion of the litigation would not be delayed. A finding of untimeliness must not be replaced with a conclusion that the argument was actually dismissed. In [DC ultra-high-voltage power supply for a food electric-field treatment apparatus], the addition of documents corroborating well-known status was distinguished from a new refusal ground; in [Gaming machine], an unfair surprise was denied because no notice of reasons for refusal is required by statute for dismissal of an amendment for violating the independent patentability requirement, and, even if an exception were considered, Cited Inventions 1 and 2 were based on the same document, had contents in common to some extent, and that document had already been cited in a notice of reasons for refusal.

6 Trade secret management and similarity between goods and rental services

"Overview of the revision of the Trade Secret Management Guidelines" sets out the positioning of reasonable classification, employees' recognizability of the intention to maintain secrecy, access management for cloud services and the risks to non-public status associated with generative AI use. In the "ゴミサー" case, goods and services were found similar for a combination with different similar group codes (according to the article's commentary; the judgment does not refer to similar group codes), based on actual circumstances in which manufacturers and the like both sell and rent construction machinery in Class 7, the same class as the cited designated goods, and on overlapping consumers. Both show the need to understand actual management and trading circumstances specifically, rather than relying only on formal classifications.

Three-point summaries of all articles

Category	Article title and three-point summary
Patents	**2023 (Ne) No. 10063 [Electric impact fastening tool] <Presiding Judge Hibiku Shimizu>** **① The case concerned obviousness of differences in motor type and magnet retention in an electric impact fastening tool.** **② The court held replacement with an outer rotor type obvious because the invention of Exhibit Otsu 15 had the problem of increasing output torque and Exhibit Otsu 6 suggested the application, and held adhesive attachment of magnets obvious based on well-known technology; it accepted the invalidity defense, also rejected the counter-defense of correction, set aside the portions of the original judgment granting the claims, and dismissed those claims.** **③ The case illustrates how shared problems within the same technical field and the well-known nature of technology addressing the differences support motivation to combine.**
Patents	**2023 (Ne) No. 10101 [Lighting device] <Presiding Judge Shoji>** **① The case concerned whether a product equipped with warm-white and daylight LEDs literally fulfilled Element A (the red, blue and green light-emitting means) of a lighting device, and whether equivalence was established with respect to Element A and Elements C/D (the adjustment unit responsive to biological information).** **② The court held that the statement of wavelength ranges in the description does not mean that every light-emitting means emitting light including those wavelengths falls within the light-emitting means of each color, and that Element A requires each of the red, blue and green light-emitting means; it therefore denied literal fulfillment, and also found the first requirement of equivalence not satisfied in light of the contribution over the prior art.** **③ The case shows that a statement of wavelength ranges in the description does not by itself determine whether a light-emitting means falls within the means of each color, and that the essential part must be identified in light of the contribution over the prior art.**

Category	Article title and three-point summary
Patents	**2024 (Ne) No. 10022 [System for providing inspection and analysis services] <Miyasaka>** **① The case concerned whether "inspection and analysis" in a system for providing inspection and analysis services means analysis of a sample or remote operation itself.** **② The court rejected the appellant's argument because the claims contained no exclusion of semiconductor inspection equipment, held that verification of remote control is also merely a step in sample analysis, upheld the original judgment finding non-fulfillment and dismissed the appeal.** **③ The case shows that interpretations based on prosecution history must also accord with the claims and that a step for inspection and analysis must be distinguished from inspection and analysis itself.**
Patents	**2023 (Gyo-Ke) No. 10061 [Combustor and boiler] <Miyasaka>** **① The case concerned motivation to apply ammonia-use technology to the primary cited invention and differences including temperature regions in a combustor and boiler.** **② The court found motivation based on the societal demand for reduced carbon dioxide emissions and common general technical knowledge at filing, held Differences 1 and 2 obvious, and upheld the revocation decision.** **③ The case shows that societal demands and common general technical knowledge at filing can support a shared problem, and that temperature expressions are assessed with regard to their comparators.**
Patents	**2023 (Gyo-Ke) No. 10110 [Intraoral OCT with color texture] <Honda>** **① The case concerned interpretation of "with or without registration" and "combining" in intraoral OCT.** **② The court upheld the JPO appeal decision denying inventive step, holding that the presence or absence of the specifying matter "with or without registration" did not change the matters specifying the claimed invention in substance and that combining was not limited to a particular dimensionality or display form.** **③ The case illustrates that language listing alternatives or referring to data combination is not automatically limited to a particular embodiment in the description.**

Category	Article title and three-point summary
Patents	**2023 (Gyo-Ke) No. 10084 [Electric impact fastening tool] <Hibiku Shimizu>** **① The case concerned obviousness of replacing an inner rotor type with an outer rotor type and adhesively attaching magnets in an electric impact fastening tool.** **② The court rejected the ground for rescission concerning the requirements for correction, but denied inventive step because increasing torque was a well-known problem and the advantages of the outer rotor type and fixation using adhesive were also well known, and rescinded the JPO trial decision that had dismissed the request for invalidation.** **③ The case shows that, when considering component replacement, the relationship between the primary cited invention's problem and the known advantages of the replacement affects motivation.**
Patents	**2023 (Gyo-Ke) No. 10103 [Optical ferrule] <Honda>** **① The case concerned interpretation of a "parting line artifact" in an optical ferrule and the position of the parting line when the cited invention is molded in a die.** **② The court denied inventive step because no specific size or similar limitation applied to the artifact and molding the cited invention would produce it at the same position.** **③ The case shows the need to assess structures arising from manufacture by relating the limits of the wording to what inevitably occurs during manufacture.**
Patents	**2023 (Gyo-Ke) No. 10107 [Induction heating coil unit] <Presiding Judge Hibiku Shimizu>** **① The case concerned the interpretation of material and unit language and the inventive step of individual claims concerning cooling paths and flow-straightening portions in an induction heating coil unit.** **② The court denied inventive step for Claims 1 and 4, held that the determination for Claims 5 and 6 also lacked its premise, and rescinded the part of the JPO trial decision concerning Claims 1 and 4 to 6, while recognizing inventive step for Claims 2 and 3 in light of differences in cooling paths and merging functions, among other matters.** **③ The case shows the need to distinguish general wording such as "composed of" and "unit" from the specific configuration and functions of cooling paths.**

Category	Article title and three-point summary
Patents	**2023 (Gyo-Ke) No. 10104 [Device... formed of a very low resistance material] <Hibiku Shimizu>** **① The case concerned sufficiency of the disclosure supporting the realization of a superconducting state and the Josephson effect in a device using a low-resistance material.** **② The court found failure of enablement because there were no test results showing zero resistance or specific methods for using a superconducting portion, and no basis for statements contradicting common general technical knowledge.** **③ The case shows the need for concrete disclosure supporting the phenomenon and its implementation where an invention presupposes a phenomenon departing from common general technical knowledge.**
Patents	**2024 (Ne) No. 10010 [Women’s clothing] <Presiding Judge Nakadaira>** **① The case concerned the interpretation of the connecting and adjusting functions in women’s clothing and the treatment of an invalidity ground added in the statement of reasons for appeal.** **② The court maintained the infringement finding and, while finding the new invalidity ground untimely, also examined its merits because, to this extent, doing so would not delay the conclusion of the litigation, and did not find the patent invalid.** **③ The case shows that timing and gross negligence may be at issue even for arguments in a statement of reasons for appeal, and that actual dismissal also requires consideration of delay to the conclusion of litigation.**

Category	Article title and three-point summary
Patents	**2023 (Gyo-Ke) No. 10124 [Moving image decoding device] <Presiding Judge Miyasaka> = 2023 (Gyo-Ke) No. 10125** **① In an action against a decision revoking a patent for a moving image decoding device, the case concerned whether "control information for changing the number of motion vector candidates," a matter common to the claims before and after correction, is described in the description (whether change flags, thresholds Th or the maximum number of vectors fall under it).** **② The court held that the control information requires a purpose–means relationship with changing the number of candidates and that consequential or indirect effects are insufficient, so that it is not described in the description; it refused the correction as adding new matter, held that Claims 1 and 2 before correction also violate the support requirement, and upheld the revocation decision.** **③ In this case, for a claim containing functional "for" language, where the description describes only a consequential change in the number of candidates, a correction further limiting that language was not allowed and the support requirement was not satisfied.**
Patents	**2023 (Gyo-Ke) No. 10148 [Sales system] <Presiding Judge Nakadaira>** **① The case concerned whether combining the matters described in Exhibits Ko 2 to Ko 4 with the primary cited invention (the invention of Exhibit Ko 1) in a sales system would arrive at Elements (D) and (E), the differences (extraction of order information based on group information and output of order lists in a form viewable by the group's person in charge), and motivation to do so.** **② The court held that Exhibits Ko 2 to Ko 4 do not describe Elements (D) and (E), so that the premise for combination is lacking, and further that, even if list creation were well known, output in a form viewable by school personnel would be incompatible with the primary cited invention's purpose of reducing retailers' workload and there was no motivation; it upheld the JPO trial decision recognizing inventive step.** **③ The case shows the need to examine whether an added configuration accords with the purpose of the primary cited invention when assessing obviousness of a combination.**

Category	Article title and three-point summary
Patents	**2024 (Ne) No. 10019 [Rolling device] <Presiding Judge Miyasaka>** **① The case concerned fulfillment of rolling-path structures as well as formation of a no-load region and the relative magnitudes of frictional forces in a rolling device.** **② The court found Elements 1-A and 2-A fulfilled, but rejected the patentee's claim because a no-load region could not be said to be formed in the appellee's products, which are used under preload, the appellant's argument concerning centrifugal force lacked specific support, and there was no specific evidence of the frictional-force relationship.** **③ The case shows that a broad construction of some elements does not eliminate the need to prove other elements concerning loads, friction and other conditions during use.**
Patents	**2023 (Gyo-Ke) No. 10143 [Hand-pushing member] <Presiding Judge Hibiku Shimizu>** **① In an action against a JPO trial decision dismissing a request for invalidation, the case concerned motivation, among other things, to apply a safety cover for a squared U-shaped handle (Exhibit Ko 8) to a long hand-pushing member extending vertically.** **② The court denied motivation to apply the safety cover of Exhibit Ko 8 to a long vertical hand-pushing member, and also found a factor teaching away, because the cover has the technical significance of using the horizontal part of a squared U-shaped handle as the grip and being attached to its curved part; it also denied obviousness for combinations using Exhibit Ko 9 as the primary reference, and upheld the JPO trial decision.** **③ The case shows that the shape of the attachment object presupposed by a cited component, and the component's technical significance, bear on the examination of motivation to apply it to a component of a different shape and of factors teaching away.**

Category	Article title and three-point summary
Patents	**Tokyo District Court, 2023 (Wa) No. 70407 [Filling material for an electronic cigarette] <Presiding Judge Sugiura>** **① The case concerned whether breaks arising during crimping and related processing of electronic-cigarette filling material constituted "cuts."** **② Based on dictionaries, the description, and functions and effects, the court construed "cuts" as structures artificially and actively formed with a blade and held that tears or cracks did not fulfill the "cuts" element.** **③ The case shows that visual similarity alone is insufficient and that the relationship between the claimed structure, its formation means and its functions and effects matters.**
Patents	**Tokyo District Court, 2023 (Wa) No. 70393 [Tiltable and stowable temporary protective fence] <Presiding Judge Nakashima>** **① The case concerned whether square tubular pivoting members in a tiltable and stowable temporary protective fence constituted "pivoting plate-like members."** **② The court construed the term as a thin plate-like member in light of the description's statements on reducing thickness and making the structure compact, and denied literal infringement and infringement by equivalents.** **③ The case shows that claim language expressing shape is interpreted in relation to the means of solving the problem disclosed in the description.**
Patents	**2024 (Ne) No. 10045 [Wastewater treatment apparatus] <Presiding Judge Hibiku Shimizu>** **① The case concerned whether means that adds ozone, together with oxygen, to a tank using microorganisms constituted "oxygen supply means" in a wastewater treatment apparatus.** **② The court found non-fulfillment because actively adding ozone was incompatible with the technical idea of promoting biological treatment and reducing residual ozone and because the claims distinguish ozone supply means from oxygen supply means, and dismissed the exclusive licensee's appeal.** **③ The case shows that possessing part of a function may not bring a configuration within claim language when an additional function is incompatible with the invention's solution to its problem.**

Category	Article title and three-point summary
IP generally	**<IP Practice Online> "Overview of the revision of the Trade Secret Management Guidelines" (Attorney Naoki Kurokawa, Ministry of Economy, Trade and Industry)** **① The article explains the 2025 revision of the Trade Secret Management Guidelines in relation to teleworking, cloud services, generative AI and recent court decisions.** **② It sets out the positioning of reasonable classification, objective recognizability of the intention to maintain secrecy, access management, and the assessment of usefulness and non-public status.** **③ It states that the emphasis of the revision has shifted from formal management to ensuring recognizability in line with actual circumstances, predicts that companies will be required to account for the objective recognizability of their management measures, and introduces the addition of statements on, among other things, the risk of losing non-public status through use of data input into generative AI for training.**
Patents	**2023 (Gyo-Ke) No. 10132 [Ground solidification material] <Presiding Judge Hibiku Shimizu>** **① The case concerned obviousness of applying injection conditions for solution-type grout to suspension-type grout in a ground solidification material.** **② The court recognized inventive step and rescinded the revocation decision because solidification by hydraulic properties differed from reaction with alkaline components in soil and no suggestion of applicability existed.** **③ The case shows that even within ground improvement technology, transferring injection conditions unchanged may not be obvious where solidification mechanisms differ.**

Category	Article title and three-point summary
Patents	**2025 (Ne) No. 10043 [Vehicle guidance system] <Presiding Judge Honda>** **① The case concerned whether "guidance" to a specified route in a vehicle guidance system is established when a vehicle can return to the destination by a route chosen at will.** **② Unlike the original judgment, the court found non-fulfillment because merely being able to return at the driver's discretion after entering a general road or similar location was not the specified guidance (some of the systems had no return route at all) and the defendant's systems had no "entrance/exit for general vehicles," a term that does not include an entrance/exit for general vehicles at another adjacent interchange; it set aside the part of the original judgment against the appellant and dismissed the claim.** **③ The case shows the need to distinguish the connections leading to the guidance destination and the range to which the device actually guides the vehicle from reachability through the driver's voluntary actions.**
Patents	**2024 (Ne) No. 10033 [Eave] <Presiding Judge Nakadaira>** **① The case concerned whether a squared U-shaped portion of an eave's front edge plate constituted a "vertical plate portion" whose front face guides rainwater.** **② The court denied literal fulfillment based on the shape including a horizontal portion and the separation between the guide surface and the abutting portion, and dismissed the appeal without recognizing infringement by equivalents, finding the first and second requirements of equivalence not satisfied.** **③ The case shows the need to examine plate sections, contact locations and the positional relationship of guide surfaces in relation to the purpose of reducing the eave's size.**

Category	Article title and three-point summary
Patents	**Tokyo District Court, 2023 (Wa) No. 70272 [Jig for a lifeline support post] <Presiding Judge Kokubu>** **① The case concerned fulfillment of the position of a bent portion and the relationship between plate length and flange width in a jig for a lifeline support post, and, in the counterclaim, whether the plaintiff's infringement notice constituted unfair competition (damage to business reputation).** **② The court found that the defendant's product did not literally fulfill either configuration and that the first requirement of equivalence was not satisfied because the differing portions constituted the essential part, and dismissed the main claims. On the counterclaim, it held that the plaintiff's infringement notice posted on social media constituted dissemination of a false fact under Article 2(1)(xxi) of the Unfair Competition Prevention Act, and granted the injunction and damages to the extent of 550,000 yen.** **③ The case shows that continuity between members and dimensional relationships bear on literal fulfillment and on identifying the essential part in light of comparison with the prior art, and that the conclusion of non-infringement is also directly linked to the determination of whether the content of an infringement notice constitutes a false fact.**
Patents	**Tokyo District Court, 2023 (Wa) No. 70607 [Remotely controlled unmanned boat] <Presiding Judge Sugiura>** **① The case concerned a configuration assessing two return conditions involving communication interruption and remaining power in a remotely controlled unmanned boat.** **② The court construed the first control device (Element J) as presupposing a mechanism capable of dealing with both critical situations, and held that the defendant's products, in which the remaining charge falls to the 20% range of full charge even when the return-start lower-limit voltage is set to 49 V, the upper limit settable by ordinary methods, did not fulfill Element J; it also denied equivalence for lack of the fifth requirement.** **③ The case shows the need to distinguish an activation condition of "at least one" from whether the device must be capable of assessing both conditions, in light of the invention's problem.**

Category	Article title and three-point summary
Patents	**Tokyo District Court, 2023 (Wa) No. 70219 [Commercial transaction system] <Presiding Judge Sugiura>** **① The case concerned fulfillment of the elements of acquisition of advance customs clearance information including customs-duty information and notification to a commercial transaction device in a commercial transaction system.** **② The court held Element D not fulfilled because seller-entered HS codes and receipt of "registration complete" did not establish acquisition of the specified customs-duty information, and held Element E also not fulfilled because, without acquisition of the advance customs clearance information, there could be no notification of it, even leaving aside the uncertainty in the evidence concerning the content transmitted.** **③ The case shows the need to identify information content, source and destination, not just its name, and to prove execution of each information-processing step.**
Patents	**2023 (Gyo-Ke) No. 10144 [DC ultra-high-voltage power supply for a food electric-field treatment apparatus] <Presiding Judge Nakadaira>** **① The case concerned procedure when adding documents corroborating well-known technology and obviousness of power circuits and related features in a power supply for food electric-field treatment.** **② The court held that the additional documents corroborated well-known status rather than introducing a new refusal ground, and denied inventive step based on well-known power circuit and voltage measurement technology.** **③ The case shows the need to distinguish whether the addition of cited materials constitutes a new refusal ground or corroboration of an existing finding, and to consider the technical fields of related components as part of the skilled person's knowledge.**

Category	Article title and three-point summary
Patents	**2024 (Ne) No. 10044 [Hair iron] <Presiding Judge Nakadaira>** **① The appellant sought, under Article 74(1) of the Patent Act, registration of transfer of the patent right from the appellee registered as the patentee, on the ground that the right to obtain a patent for the invention titled "hair iron" had been assigned by a person without authority to represent the appellant.** **② The court upheld the original judgment dismissing the claim by analogous application of Article 94(2) of the Civil Code, finding that the appellant bore serious culpability because its own internal circumstances and conduct were a cause of the creation of the false appearance and its true representative left the false appearance unaddressed for a long period, and finding that the appellees were in good faith and without negligence.** **③ The case shows the importance, when disputing ownership, of when the false appearance of authority was recognized and whether subsequent corrective measures were taken.**

Category	Article title and three-point summary
Patents	**2023 (Gyo-Ke) No. 10139 [Gaming machine] <Presiding Judge Hibiku Shimizu>** **① The case concerned novelty and inventive step of leaving important presentations to manual operation in a gaming machine's partial auto mode, and the propriety of dismissing an amendment in the appeal based on a cited invention different from that in the refusal decision without a notice of reasons for refusal.** **② The court denied inventive step of the amended invention based on the cited document's disclosure of non-auto operation only for high-expectation presentations and upheld the dismissal of the amendment, and held the claimed invention substantially identical to Cited Invention 2 (and, in the alternative, lacking inventive step). It further held that no notice of reasons for refusal is required by statute for dismissal of an amendment for violating the independent patentability requirement and that, even if an exception were considered, there was no unfair surprise because Cited Inventions 1 and 2 were based on the same document, had contents in common to some extent, and the document had already been cited in a notice of reasons for refusal.** **③ The case shows that, when an amendment filed with a request for appeal is dismissed for violating the independent patentability requirement, a notice of reasons for refusal is in principle not required even if a cited invention not presented in the refusal decision is relied on, and that, if a procedural-safeguard exception is considered, the identity of the source document, the common content and whether that document had already been presented in a notice of reasons for refusal are taken into account.**

2023 (Ne) No. 10063 [Electric impact fastening tool] <Presiding Judge Hibiku Shimizu>

Publication date: April 23, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%8d10063%e3%80%90%e9%9b%bb%e5%8b%95%e5%bc%8f%e8%a1%9d%e6%92%83%e7%b7%a0%e3%82%81%e4%bb%98%e3%81%91%e5%b7%a5%e5%85%b7%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf/

2023 (Ne) No. 10063 [Electric impact fastening tool] <Presiding Judge Hibiku Shimizu>

Inventive step: ×

<Difference A> With respect to the electric motor, the invention at issue is of an "outer rotor type," whereas the invention in Exhibit Otsu 15 is of an "inner rotor type."

<Difference B> With respect to how the magnets are held, in the invention at issue, "the magnets are adhesively attached, with a gap provided, on the outer peripheral side of the stator," whereas the invention in Exhibit Otsu 15 does not expressly disclose how the magnets are held.

1. Obviousness of Difference A (outer rotor type)
Increasing output torque and reducing size and weight were general problems in this technical field.
+ Exhibit Otsu 6 describes a high-torque machine for application to electric hand tools and an outer-rotor laminated-structure machine, and indicates application to electric hand tools. The advantage of the outer-rotor type over the inner-rotor type in increasing torque is also stated in Exhibits Otsu 21 and 22. The judgment also referred to a similar statement in Exhibit Otsu 23, while noting that it was unclear whether that document had been distributed before the priority date.
⇒ It would have been obvious for a person skilled in the art to apply invention A in Exhibit Otsu 6, which belongs to the same technical field, to solve the problem of the invention in Exhibit Otsu 15 and replace the inner rotor type with the outer rotor type.

2. Obviousness of Difference B (magnet fixing structure)

The technique of attaching magnets to a rotor with a gap provided, using an adhesive, in an electric motor was well-known technology as of the priority date of the patent at issue.

Judgment note: Regarding the statement in the original article that 「出力トルクの増大及び小型・軽量化が一般的な課題であった」 (increasing output torque and reducing size and weight were general problems), the judgment states 「工具の小型化及び軽量化を図るとの観点からも、パワーハンドツール（電動手工具）である電動式衝撃締め付け工具においては、電動モータの出力トルクを大きくすることが一般的に要請されていたものと認められる。」 (it is found that, also from the viewpoint of reducing the size and weight of tools, increasing the output torque of the electric motor was generally demanded in electric impact fastening tools, which are power hand tools (electric hand tools)) (judgment, p. 20, lines 2–5). Further, whereas the original article states 「乙６文献には、電動手工具用のアウタロータ型電動モータが高トルク化に有利であることが記載されている」 (the document in Exhibit Otsu 6 states that an outer rotor electric motor for an electric hand tool is advantageous for increasing torque), the judgment cites statements such as that the outer rotor type achieves higher torque than the inner rotor type as statements in Exhibits Otsu 21 to Otsu 23 (judgment, p. 21, line 11 – p. 22, line 13), and cites, for the document in Exhibit Otsu 6, statements such as 「電動手工具（パワーハンドツール）への応用のための高トルク機械」 (a high-torque machine for application to electric hand tools (power hand tools)) (judgment, p. 21, lines 22–23). Judgment

2023 (Ne) No. 10101 [Lighting device] <Presiding Judge Shoji>

Publication date: April 23, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10101%e3%80%90%e7%85%a7%e6%98%8e%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e6%9d%b1%e6%b5%b7%e6%9e%97%e8%a3%81%e5%88%a4%e5%ae%98%ef%bc%9e/

2023 (Ne) No. 10101 [Lighting device] <Presiding Judge Shoji>

Case-number note: As stated in the introductory note, the case number in the judgment is 2023 (Ne) No. 10101. The case number in the original article heading differs from that in the judgment. Judgment, p. 1

<Element A (respective red, blue and green light-emitting means)>

<Literal non-fulfillment>
⇒ The court held that not every light-emitting means producing light that includes wavelengths of approximately 610–670 nm can be construed as the red-light-emitting means in Element A. The assertion that the LEDs of the products at issue constituted red-light-emitting means was not accepted.
Furthermore, the patented invention requires having the “three light-emitting means” for red, blue and green, each distinguished from the others, but the products at issue have only two types of light-emitting means, warm white and daylight, and do not fulfill Element A.

<Equivalence not established>
Exhibit Otsu 3 had already disclosed technology that changes the ratio of the amounts of light from two light sources according to biological information (degree of wakefulness) while maintaining a constant total amount of light; therefore, the contribution of the invention at issue over the prior art cannot be said to be substantial, and its essential part is close to the wording of the claims (having an adjusting unit that changes the ratio of the amounts of red, blue and green light in response to biological information concerning wakefulness while keeping their total amount substantially constant). — First requirement: ×

Judgment note: The statement in the original article 「明細書において各発光手段は特定の波長帯域（赤色は概ね610〜670nm等）を持つものとして定義されており」 (in the description, each light-emitting means is defined as having a particular wavelength band (approximately 610–670 nm for red, for example)) corresponds to the appellant’s argument; the judgment states 「「概ね６１０～６７０ｎｍの波長」を含む光を発する発光手段が全て構成要件Ａの「赤色光を発光する赤色発光手段」に含まれると解することはできない。」 (it cannot be construed that every light-emitting means emitting light including “wavelengths of approximately 610–670 nm” falls within the “red light-emitting means that emits red light” of Element A) (judgment, p. 10, lines 11–13). Further, what the judgment identified as the essential part of the invention at issue is having an “adjustment unit” for changing the ratio of the light amounts of the three light-emitting means for red, blue and green according to biological information on the degree of wakefulness while keeping their total substantially constant (judgment, p. 15, lines 8–13). Judgment

2024 (Ne) No. 10022 [System for providing inspection and analysis services] <Miyasaka>

Publication date: April 23, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10022%e3%80%90%e6%a4%9c%e6%9f%bb%e5%88%86%e6%9e%90%e3%81%ae%e3%82%b5%e3%83%bc%e3%83%93%e3%82%b9%e3%82%92%e6%8f%90%e4%be%9b%e3%81%99%e3%82%8b%e3%82%b7%e3%82%b9/

2024 (Ne) No. 10022 [System for providing inspection and analysis services] <Presiding Judge Miyasaka>

Concerning the meaning and subject of “inspection and analysis,” the appellant argued that, in light of matters including the exclusion of inspection equipment for semiconductors and the like during prosecution, the subject of “inspection and analysis” in the invention at issue was “remote operation” itself, rather than a “sample.”

<This judgment>
There is no statement in the claims excluding semiconductor inspection equipment; accordingly, the appellant’s argument is not based on the claim language and cannot be accepted.
The statement in the description that one “checks whether remote control is possible” merely refers to one step for inspecting and analyzing a “sample,” and does not itself mean inspection and analysis.

⇒ Non-fulfillment

Judgment note: 「リモート制御できるか確認する」 (checks whether remote control is possible) in the original article is not the wording of the description itself; the statement in paragraph [0034] of the description at issue cited in the judgment is 「・・・ユーザ自身でユーザのワークステーションまたはパソコンを用いて、検査分析装置のリモート制御できるか、否か、確認できるようにした。」 (… the user can check, using the user’s own workstation or personal computer, whether or not remote control of the inspection and analysis device is possible) (judgment, p. 4, lines 7–9). Judgment

2023 (Gyo-Ke) No. 10061 [Combustor and boiler] <Miyasaka>

Publication date: April 23, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110061%e3%80%90%e7%87%83%e7%84%bc%e5%99%a8%e5%8f%8a%e3%81%b3%e3%83%9c%e3%82%a4%e3%83%a9%e3%80%91%ef%bc%9c%e5%ae%ae%e5%9d%82%ef%bc%9e/

2023 (Gyo-Ke) No. 10061 [Combustor and boiler] <Miyasaka>

* Inventive step: × (societal demand at the filing date — motivation existed)

The invention in Exhibit Ko 2 (the primary reference) and the technology in Exhibit Ko 1 both belong to the same technical field as devices that use combustion heat.
At the time of filing the patent application at issue, reducing carbon dioxide emissions was a societal demand, and using the combustion heat of ammonia as a heat source was common general technical knowledge.
⇒ They share the problem and the means of solving it, and a motivation existed for a person skilled in the art to apply the technology in Exhibit Ko 1 to the invention in Exhibit Ko 2.

<Obviousness of Difference 1 (burner structure)>
The technology in Exhibit Ko 1 likewise supplies ammonia to a reducing atmosphere with little oxygen (the second reaction region), thermally decomposes it, and suppresses the formation of nitrogen oxides, and does not differ from the invention at issue in its basic mechanism of action.

<Obviousness of Difference 2 (high-temperature region)>
“Relatively low temperature” in Exhibit Ko 1 is merely a relative expression compared with the hottest region on the outside of the flame. The “second reaction region” in Exhibit Ko 1 is at a temperature sufficient to thermally decompose ammonia, and corresponds to the “high-temperature region” of the invention at issue. Accordingly, Difference 2 also could have been readily conceived by a person skilled in the art.

(Excerpt from the judgment)
It is found that reducing carbon dioxide emissions was a societal demand or a well-known problem at the time of filing the patent application at issue. Furthermore, regarding the use of ammonia combustion heat as a heat source, it is also mentioned as prior art in Exhibit Ko 1 that “it is known to economically utilize the heat generated when ammonia gas is burned,” and, moreover, the evidence (Exhibits Otsu 5–7) permits a finding that the use of ammonia combustion heat as a heat source was common general technical knowledge at the time of filing the patent application at issue. Accordingly, the invention in Exhibit Ko 2 and the technology in Exhibit Ko 1 can be said to belong to the same technical field of devices utilizing combustion heat; furthermore, in light of the above well-known problem and common general technical knowledge, it is apparent to a person skilled in the art that they share the problem and the means of solving it, and there is a motivation to apply the technology in Exhibit Ko 1 to the invention in Exhibit Ko 2....

Judgment note: Regarding the statement in the original article that 「炎の外側の最も高温な領域と比較した相対的な表現にすぎない」 (it is merely a relative expression compared with the hottest region on the outside of the flame), the judgment states 「甲１の「比較的低温で燃焼」という上記記載は、酸素が直接燃焼ガス流に当たって高温を発する「一方の反応領域」との対比において、相対的に低温であると説明するものと理解することができ、そのような理解が不自然ともいえない。」 (the above statement in Exhibit Ko 1, “burning at a relatively low temperature,” can be understood as explaining that the temperature is relatively low in comparison with “one reaction region,” where oxygen directly strikes the combustion gas flow and generates high temperatures, and such an understanding cannot be said to be unnatural) (judgment, p. 26, lines 17–20). Further, regarding 「本件発明の「高温度領域」」 (the “high-temperature region” of the invention at issue) in the original article, the judgment states 「そのような領域は本件発明３及び４の「高温度領域」に相当するものといえる。」 (such a region can be said to correspond to the “high-temperature region” of Inventions 3 and 4 at issue) (judgment, p. 26, lines 12–13). Judgment

2023 (Gyo-Ke) No. 10110 [Intraoral OCT with color texture] <Honda>

Publication date: April 23, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110110%e3%80%90%e3%82%ab%e3%83%a9%e3%83%bc%e3%83%86%e3%82%af%e3%82%b9%e3%83%81%e3%83%a3%e3%82%92%e4%bc%b4%e3%81%86%e5%8f%a3%e8%85%94%e5%86%85%ef%bd%8f/

2023 (Gyo-Ke) No. 10110 [Intraoral OCT with color texture] <Honda>

* Inventive step: × (appeal decision maintained)

Regarding “with or without registration” in Element D, the description discloses both a form in which data are acquired using a common optical path without additional processing (without registration), and an alternative form in which additional processing is performed using a separate camera (with registration).
⇒ If the cited invention satisfies the “combining” requirement, the presence or absence of this specifying matter, “with or without registration...,” does not change the substantive matters specifying the invention.

Regarding the technical significance of “combining,” the claims do not specify the dimensionality of the data.
Even in light of the description, although “combining” means correlating each of the R, G and B values and the IOCT measurement value for each coordinate (X, Y), it is not understood to limit the form of the image when displayed to any particular dimensionality, texture mapping, or the like.

⇒ There is no error in the findings of the appeal decision.

Judgment note: Regarding 「座標（X、Y）」 (coordinate (X, Y)) in the original article, the judgment writes 「座標（x、y）」 (coordinate (x, y)) (judgment, p. 13, lines 17–18). Judgment

2023 (Gyo-Ke) No. 10084 [Electric impact fastening tool] <Hibiku Shimizu>

Publication date: April 23, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110084%e3%80%90%e9%9b%bb%e5%8b%95%e5%bc%8f%e8%a1%9d%e6%92%83%e7%b7%a0%e3%82%81%e4%bb%98%e3%81%91%e5%b7%a5%e5%85%b7%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4/

2023 (Gyo-Ke) No. 10084 [Electric impact fastening tool] <Hibiku Shimizu>

* Inventive step: ×

<Difference 1 (replacement of an inner rotor type with an outer rotor type)>
“Increasing torque” was a well-known problem in the technical field of the cited invention (Exhibit Ko 2: electric tool), and it was also well known that an outer rotor motor (Exhibit Ko 1) was advantageous for increasing torque.
⇒ A motivation existed to replace the inner rotor motor of Exhibit Ko 2 with the outer rotor type of Exhibit Ko 1, and a person skilled in the art could readily have done so.

<Difference 2 (adhesive attachment of magnets)>
Fixing (adhesively attaching) motor magnets with an adhesive was well-known technology.

Judgment note: The judgment refers to the differences corresponding to 「相違点１」 and 「相違点２」 (Differences 1 and 2) in the original article as 「相違点Ⅰ」 and 「相違点Ⅱ」 (Differences I and II) (judgment, p. 22, line 12 and line 17). Further, whereas the original article states 「アウタロータ型モータ（甲１）が高トルク化に有利であることも周知であった」 (it was also well known that an outer rotor motor (Exhibit Ko 1) was advantageous for increasing torque), the judgment states 「本件優先日当時、甲１発明のようなアウタロータ型モータは、インナロータ型モータよりも高トルク化が容易であることは周知であったと認められる（甲１８から２０まで）。」 (it is found that, as of the priority date at issue, it was well known that an outer rotor motor such as the invention of Exhibit Ko 1 can more easily achieve higher torque than an inner rotor motor (Exhibits Ko 18 to 20)) (judgment, p. 29, lines 10–12), identifying Exhibits Ko 18 to Ko 20 as the basis for the well-known status. Judgment

2023 (Gyo-Ke) No. 10103 [Optical ferrule] <Honda>

Publication date: April 16, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110103%e3%80%90%e5%85%89%e3%83%95%e3%82%a7%e3%83%ab%e3%83%bc%e3%83%ab%e3%80%91%ef%bc%9c%e6%9c%ac%e5%a4%9a%ef%bc%9e/

2023 (Gyo-Ke) No. 10103 [Optical ferrule] <Honda>

The “parting line artifact” in the claimed invention means a parting line (a step or burr) that arises during molding with a mold, and there is no further limitation as to specific size or the like.
When the cited invention is “molded” with a mold, its external shape (a design that avoids undercuts or makes burrs less conspicuous) inevitably causes parting lines, namely parting line artifacts, to arise at the same positions as in the claimed invention (the outer edges or ridges of mating surfaces).
⇒ Inventive step: ×

Judgment note: The judgment states 「金型を用いた成型における「分割線」（パーティングライン）とは、金型の合わせ目のことを意味し」 (a “parting line” in molding using a mold means the joint of the mold) (judgment, p. 15, lines 6–7), and 「本願発明の「分割線加工物」とは、成型品上に生じる金型の合わせ目に起因する段差状ライン又はバリ状ラインのことを意味するものと解される。」 (the “parting line artifact” of the claimed invention is construed to mean a step-like line or burr-like line arising on a molded product due to the joint of the mold) (judgment, p. 15, lines 9–10). The judgment distinguishes the parting line (the joint of the mold) from the parting line artifact arising on the molded product due to it, which differs from the terminology in the original article, 「パーティングライン、すなわち分割線加工物」 (parting lines, namely parting line artifacts). Judgment

2023 (Gyo-Ke) No. 10107 [Induction heating coil unit] <Presiding Judge Hibiku Shimizu>

Publication date: April 16, 2026
Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110107%e3%80%90%e8%aa%98%e5%b0%8e%e5%8a%a0%e7%86%b1%e3%82%b3%e3%82%a4%e3%83%ab%e3%83%a6%e3%83%8b%e3%83%83%e3%83%88%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4/

2023 (Gyo-Ke) No. 10107 [Induction heating coil unit] <Presiding Judge Hibiku Shimizu>

1. Claim 1 (inventive step: ×)
The statement “composed of...” in the claims is not limited to being composed “only” of that material, and also permits that material to be included as part of the composition.

(Excerpt from the judgment)
Claim 1 merely states, regarding the composition of the case, “a case composed of electrically insulating ceramic or resin and housing the heating coil,” and contains no wording indicating that the case is composed “only” of the element of electrically insulating ceramic or resin. Moreover, even upon considering the statements in the detailed description of the invention in the description at issue, there is no statement suggesting that the case recited in the claims is intended to be composed only of the foregoing element. Accordingly, the case of Invention 1 at issue cannot be construed as limited to one composed only of the foregoing element; thus, it is appropriate to construe “a case composed of electrically insulating ceramic or resin and housing the heating coil” in Invention 1 at issue as requiring only a composition that includes that element.
Next, regarding the “induction heating coil unit” of Invention 1 at issue, Claim 1 of the claims of the patent at issue also contains no wording indicating that “unit” has a special meaning. Even upon considering the statements in the detailed description of the invention in the description at issue, there is no statement suggesting any limitation on the composition of the “induction heating coil unit.” Accordingly, it is appropriate to construe the “induction heating coil unit” of Invention 1 at issue as simply meaning “a constituent unit including an induction heating coil” (a unit means a constituent unit).

2. Claim 2 (inventive step: ○)
The cooling path structure of the invention in Exhibit Ko 4 (induction heating cooker) is unclear, while the arrangement of the intake and exhaust openings and the cooling path configuration (division into multiple flow paths) in the invention in Exhibit Ko 5 (electric cooker) differ from Invention 2 at issue (acute-angle arrangement + partitioning portion).
There is no motivation to combine or modify these, and Invention 2 at issue is not obvious.

3. Claim 3 (inventive step: ○)
The “flow-straightening portion” of Invention 3 at issue causes gas to branch or “merge.”
The “partition plate” of the invention in Exhibit Ko 5 discharges gas while keeping it branched, and does not have a function of merging it inside the case.

4. Claim 4 (inventive step: ×)
An “induction heating coil unit” simply means a constituent unit including a coil, and even the finished “electric cooker” of the invention in Exhibit Ko 5 falls within “unit” because it can be a constituent unit of another system.

Judgment note: Regarding Claim 2, the determination based on the invention in Exhibit Ko 4 is 「甲４発明については、その冷却経路の構造が明らかではなく、甲４発明に基づき、相違点１（第１冷却経路）及び相違点２（第２冷却経路）の構成とすることが当業者にとって容易想到であったと認めるに足りない。」 (as for the invention in Exhibit Ko 4, the structure of its cooling path is not clear, and it cannot be found that a person skilled in the art could readily have conceived of the configurations of Difference 1 (first cooling path) and Difference 2 (second cooling path) based on the invention in Exhibit Ko 4) (judgment, p. 34, lines 17–20), and it was in its determination based on the invention in Exhibit Ko 5 that the judgment stated 「このような構成とすることの動機付けは認められない。」 (no motivation to adopt such a configuration is found) (judgment, p. 47, line 4). Further, although the original article does not refer to Claims 5 and 6, the judgment held that, for Claims 5 and 6 as well, the JPO trial decision’s determinations premised on inventive step being recognized for all of Claims 1 to 4 (for Claim 6, Claims 1 to 5) lacked their premise (judgment, p. 59, lines 23–25; p. 60, lines 8–10), and rescinded the parts of the JPO trial decision concerning Claims 1 and 4 to 6 (judgment, p. 1, lines 16–19). Judgment

2023 (Gyo-Ke) No. 10104 [Device... formed of a very low resistance material] <Hibiku Shimizu>

Publication date: April 16, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110104%e3%80%90%e9%9d%9e%e5%b8%b8%e3%81%ab%e4%bd%8e%e3%81%84%e6%8a%b5%e6%8a%97%e6%9d%90%e6%96%99%e3%81%a7%e5%bd%a2%e6%88%90%e3%81%95%e3%82%8c%e3%81%9f/

2023 (Gyo-Ke) No. 10104 [Device... formed of a very low resistance material] <Hibiku Shimizu>

⇒ Enablement requirement: ×

Although the test results stated in the description and other documents (Figures 14A–21B) show resistance decreasing as temperature falls, none shows that the resistance value became zero.
Resistance and resistivity must be distinguished, and the absence of test results or other evidence showing zero resistance means that the material's superconducting state has not been substantiated.
Even if part of the material became superconducting, no specific method is disclosed for extracting only that part and using it as a conductor.

⇒ Regarding the occurrence of the Josephson effect, the statement in the description that a Josephson current flows through the barrier material despite the absence of support for the conductor being in a superconducting state (zero resistance) contradicts common general technical knowledge.
The description does not state test results or other evidence supporting that such a phenomenon can occur, and the affidavits submitted by the plaintiff also lack a specific basis.

Judgment note: Whereas the original article states 「抵抗値がゼロでない以上、超伝導状態にあるとはいえない。」 (unless the resistance value is zero, the material cannot be said to be in a superconducting state), the judgment did not find that the resistance value was not zero, but stated 「超伝導状態とは抵抗値がゼロの状態であり（技術常識１）、その場合は抵抗率もゼロとなるが、本願発明の材料の抵抗値がゼロとなった試験結果等が記載されていないことは、前記のとおりである。」 (a superconducting state is a state in which the resistance value is zero (common general technical knowledge 1), in which case the resistivity is also zero, but, as stated above, no test results or the like showing that the resistance value of the material of the claimed invention became zero are described) (judgment, p. 14, lines 14–17). Judgment

2024 (Ne) No. 10010 [Women’s clothing] <Presiding Judge Nakadaira>

Publication date: April 16, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10010%e3%80%90%e5%a5%b3%e6%80%a7%e7%94%a8%e8%a1%a3%e6%96%99%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2024 (Ne) No. 10010 [Women’s clothing] <Presiding Judge Nakadaira>

* The original judgment finding patent infringement was maintained.
* The new invalidity ground asserted in the statement of reasons for appeal was held to be untimely. (It was nevertheless considered.)

<Fulfillment of the claim elements>
“Connects and also” means a configuration that has a connecting function and an adjusting function at the same time, and does not require “adjusting while maintaining the connected state,” as argued by the appellant.
“Connection width” means the amount of overlap in the horizontal direction of the torso.

<Invalidity ground>
Although the argument based on the document in Exhibit Otsu 31 constituted an “untimely allegation or evidence,” the court also considered its merits because the appellee had responded in the alternative and the appellant had not rebutted that response, so that, to this extent, conclusion of the litigation could not be said to be delayed.
⇒ Whereas the invention in Exhibit Otsu 31 covers and compresses the entire breasts to restrain their movement, the invention at issue covers only the sides of the bust and draws them inward from the left and right, and the two clearly differ in mechanism of action and configuration.
Furthermore, there is a factor teaching away from changing a configuration that covers the whole to one that covers only the sides, and inventive step is not denied either.

(Excerpt from the judgment)
First, turning to whether the new assertion constitutes an untimely allegation or evidence: the appellant's assertion of a new invalidity ground in this appeal was made in the statement of reasons for appeal dated February 6, 2024. In patent infringement litigation, an invalidity defense may be asserted without awaiting a final and binding decision of invalidation in patent invalidation trial proceedings, so that disputes concerning infringement of a patent right may be resolved promptly, as far as possible, within the patent infringement proceedings. Since it is made within civil litigation proceedings that are separate from patent invalidation trial proceedings, if, in light of the course of the proceedings, it would unduly delay the proceedings, it should be dismissed as an untimely allegation or evidence.
Looking at the course of the proceedings in the court of first instance on this basis, the appellant, who was the defendant at first instance, in its answer dated October 22, 2021 and submitted on October 27 of that month, denied that the appellee's products fell within the elements of the invention at issue, and asserted an invalidity ground of lack of inventive step using the document in Exhibit Otsu 8 as the primary reference, combined with well-known technology or with the document in Exhibit Otsu 9 as a secondary reference. In response to counterarguments and other submissions by the appellee, who was the plaintiff at first instance, the appellant added an invalidity ground of lack of novelty based on the document in Exhibit Otsu 8 in Preparatory Brief (3), dated March 18, 2022. In response to further counterarguments by the appellee, the appellant added a further invalidity ground of lack of inventive step using the document in Exhibit Otsu 8 as the primary reference and the document in Exhibit Otsu 10 as a secondary reference in Preparatory Brief (4), dated May 27, 2022. It further responded to the appellee's counterarguments on this point in Preparatory Brief (5), dated August 29, 2022.
Then, on the premise that the parties had exhausted their allegations and proof on infringement, in the written preparatory proceedings conducted by web conference on August 31, 2022, the court disclosed its view that it would proceed to examine damages (the progress record of the written preparatory proceedings on August 31, 2022 states in the discussion results column: "Both parties have exhausted their allegations and proof on infringement" and "Presiding judge: The proceedings will now move on to damages"). The examination of damages proceeded, and at the oral argument held on September 22, 2023, the appellant stated that it had no further allegations or proof to present. The oral argument at first instance was closed, and the original

judgment was rendered.
In light of this course of proceedings at first instance, the assertion of a new invalidity ground in this appeal constitutes an untimely submitted allegation or evidence, and the appellant was grossly negligent regarding the delay in its submission; it would therefore ordinarily have to be dismissed. However, the appellee has, albeit in the alternative, presented counterarguments concerning the invalidity ground submitted in this appeal, and the oral argument in this appeal has concluded without any rebuttal by the appellant. To this extent, it cannot be said that the conclusion of the litigation would be delayed, and the court will therefore consider the matter below.

Judgment note: The judgment held that the assertion of the new invalidity ground constituted an untimely allegation or evidence and that the appellant was grossly negligent, and then, because the appellee had presented counterarguments and the oral argument had concluded without a rebuttal by the appellant, stated 「この限度では訴訟の完結を遅延させることになるとまではいえないため、以下、判断を加えることとする。」 (to this extent, it cannot be said that the conclusion of the litigation would be delayed, and the court will therefore consider the matter below) (judgment, p. 38, lines 10–16). The structure of the reasons for considering the matter differs from the original article's statement 「訴訟遅延を避けるため判断を行った」 (the court ruled on it to avoid delaying the litigation). Judgment

= 2023 (Gyo-Ke) No. 10125

* This is an action seeking revocation of a cancellation decision in patent opposition proceedings. Information that merely affects the number as a consequence was not held to constitute “control information for changing the number of motion vector candidates.”
In addition to the correction adding new matter, cancellation of the patents for Claims 1 and 2 on the ground of violation of the support requirement was maintained.

— An “on” change flag includes both cases in which the number of candidate vectors changes and cases in which it does not, and does not constitute control information for changing that number. Threshold Th and the maximum vector count contribute only consequentially and indirectly to changing the candidate count and lack a purpose–means relationship. The correction was held to add new matter and not to comply with Articles 120-5(9) and 126(5) of the Patent Act.

“A purpose–means relationship with ‘changing the number of motion vector candidates’ is required, and it is insufficient that the number of motion vectors may merely be affected consequentially or indirectly.”
“The control information concerning the ‘change flag’ cannot be understood as having the purpose of changing the number of motion vector candidates, and the change flag does not constitute ‘control information for changing the number of motion vector candidates.’”
“Although the control information concerning the ‘threshold Th’ is information involved in changing the number of vectors, it merely contributes consequentially or indirectly to the change, and cannot be construed as having the purpose of changing the number of motion vector candidates.”

(Excerpt from the judgment)
...Although the description and other documents at issue contain no particular statement concerning the meaning of “control information for changing the number of motion vector candidates,” as an understanding based on the wording “for,” in light of the technical significance of that “control information,” a purpose–means relationship with “changing the number of motion vector candidates” is required, and it is insufficient that the number of motion vectors may merely be affected consequentially or indirectly.... ...
The description at issue... Although the control information concerning the “threshold Th” is information involved in changing the number of vectors, it merely contributes consequentially or indirectly to the change, and cannot be construed as having the purpose of changing the number of motion vector candidates; it therefore does not constitute “control information for changing the number of motion vector candidates.”

Judgment note: This is an action against a decision revoking a patent in opposition proceedings, and the judgment states that the correction 「特許法１２０条の５第９項、１２６条５項の規定に適合しない」 (does not comply with Article 120-5(9) and Article 126(5) of the Patent Act) (judgment, p. 20, lines 23–25). 「動きベクトル候補の数を変更するための制御情報」 (control information for changing the number of motion vector candidates) is a matter common to the claims before and after correction (judgment, p. 17, lines 1–2), and the judgment dismissed the claim, stating 「請求項１、２に係る本件特許はサポート要件違反を理由に取消しを免れない。」 (the patent for Claims 1 and 2 cannot escape revocation on the ground of violation of the support requirement) (judgment, p. 22, lines 7–8). Further, the term 「直接の目的」 (immediate purpose) in the original article does not appear in the judgment; the judgment states 「「動きベクトル候補の数の変更」との間に目的・手段の関係があることを要し、単に結果的、間接的に動きベクトルの数に影響する場合があるというのでは足りない」 (a purpose–means relationship with “changing the number of motion vector candidates” is required, and it is insufficient that the number of motion vectors may merely be affected consequentially or indirectly) (judgment, p. 17, lines 9–12). As for the change flag, the judgment stated 「「変更フラグ」オンは、候補ベクトル数が変わる場合と変わらない場合を含んでいることになる。」 (a “change flag” that is on includes both cases in which the number of candidate vectors changes and cases in which it does not) and then held that the change flag does not constitute 「動きベクトル候補の数を変更するための制御情報」 (control information for changing the number of motion vector candidates) (judgment, p. 18, lines 6–10); it was with respect to the threshold Th and the maximum number of vectors that the judgment stated 「変更に結果的、間接的に寄与するものにすぎず」 (merely contributes consequentially or indirectly to the change) (judgment, p. 18, lines 23–24; p. 19, lines 10–11). Judgment

2024 (Ne) No. 10019 [Rolling device] <Presiding Judge Miyasaka>

Publication date: April 16, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10019%e3%80%90%e8%bb%a2%e3%81%8c%e3%82%8a%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e5%ae%ae%e5%9d%82%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2024 (Ne) No. 10019 [Rolling device] <Presiding Judge Miyasaka>

★ The patentee lost for insufficient proof...

① Elements 1-A and 2-A were held fulfilled, reversing the original finding.
— The claims contain no limitation such as “absence of a retainer,” and the appellee’s products have “a rolling path constituted by at least one pair of rolling grooves” and “a plurality of rolling elements interposed so as to roll freely,” and thus literally fulfill the elements.
They are not narrowly construed on the basis of statements in the description (functions and effects).

② Element 1-C (formation of a no-load region) was held not fulfilled.
— Because the appellee’s products (angular contact ball bearings) are used under preload, there is no gap between the balls and the inner and outer rings, and they are always in contact.
⇒ A “no-load region in which the rolling elements contact only one of the rolling grooves” is not formed.
The appellant argued the effect of centrifugal force, but the load due to preload exceeded the centrifugal force, and formation of a no-load region was not proved.

③ Element 2-C (relative magnitudes of frictional forces) was held not fulfilled.
— It was not proved that the requirement is necessarily fulfilled merely because centrifugal force arises.

Judgment note: 「保持器がないこと」 (absence of a retainer) in the original article is not the wording of the judgment; the judgment states 「保持器を備えていることは、その充足を認める妨げになるものではない。」 (having a retainer does not prevent a finding of fulfillment) (judgment, p. 8, lines 2–3). Judgment

2023 (Gyo-Ke) No. 10143 [Hand-pushing member] <Presiding Judge Hibiku Shimizu>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110100%e3%80%90%e6%89%8b%e6%8a%bc%e9%83%a8%e6%9d%90%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2023 (Gyo-Ke) No. 10143 [Hand-pushing member] <Presiding Judge Hibiku Shimizu>

Case-number note: As stated in the introductory note, the case number in the judgment is 2023 (Gyo-Ke) No. 10143. The case number in the original article heading differs from that in the judgment. Judgment, p. 1

Exhibit Ko 8 is attached to the curved part of the “squared U-shaped handle” of a cart and prevents the hand from slipping onto the vertical pipe portion.
⇒ Exhibit Ko 8 has a shape and dimensions premised on attachment to the curve of a “squared U-shaped” handle, and there is no motivation to attach it to “a single vertical rod” as in the patent at issue.

For the invention of Exhibit Ko 9, the court began with Difference 2. The safety cover of Exhibit Ko 8 presupposes attachment to the curved portion of a squared-U-shaped handle, and no motivation to apply it to the vertically elongated hand-pushing member of Exhibit Ko 9 was found. The flange-shaped guard of Exhibit Ko 3 is an end stopper restricting the hand to the correct gripping position and does not disclose a technical idea solving the problem of the invention of Exhibit Ko 9. The court did not determine Difference 3 concerning the integral structure or difficulty of manufacture.

⇒ Inventive step: ○

Judgment note: The judgment’s 「当裁判所の判断」 (court’s determination) contains no finding on the difficulty of manufacture; the judgment states 「事案に鑑み、甲９相違点２の容易想到性から判断する。」 (in view of the nature of the case, the court first determines the obviousness of Difference 2 relative to Exhibit Ko 9) (judgment, p. 21, line 16) and does not determine Difference 3 relative to Exhibit Ko 9, which concerns the integral structure. Regarding Exhibit Ko 8, the judgment denied motivation and further stated 「甲８発明のハンドルをこのような形状に変更することには、むしろ阻害要因があるというべきである。」 (there is rather a factor teaching away from changing the handle of the invention of Exhibit Ko 8 to such a shape) (judgment, p. 19, lines 13–14). Judgment

Tokyo District Court, 2023 (Wa) No. 70407 [Filling material for an electronic cigarette] <Presiding Judge Sugiura>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%af70407%e3%80%90%e9%9b%bb%e5%ad%90%e3%82%bf%e3%83%90%e3%82%b3%e7%94%a8%e5%85%85%e5%a1%ab%e7%89%a9%e3%80%91%ef%bc%9c%e6%9d%89/

Tokyo District Court, 2023 (Wa) No. 70407 [Filling material for an electronic cigarette] <Presiding Judge Sugiura>

Case-number note: As stated in the introductory note, the case number in the judgment is 2023 (Wa) No. 70407. The case number in the original article heading differs from that in the judgment. Judgment, p. 1

“Cuts are formed in the sheet-like member along the first direction” (Element B) is not fulfilled.

• The dictionary meaning of “cut”
• Cutter blades and the like are given as examples of means of forming the cuts in the description at issue.
• The effects of the invention (preventing filling material from falling out and stabilizing the smoking feel) are obtained by controlling the length and other features of the cuts.
⇒ A “cut” means a structure or state in which an incision has been artificially and actively formed by cutting the surface of the sheet-like member with a blade.

⇒ Although three linear breaks along the longitudinal direction are observed in the tobacco substrate of the defendant’s products, these are “tears or cracks” formed when the surface tears or cracks along the ridges or valleys of a corrugated tobacco sheet during the process of crimping the tobacco sheet and gathering it to form a tobacco rod.
⇒ Non-fulfillment

The plaintiff argued, based on the dictionary meaning and articles about the defendant’s explanatory sessions, among other things, that “cuts” are not limited to those formed with a blade. However, the court rejected the plaintiff’s argument on grounds including that the dictionary meaning is also related to the action of “cutting,” and that the description also presupposes formation with a blade.
https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93589.pdf

Judgment note: Based on the dictionary meaning, the judgment stated 「「切込み」とは、刃物を用いて人為的・能動的に「切り目」ないし「切れ目」が形成された構造ないし状態を意味するものと理解される。」 (a “cut” is understood to mean a

structure or state in which a “cut” or “slit” has been formed artificially and actively using a blade) (judgment, p. 35, lines 2–4), and then held 「「切込み」（構成要件 B）とは、刃物でシート状部材の表面を切ることにより形成された、切れている部分をいうものと解するのが相当である。」 (it is appropriate to construe a “cut” (Element B) as a cut portion formed by cutting the surface of the sheet-like member with a blade) (judgment, p. 35, lines 9–11). The statement in the original article following 「⇒「切込み」とは、」 (⇒ A “cut” means) combines these two statements. Further, regarding control of the cuts and the effects of the invention, the judgment states only that 「何らかの方法により人為的・能動的に制御することが発明の効果を奏する上では少なくとも好ましいものとされていることがうかがわれる。」 (it can be inferred that artificially and actively controlling them by some method is regarded as at least preferable for achieving the effects of the invention) (judgment, p. 34, lines 14–16).
Judgment

Tokyo District Court, 2023 (Wa) No. 70393 [Tiltable and stowable temporary protective fence] <Presiding Judge Nakashima>

Publication date: April 10, 2026
Original article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70393%e3%80%90%e8%b5%b7%e4%bc%8f%e5%8f%8e%e5%ae%b9%e5%bc%8f%e4%bb%ae%e8%a8%ad%e9%98%b2%e8%ad%b7%e6%9f%b5%e3%80%91%ef%bc%9c-2/

Tokyo District Court, 2023 (Wa) No. 70393 [Tiltable and stowable temporary protective fence] <Presiding Judge Nakashima>

“Pivoting plate-like member” is not fulfilled.

— In light of the statements in the description (that it is a “thin plate,” and the means of solving the problem by thereby reducing the overall width and making the structure compact), this was construed as literally referring to a “thin plate-like object,” excluding round tubes and square tubes.

⇒ The posts (pivoting members) of the defendant’s products are “square tubular (square pipe-shaped),” and the element is not literally fulfilled.
(Equivalence is also not established.)

2024 (Ne) No. 10045 [Wastewater treatment apparatus] <Presiding Judge Hibiku Shimizu>

Publication date: April 10, 2026
Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10045%e3%80%90%e5%bb%83%e6%b0%b4%e5%87%a6%e7%90%86%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2024 (Ne) No. 10045 [Wastewater treatment apparatus] <Presiding Judge Hibiku Shimizu>

* “Oxygen supply means” (Element D) is not fulfilled.

The defendant’s system = intentionally and actively adds “ozone” to the micro-nanobubbles supplied into the second containment tank (aeration tank).

The patent at issue aims to perform biological treatment using microorganisms in the second containment tank.
Because ozone may kill microorganisms, the invention at issue instead addresses the problem of “early reduction of residual ozone.”
Accordingly, deliberately supplying additional ozone to the second containment tank containing microorganisms goes against the purposes of the invention (promoting biological treatment and reducing residual ozone), and is incompatible with the technical idea of the invention at issue.
⇒ “Oxygen supply means” is for supplying oxygen and does not extend to means for actively supplying additional ozone that may harm microorganisms.

<IP Practice Online> “Overview of the revision of the Trade Secret Management Guidelines” (Attorney Naoki Kurokawa, Ministry of Economy, Trade and Industry)

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%ef%bc%9c%e7%9f%a5%e8%b2%a1%e5%ae%9f%e5%8b%99%e3%82%aa%e3%83%b3%e3%83%a9%e3%82%a4%e3%83%b3%ef%bc%9e%e3%80%8c-%e5%96%b6%e6%a5%ad%e7%a7%98%e5%af%86%e7%ae%a1%e7%90%86%e6%8c%87%e9%87%9d%e6%94%b9%e8%a8%82/

<IP Practice Online> “Overview of the revision of the Trade Secret Management Guidelines” (Attorney Naoki Kurokawa, Ministry of Economy, Trade and Industry)

1. Overview of the revision of the Trade Secret Management Guidelines (2025)
This revision aims to reflect changes in social conditions such as the spread of teleworking, the rise of generative AI and increased labor mobility, as well as developments in recent court decisions.

① The position of “reasonable classification (distinguishing confidential information from general information),” which had previously been emphasized as a criterion for assessing secrecy management measures, was clarified.
⇒ Rather than making reasonable classification an absolute, independent requirement, the revised guidelines incorporate it as one factor in determining the “degree of necessary secrecy management measures.”
While this permits flexible management systems according to a company’s actual circumstances and the nature of the information, it reemphasizes that a state must be secured in which employees can objectively recognize the company’s intention that “this is confidential” (objective recognizability).

② In light of the spread of cloud services, the approach to access rights management was described in detail.
For example, even if access rights are widely granted within a particular department, the requirement of secrecy management may be found to be satisfied if access from outside that department is restricted.
Descriptions reflecting technological trends were also added, including the risk that input data may unintentionally be used for training when generative AI is used, resulting in loss of non-public status; reference to leaks through the dark web; and the relationship between reverse engineering and non-public status.

③ In light of recent court decisions, it was expressly stated regarding usefulness that “as long as the information is used or utilized in business activities, the requirement is satisfied unless there are special circumstances such as a violation of public order and morals,” and that “whether a person who wrongfully acquired it can effectively utilize it is irrelevant.”
Regarding non-public status, the guidelines clarify the standard that information readily ascertainable by analyzing a product is not protected, but non-public status is maintained when considerable time or special techniques are required.

★ This revision shifts the emphasis from “formal management” to “securing recognizability in line with actual circumstances.”
From a multifaceted perspective, it is an attempt to maintain the framework of legal protection while accepting changes in the IT environment as a given.
Examined critically, while management becomes more flexible, companies are predicted to face a heightened responsibility to explain and prove “whether their management measures are objectively recognizable.”

(Session 268) IP Practice Online: “Overview of the revision of the Trade Secret Management Guidelines” (Guest: Naoki Kurokawa, Attorney at Law and Patent Attorney, Deputy Director, Intellectual Property Policy Office, Economic and Industrial Policy Bureau, Ministry of Economy, Trade and Industry)

2023 (Gyo-Ke) No. 10132 [Ground solidification material] <Presiding Judge Hibiku Shimizu>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110132%e3%80%90%e5%9c%b0%e7%9b%a4%e5%9b%ba%e7%b5%90%e6%9d%90%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2023 (Gyo-Ke) No. 10132 [Ground solidification material] <Presiding Judge Hibiku Shimizu>

Case-number note: As stated in the introductory note, the case number in the judgment is 2023 (Gyo-Ke) No. 10132. The case number in the original article heading differs from that in the judgment. Judgment, p. 1

⇒ Inventive step: ○ (revocation decision rescinded)

The Japan Patent Office held that the configuration of the invention at issue (particularly the injection conditions) could readily have been conceived by combining the cited invention with technical matters such as the “magma action method.”

This judgment recognized inventive step for the following reasons.

① Difference in solidification principles
The ground solidification material of the invention at issue is a “suspension-type grout” that solidifies through the hydraulic properties of slag. In contrast, the technology described in documents such as Exhibit Ko 5 is a “solution-type grout” that solidifies according to the pH of the ground (reaction with alkaline components in the soil). Their principles of solidification differ.

② Inapplicability of injection conditions (arising from the difference in solidification principles)
The magma action method described in documents such as Exhibit Ko 5 concerns injection conditions (such as injecting for longer than the gelation time in the soil) where an acidic solution-type grout reacts with alkaline components in the soil and solidifies. Because the solidification principles differ, these injection conditions cannot be said to apply unchanged to the suspension-type grout of the invention at issue.

③ Absence of a suggestion
Documents such as Exhibit Ko 5 contain no statement suggesting that the magma action method can be applied to suspension-type grout. Although Exhibit Ko 9 mentions suspension-type grout, its solidification mechanism and relationship with the magma action method are unclear.

2025 (Ne) No. 10043 [Vehicle guidance system] <Presiding Judge Honda>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c7%e5%b9%b4%e3%83%8d10043%e3%80%90%e8%bb%8a%e4%b8%a1%e8%aa%98%e5%b0%8e%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c%e6%9c%ac%e5%a4%9a%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2025 (Ne) No. 10043 [Vehicle guidance system] <Presiding Judge Honda>
— Reversed: non-fulfillment!!

* For “guidance... to a route returning to the point before...,” guidance only part of the way to the “route returning to the point before...” is insufficient.

1. Regarding “guidance means for guiding... to a route returning again to the point before...”:
In some accused systems, after being returned to a general road or a service area, a driver may find and return to the original ETC-only entrance/exit through the driver’s own will and judgment.
Other accused systems have no route returning to the ETC-only exit that the vehicle attempted to enter. Even where return is possible, “guidance” means “inviting and leading toward an objective,” and it is difficult to regard a driver as having been “guided” merely because the driver can return voluntarily.
The appellee argued that guidance to the “second lane” was sufficient, and that guidance beyond it to the “point before the ETC-vehicle-only entrance/exit” was unnecessary. However, this argument was rejected because construing a vehicle’s ability to reach the destination by any route as “leading to” it disregards a matter specifying the invention and also contradicts the description.

2. “Guidance means... leading to an entrance/exit for general vehicles”
The defendant’s respective systems are not found to have an “entrance/exit for general vehicles.”
The appellee argued that an “entrance/exit for general vehicles at another adjacent interchange” is also included, even if none is present at the facility concerned. However, guidance means leading to an entrance/exit for general vehicles at another adjacent interchange cannot be read from the description, and the fact that vehicles unable to use a smart interchange consequently have no choice but to use a nearby entrance/exit for general vehicles was held “difficult to regard as the result of guidance”; this interpretation was not adopted.

(Excerpt from the judgment)
To hold that “guiding to a second lane leading to a route returning again to the point before the aforementioned ETC-vehicle-only entrance/exit or to an entrance/exit for general vehicles” is fulfilled merely because a vehicle can reach the “point before the ETC-vehicle-only entrance/exit” or an “entrance/exit for general vehicles” by any route from the point where it has left the “second lane” is substantially equivalent to allowing the point to which the “second lane” connects to be any location. It must therefore be said to disregard the matter specifying the invention, “leading to a route returning again to the point before the aforementioned ETC-vehicle-only entrance/exit or to an entrance/exit for general vehicles.” Even looking at the description at issue, the matter specifying the invention, “leading to a route returning again to the point before the aforementioned ETC-vehicle-only entrance/exit or to an entrance/exit for general vehicles,” is based, for example, on the statements “proceeds to lane E, ...and returns again to the point of selecting one of lanes A, B and C” ([0035]) and “a configuration may be adopted in which it passes through lane E and merges at a point before the ticket-issuing box 6 in lane B or C; lanes B and C are lanes for general vehicles” ([0036]). These indicate that simply by traveling along the lane, a vehicle is led to reach the “point before the ETC-vehicle-only entrance/exit” or an “entrance/exit for general vehicles,” namely, is “guided.” There is no statement that a vehicle’s ability, after leaving the lane, to reach the point before the ETC-vehicle-only entrance/exit or an entrance/exit for general vehicles by any route constitutes “guidance.”

Judgment note: Returning on the driver’s own initiative was found possible only for some of the defendant’s systems; for the other systems, the judgment states 「当該車両が進入を試みたＥＴＣ車専用出口に再度戻る経路（ルート）はない。」 (there is no route for returning again to the ETC-vehicle-only exit that the vehicle attempted to enter) (judgment, p. 11, lines 19–21). The (Excerpt from the judgment) is taken from the judgment, p. 13, lines 3–19, with the opening word 「しかし、」 (however) omitted and the judgment’s 「・・・」 written as 「…」. Judgment

2024 (Ne) No. 10033 [Eave] <Presiding Judge Nakadaira>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10033%e3%80%90%e5%ba%87%e3%80%91ef%bc%9c%e4%b8%ad%e5%b9%b3%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2024 (Ne) No. 10033 [Eave] <Presiding Judge Nakadaira>

* Appeal dismissed (non-fulfillment)

The patented invention at issue is characterized by a configuration (Element B2) in which the “vertical plate portion” of a “front edge plate” attached to the front end of the eave “abuts the open front end face of the eave plate, and its front face forms a guide surface that guides rainwater downward.”
This eliminates the need for a conventional rain gutter and seeks to reduce the size of the eave and simplify its structure.

⇒ Literal non-fulfillment

Based on the claim language, the “vertical plate portion” is a section of plate extending vertically, separate from the “horizontal plate portion,” and its front face must form the guide surface.
The corresponding part of the defendant’s products is “squared U-shaped” and includes a horizontally extending portion, and therefore does not fall within this definition.
Furthermore, in the defendant’s products, the guide surface and the abutting portion are spaced apart, causing a corresponding forward projection. The court held that construing “vertical plate portion” to include such a configuration, in which the front face of the plate abutting the eave plate’s front end does not form the guide surface, would be inconsistent with the invention’s purpose, including making the eave smaller.

Infringement by equivalents: also ×

Judgment note: What the judgment held inconsistent with the purpose of the invention is not the defendant’s products themselves but the construction that includes such a configuration in the “vertical plate portion”; the judgment states 「このように、「庇板の開放された前端面に当接され」た板部の「前面が雨水を下方へ導くガイド面」となっていない構成が構成要件Ｂ２の「縦板部」に含まれるとの解釈は、本件明細書に記載された本件発明の上記目的に整合しない。」 (thus, the construction that a configuration in which the plate portion “abutting the open front end face of the eave plate” does not have “a front face forming a guide surface that guides rainwater downward” is included in the “vertical plate portion” of Element B2 is inconsistent with the above purpose of the invention at issue described in the description at issue) (judgment, p. 12, lines 5–8). Judgment

Tokyo District Court, 2023 (Wa) No. 70272 [Jig for a lifeline support post] <Presiding Judge Kokubu>

Publication date: April 10, 2026
Original article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70272%e3%80%90%e8%a6%aa%e7%b6%b1%e6%94%af%e6%9f%b1%e7%94%a8%e6%b2%bb%e5%85%b7%e3%80%91%ef%bc%9c%e5%9c%8b%e5%88%86%e8%a3%81/

Tokyo District Court, 2023 (Wa) No. 70272 [Jig for a lifeline support post] <Presiding Judge Kokubu>

* Non-fulfillment

1. Literal non-fulfillment
Element C: “A U-shaped bent portion formed at an end of a rectangular plate”
The “bent portion” of the invention at issue is construed as being bent at an end of the rectangular plate, but the hook portion of the defendant’s products is at an end of a side plate and is not continuous with the bottom plate (corresponding to the rectangular plate).
Element E: “Length of the rectangular plate > flange width”
The length of the bottom plate of the defendant’s products (100 mm) is not greater than the width of the flange to which it is attached (100 mm or 125 mm).

2. Equivalence not established
The portions differing between the invention at issue and the defendant’s products were held to constitute the essential part of the invention, which was not found in the prior art. The court held that the first requirement of equivalence was not satisfied and rejected infringement under the doctrine of equivalents without examining the remaining requirements.

Judgment note: Page 35 of the judgment states 「均等の第１要件を満たすとは認められない。」 (it cannot be found that the first requirement of equivalence is satisfied) and 「その余の要件を検討するまでもなく」 (without needing to examine the remaining requirements). That is, the court found the first requirement not satisfied and did not separately determine the second requirement. The original article refers to the second requirement; this is the original article’s explanation, rather than a determination made by the court. The term 「小型化」 (“reduced size”) in the original article does not appear in the judgment. On the counterclaim (Article 2(1)(xxi) of the Unfair Competition Prevention Act), the judgment granted the injunction and damages to the extent of 550,000 yen (judgment, p. 2, lines 3–9). The text in quotation marks for Elements C and E in the original article is a summary; in the judgment’s division into elements, Element C is 「前記矩形状の板の前記第１の方向の端部で上下方向に間隔を開けてＵ字状に折り曲げられた折り曲げ部とを含み、」 (and a bent portion bent into a U shape with a vertical interval at the end of the rectangular plate in the first direction,) (judgment, p. 5, lines 5–6), and Element E is 「前記矩形状の板の前記第１の方向端部より逆方向の端部までの長さは、前記治具が取付けられる形鋼のフランジの幅より長い、治具。」 (a jig wherein the length from the end of the rectangular plate in the first direction to the end in the opposite direction is longer than the width of the flange of the section steel to which the jig is attached) (judgment, p. 5, lines 9–10). Judgment, p. 35

Tokyo District Court, 2023 (Wa) No. 70607 [Remotely controlled unmanned boat] <Presiding Judge Sugiura>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70607%e3%80%90%e9%81%a0%e9%9a%94%e6%93%8d%e7%b8%a6%e7%84%a1%e4%ba%ba%e3%83%9c%e3%83%bc%e3%83%88%e3%80%91%ef%bc%9c%e6%9d%89/

Tokyo District Court, 2023 (Wa) No. 70607 [Remotely controlled unmanned boat] <Presiding Judge Sugiura>

★ Element J specifies a first control device that performs control to automatically return the boat to its initial position when at least one of the following determinations has been made: “no signal has been received from the remote control device for a specified period or longer” (Condition ①), or “the remaining power has been determined to be half or less” (Condition ②).

⇒ To solve the problem of the patented invention (preventing loss), a mechanism capable of dealing with both critical situations, “communication interruption” and “insufficient power,” must be provided.

⇒ Because the condition for the defendant’s products is “return when the remaining power is in the 20% range of the fully charged level, etc.,” the element is not fulfilled.

Judgment note: The defendant’s products return when a voltage below the lower-limit voltage (44 V by default; 49 V at most when set by ordinary methods) is detected for a certain period (judgment, p. 34, lines 4–11). The judgment found that, even with the upper limit of 49 V, the remaining charge at the start of return 「満充電時の電力量に対して 20%台にまで低下している」 (has fallen to the 20% range of the fully charged amount) (judgment, p. 37, line 25 – p. 38, line 3), and held Element J (first control device) not fulfilled. Infringement by equivalents was also denied as 「少なくとも均等の第５要件を欠き」 (lacking at least the fifth requirement of equivalence) (judgment, p. 40, lines 10–13). The text in quotation marks for Conditions ① and ② in the original article is a summary; the judgment organizes them as 「自動回帰発動条件①（「前記第１送受信アンテナにより一定時間以上前記遠隔操縦装置からの信号を受信しなかったと判断された場合」）、又は、同②（「前記電源の残量が半分以下になったと判断された場合」）」 (automatic return activation condition ① (“where it has been determined that no signal has been received from the remote control device via the first transmitting/receiving antenna for a specified period or longer”) or condition ② (“where it has been determined that the remaining power of the power source has become half or less”)) (judgment, p. 35, lines 9–11). Judgment

Tokyo District Court, 2023 (Wa) No. 70219 [Commercial transaction system] <Presiding Judge Sugiura>

Publication date: April 10, 2026
Original article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70219%e3%80%90%e5%95%86%e5%8f%96%e5%bc%95%e3%82%b7%e3%82%b9%e3%83%86%e3%83%a0%e3%80%91%ef%bc%9c%e6%9d%89%e6%b5%a6%e8%a3%81/

Tokyo District Court, 2023 (Wa) No. 70219 [Commercial transaction system] <Presiding Judge Sugiura>

Element D (“a step of acquiring advance customs clearance information, including information concerning customs duties, from a customs clearance authentication device”)
In the program at issue, the only item that can be called information concerning customs duties is the HS CODE, but this is information that, in principle, the seller is to input personally.
Although it is found that product information entered by executing the program at issue is examined by the authentication server and status information of “registration complete” is received, there is insufficient evidence to find that, apart from that status information, any information concerning customs duties is received.
According to the description at issue, “information concerning customs duties” is understood to mean customs duty rates and amounts and information for calculating customs duties (such as HS codes), whereas the status information “registration complete” itself cannot be called “information concerning customs duties.”
⇒ Non-fulfillment

Element E (the configuration concerning notification of advance customs clearance information; summary)
. The evidence does not necessarily make clear what specific information the program at issue sends to the e-commerce server (commercial transaction device).
 Even leaving that point aside, however, the program does not execute the step of acquiring advance customs clearance information and does not satisfy Element D, and therefore cannot be said to execute the step of notifying that information. ⇒ Element E is also not satisfied.

Judgment note: Regarding the HS CODE, the judgment states 「HS CODE は、出品者が自ら入力し、又は「システム推奨 HS CODE」を選択することとして、原則として出品者が入力すべき情報とされている。」 (the HS CODE is, in principle, information to be input by the seller, who either inputs it personally or selects a “system-recommended HS CODE”) (judgment, p. 27, lines 5–6). Regarding Element E, the judgment’s reason is that, because the program at issue cannot be said to cause execution of a step of acquiring advance customs clearance information and does not fulfill Element D, it also cannot be said to cause execution of a step of notifying the advance customs clearance information (judgment, p. 28, lines 9–12); the point that the content transmitted is not clear from the evidence is stated as 「その点を措くとしても」 (even setting that point aside) (judgment, p. 28, lines 13–14). Further, the text in quotation marks for Elements D and E in the original article is a summary; in the judgment’s division into elements, Element D is 「前記通関認証装置から、前記商品についての、関税に関する情報を含む事前通関情報を取得するステップと、」 (a step of acquiring, from the customs clearance authentication device, advance customs clearance information concerning the goods, including information concerning customs duties;) (judgment, p. 3, lines 1–2), and Element E is 「ユーザ端末と接続して電子商取引を実行する商取引装置に対し、当該商取引装置が前記商品情報とともに前記事前通関情報を前記ユーザ端末からアクセスされるサイトに掲載することができるように、前記事前通関情報を通知するステップと」 (a step of notifying a commercial transaction device that connects to user terminals and executes electronic commerce of the advance customs clearance information, so that the commercial transaction device can post the advance customs clearance information together with the product information on a site accessed from the user terminals; and) (judgment, p. 3, lines 3–5). Judgment

2023 (Gyo-Ke) No. 10144 [DC ultra-high-voltage power supply for a food electric-field treatment apparatus] <Presiding Judge Nakadaira>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110144%e3%80%90%e9%a3%9f%e5%93%81%e9%9b%bb%e5%a0%b4%e5%87%a6%e7%90%86%e8%a3%85%e7%bd%ae%e7%94%a8%e7%9b%b4%e6%b5%81%e8%b6%85%e9%ab%98%e9%9b%bb%e5%9c%a7/

2023 (Gyo-Ke) No. 10144 [DC ultra-high-voltage power supply for a food electric-field treatment apparatus] <Presiding Judge Nakadaira>

References 1–4 added in the appeal decision were merely added as corroborating evidence to support that the technology was well known in various fields, in response to the plaintiff's disputing its well-known nature in a written opinion.
⇒ They did not establish a new reason for refusal, and it was therefore unnecessary to issue another notice of reasons for refusal.

A person skilled in the art of the claimed invention is familiar not only with common general technical knowledge concerning food electric-field treatment apparatuses, but also with technology in the technical field of "DC high-voltage power supplies," which are related components.
⇒ Regarding Difference 1 (supplying DC ultra-high voltage without using a high-voltage transformer), according to the statements in Cited Document 2, References 1–4 and other documents, the Cockcroft–Walton circuit is a well-known power supply circuit used in various fields requiring DC high voltage, including everyday electrical equipment. — Obvious
⇒ Regarding Difference 2 (connecting a high-resistance resistor between the high-voltage output terminal and the GND terminal), based on Cited Documents 2 and 3, the technique of connecting high and low resistances in series and measuring voltage through voltage division (a high-voltage measurement technique) is also well-known technology in high-voltage generators. — Obvious

⇒ Inventive step: ×

Judgment note: In the original article's statement concerning the person skilled in the art, the specification 「「直流高電圧電源装置」の技術分野」 (the technical field of "DC high-voltage power supplies") corresponds to a statement in the defendant's counterargument (judgment, p. 13, lines 3–8); the judgment states 「食品電場処理装置の技術分野の当業者は、食品電場処理装置に付随した各種部材についても、課題解決にあたり検討するものといえるから、食品電場処理装置に関連する部材に係る技術を知悉する者であるといえる。」 (a person skilled in the art in the technical field of food electric-field treatment apparatuses

can be said to consider, in solving problems, the various components accompanying food electric-field treatment apparatuses as well, and can therefore be said to be a person familiar with technology concerning components related to food electric-field treatment apparatuses) (judgment, p. 37, lines 7–10). Regarding Difference 1, the expression 「様々な分野で用いられる周知の電源回路」 (a well-known power supply circuit used in various fields) in the original article corresponds to the statement 「様々な分野において用いられる周知の電源回路」 (a well-known power supply circuit used in various fields) in the defendant's counterargument (judgment, p. 15, line 6), and the judgment, from the statements in Cited Document 2, Exhibit Otsu 5, Exhibit Otsu 6, Reference 1 and Reference 3, states 「直流高電圧を発生させるための電源回路として、コッククロフトウォルトン回路は周知技術であると認められる。」 (the Cockcroft–Walton circuit is found to be well-known technology as a power supply circuit for generating DC high voltage) (judgment, p. 34, line 16 – p. 35, line 14). Regarding Difference 2, the term 「高電圧測定手法」 (high-voltage measurement technique) was defined in the defendant's counterargument (judgment, p. 17, line 10), and the judgment states 「高電圧発生回路の出力に、高抵抗値の抵抗器と低抵抗値の抵抗器の直列回路を接続して出力電力を測定することは、高電圧を発生する装置における周知技術であると認められる。」 (connecting a series circuit of a high-resistance resistor and a low-resistance resistor to the output of a high-voltage generating circuit to measure the output power is found to be well-known technology in devices that generate high voltage) (judgment, p. 36, lines 8–10). Judgment

2024 (Ne) No. 10044 [Hair iron] <Presiding Judge Nakadaira>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10044%e3%80%90%e3%83%98%e3%82%a2%e3%83%bc%e3%82%a2%e3%82%a4%e3%83%ad%e3%83%b3%e3%80%91%ef%bc%9c%e4%b8%ad%e5%b9%b3%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2024 (Ne) No. 10044 [Hair iron] <Presiding Judge Nakadaira>

* A case seeking procedures for registration of a transfer under Article 74(1) of the Patent Act against the appellee (defendant), the current patentee, on the ground that the right had been transferred by a person without authority to represent the company.
The court of first instance dismissed the appellant's claim by analogous application of Article 94(2) of the Civil Code.
⇒ Appeal dismissed (the original judgment was affirmed)

The appellant's true representative E was aware by around July, 2015 that B′ and others had become officers and that operations were in confusion, and was aware no later than November 29, 2016 that a false appearance existed that the right to obtain a patent had been transferred to C′.
Nevertheless, for approximately four years until 2021, E did not bring an action for confirmation of the nonexistence of the shareholders' meeting resolution or take similar steps. Even after the judgment recognizing the nonexistence of that resolution became final and binding in August, 2021, E took no action against C′ for approximately half a year until the patent right was transferred from C′ to the appellee's subsidiary.
⇒ The appellant bears serious culpability with respect to the creation, etc., of the false appearance, because it left that appearance unaddressed. The appellant's own internal circumstances and conduct also contributed to creation of the appearance. The appellee and the other relevant transferees were found to have acted in good faith and without negligence, and the claim was rejected through analogous application of Article 94(2) of the Civil Code.

Judgment note: Regarding the appellant's culpability, the judgment states, in addition to its leaving the false appearance unaddressed, 「そもそも、B'が本件譲渡契約①を締結し、C'が本件特許に係る特許を受ける権利を有しあるいは特許権者であるとの虚偽の外観を作出するに至ったのは、控訴人自身の内部事情や行為にその一因があるといえる。」 (in the first place, the fact that B′ concluded Assignment Agreement ① and that a false appearance came to be created that C′ held the right to obtain a patent for the patent at issue or was the patentee can be said to be partly attributable to the appellant's own internal circumstances and conduct) (judgment, p. 24, lines 10–13). The judgment also states, regarding the appellees, 「善意無過失であったと認めるのが相当である。」 (it is appropriate to find that they were in good faith and without negligence) (judgment, p. 26, line 7). Judgment

2023 (Gyo-Ke) No. 10139 [Gaming machine] <Presiding Judge Hibiku Shimizu>

Publication date: April 10, 2026

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c5%e5%b9%b4%e8%a1%8c%e3%82%b110139%e3%80%90%e9%81%8a%e6%8a%80%e6%a9%9f%e3%80%91%ef%bc%9c%e6%b8%85%e6%b0%b4%e9%9f%bf%e8%a3%81%e5%88%a4%e9%95%b7%ef%bc%9e/

2023 (Gyo-Ke) No. 10139 [Gaming machine] <Presiding Judge Hibiku Shimizu>

Content of the invention: In “partial auto mode,” a button is deemed automatically pressed for presentations of low importance (first operation-request presentations), but important presentations relating to winning or losing (second operation-request presentations / win–loss branching) are excluded from automatic operation and left for the player to operate personally.

The cited document stated that “partial auto” could be selected as an “auto button” setting, and, for example, that “only during very high-expectation presentations, non-auto operation (where it is desired to have the player operate) may be selected.”
⇒ The amended claimed invention was held to lack inventive step, and dismissal of the amendment for failure to satisfy the independent patentability requirement was upheld. The unamended claimed invention was held to lack novelty because it was substantially identical to Cited Invention 2 and, in the alternative, to lack inventive step.

The Patent Act does not require notification of reasons for refusal when an amendment is dismissed for failure to satisfy the independent patentability requirement. Even assuming an exception from the standpoint of procedural safeguards, Cited Invention 2, indicated at the refusal decision stage, and Cited Invention 1, used in the appeal decision, were based on the same document (Exhibit Ko 1), had portions in common, and that document had already been cited in a notification of reasons for refusal. ⇒ There was no unfair surprise.

Judgment note: The judgment states that, as to Cited Inventions 1 and 2, 「その内容には共通の部分がある」 (their contents have parts in common) (judgment, p. 28, lines 1–3), and does not hold that their contents are substantially the same. The main reason for denying an unfair surprise is that, when an amendment is dismissed for violating the independent patentability requirement, 「拒絶の理由を通知することは要求されていない」 (notice of reasons for refusal is not required) (judgment, p. 27, lines 7–12); the point that they are based on the same document is a reason presented under 「仮に当事者の手続保障の観点から例外を認める場合でも」 (even if an exception were recognized from the viewpoint of procedural safeguards for the party) (judgment, p. 27, line 26 – p. 28, line 1). As for the claimed invention, the judgment held that it mainly falls under Article 29(1)(iii)

of the Patent Act (lack of novelty) and, in the alternative, that it lacks inventive step (judgment, p. 26, lines 14–18). Further, of the original article's 「激熱演出時（期待度の高い演出）のみ非オート（遊技者に操作させたい）にしてもよい」, the words 「（期待度の高い演出）」 (presentations with a high degree of expectation) are not the wording of Cited Document 1; the statement of Cited Document 1 cited in the judgment is 「激熱演出時のみ非オート（遊技者に操作させたい）にしてもよい」 (non-auto operation (where it is desired to have the player operate) may be selected only during very high-expectation presentations) (judgment, p. 22, lines 1–2). Judgment

Tokyo District Court, 2023 (Wa) No. 70619 [Device for measuring the difference in draft between both sides of a ship] <Presiding Judge Nakashima>

Publication date: April 10, 2026
Original article URL: https://www.nakapat.gr.jp/ja/note/%e6%9d%b1%e4%ba%ac%e5%9c%b0%e5%88%a4%e4%bb%a4%e5%92%8c5%e5%b9%b4%e3%83%af70619%e3%80%90%e8%88%b9%e8%88%b6%e3%81%ae%e4%b8%a1%e8%88%b7%e3%83%89%e3%83%a9%e3%83%95%e3%83%88%e5%b7%ae%e6%b8%ac%e5%ae%9a/

Tokyo District Court, 2023 (Wa) No. 70619 [Device for measuring the difference in draft between both sides of a ship] <Presiding Judge Nakashima>

During employment, the plaintiff made an invention concerning a “device for measuring a ship’s draft difference (draft inspection).”
⇒ Nippon Steel filed an application on the basis that it had succeeded to the right to obtain a patent, but the refusal decision became final and no patent was obtained.

First lawsuit: The plaintiff sought confirmation against Nippon Steel of the right to obtain a patent, but the claim was dismissed because the invention was an employee invention and the right had been transferred to Technoresearch; the appeal was also dismissed. Second lawsuit: The plaintiff sought correction of the named inventors and confirmation of sole inventorship, among other relief. The action was dismissed in part as inadmissible and the claims were otherwise dismissed, including because the refusal decision had become final and the proceedings had ended, so correction could not be sought. The appeal was also dismissed.

⇒ Subsequently, the plaintiff filed an application individually and acquired a patent right (the patent at issue).

Third lawsuit: The plaintiff sought damages against Nippon Steel and the defendant for patent infringement. The first instance dismissed the claims, including because there was insufficient evidence that the inclination-measuring device fell within the technical scope of the corrected invention. The appellate court did not find use or sale of accused Device A after registration. Although accused Device B fell within the technical scope, the relevant patents had a

ground for invalidation under Article 123(1)(vi) of the Patent Act, so enforcement was denied under Article 104-3(1), and the appeal was dismissed.

Fourth lawsuit: Claim for compensation for an employee invention
⇒ The plaintiff lost because no benefit exceeding that from a non-exclusive licence was found to have accrued to the company.

The present lawsuit (the fifth): The plaintiff sued, asserting “I suffered loss because the company lied in the earlier litigation.” The company also counterclaimed, alleging that this was a “rehashing” and wrongful litigation.

<This judgment (the fifth)>
• The company is not found to have lied in court.
• The plaintiff paid the costs of maintaining the patent (such as annual fees) voluntarily, and these were not attributable to the company. • The claim for confirmation of ownership of the patent right in the main action was dismissed as inadmissible. The finding concerning an employee invention was stated for completeness after dismissal of that action.

★ Reasons for finding an “employee invention”
The company had been entrusted by Nippon Steel, a related company with “work to improve draft inspection (draft surveys),” and the invention was within the company’s scope of business.
The plaintiff purchased components at the company’s expense and performed tests in the capacity of an employee.

Note concerning the defendant company’s counterclaim
Although aspects of the plaintiff’s claims for confirmation and other relief conflict with earlier judgments, the earlier judgments merely involved matters such as “findings in the reasons of judgments in infringement litigation.”
⇒ The right of access to the courts is important, and the bringing of this action cannot be said to amount to an “unlawful act markedly lacking in reasonableness.”

Judgment note: With respect to the principal action, the judgment states 「特許権が原告に帰属することの確認を求める訴えを却下する。」 (the action seeking confirmation that the patent right belongs to the plaintiff is dismissed) (judgment, p. 1, lines 12–13). The application for the separate invention was filed by Nippon Steel (judgment, p. 3, lines 11–14), and the judgment describes 「株式会社日鐵テクノリサーチ」 (Nittetsu Techno Research Co., Ltd.), which was merged into the defendant, as 「関連会社」 (an affiliated company) of Nippon Steel (judgment, p. 2, lines 20–23). The second lawsuit ended in dismissal of the action and of the claims on grounds such as the refusal decision having become final (judgment, p. 4, lines 9–11), and the claim in the fourth lawsuit was dismissed on the ground that 「通常実施権を超える利益が被告に生じているとは認められない」 (no benefit exceeding that of a non-exclusive license is found to have accrued to the defendant) (judgment, p. 6, lines 13–15). As for the third lawsuit, the first-instance court 「別件発明に係る傾斜測定装置が本件訂正発明の技術的範囲に属することを認めるに足りないなどとして、請求棄却の判決を言い渡した」 (rendered a judgment dismissing the claim on grounds such as that it could not be found that the inclination measuring device relating to the separate invention fell within the technical scope of the

corrected invention at issue) (judgment, p. 5, lines 19–21), and it was the appellate judgment that held that the patent at issue had 「特許法１２３条１項６号に規定する無効理由があり」 (a ground for invalidation prescribed in Article 123(1)(vi) of the Patent Act) (judgment, p. 6, lines 4–5). Judgment

[Trademark law ★] A case in which the court held that the designated services in Class 40, “rental of food waste processing machines; rental of chemical machinery and equipment,” of the trademark at issue consisting of the standard characters “ゴミサー” are similar to the cited designated goods in Class 7, “food waste processing machines; liquid fertilizer manufacturing apparatuses,” of the cited trademark consisting of the standard characters “ゴミサー” (falling under Article 4(1)(xi) of the Trademark Act), and rescinded the JPO trial decision dismissing the request for invalidation of the trademark registration at issue, which had held, among other things, that “rental of food waste processing machines” in Class 40 among the designated services at issue was not similar to “food waste processing machines” in Class 7 among the cited designated goods (not falling under Article 4(1)(xi) of the Trademark Act),

Intellectual Property High Court judgment of December 1, 2025 (2024 (Gyo-Ke) No. 10056) (Presiding Judge Ken Nakadaira)

◆ Full text of the judgment

[Summary of the judgment]

1. Criteria for assessing similarity between designated services and designated goods for the purposes of Article 4(1)(xi) of the Trademark Act

Whether the designated goods of one trademark and the designated services of another trademark are similar should be determined by whether a relationship is found in which, because of circumstances such as those goods and services ordinarily being manufactured, sold or provided by the same business operator, use of identical or similar trademarks for those goods and services is likely to cause them to be mistaken for goods or services manufactured, sold or provided by the same business operator.

2. Actual trading circumstances concerning the sale and rental of goods, and similarity between the designated services at issue and the cited designated goods

At the time the decision to register the trademark at issue was made, actual trading circumstances are found in which manufacturers of construction machinery belonging to Class 7, the same class as the cited designated goods, or their affiliated companies engaged in rental as well as sales. In addition, among companies handling goods such as output equipment, including copying machines and printers, and office equipment, multiple companies list both the sale and rental of goods among their corporate purposes. It is ordinarily not particularly unexpected for a person who uses a trademark on machinery also to rent out that machinery; rather, it is within the range of what can be anticipated. Furthermore, consumers of the designated services at issue are persons who use food waste processing machines, and it is inferred that many consumers of the cited designated goods are also persons who use food waste processing machines; the consumers of both therefore overlap to a substantial extent.

Taking these circumstances into account, it can be said that there is a relationship in which use of identical or similar trademarks for the designated services at issue and the cited designated goods is likely to cause them to be mistaken for goods or services manufactured, sold or provided by the same business operator. Accordingly, the designated services at issue and the cited designated goods are found to be similar.

[Comments]

1. Regarding Point 1 of the Summary of the judgment

(1) Concerning similarity between goods and services prescribed in Articles 4(1)(xi), 37(i) and other provisions of the Trademark Act, Article 2(6) of that Act provides: “In this Act, the scope of things similar to goods may include services, and the scope of things similar to services may include goods.” As a confirmatory interpretative provision, it generally affirms the possibility of similarity between goods and services (Industrial Property System Revision Deliberation Office, General Affairs Division, General Affairs Department, Japan Patent Office, ed., Service Mark Registration System: Article-by-Article Commentary on the Amended Trademark Act (Yuhikaku, 1992), p. 41).

(2) As for the criteria for assessing such similarity between goods and services, according to the commentary of the Japan Patent Office, which administers the Trademark Act, it is appropriate to adopt the confusion theory rather than the

attributes theory, in the same manner as the precedent on the criteria for assessing similarity of goods under Article 2(1)(ix) of the former Trademark Act, which held that "whether designated goods are similar should not be determined, as the original judgment did, by whether the goods themselves are likely to be mistaken for or confused with each other in trade; rather, where, because of circumstances such as those goods ordinarily being manufactured or sold by the same business operator, there is a relationship in which use of identical or similar trademarks on those goods is likely to cause them to be mistaken for goods manufactured or sold by the same business operator, even if the goods themselves are not likely to be mistaken for or confused with each other, it is appropriate to construe those trademarks as falling within similar goods referred to in Article 2(ix) of the Trademark Act (Act No. 99 of Taisho 10)" (underlining added by the author; the same applies below) (Supreme Court judgment of June 27, 1961, Minshu Vol. 15, No. 6, p. 1730 [Tachibana Masamune case]) (Industrial Property System Revision Deliberation Office, General Affairs Division, General Affairs Department, Japan Patent Office, ed., Service Mark Registration System: Article-by-Article Commentary on the Amended Trademark Act (Yuhikaku, 1992), p. 39). Not only trademark examination practice concerning Article 4(1)(xi) of the Trademark Act (Trademark Examination Guidelines [16th revised edition], "Part 3," "X. Article 4(1)(xi) (Another person's registered trademark pertaining to an earlier application)," p. 20), but also numerous court decisions, including those concerning Article 37(i) of the Trademark Act, adopt the same view (Tokyo District Court judgment of April 28, 1999, Hanrei Jiho No. 1691, p. 136 [Virus Buster case]; Tokyo District Court judgment of October 21, 1999, Hanrei Times No. 1019, p. 250, affirmed by the Tokyo High Court judgment of September 28, 2000, Hanrei Times No. 1056, p. 275 [Village Hakusan case]; Osaka District Court judgment of June 30, 2011, Hanrei Jiho No. 2139, p. 92, affirmed by the Osaka High Court judgment of March 7, 2013 (2011 (Ne) No. 2238), courts' website [Mon Chouchou case]; Intellectual Property High Court judgment of November 11, 2024 (2024 (Gyo-Ke) No. 10028), courts' website [AWG treatment case]; and others).

In this respect, Point 1 of the Summary of the judgment likewise states the same view concerning the criteria for assessing similarity between designated services and designated goods for the purposes of Article 4(1)(xi) of the Trademark Act.

(3) More specifically, regarding the criteria for assessing such similarity between goods and services, trademark examination practice states: "In determining similarity between goods and services, for example, the following criteria shall be

considered comprehensively and a specific determination shall be made in each case. In this case, in principle, the Examination Guidelines for Similar Goods and Services shall be followed. ① Whether the manufacture and sale of the goods and the provision of the services are generally conducted by the same business operator; ② whether the uses of the goods and services coincide; ③ whether the places where the goods are sold and the services are provided coincide; ④ whether the range of consumers coincides" (Trademark Examination Guidelines [16th revised edition], "Part 3," "X. Article 4(1)(xi) (Another person's registered trademark pertaining to an earlier application)," p. 21). It also states that "goods and services assigned the same similar group code are presumed similar in examination," and that, even for goods and services assigned different similar group codes, where the remarks column states that they are "presumed similar," although cross-searching is not conducted in principle during examination, it is conducted to the extent possible when information is provided or in similar circumstances (Examination Guidelines for Similar Goods and Services [corresponding to the 12th edition of the International Classification, version 2024], "1-7" and "1-11").

On the other hand, in numerous court decisions (Tokyo District Court judgment of October 21, 1999, Hanrei Times No. 1019, p. 250, affirmed by the Tokyo High Court judgment of September 28, 2000, Hanrei Times No. 1056, p. 275 [Village Hakusan case]; Osaka District Court judgment of June 30, 2011, Hanrei Jiho No. 2139, p. 92, affirmed by the Osaka High Court judgment of March 7, 2013 (2011 (Ne) No. 2238), courts' website [Mon Chouchou case]; Intellectual Property High Court judgment of November 11, 2024 (2024 (Gyo-Ke) No. 10028), courts' website [AWG treatment case]; and others), as a starting point, in principle, irrespective of the above similar group codes and the like, a specific determination is made in each case by comprehensively considering factors similar to factors ①–④ in the Trademark Examination Guidelines. Particularly in recent years, an approach can be seen that somewhat relaxes those factors ①–④ to "the existence and degree of actual circumstances in which the manufacture and sale of goods and the provision of services are conducted by the same business operator, commonality in the uses of goods and services, identity of the places where goods are sold and services are provided, the extent of overlap between consumers of goods and services, and the like" (Intellectual Property High Court judgment of November 11, 2024 (2024 (Gyo-Ke) No. 10028), courts' website [AWG treatment case]; and others).

In this respect, although Point 1 of the Summary of the judgment itself does not state this directly and expressly, in light of the facts found in the application of the criteria in Point 2 of the Summary of the judgment, this judgment is understood as having made a specific determination in this case by comprehensively considering factors similar to factors ①–④ of the Trademark Examination Guidelines.

2. Regarding Point 2 of the Summary of the judgment

According to the Examination Guidelines for Similar Goods and Services and other sources, the designated services at issue in Class 40, "rental of food waste processing machines; rental of chemical machinery and equipment," and the cited designated goods in Class 7, "food waste processing machines; liquid fertilizer manufacturing apparatuses," are assigned different similar group codes: "40J09" and "40J10" for the former, and "09G63" and "11A06," and "09A06" for the latter, and the remarks column does not state that they are "presumed similar." Nevertheless, in applying the criteria, Point 2 of the Summary of the judgment affirmed similarity between the designated services at issue and the cited designated goods, unlike the trial decision at issue.

In this respect, whereas the trial decision at issue, in the absence of sufficient allegations and proof by the petitioner (plaintiff) and others, denied similarity between the designated services at issue and the cited designated goods by strictly and restrictively considering factors ①–④ above while considering only general and constant actual trading circumstances relating solely to the designated services at issue and the cited designated goods, Point 2 of the Summary of the judgment is understood as having affirmed similarity between the designated services at issue and the cited designated goods, following supplementation of the allegations and proof by the plaintiff (petitioner) and others, by considering factors ①–④ in a relaxed and expansive manner while also considering individual and specific actual trading circumstances concerning services and goods surrounding and related to the designated services at issue and the cited designated goods, including not only construction machinery but also output equipment such as copying machines and printers and office equipment.

Together with the Intellectual Property High Court judgment of November 11, 2024 (2024 (Gyo-Ke) No. 10028), courts' website [AWG treatment case], which generally affirmed similarity between the designated services in that other case in Class 44, "rental of medical machinery and equipment," and the cited

designated goods in Class 10, “medical machinery and equipment (excluding ‘walking aids and crutches’),” and the like, which likewise had different similar group codes and no statement in the remarks column that they were “presumed similar,” Point 2 of the Summary of the judgment may be thought to influence future decisions toward more broadly affirming similarity between machinery and equipment and their rental, where rental or leasing readily intervenes in trading in the goods, including medical machinery and equipment, construction machinery, output equipment such as copying machines and printers, and office equipment —items that are often expensive, used for short periods, subject to rapid technological development, and complex to maintain and manage.

[Excerpts from the judgment]

1. Criteria for assessing similarity between designated services and designated goods for the purposes of Article 4(1)(xi) of the Trademark Act

“Whether the designated goods of one trademark and the designated services of another trademark are similar should be determined by whether a relationship is found in which, because of circumstances such as those goods and services ordinarily being manufactured, sold or provided by the same business operator, use of identical or similar trademarks for those goods and services is likely to cause them to be mistaken for goods or services manufactured, sold or provided by the same business operator (see Supreme Court, 1958 (O) No. 1104, Third Petty Bench judgment of June 27, 1961, Minshu Vol. 15, No. 6, p. 1730).”

2. Actual trading circumstances concerning the sale and rental of goods, and similarity between the designated services at issue and the cited designated goods

“There are actual trading circumstances in which manufacturers of construction machinery belonging to Class 7, the same class as the cited designated goods, or their affiliated companies engage in rental as well as sales. In addition, among companies handling goods such as output equipment, including copying machines and printers, and office equipment, multiple companies list both the sale and rental of goods among their corporate purposes (Exhibits Ko 72–74; the defendant’s corporate purposes also include ‘manufacture, sale and rental of industrial machinery and equipment’ [the entire purport of the oral argument]). It is ordinarily not particularly unexpected for a person who uses a trademark on machinery also to rent out that machinery; rather, it is within the range of what can be anticipated. Furthermore, consumers of the designated services at issue are persons who use food waste processing machines, and it is inferred that

many consumers of the cited designated goods are also persons who use food waste processing machines; the consumers of both therefore overlap to a substantial extent.

Taking these circumstances into account, it can be said that there is a relationship in which use of identical or similar trademarks for the designated services at issue and the cited designated goods is likely to cause them to be mistaken for goods or services manufactured, sold or provided by the same business operator. Accordingly, the designated services at issue and the cited designated goods are found to be similar."

Judgment note: Item 1 of the [Excerpts from the judgment] is taken from the judgment, p. 15, lines 1–7, and Item 2 from the judgment, p. 17, lines 5–21; Item 2 omits the opening words 「以上のとおり、」 (as stated above). Judgment

Legal Update May 2026

Scope: The 27 articles dated May 1–31, 2026 in Nakamura & Partners' Legal Updates and Hideki Takaishi's IP Updates.

Articles included: 27

Authors: Hideki Takaishi (26 articles); Kei Iida (the article published on May 27).

Article indexes: Legal Updates / Hideki Takaishi's IP Updates

This Month's Highlights May 2026 Intellectual Property and Legal Updates

This month covers 27 articles published in May 2026. The articles focus on identifying the subject matter protected and the scope of rights, including the copyrightability of mass-produced utilitarian articles, similarity of composite trademarks, video takedown requests, trade secrets, and patent term extensions. Articles on both the first-instance and appellate judgments in the same dispute also appear, inviting attention to the assessment of the facts underlying the conclusions.

1 Copyrightability of mass-produced utilitarian articles and the essential part of a design

The article on the Supreme Court judgment of April 24, 2026 introduces the standard of whether the shape of a children's chair can be perceived, conceptually and separately from its function-derived configuration, as a creative expression, and the application of that standard. Copyrightability of the chair was denied. Kei Iida's commentary examines the relationship with the previous separability theory and the omission of the purpose of creation and the term "aesthetic appreciation" from the standard. In the design field, Osaka District Court, 2023 (Wa) 10125, "Container for a Liquid Soap Dispenser," identified the specific rear shape as the essential part in light of use by attachment to a wall. The article indicates the need to compare the parts consumers examine when checking functionality, as well as the front appearance.

2 Separate observation of composite trademarks and differences in notation

Articles on both Osaka District Court, 2024 (Wa) 5007, and Osaka High Court, 2025 (Ne) 1750, concerning "Koi Ichigo," were published in the same month. The first-instance court regarded "awa" as an indication of origin and extracted "koi ichigo," whereas the appellate court understood the sign as a combination of "awa koi" and "ichigo," rejected separate observation, and found dissimilarity. Even when packaging and actual trading circumstances are considered, the conclusion may differ according to which portions are understood as a unit. The "VALENTINO" case permitted extraction and comparison because the famous lettering created a strong and dominant impression. In "Paku to Mogu," however, "パクモグ" was found similar and "PAKUMOGU" dissimilar. The article on Appeal 2024-18950 likewise reports that the decision found "ViCREA" and "BICREA" dissimilar on the basis of differences in appearance despite identical pronunciation, illustrating the need to examine the assessment of each element.

3 Circumstances of trademark acquisition and proof of distinctiveness

The "LEADER／リーダー" and "MYOFOCUS" cases offer a comparison of public order and morality assessments. The former set aside the invalidation decision in light of the acquisition from the lawful right holder and other circumstances; the latter found misappropriation based on close similarity down to details, the timing of filing and other circumstances, and, considering the issue date of the revenue stamp on the submitted receipt and the circumstances of its production, did not find that the related plaintiff's mark had been created in October 2015. The circumstances of acquisition and subsequent use of a trademark are examined separately. 2024 (Gyo-Ke) 10048, concerning a three-dimensional trademark, denied distinctiveness of a shape related to the product's function or aesthetics and found the sales record and survey results insufficient to establish acquired distinctiveness. In "Pon-chan," recognition within the city was distinguished from recognition outside it, raising the relationship between the geographic extent of recognition and the evidence.

4 Video takedown requests and permission to use works

Tokyo District Court, 2023 (Wa) 70125, did not regard notices requesting video removal and other measures as tortious, in part because they had reasonable factual grounds and were not found to have been abused for an improper purpose. In the Osaka High Court article concerning shogi game-record information, it was the video distribution using information obtained from paid distribution that was held tortious; the takedown requests directed against it were not held improper. Osaka High Court, 2024 (Ne) 1431, concerning a film screenplay, found acceptance of changes from consent to the co-screenwriter's participation and cooperation with revisions. 2024 (Ne) 10017, concerning programs, also found implied permission for reuse and modification while recognizing infringement of the right of attribution, requiring separate consideration of the acts of use and the individual moral rights.

5 Management of customer information and the substance of contractual wording

Osaka District Court, 2023 (Wa) 5749, denied secret management in light of circumstances including access to customer information by all employees using a shared ID and password. It also examined price differences and prospects of concluding contracts when considering causation for the failure to obtain orders. In the non-compete case, Osaka District Court, 2023 (Wa) 9115, the prohibition encompassed areas measured from establishments with which the employee had no involvement, and a restrictive interpretation was also rejected. Tokyo District Court, 2023 (Wa) 70680, recognized a personal joint and several guarantee from the memorandum's promise to make "the maximum possible payment" and the circumstances of its preparation. Actual information management, the objects of restrictions, and the identity of the payer are not determined solely by formal labels.

6 Scope of patent rights and preparation for use inventions

Osaka District Court Orders, 2025 (Yo) 20008 and 20009, examine the relationship between a later extension registration based on approval of a 12 μg formulation and a 24 μg formulation for which the earlier extended term had expired. The reasoning centers on harmonizing the scope and units of extension registration with the scope of the right's effect. In "Clothing," construction of the manner of joining the lifeline passage and motivation to apply ordinary garment technology to clothing for a special use were decided separately. "Bone Anchor with Improved Fixation Strength" focuses on adopting a well-known eyelet, while "Bag Processing Machine" focuses on identifying the earlier application's processes and waiting state. The introduction to Nobuhiro Tago's "Patent Protection for Food Use Inventions at the European Patent Office" recommends distinguishing embodiments and target groups for medical and non-medical uses in the application as filed.

Three-Point Summaries of All Articles

Category	Article title and three-point summary
Copyright	**【Copyright Law ★★★】 A precedent holding that, where the shapes and other features of all or part of a mass-produced utilitarian article can be perceived, conceptually and separately from the configuration derived from its function, as a creative expression of thoughts or sentiments, all or part of that article falls within the artistic domain among the works referred to in Article 2(1)(i) of the Copyright Act, affirming the lower court's denial of copyrightability of the plaintiff's products shown below, and dismissing the appeal** ① The issue was whether the shape of a mass-produced children's chair constituted an artistic work. ② The Supreme Court applied the test of whether creative expression could be perceived conceptually and separately from the function-derived configuration, denied copyrightability, and dismissed the appeal. ③ It is necessary to examine separable creative expression, rather than merely the aesthetic impression of a product's shape.
Design	**【Design】 Osaka District Court, 2023 (Wa) 10125, "Container for a Liquid Soap Dispenser" case ＜Presiding Judge Matsuami＞** ① The essential part of a design and similarity to the defendant's product were disputed for a wall-mounted liquid soap dispenser container. ② The court identified the specific rear shape attracting consumers' attention as essential and denied similarity and a utilization relationship because of differences in the magnets and other features. ③ Design comparison requires examination of the parts consumers observe in light of use and of differences in their specific shapes.
Copyright	**【Copyright】 Tokyo District Court, 2023 (Wa) 70125 ＜Presiding Judge Takahashi＞** ① The issue was whether notices alleging copyright and other infringements by videos constituted a tort interfering with the uploader's expressive activities. ② The court denied a tort in light of the review of removal requests, the notices' factual grounds, and the absence of abuse for an improper purpose. ③ The legality of a takedown request is examined in light of its grounds, purpose, and the platform's review system, as well as the form used.
IP General	**【Unfair Competition Prevention Act / Non-Compete】 Osaka District Court, 2023 (Wa) 9115 ＜Presiding Judge Matsuami＞** ① The validity of a clause prohibiting competing businesses within two kilometers of the corporation's establishments during employment and for six months thereafter was disputed. ② The court held the clause invalid as excessively restricting occupational freedom by covering unrelated establishments and also rejected a restrictive interpretation. ③ Non-compete clauses require specific consideration of the employee's relationship to the establishments, geographic scope, and compensatory measures.
IP General	**【Contract】 Tokyo District Court, 2023 (Wa) 70680 【Method for Screening Inhibitors of Phosphorylation of Telomerase Reverse Transcriptase】 ＜Presiding Judge Nakashima＞** ① The issue was whether a memorandum concerning an unpaid lump sum established a personal joint and several guarantee by the company representative. ② The court found an agreement to guarantee jointly and severally from the individual identity of the promisor, the wording, and the circumstances of preparation. ③ Even without the word "guarantee," the payer's identity and the performance promised upon the principal debtor's default may establish a guarantee.
Copyright	**【Copyright】 Osaka District Court, 2023 (Wa) 11871, "Method of Diagnostic Imaging Based on Relativization through Comparison" ＜Presiding Judge Matsuami＞** ① Ownership of copyright and other rights in a paper, flowcharts, screen layouts, and a diagnostic imaging system was disputed. ② The court recognized the plaintiff's rights in the paper, denied copyrightability of the flowcharts and layouts, and held that, even if the system were a copyright work, its author would be Hitachi Software or the defendant that commissioned it, and not the plaintiff. ③ Ideas, creative expression, and the identity of the actual system developer must be distinguished when determining ownership.

Category	Article title and three-point summary
IP General	**【Unfair Competition Prevention Act / Trade Secrets】 Osaka District Court, 2023 (Wa) 5749 ＜Presiding Judge Takemiya＞** ① Liability for former employees' acquisition and use of customer information, competition, and deletion of information was disputed. ② The court denied secret management given access by all employees with shared credentials and did not recognize causation for lost orders. ③ The actual secrecy measures and whether orders would have been obtained absent the competition each require proof.
Foreign	**【Paper / European Patents】 Patent Protection for Food Use Inventions at the European Patent Office (Nobuhiro Tago, Patent, September 2025)** ① This article introduces a paper on medical and non-medical food use inventions and obtaining protection at the European Patent Office. ② It organizes relevant Board of Appeal decisions, points for drafting specifications, and enforcement of use inventions in Germany. ③ The article recommends distinguishing medical and non-medical embodiments, examples, and target groups from the filing stage.
Trademark	**【Trademark】 Tokyo District Court, 2022 (Wa) 11316, "Paku to Mogu" ＜Presiding Judge Kokubu＞** ① Similarity of "パクとモグ" to the defendant's katakana and alphabetic signs, and damages, were disputed. ② The court found "パクモグ" similar and "PAKUMOGU" dissimilar and set a royalty rate of 1%, considering user numbers after removal of the sign and other circumstances. ③ Differences between katakana and alphabetic notation and trading circumstances can affect similarity, while the sign's contribution also matters for damages.
Trademark	**【Trademark (Violation of Public Order and Morality)】 Intellectual Property High Court, 2024 (Gyo-Ke) 10079 ＜Presiding Judge Honda＞** ① The issue was whether a former distributor's acquisition of "LEADER／リーダー" trademark rights violated public order and morality. ② The court denied such a violation and set aside the invalidation decision, considering acquisition from the lawful holder after the contractual relationship had ended. ③ Assessment of acquisition circumstances is distinct from remedies for confusing use after acquisition.
Copyright	**【Authors' Moral Rights】 Osaka High Court, 2024 (Ne) 1431 ＜Presiding Judge Morisaki＞** ① The issue was whether additions and revisions by a co-screenwriter infringed the right of integrity. ② The appellate court found acceptance of changes from consent to participation and cooperation with revisions and reversed the first-instance judgment, dismissing the claim. ③ Consent to participation, responses to revisions, and authority to decide the final script affect permission and liability in joint creation.
Trademark	**【Trademark】 Intellectual Property High Court, 2024 (Gyo-Ke) 10089, "VALENTINO" case ＜Presiding Judge Miyasaka＞** ① Similarity between a trademark consisting of "GIANNI VALENTINO" and a figure and the cited trademark was disputed. ② The court permitted extraction of the famous "VALENTINO" portion because of its strong and dominant impression and found Article 4(1)(xi) of the Trademark Act applicable. ③ The fame of part of a composite mark may affect whether that part is extracted as its essential portion.
Trademark	**【Trademark Act】 Intellectual Property High Court, 2024 (Gyo-Ke) 10090, "Pon-chan" case** ① The issue was whether Tatebayashi City's mascot "Pon-chan" was a famous sign under Article 4(1)(vi) of the Trademark Act. ② The court required recognition across an appropriately sized geographic area in light of its regional nature and set aside the refusal decision because use outside the city was limited. ③ Recognition within a locality must be distinguished from its spread to surrounding areas when examining use and media exposure.

Category	Article title and three-point summary
Trademark	**【Trademark】 Intellectual Property High Court, 2024 (Gyo-Ke) 10072 ＜Presiding Judge Nakadaira＞** ① The issue was whether emails to trading partners concerning “INTUITION” established trademark use sufficient to avoid cancellation for non-use. ② The court recognized transmission of product ledgers and materials as use and set aside the decision because lettering size and line breaks caused “INTUITION” to be recognized as a product name. ③ Evidence of use requires attention to materials sent to customers and how product names and model numbers are displayed.
Copyright	**【Copyright】 Intellectual Property High Court, 2024 (Ne) 10065 ＜Presiding Judge Miyasaka＞** ① Copyright and related infringement and the need for an injunction were disputed over photographs with mosaic processing and overlaid illustrations. ② The court found infringement because essential expressive features remained perceptible and found a risk of renewed infringement from continued retention of the data and other circumstances. ③ It is necessary to assess the original photograph’s remaining essential features and the risk of reuse indicated by data retention.
Trademark	**【Trademark】 Intellectual Property High Court, 2024 (Gyo-Ke) 10048 ＜Presiding Judge Hibiku Shimizu＞** ① Inherent and acquired distinctiveness of a three-dimensional continuous glucose monitor shape were disputed. ② The court denied distinctiveness as a predictable functional or aesthetic shape and did not find acquisition from sales, combined use with a word mark, or survey results. ③ Proof of the shape’s own source-identifying capacity requires consideration of the word mark’s influence and the survey population.
IP General	**【Unfair Competition Prevention Act / Circulation or Communication of False Facts】 Osaka High Court, 2024 (Ne) 338 ＜Presiding Judge Morisaki＞** ① The legality of distributing real-time shogi game-record information obtained from paid distribution and of takedown requests against that distribution was disputed. ② The court held the video distribution tortious as exceeding free competition, found its business interests unprotected, and did not find the takedown requests improper. ③ Copyrightability of game records must be distinguished from business-interest infringement through information use and the evaluation of takedown requests.
Trademark	**【Trademark】 Intellectual Property High Court, 2024 (Gyo-Ke) 10067, “MYOFOCUS” = 2024 (Gyo-Ke) 10068** ① The issue was whether acquiring Japanese marks closely resembling a foreign business’s “MYOFOCUS” marks violated public order and morality. ② The court found misappropriation based on detailed similarities and filing circumstances. Considering the issue date of the revenue stamp on the submitted receipt and the circumstances of its production, the court also assessed the credibility of the plaintiff’s assertions and evidence as low and did not find that the related plaintiff’s mark had been created in October 2015. ③ Details of signs, acquisition timing, and authenticity of evidence supporting independent creation affect the legality of trademark acquisition.
Copyright	**【Copyright】 Intellectual Property High Court, 2024 (Ne) 10017 ＜Presiding Judge Honda＞** ① Copyrightability of delivered programs, permission for reuse and modification, and infringement of attribution rights were disputed. ② The court recognized copyrightability and implied permission for reuse and modification but also found infringement of attribution rights concerning a creator’s name displayed at startup. ③ The scope of permission and attribution rights are examined separately in light of delivery, prior use, and display to customers.
Trademark	**【Trademark】 Appeal 2024-18950** ① This article introduces a decision on similarity between standard-character “ViCREA” and the figurative cited mark “BICREA.” ② According to the article, despite identical pronunciation as “Bikurea,” the marks were held dissimilar because their appearances differed markedly and were distinguishable. ③ Similarity requires consideration of appearance and concept as well as identical pronunciation.

Category	Article title and three-point summary
Patent	**Osaka District Court Orders, 2025 (Yo) 20008 and 20009 【Prostaglandin Derivatives for the Treatment of Abdominal Discomfort】** ① The issue was whether an extension based on approval of a 12 μg formulation also covered a 24 μg formulation whose earlier extended term had expired. ② The court emphasized harmony with the scope and units of extension registration and held that the later extension did not cover products identical to the subject of the earlier regulatory disposition and certain other products. ③ Multiple extensions require matching the ingredients and quantities of each approval with expiry of earlier extensions when examining scope.
Trademark	**【Trademark】 Appeal 2025-416** ① This article introduces a decision on similarity between standard-character “百香” and the cited mark “MOMOCA.” ② According to the article, the marks were held dissimilar in light of “ka” as the Roman-letter spelling of カ, distinguishable appearance, and differences in concept. ③ The concluding question about “CA” is the author’s interrogative comment and does not guarantee registrability generally.
Trademark	**Osaka High Court, 2025 (Ne) 1750 【Koi Ichigo】 ＜Presiding Judge Morisaki＞** ① This appeal disputed the first-instance assessment of similarity between “恋　苺” and “あわ恋いちご.” ② The appellate court rejected separating “awa” from “koi ichigo” and reversed on the basis of differences in appearance, pronunciation, and concept. ③ Even a sign containing a place name requires consideration of whether it is understood as a unit in light of other wording, packaging, and trading circumstances.
Trademark	**【Trademark】 Osaka District Court, 2024 (Wa) 5007, “Awa Koi Ichigo” ＜Presiding Judge Matsukawa＞** ① The first-instance case concerned extracting “koi ichigo” from “awa koi ichigo” and the defense of use of a registered trademark. ② The first-instance court found similarity by treating “awa” as geographic origin and rejected the registered-mark-use defense, but the appellate court reversed. ③ Use of the first-instance reasoning requires checking the appellate article published in the same month and the changed assessment of separate observation.
Patent	**Tokyo District Court, 2019 (Wa) 32779 【Clothing】 ＜Presiding Judge Kokubu＞** ① Satisfaction of the lifeline-passage joining limitation and alleged lack of inventive step based on ordinary garment technology were disputed. ② The court found satisfaction without limiting the joining manner and denied motivation to apply ordinary pocket technology to special-purpose clothing. ③ The joining structure required by the claim and motivation to apply prior technology each require specific examination.
Patent	**Intellectual Property High Court, 2023 (Gyo-Ke) 10062 【Bone Anchor with Improved Fixation Strength】 ＜Presiding Judge Shoji＞** ① Construction of the bone anchor’s outer surface, channels, and ribs and inventive step of providing an eyelet were disputed. ② The court regarded the outer surface as the circumference joining the rib tips and denied inventive step because adopting and placing a well-known eyelet was obvious. ③ Correspondence between prior-art parts and claim terms, and whether a “preferred” feature is indispensable, require attention.
Patent	**Intellectual Property High Court, 2023 (Gyo-Ke) 10092 【Bag Processing Machine】 ＜Presiding Judge Honda＞** ① The issue was whether transport-speed control and a bag waiting state in an earlier application differed from the claimed bag processing machine. ② The court recognized current control using electromagnetic coils as presupposed and upstream waiting as “stock,” finding a violation of Article 29-2 of the Patent Act. ③ The earlier application’s text and process timing must be examined to identify disclosure of the control method and waiting state.

【Copyright Law ★★★】 A precedent holding that, where the shapes and other features of all or part of a mass-produced utilitarian article can be perceived, conceptually and separately from the configuration derived from its function, as a creative expression of thoughts or sentiments, all or part of that article falls within the artistic domain among the works referred to in Article 2(1)(i) of the Copyright Act, affirming the lower court's denial of copyrightability of the plaintiff's products shown below, and dismissing the appeal

Supreme Court judgment of April 24, 2026 (2025 (Ju) No. 356) (Presiding Judge Kazumi Okamura)

◆ Full text of the judgment

	Plaintiff's products		
			

【Summary of the Judgment】

1. Standard for determining copyrightability of mass-produced utilitarian articles

Where the shapes and other features of all or part of a mass-produced utilitarian article can be perceived, conceptually and separately from the configuration derived from its function, as a creative expression of thoughts or sentiments, all or part of that mass-produced utilitarian article falls within the artistic domain among the works referred to in Article 2(1)(i) of the Copyright Act.

2. Copyrightability of the plaintiff's products

The chair in question is a mass-produced utilitarian article. Its having two legs rising from the floor in an approximately L-shaped form at an angle of approximately 66 degrees, with a seat board and footrest board fixed between the two legs parallel to the floor, is merely a circumstance supporting the proposition that the shape resulting from the arrangement of the legs, seat board, and footrest board, which are configurations derived from the function as a children's chair, gives rise to an aesthetic impression. The shapes and other features of all or part of the chair can only be perceived as configurations derived from its function as a children's chair and cannot be perceived, separately from those configurations, as a creative expression of thoughts or sentiments. Accordingly, the chair cannot be said to constitute a work.

【Comments】

1. Regarding point 1 of the summary of the judgment

In recent years, concerning the standard for determining copyrightability of so-called applied art, Intellectual Property High Court precedents have seen the coexistence of the separability theory (Intellectual Property High Court judgment of August 28, 2014, Hanrei Jiho No. 2238, p. 91 [Fashion Show case]) and the unrestricted theory (Intellectual Property High Court judgment of April 14, 2015, Hanrei Jiho No. 2267, p. 91 [TRIPP TRAPP II case]), both differing from the theory imposing heightened requirements based on a staged approach found in many earlier lower-court precedents. Subsequently, the separability theory became predominant in many lower-court precedents, particularly those of the Tokyo District Court. There was also an Intellectual Property High Court precedent understood as adopting the separability theory as a question of whether the subject matter was “a creative expression of thoughts or sentiments” under the first part of Article 2(1)(i) of the Copyright Act (Intellectual Property High Court judgment of December 8, 2021, 2021 (Ne) 10044, Courts website [Octopus Slide case]). However, the judgment below (Intellectual Property High Court judgment of September 25, 2024, 2023 (Ne) 10111, Courts website [TRIPP TRAPP III case]), like another Intellectual Property High Court precedent (Intellectual Property High Court judgment of June 29, 2021, 2021 (Ne) 10024, Courts website [Good Core case]), was understood as adopting the separability theory as a question of whether the subject matter “falls within the … artistic … domain” under the latter part of that item, while using whether it “is an independent object of aesthetic appreciation” as the standard for separability. The judgment below also stated a separate standard that did not address separability but asked whether the purpose of creation was “exclusively for aesthetic appreciation.”

In contrast, point 1 of the summary is understood, regarding the standard for determining copyrightability of mass-produced utilitarian articles, as adopting only the separability theory as a question of whether the subject matter “falls within the … artistic … domain” under the latter part of Article 2(1)(i) of the Copyright Act, without adopting a standard asking whether the purpose of creation was “exclusively for aesthetic appreciation.” Furthermore, it is understood as using whether the subject matter “can be perceived … conceptually and separately from the configuration derived from its function,” rather than whether it “is an independent object of aesthetic appreciation,” as the standard for separability.

These features of point 1 of the summary may be better understood through Justice Akira Ojima’s supplementary opinion, which states that “the opinion of the Court … determined whether, with respect to mass-produced utilitarian articles, their shapes and other features, for which design registration can be obtained, also separately constitute works falling within the artistic domain”; that “the opinion of the Court also indicates a standard delineating the respective areas of application of the Copyright Act and the Design Act to mass-produced utilitarian articles, taking into account their respective subject matter, purposes of protection, requirements and procedures for protection, content of rights and their duration, and other matters, from the perspective of what subject matter our intellectual property legal system has legislatively chosen to protect and how”; and that “the opinion of the Court … does not use the term ‘aesthetic appreciation.’ The intention is that … the term ‘aesthetic appreciation’ may give rise to the mistaken impression that a high degree of creativity or artistry is necessary, and, in the first place, it appears inappropriate for a court to determine whether something merits appreciation as aesthetic art.”

2. Regarding point 2 of the summary of the judgment

Point 2 of the summary applies the standard for copyrightability of mass-produced utilitarian articles in point 1 to the plaintiff’s products and denies their copyrightability. In this respect, as Justice Akira Ojima’s supplementary opinion states, “the … requirement stated in the opinion of the Court is also highly abstract, but, just as the opinion of the Court applies it to the chair in this case, accumulation of various cases will be expected in the future concerning the concrete application of that requirement.”

【Excerpts from the Judgment】

1. Standard for determining copyrightability of mass-produced utilitarian articles

“With regard to mass-produced utilitarian articles, it is inappropriate to adopt an interpretation under which, if their shapes and other features can be said to be creative expressions of thoughts or sentiments, they immediately constitute works as falling within the artistic domain.” “That is, … in light of the requirements for creation of rights, their content and duration, and other matters under Japan’s Design Act and Copyright Act, if

the above interpretation were adopted and broad protection under the Copyright Act in addition to the Design Act were recognized for the shapes and other features of mass-produced utilitarian articles, protection for a longer period and over a broader scope might be obtainable under the former Act without deliberately incurring costs and obtaining design registration, potentially undermining the significance of the Design Act's existence. Furthermore, if copyright protection broadly extended to the shapes and other features of mass-produced utilitarian articles, authors' moral rights could complicate legal relationships and impede use of such articles, or those shapes and other features could remain unavailable for free use for a long period even after expiry of the design right, potentially obstructing the above purpose of the Design Act of contributing to industrial development."

"Nevertheless, the shapes and other features of mass-produced utilitarian articles are ordinarily determined subject to certain constraints in relation to the functions necessary for their practical purpose (hereinafter simply 'functions') and cannot be perceived separately from configurations derived from those functions. Among them, however, are articles, for example those with decoration exceeding the level of mere patterns or surface treatment added to their surfaces, in which the shapes and other features of the added portions are unrelated to function and can conceptually be perceived as paintings or sculptures separate from the function-derived configurations. Such articles may be described as mass-produced utilitarian articles to which 'artistic works' (Article 10(1)(iv) of the Copyright Act) have simply been added, and it is natural that protection under that Act extends to those added portions.

Among mass-produced utilitarian articles are also those, for example articles that can be perceived as sculptures or the like as a whole, in which the shapes and other features of all or part of the article, although related to its function as a utilitarian article, can conceptually be perceived as sculptures or the like separate from the configurations derived from its function. Such shapes and other features can be said to be the same as the aforementioned case of an 'artistic work' simply being added, in that a creative expression of thoughts or sentiments can be perceived separately from the function-derived configuration, and it is therefore appropriate to extend copyright protection to them. Shapes and other features of the foregoing kind can be described as exceptional among the shapes and other features of mass-produced utilitarian articles, which are ordinarily subject to certain functional constraints, and the risk that extending copyright protection to them would produce the harmful effects discussed above is small.

On the foregoing basis, where the shapes and other features of all or part of a mass-produced utilitarian article can be perceived, conceptually and separately from the configuration derived from its function, as a creative expression of thoughts or sentiments, all or part of that mass-produced utilitarian article should be held to fall within the artistic domain among the works referred to in Article 2(1)(i) of the Copyright Act."

2. Copyrightability of the plaintiff's products

"Applying this to the present case, according to the facts described above, the chair is a mass-produced utilitarian article, and the appellants argue, in substance, that the chair constitutes a work because creativity is recognized in its having two legs rising from the floor in an approximately L-shaped form at an angle of approximately 66 degrees, with a seat board and footrest board fixed between those two legs parallel to the floor. However, this is merely a circumstance supporting the proposition that the shape resulting from the arrangement of the legs, seat board, and footrest board, which are configurations derived from the function as a children's chair, gives rise to an aesthetic impression. The shapes and other features of all or part of the chair can only be perceived as configurations derived from its function as a children's chair and cannot be perceived, separately from those configurations, as a creative expression of thoughts or sentiments. Accordingly, the chair cannot be said to constitute a work."

【Design】 Osaka District Court, 2023 (Wa) 10125, “Container for a Liquid Soap Dispenser” case ＜Presiding Judge Matsuami＞

Source article: Nakamura & Partners

Publication date: May 21, 2026

Judgment date: March 17, 2025 Judgment

1. Identification of the “essential part”
The container’s shape (a rectangle with rounded corners) and the configuration of the lid: Because these previously existed, they are not regarded as special innovations (essential parts).
As to the magnet on the rear, because the product is used attached to a wall, consumers (purchasers) focus on the rear out of concern over whether it “attaches firmly to the wall.”
⇒ The “specific shape of the rear (wall-mounting surface)” is the most important part of the design (essential part).

2. Comparison of the registered design and the defendant’s products
Registered design: A large, simple, uncluttered rectangular magnet covering the entire rear.
Defendant’s products: “Anti-slip sheets” are arranged above and below the magnet, creating a complex “I-shaped” form as a whole.
⇒ Dissimilar

3. “Utilization relationship” also denied
Because the characteristics (essential part) of the designs themselves were held different, it cannot be said that another person’s design is being used as a base.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93970.pdf

Figure: The defendant’s container, showing front, rear, left and right side views, top and bottom views, and a perspective view; registered-design drawings are shown alongside.

Publication date: May 21, 2026

Judgment date: March 11, 2025 Judgment

The act of using YouTube notification forms to give notices of copyright infringement, privacy infringement, and defamation concerning uploaded videos was held not to constitute a tort interfering with expressive activities.

1. Google carefully reviews requests for removal based on infringement, and there are instances in which it seeks additional information or rejects requests; removal is therefore not “unconditional.”
The notices in this case complained of infringement of publicity or portrait rights and described corresponding facts (unauthorized use of names and facial photographs). Even if a copyright form was used because a suitable form could not be found, this cannot immediately be said to be unlawful.

2. Under Google’s terms (Community Guidelines), measures such as removal may be taken at its own discretion against videos that a person “finds uncomfortable” or that “harm [the person’s] reputation,” even if the legal requirements for “privacy infringement” or “defamation” are not met.

3. Because the notices had corresponding factual grounds (display of a name, wording calling the person a fraudster, etc.), they cannot be said to have been deliberately based on false facts, and they were not found to have been abused exclusively for an improper purpose (harassment, etc.).

Tokyo District Court judgment

On appeal, the Intellectual Property High Court upheld the judgment and dismissed the appeal on October 16, 2025 (2025 (Ne) 10037). Judgment

【Unfair Competition Prevention Act / Non-Compete】 Osaka District Court, 2023 (Wa) 9115 ＜Presiding Judge Matsuami＞

Source article: Nakamura & Partners

Publication date: May 21, 2026

Judgment date: January 27, 2025 Judgment

* The geographic scope of the non-compete provision was too broad and therefore invalid.
⇒ No restrictive interpretation, from the perspective of its chilling effect.
(Only a very small amount of damages was awarded for preparatory acts during employment as a breach of an ancillary duty under the employment contract.)

(Summary of the holding)

The non-compete provision prohibits operating a competing business “within a radius of 2 kilometers from this corporation,” without the plaintiff’s permission, during employment and for six months after resignation.

The plaintiff has approximately ten establishments in addition to its head-office location in its welfare business division alone, and “within a radius of 2 kilometers from this corporation” must be interpreted as prohibiting opening a business within a radius of two kilometers measured from all those establishments (the plaintiff’s assertion is also understood in that way).

However, given a business of the plaintiff’s kind, it may be reasonable to prohibit post-employment competition for a certain period within a certain distance of an establishment in which the employee was actually involved, but the non-compete provision, which includes establishments with which the employee had no involvement at all, excessively restricts freedom of occupational choice and should be held invalid as contrary to public order and morality (and, in light of the chilling effect of such a provision, it also cannot be regarded as valid within a limited scope through a restrictive interpretation).

It cannot be said that compensatory measures sufficient to justify such a broad prohibition on competition had been taken.

(The actual distance to the defendants’ establishment was not made a premise of the determination, and no specific distance was found.)

【Contract】 Tokyo District Court, 2023 (Wa) 70680 【Method for Screening Inhibitors of Phosphorylation of Telomerase Reverse Transcriptase】 ＜Presiding Judge Nakashima＞

Source article: Nakamura & Partners

Publication date: May 21, 2026

Judgment date: January 30, 2025 Judgment

The wording in the memorandum, “I pledge to make the maximum possible payment in the event of non-performance,” constituted an expression of intent to guarantee, and a joint and several guarantee agreement concerning the obligation to pay the lump sum in question was formed by defendant B personally.

(Excerpts from the judgment)

Because the subject of “I pledge to make the maximum possible payment in the event of non-performance” is “I, B” at the beginning of that sentence, a reasonable interpretation of the contracting parties’ intent is that defendant B personally was to make payment in the event of non-performance by the defendant company.

…

Its content is the very meaning of a guarantee: providing performance of the same content if the principal obligation is not performed, and it is merely a paraphrase of wording synonymous with a guarantee. Accordingly, the memorandum cannot be understood to have been prepared with an intention different from that of a guarantee.

…

Considering not only the meaning of the wording of the memorandum but also the circumstances and situation of its preparation and the parties’ conduct after preparation, it is appropriate to find that defendant B expressed, through the memorandum, an intention jointly and severally to guarantee the obligation to pay the lump sum and agreed with the plaintiff jointly and severally to guarantee that obligation.

…

From a substantive perspective as well, even assuming that C, the defendant company’s finance and contracts officer, bore the principal responsibility for this dispute, defendant B held the position of representative director of the defendant company. It would therefore not be particularly unnatural, in light of the circumstances at the time, for B, taking that position into account, to have provided a joint and several guarantee in response to the request of the plaintiff, who was also B’s senior in the community of medical researchers and had been compelled by non-payment of the lump sum to seek its payment from defendant B.

【Copyright】 Osaka District Court, 2023 (Wa) 11871, “Method of Diagnostic Imaging Based on Relativization through Comparison” ＜Presiding Judge Matsuami＞

Source article: Nakamura & Partners

Publication date: May 21, 2026

Judgment date: February 17, 2025 Judgment

The plaintiff sought confirmation of copyright and other relief against the employer concerning a paper, flowcharts, screen layouts, and a diagnostic imaging system based on them that the plaintiff had created.

1. Regarding the paper, the plaintiff’s copyright and moral rights were recognized, with copyright registration (registration of the date of first publication) as one of the reasons.

2. Regarding the flowcharts and screen layouts, copyrightability was denied as they merely illustrated ideas using commonplace expression.

3. Regarding the system, even if it were a work, the author would be Hitachi Software, the system developer, or the defendant that commissioned it, and not the plaintiff.

The judgment, p. 12, identifies Hitachi Software or the defendant that commissioned it as the author, on the assumption that the system constitutes a copyright work.

【Unfair Competition Prevention Act / Trade Secrets】 Osaka District Court, 2023 (Wa) 5749 ＜Presiding Judge Takemiya＞

Source article: Nakamura & Partners

Publication date: May 21, 2026

Judgment date: February 13, 2025 Judgment

The plaintiff alleged violations of the Unfair Competition Prevention Act and the duty of fidelity, claiming that former employees had improperly acquired and used customer information to conclude contracts at a competitor, but the allegations were not accepted.

— A password accessible to everyone within the company does not establish “secret management.” (As in numerous precedents.)

The court denied that the information qualified as a “trade secret” under the Unfair Competition Prevention Act (secret management).
The customer information was managed in the plaintiff’s core business system, but all approximately 1,708 employees could easily access it, including from personal devices, using a shared ID and password. No measures restricted viewing authority to specific persons, and general confidentiality provisions in the work rules alone were insufficient secrecy measures. The court held that the information was not in a state in which it could objectively be recognized as managed as secret.
As to breach of the duty of fidelity and the duty not to compete, although establishment of the defendant company and business activities during the individual defendant’s employment were regarded as problematic, causation with damage was denied.
For customers other than customer 6, the differences between the plaintiff’s expected amounts and the actual contract amounts ranged from approximately 7 million yen to slightly under 25 million yen. The difference for customer 6 was approximately 1.5 million yen. However, the plaintiff’s expected amount was already low, at 20 million yen, making a further reduction difficult; the prospect rating was “C” (a probability below 30% of confirmation that month), and no presentation had been made. The court therefore found no prospect that the plaintiff would have concluded that contract either.
The defendants’ ability to obtain the orders was merely the result of price competitiveness that enabled contracting at budgets substantially below the plaintiff’s; it was not recognized that the plaintiff would have obtained the orders without the defendants’ conduct.
Deletion of information from the system was also performed by the individual defendant, who was a branch manager, based on a determination that there was “no prospect of concluding a contract,” and was within the scope of business discretion, not an improper act of concealment.

IP Force intellectual property case reports

【Paper / European Patents】 Patent Protection for Food Use Inventions at the European Patent Office (Nobuhiro Tago, Patent, September 2025)

Source article: Nakamura & Partners

Publication date: May 15, 2026

1. Classification of use inventions at the EPO

The EPO operates by strictly distinguishing use inventions as “medical uses” and “non-medical uses.”

Claim type	Category	Legal basis	Example wording
First medical use	Product claim	EPC Article 54(4)	A composition for use as a medicament
Second medical use	Product claim	EPC Article 54(5)	A composition for use in a method for the treatment of X
Non-medical use	Method claim	Guidelines F–IV 4.16	Use of a composition for Y

2. Boundary and criteria between medical and non-medical uses

Because functional foods are situated at the boundary between “prevention of disease (medical)” and “maintenance of health or improvement of physiological functions (non-medical),” that distinction is key to obtaining rights.

In determining whether a use is medical, whether an act by a medical practitioner is contemplated and whether a specific disease or symptom is targeted may serve as factors. These are not stated as necessary conditions common to every case; the determination depends on the specific circumstances of each case.

＜Determinations in principal Board of Appeal cases＞

T 815/22 (infant formula): The use of “promoting bodily growth so that it is comparable to bodily growth when breast-fed” was not recognized as a medical use (second medical use) in light of specific circumstances including the purpose of ordinary nutrition for healthy infants and a setting involving use by persons other than medical practitioners.

T 158/13 (perfume): The use of “providing relief from physiological and psychological states such as drowsiness, fatigue, and listlessness” inseparably included pathological characteristics (such as depression) and was therefore not recognized as a non-medical use even with a disclaimer of “non-therapeutic use.”

T 1916/19 (antimicrobial composition): Where embodiments such as removal of bacteria in healthy persons, in which the disease-prevention effect is negligibly small, are included, protection as a non-medical use may be recognized.

T 0815/22, Reasons 1.39, states that the assessment “depends on the specific circumstances of each case.” As discussed by Tago at pp. 64 and 67, the involvement of medical practitioners is one contextual factor, rather than the sole basis for a uniform rule.

T 0815/22, Reasons 1.28–1.43

3. Practical recommendations for obtaining rights for functional foods

In view of the EPO’s strict amendment requirements (the gold standard), it is necessary to provide descriptions from multiple perspectives at the filing stage.

In preparing the specification, clearly distinguishing and describing embodiments and examples of medical uses (specific diseases and patient groups) and non-medical uses (healthy persons and groups at low risk of disease) is extremely important for securing rights in both.

4. Enforcement in Germany

Use inventions granted at the EPO can become powerful rights in Germany and elsewhere.

In Germany, acts accompanied by “manifest preparation (sinnfällige Herrichtung),” such as product design premised on the patented use or attachment of instructions, constitute infringement.

(However, the strictness of labeling under the European Union’s “health claims regulation” must also be considered.)

【Trademark】 Tokyo District Court, 2022 (Wa) 11316, “Paku to Mogu” ＜Presiding Judge Kokubu＞

Source article: Nakamura & Partners

Publication date: May 15, 2026

Judgment date: January 24, 2025 Judgment

Trademark in question: “パクとモグ”

Defendant’s sign 5: “パクモグ” — similar
Defendant’s sign 1: “PAKUMOGU” — dissimilar

Compared with the plaintiff’s trademark “パクとモグ,” the defendant’s sign “パクモグ” differs in the presence or absence of the middle “と,” but is similar in appearance and pronunciation and identical in concept.
⇒ Similar

For the sign in alphabetic notation, the court considered that its appearance differed markedly from the plaintiff’s trademark and actual trading circumstances, including the display of the defendant’s name on its webpages and elsewhere.
+ Even if “パクとモグ” were written in the alphabet with “と” omitted, that notation would not necessarily be “PAKUMOGU.”
⇒ Dissimilar

＜Damages＞

The number of unique users of the defendant’s website did not decrease after the sign “パクモグ” was removed from the defendant’s webpages.
⇒ Royalty rate of 1%

【Trademark (Violation of Public Order and Morality)】 Intellectual Property High Court, 2024 (Gyo-Ke) 10079 ＜Presiding Judge Honda＞

Source article: Nakamura & Partners

Publication date: May 15, 2026

Judgment date: February 5, 2025 Judgment

Trademark “LEADER／リーダー”

The plaintiff (BROTURES Co., Ltd.) was formerly a distributor of the U.S. company Leader Bike, but after that company’s bankruptcy, acquired the trademark right from Honda Motor Co., Ltd. (Honda) and registered a divided transfer.
In response, the defendant, which succeeded to the business of the U.S. company Leader Bike, requested a trial for invalidation of the trademark registration.
The Japan Patent Office issued an invalidation decision on the ground that Article 4(1)(vii) of the Trademark Act (violation of public order and morality) applied.
⇒ Decision set aside (trademark valid)

(Summary of the holding)

Article 4(1)(vii) of the Trademark Act (violation of public order and morality) is a general provision that should apply only where the circumstances of trademark registration markedly lack social propriety and are contrary to the legal order.
In this case, the plaintiff acquired the “LEADER” trademark, to which neither the U.S. company Leader Bike nor the defendant held rights, from the lawful right holder, Honda Motor Co., Ltd. (Honda).
Because the contractual relationship between the plaintiff and the U.S. company Leader Bike had terminated on that company’s bankruptcy, the acquisition took place in a state in which no subsequent duties existed; the acquisition itself therefore cannot be said markedly to lack social propriety.
Even if the plaintiff described itself as the “exclusive distributor” and engaged in conduct causing confusion with the defendant’s products, that is a matter to be resolved through civil litigation under the Unfair Competition Prevention Act or other laws and does not constitute a ground for invalidating the trademark registration itself (violation of public order and morality).

【Authors' Moral Rights】 Osaka High Court, 2024 (Ne) 1431 ＜Presiding Judge Morisaki＞

Source article: Nakamura & Partners

Publication date: May 15, 2026

Judgment date: February 27, 2025 Judgment

The first-instance plaintiff, who created the original draft (tenth draft) of a film screenplay, sought damages and other relief against the first-instance defendant, who participated as a co-screenwriter and added to and revised that screenplay (creating the twelfth draft), claiming unauthorized alteration and infringement of the right of integrity.
The first-instance court found infringement in part, but this court reversed and dismissed the claim.

(Summary of the holding)

The first-instance plaintiff consented to the first-instance defendant's participation as a screenwriter and, during approximately two months in which the first-instance defendant independently performed additions and revisions, did not object and cooperated with research and other work.
⇒ It is appropriate to find that the first-instance plaintiff accepted the first-instance defendant's changing the screenplay by adding that defendant's own creation.
Because the first-instance defendant would display a name as a well-known screenwriter, creative additions and revisions were naturally foreseeable, and the first-instance plaintiff can be said to have understood this as well.
Authority to make the screenplay the "final draft" belonged to the production side, including the producer, not the first-instance defendant. Therefore, the first-instance defendant cannot be held legally responsible for the production side's making it the final draft without the first-instance plaintiff's express consent.

【Trademark Act】 Intellectual Property High Court, 2024 (Gyo-Ke) 10090, “Pon-chan” case

Source article: Nakamura & Partners

Publication date: May 15, 2026

Judgment date: March 12, 2025 Judgment

“Fame” under Article 4(1)(vi) of the Trademark Act denied
— Tatebayashi City has a population of slightly under 80,000, compared with approximately 1.97 million for Gunma Prefecture as a whole

For the trademark “ぽんちゃん,” applied for by an individual, the Japan Patent Office refused registration on the ground that, in relation to Tatebayashi City, Gunma Prefecture’s mascot character “ぽんちゃん” (the cited sign), Article 4(1)(vi) of the Trademark Act (a famous sign indicating a non-profit undertaking in the public interest) applied.
⇒ Decision set aside

(Summary of the holding)

To qualify as “famous” under Article 4(1)(vi) of the Trademark Act, recognition throughout Japan is not necessarily required in light of the regional nature of the organization or undertaking, but broad recognition across a “geographic area of an appropriate scale” is nevertheless necessary.

The Nichinan City Emblem judgment (Intellectual Property High Court, October 30, 2012, 2012 (Gyo-Ke) 10125) required broad recognition among traders and consumers across at least one trading area for the designated goods or services. The JPC judgment (Intellectual Property High Court, February 4, 2025, 2024 (Gyo-Ke) 10060) interpreted “famous” in item (vi) as having the same meaning as “well known among consumers” in item (x). The Pon-chan judgment assessed recognition across a geographic area of an appropriate scale in light of the regional character of the organization or undertaking.

The cited sign “ぽんちゃん” was recognized as widely known within Tatebayashi City through manholes, installations, and other uses.
However, outward-facing use beyond the city was limited and sporadic, social media followers numbered only in the thousands, and past media exposure (commercials, etc.) was temporary, so broad recognition in Gunma Prefecture and the surrounding region could not be recognized.
⇒ Does not qualify as “famous.”

Nichinan City Emblem, judgment p. 7 / JPC, judgment p. 9

【Trademark】 Intellectual Property High Court, 2024 (Gyo-Ke) 10072 ＜Presiding Judge Nakadaira＞

Source article: Nakamura & Partners

Publication date: May 8, 2026

Judgment date: January 22, 2025 Judgment

The decision cancelling the registration for non-use was set aside.
Trademark concerned: “INTUITION”

The act of an employee of the plaintiff’s non-exclusive licensee sending a product ledger and presentation materials by email to a trading partner during the period requiring proof was recognized as “use of the trademark.”
The defendant asserted, “These are continuous strings of letters and not use of ‘INTUITION’ alone,” but “INTUITION” appeared on a separate line and in larger letters than the other wording (WILL JP, etc.), and consumers would recognize “INTUITION” as the product name (brand name) and “WILL JP,” etc., as its model number or type.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93769.pdf

【Copyright】 Intellectual Property High Court, 2024 (Ne) 10065 ＜Presiding Judge Miyasaka＞

Source article: Nakamura & Partners

Publication date: May 8, 2026

Judgment date: January 30, 2025 Judgment

The appellant asserted that mosaic processing and other measures made perception of the content impossible, but the mosaic was coarse, and even the portions with overlaid illustrations allowed perception of essential expressive features, such as the subject’s upper body and hair, angle, and lighting. Infringement of the reproduction right and right of integrity therefore could not be avoided.

Regarding the right of attribution, Article 19(2) of the Copyright Act is a provision for users’ convenience, but, at least where unauthorized alteration has been made as in this case, the premise for applying that paragraph is absent.

An injunction is necessary
— In light of the manner of infringement and the history between the parties, the appellant’s deliberate continued retention of the photograph data supports a risk of renewed infringement.
The fact that other persons can obtain the data is not a reason to deny the risk of infringement by the appellant.

【Trademark】 Intellectual Property High Court, 2024 (Gyo-Ke) 10048 ＜ Presiding Judge Hibiku Shimizu＞

Source article: Nakamura & Partners

Publication date: May 8, 2026

Judgment date: January 30, 2025 Judgment

* Distinctiveness of the three-dimensional trademark denied

＜Distinctiveness (Article 3(1)(iii) of the Trademark Act)＞
The shape of the applied-for trademark (a flattened, substantially circular cylinder, a disk on the bottom, a hole with a gear-like pattern, grooves on the side, etc.) is objectively recognized as adopted to serve the product's functions (attachment to the body, needle insertion, ventilation, etc.) or aesthetics.
Even if there are characteristic parts not found in other companies' products, they remain within the range foreseeable as choices for functional or aesthetic reasons in products of the same kind, and the shape, being represented in a commonly used manner, does not distinguish the applicant's goods from others'.

＜Applicability of Article 3(2) of the Trademark Act＞
The plaintiff's product has substantial sales volume and revenue, but its market share is not overwhelming and is declining, and it is always displayed together with the word mark "FreeStyle リブレ" in advertisements and elsewhere, so the shape itself is not recognized as independently creating a strong impression on consumers.
The questionnaire survey submitted by the plaintiff is problematic because its respondents were limited to persons with experience purchasing or providing guidance on CGM (continuous glucose monitors), and it does not reflect general recognition including potential consumers. Taking both the unaided and aided recall results into account, the court found that the shape itself had not acquired independent distinctiveness through use.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94002.pdf

Figure: The three-dimensional trademark applied for, depicting the continuous glucose monitor.

【Unfair Competition Prevention Act / Circulation or Communication of False Facts】 Osaka High Court, 2024 (Ne) 338 ＜Presiding Judge Morisaki＞

Source article: Nakamura & Partners

Publication date: May 8, 2026

Judgment date: January 30, 2025 Judgment

The appellant, holding exclusive distribution rights for shogi competitions (the Osho and Ginga tournaments), made takedown requests and other requests alleging copyright infringement against the appellee's videos, which reproduced the tournaments' real-time moves (game-record information) on a board for distribution.

The appellee's video distribution was held to constitute a tort. Before deciding whether the game records were copyrightable, the court examined the infringement of business interests through the use of information obtained from the paid distribution.
Organizers such as the Japan Shogi Association use a business model in which, for shogi competitions that do not generate admission-fee revenue, operating costs are covered by consideration for licensing broadcast and distribution rights, and the appellant acquired distribution rights at considerable expense.
⇒ The appellee's video distribution provided viewers free of charge with real-time game-record information obtained from the appellant's paid distribution, reducing the number of fans who paid to receive distribution from the appellant and causing direct damage to the appellant.
The appellee, while understanding that business model, used real-time game-record information at only the cost borne by an individual viewer to earn revenue and obstructed the appellant's revenue structure. In circumstances where other video distributors were devising ways to compete within the rules, this was unlawful conduct exceeding the scope of free competition and infringing the appellant's business interests, and constituted a tort.
Because the appellee's distribution conduct constituted a tort, the benefits derived from that business were not legally protected interests.
Even assuming that copyrightability of the game records were denied, videos causing damage to third parties could be subject to removal under the platform's terms of use; in relation to the appellee, who was a tortfeasor, therefore, the takedown requests in question could not be said to have been improper.

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-93782.pdf

【Trademark】 Intellectual Property High Court, 2024 (Gyo-Ke) 10067, “MYOFOCUS” = 2024 (Gyo-Ke) 10068

Source article: Nakamura & Partners

Publication date: May 8, 2026

Judgment date: January 16, 2025 Judgment 1 ／ Judgment 2

The defendant’s (an Australian corporation’s) trademark was misappropriated.
⇛ Violation of public order and morality (Article 4(1)(vii) of the Trademark Act)

The defendant used “MYOFOCUS” and other trademarks in Australia and also held seminars in Japan.
On September 27, 2019, the day after the defendant’s first seminar in Japan ended, the plaintiff applied in Japan for trademarks closely resembling the defendant’s marks. Registration followed on July 7, 2021. By a letter dated October 27, 2021, the plaintiff then demanded that the defendant cease use.
The marks closely resembled one another down to details, including the features of the figure and the mixed uppercase/lowercase arrangement (mYofocUs); the resemblance could not be regarded as coincidental.
The revenue stamp affixed to the designer’s receipt dated November 24, 2015, submitted by the plaintiff, bore a new design introduced in 2018. Considering this issue date, together with the circumstances in which the receipt was produced, the explanation concerning its reissuance and the failure to produce the original, the court assessed the credibility of the plaintiff’s assertions and evidence as low and did not find that the related plaintiff’s mark had been created in October 2015.

Source article: Nakamura & Partners

Publication date: May 8, 2026

Judgment date: November 21, 2024 Judgment

The programs in question allow a range of choices in the specific description of the source code and reflect their creator’s individuality.
⇒ Copyrightability recognized

The court did not find that a program reproduced or modified from program 3 was used as the program for the first-instance defendant’s “Silent Robo” product.

As to the reproduction right and the right of integrity, the court found an implied agreement permitting reproduction and modification for use within the first-instance defendant’s business. Programs 3–5 were delivered with their source code. The defendant had previously reproduced and modified delivered programs for sites other than those that prompted the orders. The plaintiff, a former employee who continued to produce and deliver numerous programs after becoming independent, could have been aware of that practice.
For programs 1, 2 and 6, disclosure of source code at delivery was not established. Nevertheless, the specifications imposed no objective restriction on use at other sites, and the plaintiff had made no particular statement restricting reproduction or modification. Taking these circumstances together with the previous practice, the court found the same implied agreement.

For program 3, the creator’s name was displayed for approximately one second at startup, in circumstances in which customers could check it on site, so this constituted “presentation to the public,” and infringement of the right of attribution was established.

Judgment, pp. 15–17

＜Issues＞

Extension 1: Extension based on approval of the originator's 24 μg formulation (expired)

Extension 2: Extension based on approval of the originator's 12 μg formulation (in force)

The creditor asserted that the effect of the subsisting "extension registration based on the 12 μg approval" also extended to the generic "24 μg formulation" (the products being substantially identical).

The scope and units of extension registration (the scope divided into strips) and the scope of the effect of the patent right whose term has been extended (a scope having breadth that includes substantial identity) do not necessarily coincide, and the latter generally has greater breadth. However, only when the two are "interpreted and operated consistently and harmonized with one another can the purpose of the system, equity between the patent holder and third parties, be realized."

The scope of effect "should be interpreted within the constraint that it not conflict with the scope and units of the registration of extension of duration."

The court held: "Where extension registrations have been made for the same patent right relating to a pharmaceutical on the grounds of multiple dispositions specified by Cabinet Order, the scope of effect of the patent right subject to a later extension registration … should be interpreted, at least, as not extending to production, assignment, etc., of products identical in ingredients, quantity, administration, dosage, efficacy, and effects to the product covered by the disposition specified by Cabinet Order that formed the basis of the earlier extension registration, because such products are not substantially identical to the product covered by the disposition specified by Cabinet Order that formed the basis of the later extension registration."

Furthermore, taking as a reference the product covered by the disposition specified by Cabinet Order that formed the basis of the later extension registration, (1) products with a quantitative difference greater than the quantitative difference from the product covered by the earlier disposition (for example, a larger difference in quantity), and (2) products having both the same quantitative difference as the product covered by the earlier disposition and a further qualitative difference (for example, a certain difference in ingredients in addition to the same difference in quantity), are more remote as products and likewise cannot be regarded as substantially identical.

If the creditor's position were accepted, where the earlier extended duration was shorter, third-party working of its subject product would be prohibited for a period longer than that regulated by the extension system, "greatly undermining the purpose of the patent term extension system, which divides the scope and units at the extension-registration application stage into strips according to ingredients, quantity, administration, dosage, efficacy, and effects, and seeks finely to adjust equity between the patent holder and third parties within those scopes and units."

【Trademark】 Appeal 2025-416

Source article: Nakamura & Partners

Publication date: May 8, 2026

According to the article, the applied-for mark “百香” (standard characters) and the cited mark “MOMOCA” were held dissimilar.

The article reports that, in Roman-letter spelling, the sound “カ” is spelled “ka,” the appearances are distinguishable, and there is no risk of confusion in concept.

Author’s comment: The original article raises the question whether representing “カ” with “CA” makes dissimilarity more likely and registration easier to obtain.

Osaka High Court, 2025 (Ne) 1750 【Koi Ichigo】
＜Presiding Judge Morisaki＞

Source article: Nakamura & Partners

Publication date: May 1, 2026

Judgment date: February 13, 2026 Judgment

(First instance: Osaka District Court, 2024 (Wa) 5007)

* Dissimilar (reversal)

Trademark in question: “恋　苺”

Defendant’s sign: “あわ恋いちご”

＜Separate observation denied (unlike the first instance)＞
The trademark holder’s assertion that “awa” means the place name “Awa” and therefore has no source-identifying function, making “koi ichigo” the essential portion, was not accepted.

＜Appearance＞
The trademark in question is written vertically in kanji, whereas the defendant’s sign is written horizontally in a POP-style typeface in hiragana except for “恋”; they are clearly different.

＜Pronunciation＞
The pronunciations are “Koi Ichigo” and “Awa Koi Ichigo,” and differ in the number of characters and are not similar.

＜Concept＞
“Love” and “faint love” evoke different concepts and are not similar.

(Excerpts from the judgment)

Even if the lettering “あわ” evokes the place name “阿波” because the defendant’s sign is affixed to packaging of the above design, in the actual trading circumstances in which that packaging is used for each of the defendant’s products accompanied by strawberries, the defendant’s sign is understood, on the premise that it is a composite mark combining “あわ恋” and “いちご,” merely as making a play on the geographic name “阿波,” the origin of the defendant’s products, in the “あわ” lettering of “あわ恋.” Accordingly, when determining similarity between the defendant’s sign and the trademark in question, it is impermissible to observe the defendant’s sign separately as “あわ” and “恋いちご” …. …

Whereas the trademark in question is written vertically in kanji, the defendant’s sign is written in hiragana except for “恋,” using slightly rounded POP-style lettering arranged at equal intervals in a slightly curved, single continuous horizontal line, and is clearly different in appearance. Moreover, the trademark in question produces the pronunciation “Koi Ichigo,” whereas the defendant’s sign produces “Awa Koi Ichigo”; although they overlap in part, the number of characters differs, and the pronunciations cannot be said to be similar. Both are words coined by combining the fruit name ichigo with a word describing a psychological or emotional state that does not ordinarily express taste, to express the fruit’s taste. However, because “love” and “faint love” evoke different concepts, the concepts resulting from combining each with ichigo likewise cannot be said to be similar. Accordingly, the trademark in question and the defendant’s sign cannot be said to be similar as a whole.

【Trademark】 Osaka District Court, 2024 (Wa) 5007, “Awa Koi Ichigo” ＜Presiding Judge Matsukawa＞

Source article: Nakamura & Partners

Publication date: May 1, 2026

Judgment date: July 17, 2025 Judgment

Trademark in question: “恋　苺”

Defendant’s sign: “あわ恋いちご”

① Determination of similarity of composite trademarks (permissibility of separate observation and identification of the essential portion)

The “あわ” portion of the defendant’s sign “あわ恋いちご” has multiple meanings, such as “泡, 粟, 安房, 阿波,” but the packaging of each defendant product prominently displays the words “Produced in Tokushima Prefecture,” illustrations of the Awa dance, and other indications.

In light of these actual trading circumstances, consumers recognize “あわ” as the regional name “阿波” and take it as an indication of origin, so that portion has no distinctiveness.

⇒ It is permissible to extract “恋いちご” from the defendant’s sign and compare it with the trademark “恋苺.”

② Similarity of the trademark in question and the defendant’s sign

Comparing the separated “恋いちご” portion of the defendant’s sign with the trademark “恋苺,” although they differ in appearance, both have the identical pronunciation “Koi Ichigo.”
In concept as well, both are coined expressions combining “love” and “strawberry” and give rise to the same concept of a strawberry that attracts strongly, like romantic love.

The defendant asserted that “あわ恋” means “faint love” and is indivisible, but this was rejected on the facts.

⇒ Similar, with a risk of mistaken identification or confusion

③ Defense of use of a registered trademark

The court held that use of a sign similar to a prior registered trademark in a manner causing mistaken identification or confusion among consumers constitutes an abuse of rights in light of the purpose and intent of the Trademark Act, even if it is use of a registered trademark, and does not establish a defense.

Cf. Reversed on appeal by the Osaka High Court on February 13, 2026 (2025 (Ne) No. 1750).

Tokyo District Court, 2019 (Wa) 32779 【Clothing】 ＜Presiding Judge Kokubu＞

Source article: Nakamura & Partners

Publication date: May 1, 2026

Judgment date: April 26, 2024 Judgment

1. Satisfaction of the claim limitations
From the wording of the claims, the “lifeline passage” need only have one end joined to the back side of the garment fabric and be formed in a tubular shape; the manner of joining (cylindrical, at an edge, etc.) is not further limited.
⇒ Satisfied

2. Validity (inventive step)
In the sample in question, one end of the lifeline passage is joined to the “front side” of the garment fabric, whereas in the invention it is joined to the “back side.”
⇒ The invention concerns clothing for a special use addressing prevention of air leakage and other problems, and there is no motivation to apply technology for pockets and the like in ordinary garments.
⇒ Inventive step recognized

https://www.courts.go.jp/assets/hanrei/hanrei-pdf-94061.pdf

Intellectual Property High Court, 2023 (Gyo-Ke) 10062 【Bone Anchor with Improved Fixation Strength】 ＜Presiding Judge Shoji＞

Source article: Nakamura & Partners

Publication date: May 1, 2026

Judgment date: May 14, 2024 Judgment

The “outer surface of the anchor body” in the applied-for invention refers not to the uneven surface itself formed by multiple channels and ribs but to the outer perimeter (circumference) joining the rib tips.
⇒ Likewise, in the cited invention, if the outer perimeter joining the tips of the bone-engaging surface portions (corresponding to ribs) is regarded as the outer surface, the “portions between the bone-engaging surface portions” correspond to “channels” formed within the outer surface, and the “bone-engaging surface portions” defined thereby correspond to “ribs.”

The applied-for invention has a configuration in which the channel “intersects” an eyelet (a hole through which a suture passes) in a T shape.
Providing a suture anchor with a through-hole (eyelet) for passing a suture was well-known technology before the application’s priority date.
⇒ Providing a well-known “eyelet” in place of the cited invention’s “continuous groove” could readily have been conceived by a person skilled in the art. In doing so, placing the eyelet at a position communicating with the channel (suture-receiving groove) (a position intersecting in a T shape), within a range that does not impair structural integrity, is merely a design matter that a person skilled in the art could appropriately adopt.

In Exhibit Ko 1, the recess accommodating the knot in the cited invention is described only as a “preferred” configuration, not an indispensable one.

⇒ Inventive step denied

Intellectual Property High Court, 2023 (Gyo-Ke) 10092 【Bag Processing Machine】 ＜Presiding Judge Honda＞

Source article: Nakamura & Partners

Publication date: May 1, 2026

Judgment date: May 9, 2024 Judgment

* Violation of the expanded prior-application rule (Article 29-2)

1. Identification of the earlier-filed invention
From the description in the earlier application’s specification (paragraph 0046, Figure 3, etc.), it can be understood that the filling-process time T2 is twice the other-process time T1 and that filling and closing of two groups take place during that time.

2. Difference 1 (adjustment of transport speed)
Whereas the invention adjusts speed through current to electromagnets, the earlier-filed invention uses electromagnetic coils for control.
⇒ The earlier specification describes arbitrary setting of speed through linear transport, and using electromagnetic coils as electromagnets and adjusting speed through current are naturally presupposed in the earlier-filed invention.

3. Difference 2 (stock function)
In the invention, processed bags are “stocked” upstream of the downstream device.
⇒ “Stock” means having the bags wait upstream so that the downstream device can immediately begin the next process.
⇒ In the earlier-filed invention as well, the second group waits upstream (in the third filling region) during sealing of the first group and can move to the sealing process immediately after completion, and this constitutes “stock.”

Legal Update (Items Posted in June 2026)

Scope: Articles published in June 2026 by attorney Hideki Takaishi (Nakamura & Partners)

Number of entries included: 32 (30 distinct titles; two titles are each posted at two different URLs)

List page: https://www.nakapat.gr.jp/ja/legal_updates_jp/

Selection: Entries whose publication date on the list page is in June 2026, in descending order of publication date; entries published on the same date retain their list order.

<Highlights of This Month> Key Points in the June 2026 Intellectual Property and Legal Affairs Update

The June 2026 Legal Update contains articles on patent disclosure requirements and inventive step, overseas filing, U.S. designs, protection of intellectual property in virtual space, trade secrets, and litigation procedure. This issue includes all 32 entries based on the publication dates on the list page. Two pairs with identical titles are retained as articles with separate URLs. The following addresses the specific issues and practical points presented in the original articles.

1. Obviousness and Infringement Analysis for U.S. Designs

“New Standards for Determining Obviousness of U.S. Design Patents” (佐々木眞人) addresses the abolition of the Rosen-Durling test by the 2024 LKQ en banc judgment. The framework examines not only the relationship with the primary reference but also the ordinary designer’s viewpoint, differences, and secondary considerations. In contrast, “Changes in the Methods for Determining Design Right Infringement in the United States” (the same author) explains the ordinary observer test after the Egyptian Goddess en banc judgment. It is important to distinguish the person whose viewpoint is adopted and the role of prior designs in obviousness and infringement. Source 1 / Source 2

2. Reviewing Specifications by Distinguishing Clarity from Support

“Examination of Clarity Determinations in Recent Court Decisions” (岡田健太郎 et al.) states that clarity determinations cannot be said to have become stricter and introduces cases in which expressions of degree can be understood through common general technical knowledge. In contrast, 2024 (Ne) No. 10038 [Brake Control Device and Behavior Analysis Device for a Motorcycle] <Presiding Judge Honda> refused to read angular velocity as angular acceleration in a specification consistently using the former, and found a support violation. Supplementing the meaning of a term must be distinguished from understanding a physically contradictory formula by correcting it. “The Support Requirement for Numerical Range Limitations in China” (胡春豊 and 林軍) presents the viewpoint of whether non-working ranges can be excluded without excessive effort, and policies for describing numerical ranges and examples. Source 1 / Source 2 / Source 3

3. Designing Conditions for Overseas Filing and International Licensing

“Differences Between the Japanese and European Patent Systems That Require Attention” (野村和弘 and フロリアン キューベック) organizes the number of independent claims, self-collision, amendments, and descriptions of measurement methods. “Points to Note When Filing Food-Use Inventions in Different Countries” shows the need to examine claim forms such as purpose-limited substances, non-therapeutic uses, methods, and Swiss-type claims according to national practice. In the introduction to “The UK InterDigital v. Lenovo Litigation over the Calculation of FRAND Rates” (小林和人), the process by which the Court of Appeal revised the rate to $0.225 per unit based on analysis of a comparable agreement is important. The High Court rate and Court of Appeal rate must not be confused, and conditions must be understood together with past royalties, the basis for discounts, and compound interest. Source 1 / Source 2 / Source 3

4. Protection in Virtual Space and Avoiding Trademark Confusion

“Protection of Goods and Other Subject Matter in Virtual Space under U.S. Design Law” by 山口洋一郎 and “A Consideration of Future Responses under Japanese Design Law to Design Protection in Virtual Space — In Light of International

Trends” by 星野光秀 provide different viewpoints on registrable images and the effect of rights across physical and virtual spaces. The possibilities of protection should be read together with the issues arising from expansion of the system. In trademarks, the article by 星野 addresses specific identification of virtual goods and classification of services. 2025 (Gyo-Ke) No. 10111 “SORA” <Presiding Judge Moritomi> emphasized extraction of the word element and actual trading circumstances of beauty-related services. The article on the consent system also shows the need to explain distribution channels, consumers, and manner of use, in addition to the existence of a consent document. Source 1 / Source 2 / Source 3 / Source 4 / Source 5

5. Litigation Practice That Organizes Evidence and the Scope of Claims Early

“The Practice and Theory of Preservation of Evidence in Intellectual Property Cases and Related Matters” (高村隆司) addresses use of summary courts and the effects of refusing presentation, while “Patent Attorneys as Judicial Research Officials” (髙村和宗 and 岩永勇二) explains the importance of organizing grounds for cancellation and evidence in the first preparatory brief. In Tokyo District Court, 2024 (Wa) No. 4142 [Portable Information Communication Device and Personal Computer System Using the Portable Information Communication Device] <Presiding Judge Kokubu>, separately claiming as a remainder the amount equivalent to consumption tax that could have been asserted in the prior actions was held contrary to good faith. 2024 (Gyo-Ke) No. 10036 [Chip Detection Device] <Presiding Judge Honda> also denied an interest in cancelling the trial decision to grant a patent based on the last amendment. It is important not only to secure evidence but also to organize what is claimed and which amendment is ultimately chosen. Source 1 / Source 2 / Source 3 / Source 4

6. Business Protection through Trade Secrets and IP Mixes

“Infringement Risks Arising from the Use of Other Companies’ Trade Secrets Brought in by Employees Changing Jobs” (石本貴幸) proposes written pledges, training, consultation desks, and checking the process by which results were created. “Intellectual Property and Intangible Assets in the Food Industry” (藤原研

二郎) and the Agriculture, Forestry, and Fisheries Committee's article on IP mixes explain combinations of know-how, brands, plant breeders' rights, and GIs through specific examples. "Use of AI in Patent Examination" (五十嵐康弘) further addresses use in summarization and translation with attention to access to primary information. These articles provide a perspective on managing information to be protected, technology to be disclosed, and information used in work according to their respective purposes. Source 1 / Source 2 / Source 3 / Source 4

Three-Line Summaries of All Articles

Category	Article Title and Three-Line Summary
IP in General	**[Article / Unfair Competition Prevention Act] The Practice and Theory of Preservation of Evidence in Intellectual Property Cases and Related Matters (高村隆司, Patent, June 2025)** ① This introduces an article examining the choice of court, a prima facie showing of grounds for preservation of evidence, and the opposing party's response in intellectual property cases. ② The introductory article recommends using summary courts based on the author's experience of applications to summary courts and organizes the issues of refusing presentation and deeming allegations true. ③ It is necessary to consider the court and the content of the prima facie showing, while the opposing party should consider how refusal affects the evaluation of evidence in the litigation on the merits.

Category	Article Title and Three-Line Summary
Design	**[Article / U.S. Designs] New Standards for Determining Obviousness of U.S. Design Patents (佐々木眞人, Patent, June 2025)** ① This introduces an article on the change in the test for obviousness of U.S. design patents following the LKQ en banc judgment. ② It explains that the Rosen-Durling test was abolished and replaced by a framework evaluating prior art, differences, the designer's level of skill, and secondary considerations. ③ Obviousness should be examined not only through selection of the primary reference but also through the viewpoint of an ordinary designer and objective evidence such as commercial success.
IP in General	**[Article / Unfair Competition Prevention Act] Infringement Risks Arising from the Use of Other Companies' Trade Secrets Brought in by Employees Changing Jobs (石本貴幸, Patent, October 2025)** ① This introduces an article on the infringement risks arising when a receiving company uses another company's trade secrets brought in by employees changing jobs. ② It presents four defensive measures: written pledges on joining, employee training, internal consultation desks, and detection of unnatural inventions. ③ It is important to establish an internal system covering superiors and subordinates as well as the employee changing jobs, and to check how results produced immediately after joining were created.

Category	Article Title and Three-Line Summary
Patent	**[Article / Patents] Examination of Clarity Determinations in Recent Court Decisions (岡田健太郎 et al., Patent, June 2025)** ① This introduces an article comparing recent court decisions and Patent Office trends on clarity, including expressions of degree. ② It explains that clarity determinations cannot be said to have become stricter and that understandability for a person skilled in the art tends to be evaluated from the specification and common general technical knowledge. ③ Explaining definitions, assessment indicators such as public standards, and the relationship between processes and structures in the specification helps prevent disputes.
Patent	**2024 (Gyo-Ke) No. 10036 [Chip Detection Device] <Presiding Judge Honda>** ① An applicant who obtained a trial decision to grant a patent based on its own later amendment sought cancellation in order to obtain a patent based on an earlier amendment. ② The court dismissed the action as inadmissible because the plaintiff had no interest in cancelling a trial decision that accepted its request based on the last amendment. ③ Because amendments during trial proceedings change the subject of examination, attention is required to whether an interest exists in challenging the subsequent trial decision to grant a patent in a cancellation action.

Category	Article Title and Three-Line Summary
Patent	**[Article / Patents] Use of AI in Patent Examination (五十嵐康弘, Patent, August 2025)** ① This introduces an article testing the use of cloud and on-premises generative AI for practical patent examination tasks. ② It explains hallucination measures through limiting tasks to summarization and translation, and the need to incorporate patent-specific reasoning and vocabulary. ③ It is important to consider the scope of application suited to examination work while monitoring model updates and maintaining access to primary information.
Patent	**[Article / Chinese Patents] The Support Requirement for Numerical Range Limitations in China (胡春豊 and 林軍, Patent, September 2025)** ① This introduces an article examining the support requirement for inventions combining numerical ranges in light of a judgment of the Supreme People's Court of China. ② It emphasizes whether a skilled person can understand the relationships among ranges, obtain suitable embodiments with limited experiments, and exclude non-working ranges without excessive effort. ③ The specification should include guidance and examples for numerical ranges, while invalidity arguments require specific proof that effective ranges cannot be recognized with ordinary effort.

Category	Article Title and Three-Line Summary
Patent	**[Article / European Patents] Differences Between the Japanese and European Patent Systems That Require Attention (野村和弘 and フロリアン キューベック, Patent, September 2025)** ① This introduces an article addressing differences between the Japanese and European patent systems concerning claims, self-collision, amendments, and parameter inventions. ② It organizes points to note about Europe's restrictions on independent claims, strict amendment requirements, disclosure of numerical ranges, and identification of measurement methods and standards. ③ When European expansion is planned, diverse numerical ranges and dependencies should be described from filing, and the timing of related applications and disclosure risks should be considered.
Patent	**[Article / UK Patents] The UK InterDigital v. Lenovo Litigation over the Calculation of FRAND Rates (小林和人, Patent, September 2025)** ① This introduces an article on the calculation of FRAND rates in the UK InterDigital v. Lenovo litigation. ② It explains how the rate based on comparable agreements was revised from the High Court's $0.175 per unit to the Court of Appeal's $0.225, and the treatment of past periods and compound interest. ③ License terms should be considered with regard to selection and adjustment of comparable agreements, the basis for volume discounts, past implementation periods, and interest.

Category	Article Title and Three-Line Summary
Patent	**[Article / Patents] Intellectual Property and Intangible Assets in the Food Industry (藤原研二郎, Patent, September 2025)** ① This introduces an article examining the role of intellectual property and intangible assets in food industries from their industrial stages and the characteristics of flavor and skills. ② It explains the importance of manufacturing know-how, brand stories, and the passing down of skills in light of the history and regionality of food and the complexity of flavor. ③ It is important to combine not only exclusivity through patents but also know-how management and brand formation according to the business's role.
Design	**[Article / U.S. Designs] Protection of Goods and Other Subject Matter in Virtual Space under U.S. Design Law (山口洋一郎, Patent, August 2025)** ① This introduces an article examining article use and the scope of rights in the protection of goods and other subject matter in virtual space under U.S. design law. ② It discusses the treatment of limitations based on article use, image protection as part of a display, and enforcement between physical and virtual spaces. ③ In filing and enforcing designs for virtual goods, the relationship between displayed articles and their overall appearance should be considered.

Category	Article Title and Three-Line Summary
Design	**[Article / Designs] A Consideration of Future Responses under Japanese Design Law to Design Protection in Virtual Space — In Light of International Trends (星野光秀, Patent, October 2025)** ① This introduces an article comparing potential Japanese legal responses to design protection in virtual space with systems and discussions in Europe and the United States. ② It distinguishes expansion of image-design protection from the extension of rights in physical articles to virtual goods and examines the balance between industrial development and freedom of creation. ③ It is necessary to consider not only expansion of design law but also the allocation of roles with copyright and unfair competition prevention law and international harmonization.
Trademark	**[Article / Trademarks] Treatment under Trademark Law of Goods and Services Relating to Virtual Space — The Nice Classification and the Situations in Europe, the United States, South Korea, and Japan (星野光秀, Patent, June 2025)** ① This introduces an article on the Nice Classification and national practices concerning classification and identification of goods and services related to virtual space. ② It explains that virtual goods should be specifically identified and generally classified in Class 9, while the classification of services may change according to the purpose and result of provision. ③ Comprehensive descriptions such as virtual goods should be avoided, and designations should correspond to the content and the purpose of the services provided.

Category	Article Title and Three-Line Summary
Trademark	**[Article / Trademarks] Consideration of the Use of the "Consent System" through Model Cases (中山真理子 and 竹山尚治, Patent, October 2025)** ① This introduces an article using model cases to examine preparation of agreements and written opinions under the trademark consent system. ② It explains that consent alone does not lead to registration and that likelihood of confusion must be examined in light of goods and services, distribution channels, consumers, and manner of use. ③ It is important to agree specifically on measures to avoid confusion and prove in written opinions the actual trading circumstances not fully covered in the agreement.
Patent	**2023 (Gyo-Ke) No. 10149 [Multi-Branched Heat Exchanger with Independent Baffles] <Presiding Judge Miyasaka>** ① The issues were correspondence between an amended heat-exchanger invention and the baffle cells of a cited invention, and motivation to combine. ② The court held that the baffle cells corresponded to solid walls and that separate walls meant functional distinction regardless of physical separation, and affirmed motivation based on the common technical field and the baffles serving as a means of solving the problem. ③ Correspondence with cited inventions should be examined not only by component names but also by their effects on fluid and functional distinctions.

Category	Article Title and Three-Line Summary
Patent	**2024 (Ne) No. 10038 [Brake Control Device and Behavior Analysis Device for a Motorcycle] <Presiding Judge Honda>** ① The issue was whether a brake-control formula satisfied the support requirement by interpreting angular velocity as an erroneous reference to angular acceleration. ② The court refused that reading where the specification consistently referred to angular velocity and found a support violation, holding that physical meaninglessness alone did not establish an error in the description. ③ Physical consistency of formulas and definitions of symbols should be checked at filing, and arguments of erroneous description should be assessed against the specification as a whole.
Trademark	**[Trademarks / Similarity] 2025 (Gyo-Ke) No. 10111 “SORA” <Presiding Judge Moritomi>** ① The issues were separate observation of the SORA trademark’s device and word elements and similarity of beauty-related services. ② The court extracted the SORA word element as dominant and found the marks similar, also finding the designated services similar in light of actual trading circumstances. ③ It is necessary to examine distinctiveness of the word element and the reality of combined service provision, rather than seeking to avoid conflict merely by adding a device.

Category	Article Title and Three-Line Summary
Trademark	**[Article / Austrian Trademarks] A Consideration of the Protection of Well-Known Trademarks and Unfair Use through Packaging Imitation Learned from the "Jägermeister" Case (遠藤華英, Patent, November 2025)** ① This addresses protection of the well-known Jägermeister trademark and imitation of packaging, with the body introducing an Austrian Supreme Court decision. ② It examines association with a well-known mark, free riding on its reputation, and damage to reputation under both trademark law and unfair competition prevention law. ③ Adoption of packaging should be considered not only in terms of confusion but also association with the brand and use of its reputation.
IP in General	**[Article / Customs] Customs Expert Advisers (磯貝克臣, Patent, November 2025)** ① This introduces an article addressing the selection of customs expert advisers, conduct of proceedings, and preparation of written opinions. ② It explains how three expert advisers form their opinions through individual review, advance meetings, and a hearing, and how customs generally respects the majority opinion. ③ It is important to assemble supporting materials and reasoning through explanations and rebuttals at the hearing of opinions and responses to the expert advisers' questions.

Category	Article Title and Three-Line Summary
IP in General	**[Article / Intellectual Property in General] Patent Attorneys as Judicial Research Officials (髙村和宗 and 岩永勇二, Patent, November 2025)** ① This introduces an article on the position and duties of judicial research officials who are patent attorneys and points to note in litigation practice. ② It describes their advance research, attendance at hearings, and preparation of reports, emphasizing early submission of cancellation grounds and reliability of experimental proof. ③ Arguments and evidence should be assembled in the plaintiff's first preparatory brief, and responses should be prepared with attention to the intent of questions at technical explanation sessions.
IP in General	**[Article / Intellectual Property in General] A Note on the Prohibition of Abuse of Rights in Intellectual Property Infringement (森本晃生, Patent, December 2025)** ① This introduces an article examining the role of the prohibition of abuse of rights in intellectual property infringement through the Ricoh and Goldfish Telephone cases and others. ② It explains, as proposals of the article, solutions that separately adjust the availability of injunctions and disposal and payment equivalent to royalties. ③ In abuse-of-rights arguments, it is important to distinguish injunctions from monetary relief and examine their relationship with implementers' benefits and freedom of expression and business.

Category	Article Title and Three-Line Summary
Patent	**[Article / Patents] Research and Proposals on Lack of Unity of Inventions Expressed as Alternatives (Biotechnology and Life Sciences Committee, Patent, December 2025)** ① This introduces an article on unity and selection of the subject of examination for inventions expressed in alternatives, such as Markush form. ② It compares Japan's treatment of the first alternative with U.S. and European practices and examines addition or assertion of a common special technical feature and amendment to an inclusive relationship. ③ Filing and amendment policies should consider the order of alternatives and common structures, as well as shift amendments and the burdens of divisional applications.
IP in General	**[Article / Agriculture, Forestry, and Fisheries] Protection and Use of Intellectual Property through an IP Mix with Overseas Expansion in View (Agriculture, Forestry, and Fisheries Committee, Patent, January 2026)** ① This introduces an article on IP mixes and brand formation in agriculture, forestry, and fisheries with overseas expansion in view. ② It explains combinations of trademarks, plant breeders' rights, patents, and GIs through examples including Beni Madonna, Soratobu Pumpkin, Zentsuji-san Shikaku Suika, and Kobe Beef. ③ It is important to distinguish variety names from brand names and select which technologies to disclose and which cultivation techniques to manage as trade secrets.

Category	Article Title and Three-Line Summary
Design	**[Article / Designs] An Overview of Court Decisions on Employee-Created Designs (藤本一, Patent, January 2026)** ① This introduces an article examining court decisions on consideration for employee-created designs through differences from employee inventions. ② It explains the effect of design substitutability on excess sales and hypothetical royalty rates and the assessment of creators' contributions. ③ It is necessary to examine alternative design choices and individual creative contributions instead of applying patent calculation examples unchanged.
Patent	**[Article / Patents] Cases and Issues in Patent Protection of Biopharmaceuticals (Biotechnology and Life Sciences Committee, Patent, December 2025)** ① This introduces an article on systems and issues surrounding patent protection of biopharmaceuticals and biosimilar entry. ② It explains the effects on entry and choice of de facto patent linkage, re-examination periods, and the high-cost medical expense benefit system. ③ Entry conditions should be examined with regard to use and formulation patents and the approval system, rather than judged solely by expiration of a substance patent.

Category	Article Title and Three-Line Summary
Patent	**[Article / Patents] Points to Note When Filing Food-Use Inventions in Different Countries (Biotechnology and Life Sciences Committee, Patent, December 2025)** ① This introduces an article on system differences in the United States, Europe, China, and South Korea concerning overseas protection of food-use inventions. ② It organizes permissible claim forms, U.S. inherency and laws of nature, and the European distinction between therapeutic and non-therapeutic uses. ③ Instead of translating Japanese claims unchanged, claim forms suited to the destination and distinctiveness of structures and methods should be considered.
Design	**[Article / Designs] An Overview of Court Decisions on Employee-Created Designs (藤本一, Patent, January 2026)** ① This introduces an article examining court decisions on consideration for employee-created designs through differences from employee inventions. ② It explains the effect of design substitutability on excess sales and hypothetical royalty rates and the assessment of creators' contributions. ③ It is necessary to examine alternative design choices and individual creative contributions instead of applying patent calculation examples unchanged.

Category	Article Title and Three-Line Summary
IP in General	**[Article / Agriculture, Forestry, and Fisheries] Protection and Use of Intellectual Property through an IP Mix with Overseas Expansion in View (Agriculture, Forestry, and Fisheries Committee, Patent, January 2026)** ① This introduces an article on IP mixes and brand formation in agriculture, forestry, and fisheries with overseas expansion in view. ② It explains combinations of trademarks, plant breeders' rights, patents, and GIs through examples including Beni Madonna, Soratobu Pumpkin, Zentsuji-san Shikaku Suika, and Kobe Beef. ③ It is important to distinguish variety names from brand names and select which technologies to disclose and which cultivation techniques to manage as trade secrets.
Design	**[Article / U.S. Designs] Changes in the Methods for Determining Design Right Infringement in the United States (佐々木眞人, Patent, January 2026)** ① This introduces an article on changes in U.S. design infringement analysis from Gorham through Egyptian Goddess and thereafter. ② It explains that after abolition of the point of novelty test, overall ornamental impression is evaluated from the viewpoint of an ordinary observer familiar with prior designs. ③ Comparison with allegedly infringing products should include prior designs, functional aspects, and ornamental differences such as logos.

Category	Article Title and Three-Line Summary
Patent	**[United States] Focus Prod v. Kartri Sales (CAFC, 2025.9.30)** ① The issue was whether responses during an election of species in U.S. patent prosecution resulted in exclusion from claim scope. ② The CAFC held that the features of claim 73, which the examiner withdrew as drawn to a nonelected species without the patentee disputing the withdrawal, had been excluded from the claims of the ’248 and ’609 patents, and, as to Marquis, reversed the summary judgment of infringement of those patents (the infringement findings against Kartri were affirmed because Kartri waived its non-infringement arguments). ③ In electing species, it is necessary to check the examiner’s definitions and limitations and consider their effect on the claim scope for the features of unelected species.
Patent	**2024 (Gyo-Ke) No. 10017 [Optimized Nutritional Formulations, Methods for Selecting Tailored Diets Therefrom, and Uses Thereof] <Presiding Judge Miyasaka>** ① The issue was inventive step concerning numerical ranges and inclusion of polyphenols in a nutritional formulation. ② In light of the cited disclosure of 1–35 g of ω-6 fatty acid and well-known matters, the court held that setting 1–40 g and including polyphenols were matters a skilled person could appropriately implement. ③ It is necessary to examine whether differences are merely matters of design in light of inclusion relationships between numerical ranges and known properties of the components.

Category	Article Title and Three-Line Summary
Patent	**Tokyo District Court, 2024 (Wa) No. 4142 [Portable Information Communication Device and Personal Computer System Using the Portable Information Communication Device] <Presiding Judge Kokubu> (related case decided the same day: Tokyo District Court, 2024 (Wa) No. 70083, defendant SoftBank Corp.)** ① An amount equivalent to consumption tax that had not been claimed in prior actions was sought in a separate action as unjust enrichment arising from patent infringement. ② The court found no difficulty or reasonable ground for not asserting that amount earlier and dismissed the action as inadmissible for violating good faith because the remainder claim imposed a second defense burden on the defendant. ③ Monetary claims should be organized to include consumption tax amounts, with attention to restrictions on claims for the remainder following a partial loss.

[Article / Unfair Competition Prevention Act] The Practice and Theory of Preservation of Evidence in Intellectual Property Cases and Related Matters (高村隆司, Patent, June 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e4%b8%8d%e7%ab%b6%e6%b3%95%e3%80%91%e7%9f%a5%e8%b2%a1%e4%ba%8b%e4%bb%b6%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e8%a8%bc%e6%8b%a0%e4%bf%9d%e5%85%a8%e3%81%ae%e5%ae%9f%e9%9a%9b/

Publication date on list page: June 26, 2026

[Article / Unfair Competition Prevention Act] The Practice and Theory of Preservation of Evidence in Intellectual Property Cases and Related Matters (高村隆司, Patent, June 2025)

1. Selection of Jurisdiction

In the statistics of the Intellectual Property Division of the Tokyo District Court for 2013–2015 obtained through the author's own research, six out of 15 applications were granted, a grant rate of 40%. By contrast, all of the author's nearly ten applications, made mainly to summary courts (including one application to a district court's intellectual property division), were granted, and the author recommends using summary courts.

Note on the statistics: 高村隆司's article, p. 165, states 「認容率は 40%であり、筆者の経験における認容率 100%に比較して大幅に低い。」 ("the grant rate is 40%, substantially lower than the 100% grant rate in the author's experience"). The 40% figure concerns the specified court, period and sample, rather than district courts generally. The author's experience of nearly ten applications also includes one district-court application. The article presents these statistics as the result of the author's own research (p. 165: 「今回の執筆に当り調査した結果、東京地方裁判所知財部の下記の情報が入手できた。」, i.e., "as a result of research conducted for this article, the following information of the Intellectual Property Division of the Tokyo District Court was obtained"). Article, pp. 159 and 165

2. Theory and Legal Nature of Preservation of Evidence

The essence of preservation of evidence is "bringing forward the examination of evidence." A prima facie showing of the risk of concealment, disposal, or alteration of evidence (grounds for preservation of evidence) is necessary, but there is a dispute as to whether the degree of the showing may be "abstract" or must be "fairly specific," and the author's impression from experience is that practice in intellectual property cases follows the former view.

3. Defensive Measures as the Opposing Party

Because preservation of evidence has no physical compulsory force, refusing presentation is also an option.

In that case, there is a risk of “deeming allegations to be true (Articles 232 and 224 of the Code of Civil Procedure)” in the litigation on the merits, but it may be possible to avoid this by presenting the evidence in a later examination of evidence, and tactical consideration is necessary.

[Article / U.S. Designs] New Standards for Determining Obviousness of U.S. Design Patents (佐々木眞人, Patent, June 2025)

The CAFC en banc judgment of May 21, 2024 (the LKQ en banc judgment) abolished the “Rosen-Durling test,” which had been used for more than 40 years to determine the obviousness of U.S. design patents.

⇒Going forward, the four factual findings (Graham factors) will also apply to design patents, as they do to utility patents.

1. Previous Test: The End of the Rosen-Durling Test

Until now, in the United States, whether a design is obvious has been determined through the following two strict stages.

①First stage (selection of the primary reference): A single primary reference (a Rosen reference) having design characteristics that are “basically the same” as the claimed design is required.

②Second stage (application of secondary references): Secondary references must be “so related” to the primary reference that application of the features of one to the other is suggested.

This two-stage test was extremely strict compared with the obviousness test for utility patents, and it had been considered difficult to invalidate design patents in the United States.

2. Changes Made by the LKQ En Banc Judgment

The CAFC en banc judgment held that the above test did not accord with the “flexible approach” indicated by Supreme Court precedents (including the KSR Supreme Court judgment) and abolished it.

Going forward, the four factual findings (Graham factors) based on the Graham Supreme Court judgment will apply to design patents, as they do to utility patents.

<Four Elements of the New Determination Method>

①Determination of the scope and content of the prior art: The primary reference need not be “basically the same” as the claimed design. However, it must be analogous art, and the analysis starts with an actual prior design most visually similar in overall appearance. Secondary references must also be analogous art, and reasons for modification and other matters are considered from the perspective of an ordinary designer.

Judgment (LKQ en banc)：https://www.cafc.uscourts.gov/opinions-orders/21-2348.OPINION.5-21-2024_2321050.pdf

②Determination of differences between the claimed design and the prior art: Visual appearance is compared from the viewpoint of an “ordinary designer.”

③Identification of the level of skill in the art: The knowledge of a designer having ordinary skill in designing the article in question is considered.

④Evaluation of secondary considerations: Objective evidence, such as commercial success, industry praise, and copying by others, is considered.

意匠の非自明性判断―LKQ 大合議判決後

2024 年 5 月 22 日、USPTO（米国特許商標庁）は、この判決を受けた審査官向けガイダンス（覚書）を公表した。

項目	Rosen–Durling テスト（旧）	LKQ 大合議判決後の基準（新）
主引例要件	クレーム意匠と「基本的に同一」	類似技術であることを要する。全体の外観が最も近い実在する先行意匠を起点とする。「基本的に同一」である必要はない。
副引例	主引例と「密接に関連」	類似技術であることを要する。
結合動機	厳格な関連性が要求される。	通常の創作者の観点から、変更の理由等を柔軟に検討する。

English translation

On May 22, 2024, the USPTO (U.S. Patent and Trademark Office) published guidance (a memorandum) for examiners following this judgment.

Item	Rosen-Durling Test (Old)	Test after the LKQ En Banc Judgment (New)
Requirement for the primary reference	“Basically the same” as the claimed design	Must be analogous art; an actual prior design most visually similar in overall appearance is the starting point. “Basically the same” is not required.
Requirement for secondary references	“So related” to the primary reference	Must also be analogous art; the requirement that the references be “so related” is abolished.
Motivation to combine	Strict relatedness is required	A reason for a designer to modify is sufficient (flexible determination)

[Article / Unfair Competition Prevention Act] Infringement Risks Arising from the Use of Other Companies' Trade Secrets Brought in by Employees Changing Jobs (石本貴幸, Patent, October 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e4%b8%8d%e7%ab%b6%e6%b3%95%e3%80%91%e8%bb%a2%e8%81%b7%e8%80%85%e3%81%8c%e6%8c%81%e3%81%a1%e8%be%bc%e3%82%93%e3%81%a0%e4%bb%96%e7%a4%be%e5%96%b6%e6%a5%ad%e7%a7%98%e5%af%86/

[Article / Unfair Competition Prevention Act] Infringement Risks Arising from the Use of Other Companies' Trade Secrets Brought in by Employees Changing Jobs (石本貴幸, Patent, October 2025)

1. "Four Defensive Measures" That Intellectual Property and Legal Personnel Should Take

①Written Pledge at the Time of Joining the Company (Calling Attention)
Obtain a written pledge expressly stating that "no confidential information from the previous employment will be brought in." This also serves as evidence that the company does not tolerate wrongdoing.

②Effective Employee Training
Thoroughly instill awareness that "using another company's information is also unlawful." In particular, training "subordinates where a person changing jobs becomes their superior" is the key to preventing tragedies such as the conveyor-belt sushi case.

③Establishment of an Internal Consultation Desk (a Place of Refuge)
Build a system enabling consultation with the legal or intellectual property department when a superior orders the use of suspicious data.

④Detection of "Unnatural Inventions" Through Intellectual Property Activities
When a person changing jobs produces advanced results (such as formulation tables or design drawings) immediately after joining the company, closely examine

the process by which they were created (experimental data, etc.) and check for diversion of another company's information.

★Experience and Skills: Knowledge generally available in the industry and skills embodied in an individual are free.

Conveyor-belt sushi cost information case	A former officer of a competitor brought in cost data and had subordinates at the new employer analyze and use it.	The former officer, subordinates at the new employer, and the corporation were all convicted.
Paint formulation information case	A development department head brought in formulation tables, disclosing them as an "invention" only a few months after changing jobs.	The individual was convicted. The corporation recorded ¥372 million in litigation costs, including the settlement, as an extraordinary loss.
Renovation business information case	Cost and gross-profit data were stored in a shared folder and used in departmental meetings and elsewhere.	The individual was convicted. Damages of ¥18.15 million and other relief were awarded against the corporation.
Automotive parts information case	Information was unlawfully acquired after leaving employment by using a former colleague's ID.	The individual was convicted.

Source for the table: 石本貴幸's article, p. 118, states that the company in the paint formulation information case recorded ¥372 million in litigation costs, including the settlement, as an extraordinary loss. For the renovation business information case, p. 119 states that damages of ¥18.15 million and other relief were awarded. Article, pp. 118–119

[Article / Patents] Examination of Clarity Determinations in Recent Court Decisions (岡田健太郎 et al., Patent, June 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%89%b9%e8%a8%b1%e3%80%91%e8%bf%91%e6%99%82%e3%81%ae%e8%a3%81%e5%88%a4%e4%be%8b%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e6%98%8e%e7%a2%ba%e6%80%a7%e5%88%a4%e6%96%ad%e3%81%ab/

Publication date on list page: June 26, 2026

[Article / Patents] Examination of Clarity Determinations in Recent Court Decisions (岡田健太郎 et al., Patent, June 2025)

It cannot be said that determinations of clarity have become stricter than before!!

1. Determination of Expressions Indicating Degree, Such as “Substantially” and “Approximately”
An Example Found Unclear
The Dies for Polygonal Cross-Section Wire case (No. 17): It was not possible to distinguish whether the expression “substantially polygonal” referred to rounding (tolerance) unavoidably occurring in the manufacturing process or to intentional changes in shape, and the scope of rights was held unclear.

An Example Found Clear
The Tillage Claw case (No. 10): Regarding “substantially” in “at substantially the same position” and “at a substantially constant distance,”
The expression could be understood to mean within the range of mechanical tolerances, and a person skilled in the art could identify the range in light of common general technical knowledge; it was therefore held clear.

2. Trends in Determinations by the Patent Office (Trial Decisions) and Courts (Judgments)
While the Patent Office emphasizes whether formal descriptions exist, courts tend to evaluate substantively whether a person skilled in the art can understand them.
<Patent Office> Where the specification does not describe a direct definition or

calculation method, the Patent Office tends to make a formal determination of “unclear.”
<Courts> Even if the specification is insufficiently described, courts consider common general technical knowledge at the time of filing and relevant research results and find the invention “clear” if a person skilled in the art can reasonably understand the scope of rights (examples: the Tape for Fixing In-Vehicle Components case and the Cell Separation Method case).

3. Proposals for Practice
Although determinations of clarity by courts remain flexible, the following measures are effective in preventing disputes.
Definitions of Terms: Include explanations providing guidance for interpretation in the specification even for general terms such as “simultaneously” and “integrally.”
Supplementation of Common General Technical Knowledge: Where numerical limitations are difficult, cite public standards such as JIS or ASTM standards and expressly indicate an objective basis for determination.
Avoidance of PBP: In principle, strive for drafting that identifies a product by its structure and characteristics; where describing a manufacturing process is unavoidable, logically explain the relationship between that process and the product’s structure.

2024 (Gyo-Ke) No. 10036 [Chip Detection Device] <Presiding Judge Honda>

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e8%a1%8c%e3%82%b110036%e3%80%90%e5%88%87%e5%b1%91%e6%a4%9c%e5%87%ba%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c%e6%9c%ac%e5%a4%9a%ef%bc%9e/

Publication date on list page: June 26, 2026

2024 (Gyo-Ke) No. 10036 [Chip Detection Device] <Presiding Judge Honda>

*Cancellation of a trial decision to grant a patent was sought. ⇒Dismissed as inadmissible

In the trial against the decision of refusal of the patent application, the plaintiff sought a trial decision stating: “The decision dismissing the amendment is cancelled; on the basis of that amendment, the original decision is cancelled. A patent is to be granted for the invention of this application.” (that amendment being Amendment 1 at issue).
During the proceedings, the plaintiff made amendments on June 9 and December 4, 2023 (the latter being Amendment 2 at issue), and ultimately the Patent Office made a trial decision stating: “The original decision is cancelled. A patent is to be granted for the invention of this application.” This trial decision granted a patent for the invention based on Amendment 2 at issue (Amended Invention 2 at issue), which the plaintiff had submitted last.
⇒The plaintiff brought an action seeking cancellation of the trial decision at issue and other relief, asserting that the invention based on Amendment 1 at issue (Amended Invention 1 at issue) was the invention that should originally have been patented.

This judgment held that, because the trial decision at issue granted all of the requests of the plaintiff as the demandant, the plaintiff had no interest in cancelling it, and that it is impermissible to disavow an amendment previously made at one’s own discretion and seek cancellation of a trial decision made as

requested in order to obtain a patent for the invention that would have been granted had the amendment not been made.

[Article / Patents] Use of AI in Patent Examination (五十嵐康弘, Patent, August 2025)

Practical tasks in patent examination were tested using cloud models (GPT, etc.) and on-premises models (Llama, etc.).

When introducing generative AI, there are distinctive issues that did not exist with conventional AI.
Addressing hallucinations: It is effective to minimize risks by limiting tasks to those that “reduce (summarize)” or “convert (translate)” information, rather than tasks that “increase” information (creative responses).
Responding to the speed of model evolution: Evolution is so rapid that new models appear during an investigation, making it necessary to prevent methods from becoming obsolete.
While watching the evolution of general-purpose models, incorporating “thought processes (reasoning)” specialized for the patent field will be the key going forward.

Generative AI is now evolving into “reasoning models,” which perform logical inference, and “agent models,” which operate external tools.

In specialized fields such as patent examination, continued “trial and error toward practical application” is necessary to reflect examiners’ comprehensive search methods and patent-specific vocabulary, rather than merely introducing general-

purpose models.
Going forward, it will be important to determine when to pursue specialization in particular fields while making maximum use of basic performance (such as context length), whose evolution has slowed.

タスク名	内容	調査結果・考察
特許文献の要約	先行技術文献を400字程度に要約。	Claude 3.5で**特定率68%**（要約のみで正解文献を特定できる割合）を記録。一次情報へのアクセス性を保てば実務効率化の可能性が高い。
他庁ドシエ情報の要約	外国庁の審査経過（PDF）を日本語で時系列要約。	クラウドモデルは**引用文献を約8割網羅**。ハルシネーション（虚偽回答）の懸念も低く、他庁参照業務の負担軽減が期待される。
表の構造化	画像データとしての表をJSON形式に変換。	GeminiやGPTが良好な成績（5段階評価で3.0前後）。多層ヘッダやページ跨ぎの複雑な表には依然として課題が残る。

English translation of text in the image

Task	Content	Investigation Results and Considerations
Summarization of patent documents	Summarize prior-art documents in approximately 400 characters.	Claude 3.5 recorded an identification rate of 68% (the proportion of correct documents identified using only summaries). There is strong potential for practical efficiency if accessibility to primary information is maintained.
Summarization of other offices' dossier information	Summarize the prosecution history (PDF) of a foreign office chronologically in Japanese.	Cloud models covered approximately 80% of cited documents. Concern over hallucinations (false responses) is also low, and a reduction in the burden of referring to other offices' information is expected.
Structuring of tables	Convert tables in image data into JSON format.	Gemini and GPT perform well (around 3.0 on a five-point scale). Challenges remain for complex tables with multilayer headers or spanning pages.

AI 技術の進展と特許審査への応用（論文掲載時点）

時代区分	主な技術と特徴
機械学習期（～2012 年）	SVM（サポートベクターマシン）や決定木など。分類付与支援、検索式の作成支援等に応用。
ディープニューラルネットワーク期（2012～2016 年ごろ）	DNN による深層学習が画像認識等で注目され、RNN による機械翻訳が実用化。

時代区分	主な技術と特徴
大規模言語モデルと応用拡大期（2017〜2021 年ごろ）	Transformer を基盤とした BERT や GPT が注目され、転移学習により応用が拡大。
生成 AI による普及期（2022〜2025 年現在）	GPT-4o、Claude 3.5、Gemini 1.5 などのモデルを用いた要約、翻訳、構造化等の生成タスクへの応用。

機械分類付与の精度比較に用いられた基準は非特許 BERT である。SVM・LightGBM 等に替わる手法として、DeBERTa の導入が順次進められている。

English translation

• Machine-learning period (up to 2012)
: SVM and decision trees; practical
applications include classification support and search-expression support.
• Deep-neural-network period (around 2012–2016): DNN-based deep learning gained attention through image recognition; RNN-based machine translation became practical. • Period of large language models and expanding applications (around 2017–2021)
: Transformer-based BERT and GPT attracted attention, and transfer learning broadened applications. • Generative-AI dissemination period (2022–2025, the article’s present): Models such as GPT-4o, Claude 3.5 and Gemini 1.5 were examined
for generation tasks including summarization, translation and structuring. For machine classification assignment, the accuracy comparison uses non-patent BERT as its baseline. DeBERTa was being introduced as a replacement for SVM, LightGBM and other methods.

Source for the chronology: 五十嵐康弘’s article, p. 33, identifies four periods: machine learning (up to 2012); deep neural networks (around 2012–2016); large language models and expanding applications (around 2017–2021); and dissemination through generative AI (2022–2025, the article’s present). The baseline for the accuracy comparison on p. 34 is non-patent BERT. On p. 35, SVM and LightGBM are methods being replaced by DeBERTa. Article, pp. 33–35

[Article / Chinese Patents] The Support Requirement for Numerical Range Limitations in China (胡春豊 and 林軍, Patent, September 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e4%b8%ad%e5%9b%bd%e7%89%b9%e8%a8%b1%e3%80%91%e4%b8%ad%e5%9b%bd%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e6%95%b0%e5%80%a4%e7%af%84%e5%9b%b2%e3%81%ae%e9%99%90%e5%ae%9a%e3%81%ab/

[Article / Chinese Patents] The Support Requirement for Numerical Range Limitations in China (胡春豊 and 林軍, Patent, September 2025)

<Supreme People's Court of China, (2020) Zui Gao Fa Zhi Xing Zhong No. 407>

1. Consideration of the Judgment of the Supreme People's Court of China
Content of the Patent: An invention with numerical limitations combining a charging cut-off voltage (greater than 4.2 V and not greater than 5.8 V) and a positive/negative electrode ratio (1:1.0 to 1:2.5).

Issue: The specification stated that "characteristics deteriorate when the parameters exceed the ranges," and Apple asserted that "ranges not covered by the examples (ranges in which the purpose of the invention cannot be achieved) are included, and the support requirement is not satisfied."

First-Instance Judgment: Holding that "a considerable part of the scope of claim 1 was expressly excluded by the specification, and the generalized scope of claim 1 is too broad relative to the scope disclosed in the specification," the court set aside the invalidation trial decision that had found Apple's invalidity grounds not established and ordered the China National Intellectual Property Administration to re-examine the case (Article, pp. 96–97).

Determination of the Supreme People's Court (Victory on Reversal)
"If a person skilled in the art reads the specification and can confirm mutually corresponding relationships between the technical features of the respective numerical ranges, obtain embodiments meeting the purpose of the invention

through a limited number of experiments, and exclude inventions that cannot achieve the purpose of the invention without excessive effort, the claim should be determined to be supported by the specification."

2. Practical Points to Note

In light of this Supreme People's Court judgment, the following measures for drafting specifications and handling invalidation proceedings in China are proposed.

①When Drafting Patent Specifications

Multiple Layers of Independent Claims: Consider a configuration that is readily recognizable, such as providing separate independent claims for each numerical group (data groups of examples) in which the effects can reliably be obtained, in addition to claims covering broad ranges.

②Arrangement of Examples

The basic approach is to cover specific data at the starting, ending, and intermediate values of a range in accordance with the Examination Guidelines.

③During Patent Invalidation Proceedings

Merely asserting that "there is a range in which the purpose of the invention cannot be achieved" is insufficient.

It is necessary to use more specific experimental results to prove that "even by following the guidance in the specification, a person skilled in the art cannot recognize the scope of protection (the range in which the effects are obtained) with ordinary effort."

3. Summary

The Supreme People's Court of China indicated a new criterion for the support requirement for numerical ranges: "whether a person skilled in the art can exclude non-working ranges without excessive effort."

It can therefore be said that, even for broad numerical limitations, the possibility of maintaining the rights has increased if the specification contains appropriate guidance.

[Article / European Patents] Differences Between the Japanese and European Patent Systems That Require Attention (野村和弘 and フロリアン キューベック, Patent, September 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e6%ac%a7%e5%b7%9e%e7%89%b9%e8%a8%b1%e3%80%91%e6%97%a5%e6%9c%ac%e3%81%ae%e7%89%b9%e8%a8%b1%e5%88%b6%e5%ba%a6%e3%81%a8%e6%ac%a7%e5%b7%9e%e3%81%ae%e7%89%b9%e8%a8%b1-%e5%88%b6/

Publication date on list page: June 19, 2026

[Article / European Patents] Differences Between the Japanese and European Patent Systems That Require Attention (野村和弘 and フロリアン キューベック, Patent, September 2025)

1. Differences Concerning “Claims”
①Number of Independent Claims:
Japan: No limitation.
Europe: In principle, one per category (Rule 43(2)). Multiple independent claims are not permitted except for exceptions such as interrelated products like a plug and socket, or alternative solutions.

②Categories and Use Limitations:
Japan: Three types: “product,” “process,” and “process for producing a product.” Use limitations (e.g., for anti-fatigue use) are given relatively strong effect.
Europe: Two types: “physical entity” and “activity.” A use limitation such as “a device for ...” is interpreted merely as “a device suitable for ...” and has weak limiting effect. Therefore, use claims in the form of “non-therapeutic use” are recommended.

③Multiple Dependency (Multiple-Multiple Dependent Claims):
Japan: Restricted since April 2022 (violation of requirements under the delegated ministerial ordinance).
Europe: No restriction. However, additional fees arise where the number of claims is 16 or more.

④Reference Signs:
Europe: It is strongly desirable to insert drawing reference signs in parentheses in the claims (Rule 43(7)).

2. “Prior Art and Publication of Earlier Applications” (Self-Collision and Grace Periods)
In Europe, “one’s own applications” can become powerful grounds for refusal, so attention to filing strategy is required.

3. “Restrictions on Amendments” (Europe’s Strict “Gold Standard”)
European amendment requirements are far stricter than those in Japan, and disclosure in the original specification must be “direct and unambiguous.”

<Amendments to Numerical Limitations>: In Europe, it is very difficult to adopt a value not expressly stated in the specification (for example, an intermediate value of examples) as a boundary value. Combinations of preferred ranges should be expressly stated in the specification in advance.

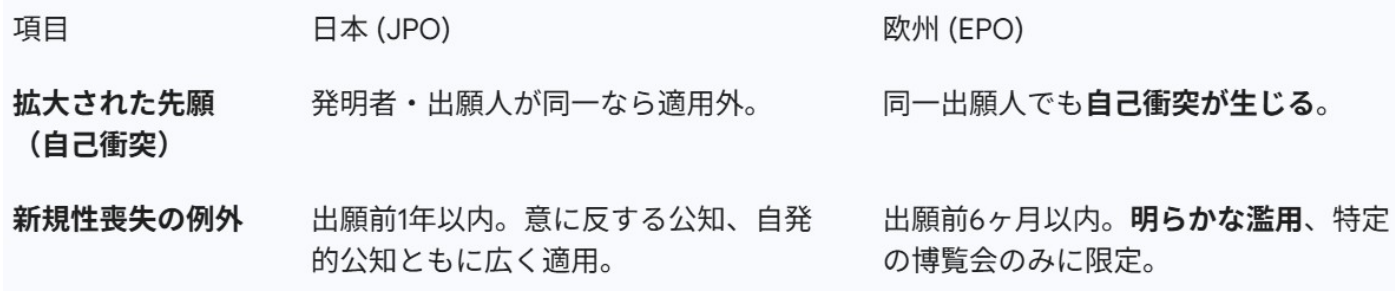
<Excluding Claims (Disclaimers)>
Japan: Cases in which they are used to overcome a lack of inventive step are increasing.
Europe: G 1/03 addresses undisclosed disclaimers, that is, exclusions without a basis in the application as filed. The decision identifies circumstances permitting restoration of novelty over prior art under Article 54(3) and (4) EPC 1973 (now Article 54(3) EPC) or an accidental anticipation, as well as exclusion of subject matter excluded from patentability for non-technical reasons. An undisclosed disclaimer relevant to assessing inventive step or sufficiency of disclosure is not allowable. Disclaimers disclosed in the application as filed must be distinguished.

Note on the scope of the source: G 1/03, Headnote II, refers to “not disclosed in the application as filed”; II.1 refers to “non-technical reasons”. In summary, the criteria concern undisclosed disclaimers and are not confined to restoring novelty. The source article is coauthored by 野村和弘 and フロリアン キューベック. Article, pp. 82 and 88 G 1/03

4. “Parameter Inventions”
Where an invention is identified by a special parameter, strict treatment of the “measurement method” is required in Europe.
Points to Note in Europe: The measurement method of a parameter may be

required to be stated in the claims themselves, as well as in the specification. In addition, when citing a standard such as an ISO standard, there is a risk of being found unclear unless the issue date (year) is specified, taking account of changes to the standard.

5. Summary and Proposals



When considering expansion into Europe based on a Japanese application, the following preparations are essential.

①Considering Europe's distinctive restrictions on independent claims, file related inventions on the same day wherever possible.

②Because freedom to amend is limited, include diverse numerical ranges and sets in multiple-dependent form in the specification in advance.

③To minimize the risk of loss of novelty through disclosure, treat the European grace period, in principle, as "nonexistent."

Item	Japan (JPO)	Europe (EPO)
Enlarged earlier applications (self-collision)	Excluded if the inventor or applicant is the same.	Self-collision occurs even for the same applicant.
Exceptions to loss of novelty	Within one year before filing. Broadly applies to both disclosure against one's will and voluntary disclosure.	Within six months before filing. Limited to evident abuse and certain exhibitions.

[Article / UK Patents] The UK InterDigital v. Lenovo Litigation over the Calculation of FRAND Rates (小林和人, Patent, September 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e8%8b%b1%e5%9b%bd%e7%89%b9%e8%a8%b1%e3%80%91frand%e3%83%ac%e3%83%bc%e3%83%88%e3%81%ae%e7%ae%97%e5%ae%9a%e3%82%92%e5%b7%a1%e3%82%8b-interdigital-v-lenovo-%e8%8b%b1/

Publication date on list page: June 19, 2026

[Article / UK Patents] The UK InterDigital v. Lenovo Litigation over the Calculation of FRAND Rates (小林和人, Patent, September 2025)

<Main Issues>
①Whether InterDigital's final offer (5G Extended Offer) conformed to FRAND terms.
②If not, what the specific FRAND rate was.
③Whether an injunction would be granted if Lenovo was not a "Willing Licensee."

1. Determination of the UK High Court (EWHC 539, 1578)
The High Court held that neither party's offer was FRAND.
Method of Calculating the FRAND Rate: LG (2017) was selected as the most comparable agreement. Based on it, sales regions and proportions of standards were adjusted, and the rate was calculated as $0.175 per unit (a blended rate).
Determination of the Lump Sum: The entire period from 2007 through the end of 2023 was covered, and $138.7 million was presented as royalties.
Addition of Interest: To eliminate the benefit from delayed payment, interest at 4% per annum, compounded quarterly ($46.2 million), was added, bringing the total to $184.9 million.
Criticism of Volume Discounts: Large discounts of as much as 60–80% applied to Samsung and Apple were identified as discriminatory acts against smaller implementers and as not FRAND.
Whether an Injunction Was Appropriate: Lenovo was given the choice of accepting the judgment's terms and would be subject to an injunction only if it refused.

2. Determination of the Court of Appeal (EWCA Civ 743)
As a result of both parties appealing, the Court of Appeal followed the High Court's logic but revised the figures.
Revision of the Rate: It reviewed the analysis of the LG agreement used for comparison and raised the base rate from $0.24 to $0.30 and the adjustment factor from 0.728 to 0.75.
Final Holding: The FRAND rate was revised upward to $0.225 per unit. As a result, the principal amount of the lump sum became $178.3 million, and the court ordered the addition of the same interest (4% per annum, compounded quarterly).

3. Conclusions and Implications
This is an important case in which UK courts emphasized the "comparative approach" and derived a specific global rate through their own calculations. In particular, the following points are important in practice.

①Payment for the Past: It was held that a willing licensee should pay royalties for the entire past period of implementation, irrespective of the limitation period for damages claims.

②Requirement of Transparency: The risk was shown that extreme preferential treatment of large companies (opaque volume discounts) would be rejected from the viewpoint of non-discrimination.

③Importance of Interest: The addition of compound interest was justified to offset the gains from "holdout" through prolonging negotiations.

Item	InterDigital’s Arguments	Lenovo’s Arguments
Final offer	5G Extended Offer ($337 million)	Lump Sum Offer ($80 million)
Comparators	“InterDigital 20” (20 existing agreements)	“Lenovo 7” (seven agreements, including major businesses)
Past periods	Apply the same rate as for future periods	Argues for a free release for periods up to and including 2016
Volume discounts	Application to large businesses is justified	Criticized as discriminatory and unjust

[Article / Patents] Intellectual Property and Intangible Assets in the Food Industry (藤原研二郎, Patent, September 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%89%b9%e8%a8%b1%e3%80%91%e9%a3%9f%e5%93%81%e7%94%a3%e6%a5%ad%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e7%9f%a5%e8%b2%a1%e3%83%bb%e7%84%a1%e5%bd%a2%e8%b3%87%e7%94%a3%ef%bc%88/

Publication date on list page: June 19, 2026

[Article / Patents] Intellectual Property and Intangible Assets in the Food Industry (藤原研二郎, Patent, September 2025)

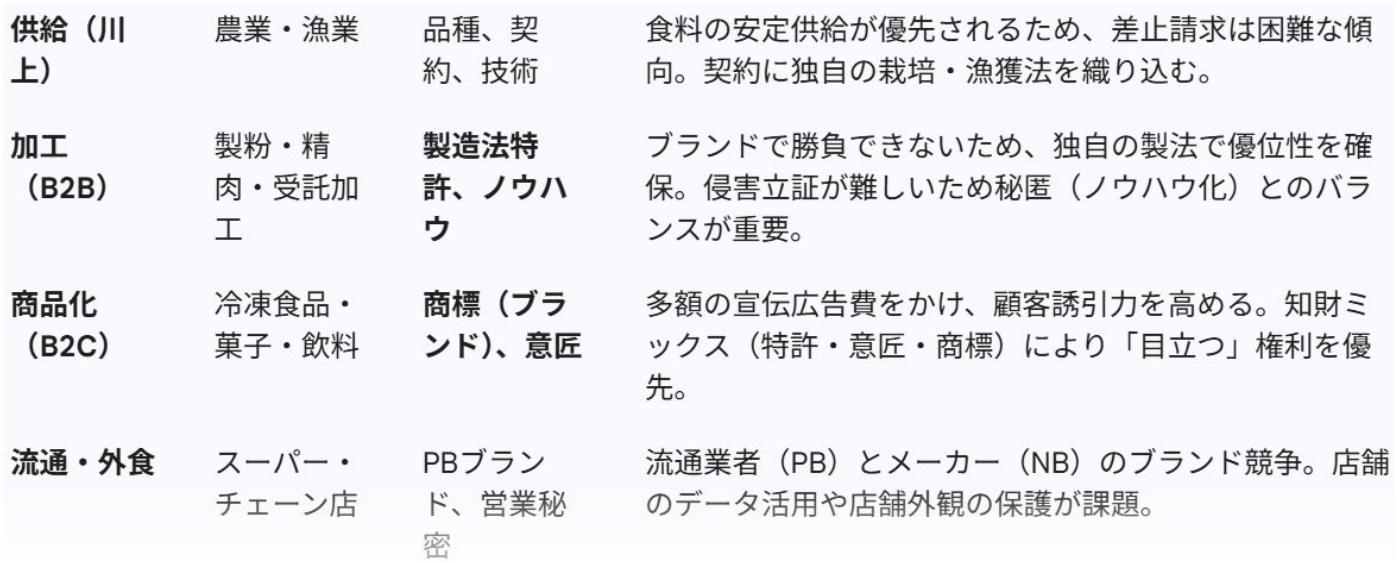
1. In the food industry, intellectual property strategies differ greatly depending on the role (from upstream to downstream).

2. Issues Particular to the Food Field
The food industry has difficulties arising from “history” and “sensation” that differ from those in other technical fields.

“Long History and Regionality”: This industry has continued since the beginning of recorded history, with considerable regional differences, making it difficult to understand what is “publicly known worldwide.”

“Flavor as a Complex System (Difficulty of Digitization)”: Food is not a pure substance but a complex composition that changes over time. It is extremely difficult to verify objectively “flavor,” in which taste, texture, and smell intertwine, resulting in a structure in which one must rely on skills (know-how) that cannot be verbalized.

“Monopoly Does Not Necessarily Mean Maximization of Profit”: The appearance of products similar to a new product can increase “eating experience” across the entire market and consequently expand the market.



3. Use of Know-How and Intangible Assets
In the food industry, the key to continuing business after patent expiration lies in “management of know-how.”

“Manufacturing Know-How”: How to suppress variability in raw materials and how to guarantee quality standards.

“Brand Story”: Turn trust and stories into intangible assets, as in Mishima Foods’ response to a shortage of “aonori” and Sapporo Breweries’ use of place names.

“Skill Succession (Skills)”: Abandon verbalization and pass skills down as “bodily experience” through training and apprenticeship.

“Identification Know-How”: Incorporate the “uses” and “attachment” spontaneously generated by consumers into brand control.
https://jpaa-patent.info/patent/viewPdf/4690

供給（川上）	農業・漁業	品種、契約、技術	食料の安定供給が優先されるため、差止請求は困難な傾向。契約に独自の栽培・漁獲法を織り込む。
加工（B2B）	製粉・精肉・受託加工	**製造法特許、ノウハウ**	ブランドで勝負できないため、独自の製法で優位性を確保。侵害立証が難しいため秘匿（ノウハウ化）とのバランスが重要。
商品化（B2C）	冷凍食品・菓子・飲料	**商標（ブランド）、意匠**	多額の宣伝広告費をかけ、顧客誘引力を高める。知財ミックス（特許・意匠・商標）により「目立つ」権利を優先。
流通・外食	スーパー・チェーン店	PBブランド、営業秘密	流通業者（PB）とメーカー（NB）のブランド競争。店舗のデータ活用や店舗外観の保護が課題。

English translation of text in the image

Supply (upstream)	Agriculture and fisheries	Varieties, contracts, technology	Because stable food supply takes priority, injunction claims tend to be difficult. Incorporate distinctive cultivation and fishing methods into contracts.
Processing (B2B)	Flour milling, meat processing, contract processing	Manufacturing-process patents, know-how	Because competition through brands is not possible, secure advantages through distinctive manufacturing processes. Because proving infringement is difficult, a balance with secrecy (conversion into know-how) is important.
Commercialization (B2C)	Frozen food, confectionery, beverages	Trademarks (brands), designs	Spend substantial advertising expenses to enhance customer appeal. Give priority to “conspicuous” rights through an IP mix (patents, designs, trademarks).
Distribution and food service	Supermarkets, chain stores	Private-label brands, trade secrets	Brand competition between distributors (PB) and manufacturers (NB). Use of store data and protection of store appearance are issues.

[Article / U.S. Designs] Protection of Goods and Other Subject Matter in Virtual Space under U.S. Design Law (山口洋一郎, Patent, August 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%b1%b3%e5%9b%bd%e6%84%8f%e5%8c%a0%e3%80%91%e7%b1%b3%e5%9b%bd%e6%84%8f%e5%8c%a0%e6%b3%95%e3%81%ab%e3%82%88%e3%82%8b%e4%bb%ae%e6%83%b3%e7%a9%ba%e9%96%93%e3%81%ab%e3%81%8a/

Publication date on list page: June 19, 2026

[Article / U.S. Designs] Protection of Goods and Other Subject Matter in Virtual Space under U.S. Design Law (山口洋一郎, Patent, August 2025)

Note on the author's view and scope: The following introduces the view in 山口洋一郎's article. Page 83 states 「用途の異なる他の物品にも行使可能であると解される」 ("is understood to be enforceable also against other articles having different uses"). By contrast, MPEP 1504.02 states, in discussing novelty, "A design claim is limited to the article of manufacture identified in the claim". An article's use must be distinguished from the article identified in the claim, and novelty from infringement. The following does not mean that enforcement between physical and virtual goods is always available; nor does the MPEP statement alone establish that infringement between them is always excluded. In the table below, the image lists the article for US D1,053,219 S as 「仮想３次元キャラを伴うディスプレイ」 (display with a virtual three-dimensional character), whereas p. 84 of the article states 「仮想３次元のキャラクター・アイコンを伴うディスプレイ・スクリーン」 (a display screen with a virtual three-dimensional character icon). Article, pp. 81–87 MPEP 1504.02

1. Article Use and Claim Limitations in the U.S. Design System
U.S. design law is part of patent law (35 U.S.C. § 171), and patent principles apply. Yamaguchi's article identifies the principle that an article's use is disregarded, as in patent law, as a characteristic. Statements of use must nevertheless be distinguished from a limitation based on the article identified in the claim. Curver recognises the latter limitation.

Yamaguchi's Explanation Concerning Novelty: Even a known design in a technical field entirely different from that of the article of the application can form a basis for lack of novelty if its shape is substantially identical (for example, there is a case in which novelty of a capsule for compressed gas was denied based on the design of a "bottle").

Scope of Rights: Yamaguchi's article expresses the view that design rights may be exercised against other articles having different uses, and also discusses enforcement where the registered design constitutes a part of the allegedly

infringing article. Actual enforcement requires examination of the article identified in the claim and the overall visual appearance, among other matters.

2. Protection of Designs in Virtual Space
In the United States, “icons” and “GUIs” shown on a display are eligible for protection as part of the display.

Enforcement from the Physical to the Virtual: Yamaguchi’s article expresses the view that infringement of design rights for a real product, such as a shoe, may be asserted where that product is displayed and sold on a display in virtual space and is sufficiently similar to cause confusion for an ordinary observer. Individual examination in light of the article identified in the claim and other matters is required.

Enforcement from the Virtual to the Physical: Conversely, Yamaguchi’s article expresses the view that design rights for an article represented on a display in virtual space, such as a virtual three-dimensional shoe, may be enforced against a physical product of the same design. It does not introduce an established judicial rule that infringement between physical and virtual spaces generally occurs.

[Article / Designs] A Consideration of Future Responses under Japanese Design Law to Design Protection in Virtual Space — In Light of International Trends (星野光秀, Patent, October 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e6%84%8f%e5%8c%a0%e3%80%91%e4%bb%ae%e6%83%b3%e7%a9%ba%e9%96%93%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e6%84%8f%e5%8c%a0%e4%bf%9d%e8%ad%b7%e3%81%ab%e9%96%a2%e3%81%99%e3%82%8b/

Publication date on list page: June 19, 2026

[Article / Designs] A Consideration of Future Responses under Japanese Design Law to Design Protection in Virtual Space — In Light of International Trends (星野光秀, Patent, October 2025)

1. Expansion of the Scope of Protection of Image Designs (Protection of GUIs)
Trends in Europe and the United States are contrasting.

Europe (EU): The article states that the amended CDR (Council Regulation on European Union Designs), adopted in October 2024, can be interpreted as allowing virtual objects to be protected without particular limitations and that it has become clear that virtual objects are included. However, because this can be interpreted as having long been the case in the EU, whose situation differs from that of the United States and Japan, where protection has long been limited, the article states that this suggests that the scope is too broad, at least as an expansion for the time being.

United States: In registration practice, if an image is integrated with an “article” in the form of a display screen, even content that does not fall within Japan’s operation images or display images (e.g., virtual shoes or models) may be eligible for protection.

<Implications for Japan>
There is concern that expansion without particular limitations, as in Europe, could chill creators’ creative activities. Meanwhile, the U.S. concept of “integration with

an article," which has a high degree of institutional affinity with Japan, is useful as a compromise that promotes industrial development while relaxing the connection with equipment.

2. Extending the Scope of Working of Design Rights into Virtual Space (from Physical to Virtual)
The issue is whether design rights for articles in the real world (such as cars and furniture) extend to digital objects in virtual space.

Europe (Positive Tendency): It adopts an "abstract view" and recognizes protection regardless of changes in dimensions (from real to digital). This is a position under which digital use of a non-digital design may be regarded as infringement.

United States (Negative Tendency): Negative views are strong due to concerns about giving design right holders unjust "windfall" benefits, the risk of infringing freedom of expression such as photography, and increased examination burdens.

<Consideration of Possible Responses in Japan>
①Proposal to Expand Design Rights Limited to Appearance: Extend rights based on similarity of appearance regardless of use. Although this contributes to protecting investment in design, it requires examination of an enormous amount of prior designs and presents substantial practical examination challenges.
②Proposal to Treat Physical and Virtual Articles as Equivalent: Treat articles as similar only where functions in virtual space are recognized as equivalent to those in the real world. The criteria become clear, but protection needs may not be sufficiently covered.

3. Conclusions and Proposals
Because virtual space has no national borders, responses with awareness of international harmonization of systems are indispensable. When Japan expands its system, it will be important to secure a balance between industrial development and freedom of creation.
Rather than seeking a solution solely through design law, a realistic response is to

advance legal development in stages while clarifying the allocation of roles with copyright law and unfair competition prevention law.

[Article / Trademarks] Treatment under Trademark Law of Goods and Services Relating to Virtual Space — The Nice Classification and the Situations in Europe, the United States, South Korea, and Japan (星野光秀, Patent, June 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e5%95%86%e6%a8%99%e3%80%91%e4%bb%ae%e6%83%b3%e7%a9%ba%e9%96%93%e3%81%ab%e9%96%a2%e3%81%99%e3%82%8b%e5%95%86%e5%93%81%e3%83%bb%e5%bd%b9%e5%8b%99%e3%81%ae%e5%95%86%e6%a8%99/

Publication date on list page: June 19, 2026

[Article / Trademarks] Treatment under Trademark Law of Goods and Services Relating to Virtual Space — The Nice Classification and the Situations in Europe, the United States, South Korea, and Japan (星野光秀, Patent, June 2025)

1. Classification and Identification of Goods and Services in Virtual Space
The following points are commonly recognized in examination practice across countries and regions.
Simply referring to “virtual goods” leaves the scope unclear, and it is necessary to identify the related content specifically, as in “downloadable virtual clothing.”
Treatment as Class 9 (Goods): Because virtual goods are treated as digital content, they are classified in Class 9 in principle.

Changes in the Classification of Services: In principle, classification does not change even if the means of provision is virtual space, but it does change if the “purpose or result of provision” changes (e.g., while real transportation is in Class 39, a travel experience in virtual space is treated as entertainment in Class 41).

2. Main Trends and Characteristics of Countries and Organizations
Distinctive characteristics in practical operations and approaches to classification can be seen in each region.

https://jpaa-patent.info/patent/viewPdf/4662

仮想商品・役務に関する主な取扱い（論稿の整理）

国・機関	主な特徴・取扱い
ニース国際分類	2024 年版より「ダウンロード可能な仮想被服」（9 類）やその小売（35 類）が追加。
欧州（EUIPO／UKIPO）	EUIPO は現実の商品と仮想商品は機能・目的・性質が同一ではないとする。UKIPO は仮想商品が明確に定義された場合にのみ認容する。
米国（USPTO）	現実と仮想の混同は「商業的関連性」に基づいて判断すべきと示唆。

日本（JPO）	2024 年 3 月にガイドライン公表。役務の代案（例：模擬レストラン）まで示す運用。

English translation

Country / Organization	Main Characteristics and Treatment
Nice Classification	The 2024 edition added “downloadable virtual clothing (Class 9)” and its retail services (Class 35).
Europe (EUIPO/UKIPO)	EUIPO states that real and virtual goods are not identical in function, purpose or nature. UKIPO accepts virtual goods only when they are clearly defined.
United States (USPTO)	Suggests that confusion between the real and virtual should be determined based on “commercial relatedness.”
South Korea (Patent Office)	A distinctive feature is management of virtual goods through separate, independent similarity-group codes, apart from image files and the like.
Japan (JPO)	Guidelines were published in March 2024. Careful operation even indicates alternative descriptions of services (e.g., simulated restaurants).

Source for the table: 星野光秀’s article, p. 112, attributes the statement that virtual goods are not identical in function, purpose or nature to their real-world counterparts to EUIPO material. For UKIPO, p. 113 states that virtual goods are accepted only when clearly defined. Article, pp. 112–113

[Article / Trademarks] Consideration of the Use of the “Consent System” through Model Cases (中山真理子 and 竹山尚治, Patent, October 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e5%95%86%e6%a8%99%e3%80%91%e3%83%a2%e3%83%87%e3%83%ab%e4%ba%8b%e4%be%8b%e3%82%92%e7%94%a8%e3%81%84%e3%81%9f%e3%80%8c%e3%82%b3%e3%83%b3%e3%82%bb%e3%83%b3%e3%83%88%e5%88%b6/

Publication date on list page: June 12, 2026

[Article / Trademarks] Consideration of the Use of the “Consent System” through Model Cases (中山真理子 and 竹山尚治, Patent, October 2025)

1. The Core of Japan’s Consent System: A System with Reservation
Unlike many foreign countries, Japan’s consent system is a “system with reservation.”
⇒Registration is not granted simply because there is “consent” from the holder of the cited trademark; registration under Article 4(4) of the Trademark Act is permitted only where the Patent Office ultimately determines that “there is no likelihood of confusion as to source.”

2. Important Practical Points (Insights from Model Cases)
①Devising the Wording of Agreements (Letters of Consent)
Identification of Goods and Services: Wording that the mark will be “used only for specified goods” is close to essential. However, even without stating specific product names, it is possible to indicate the intention to avoid future confusion by expressly stating differences in distribution channels or consumers.
Between Group Companies: Strong wording such as “take measures to avoid confusion with each other” becomes a strong consideration against confusion.
Addition of a House Mark: According to discussions at an exchange of views with the Japan Patent Office, where a house mark is added only to the applied-for trademark, that fact alone generally makes it difficult to find that there is no likelihood of confusion. However, the article states that agreeing on the wording

“always to be used together with the house mark” may be taken into account in the direction of denying a future likelihood of confusion, particularly where the applied-for and cited trademarks are not highly similar.

②Arguments in Written Opinions
Fact-Based Explanations: “Business realities (consumer groups, expertise, price ranges, and differences in production divisions)” that cannot be fully covered in the agreement should be proved in detail in the written opinion.
Treatment of Non-Use: Where the cited trademark is actually unused, stating that in the agreement may disadvantage the trademark holder; it is therefore recommended to devise “alternative wording (differences in distribution channels),” for example, to avoid the area of de facto non-use.

2023 (Gyo-Ke) No. 10149 [Multi-Branched Heat Exchanger with Independent Baffles] <Presiding Judge Miyasaka>

From the description in Cited Document 2, the “baffle cell” itself has a configuration that obstructs fluid flow and changes its direction, and it corresponds to the “baffle” of the amended invention at issue.
In addition, the “baffle cell” includes a solid portion (solid domain) and has the function of blocking the flow path, so it can be described as a “solid wall.”
Furthermore, the meaning of a “wall separate (from the unit cell)” was interpreted as meaning that the elements are functionally “separated” or “different,” regardless of whether they are physically separated, and because the “baffle cell” and “path cell” are functionally distinguished in Cited Invention 2, this also corresponds.
⇒Both inventions concern “heat exchanger” technology in the same technical field and share the configuration of branching flow paths using unit cells. Using baffles to form flow configurations that increase heat transfer efficiency is well-known art (Cited Document 1 contains no description of baffles); therefore, in view of the common technical field and the baffles serving as a means of solving the problem, there is motivation to combine.

2024 (Ne) No. 10038 [Brake Control Device and Behavior Analysis Device for a Motorcycle] <Presiding Judge Honda>

Original article URL: https://www.nakapat.gr.jp/ja/note/%e4%bb%a4%e5%92%8c6%e5%b9%b4%e3%83%8d10038%e3%80%90%e8%87%aa%e5%8b%95%e4%ba%8c%e8%bc%aa%e8%bb%8a%e3%81%ae%e3%83%96%e3%83%ac%e3%83%bc%e3%82%ad%e5%88%b6%e5%be%a1%e8%a3%85%e7%bd%ae%e3%80%91%ef%bc%9c/

Publication date on list page: June 12, 2026

2024 (Ne) No. 10038 [Brake Control Device and Behavior Analysis Device for a Motorcycle] <Presiding Judge Honda>

Because the description in the specification at issue is consistent in referring to "angular velocity," reading it as "angular acceleration" by correcting an error in the description is not permitted.
⇒The invention stated in the claims (including a physically contradictory calculation formula) cannot be said to be described in the detailed description of the invention, and therefore violates the support requirement.

(Excerpt from the Holding)
Regarding Formula A, "Ghosei = Gken − (Ψ · Rhsen)," the appellant argues that, if Ψ is understood according to the ordinary meaning of the symbol, the formula subtracts a value having the dimension of velocity, obtained by multiplying angular velocity by the sensor mounting height, from Gken, which has the dimension of acceleration, and thus becomes a formula that has no meaning in physics; therefore, "Ψ · Rhsen" cannot be understood literally as a calculation multiplying angular velocity by the sensor mounting height, while it is clear that "Ψ · Rhsen," the correction term for lateral G (Gken) in Formula A, is a correction term for removing the change in velocity along a circular trajectory superimposed on Gken, in other words, circumferential acceleration; however, ... the fact that it has no meaning in physics does not mean that it is recognized as an error in the description, and Formula A is as stated above, so the appellant's argument cannot be accepted.

[Trademarks / Similarity] 2025 (Gyo-Ke) No. 10111 “SORA” <Presiding Judge Moritomi>

⇒Similar (separate observation of the device and word elements is permissible)

(1) Similarity of the Trademarks
In both trademarks, the device element and word element are arranged with a space between them, and they cannot be said to be so inseparably combined that separate observation would be unnatural. Moreover, because the device elements do not give rise to a specific pronunciation or concept, it is permissible to extract as the dominant element the word element “SORA,” which gives a strong and dominant impression as a source-identifying sign. Comparing the two, their appearances are close and their pronunciation (sora) is identical; therefore, the two trademarks are similar.
⇒In a composite trademark consisting of a device and words, if the device element is abstract and does not give rise to a specific concept, there is a high risk that only the word element will be extracted as the dominant element.
In filing practice, even if a device is added to avoid conflict with an existing word mark, similarity is often found unless the two elements are inseparably combined (for example, through substantial stylization of the logotype or overlap).

(2) Similarity of the Services
Similarity of designated services is determined on the basis of “actual circumstances of trade,” such as the relationship of the means and purposes and

whether they are provided by the same business operator or at the same place. In light of trading conditions, such as massages and facial beauty treatments being provided at beauty salons (hair salons), the designated services of the application and the cited designated services share the purpose of beautification, and the business operators and places providing them overlap in reality. Therefore, regardless of differences in strict definitions under the Beauticians Act, the two services are similar.
⇒In determining similarity of services, the “actual circumstances of trade,” namely the combination of services in the actual market (such as the provision of massages in beauty salons), take precedence over whether national qualifications (such as a beautician’s qualification) are held and over distinctions in the legal scope of business. Diversification of corporate business may result in a likelihood of confusion being affirmed even between services previously regarded as dissimilar.

[Article / Austrian Trademarks] A Consideration of the Protection of Well-Known Trademarks and Unfair Use through Packaging Imitation Learned from the “Jägermeister” Case (遠藤華英, Patent, November 2025)

Note on country and procedure: The article by 遠藤華英 states 「オーストリア最高裁判所（OGH）」 (“Supreme Court of Austria (OGH)”) on p. 49. The country concerned is Austria. The proceedings described on p. 54 concern an interim injunction. The Austrian legal information system RIS lists the OGH ruling (4Ob55/23a, May 31, 2023) as a “Beschluss” (decision) rejecting the defendant’s appeal and upholding the lower courts’ interim injunction. Article, pp. 49 and 54

A decision of the Austrian Supreme Court (OGH) in interim-injunction proceedings (4Ob55/23a, May 31, 2023) concerning protection of the well-known trademark “Jägermeister” and imitation of packaging.

1. Overview of the Case: Jägermeister vs SPAR
A case in which the plaintiff, the right holder for the world-famous herbal liqueur “Jägermeister,” brought an action and applied for an interim injunction on the grounds of trademark infringement and violation of unfair competition prevention law against the defendant (SPAR), which sold products imitating the packaging of the plaintiff’s products (an orange band, black lettering, a deer-head device, etc.). The lower courts issued the interim injunction, and the OGH rejected the defendant’s appeal and upheld their decision.

Issue: Whether the defendant’s imitation constituted “unfair exploitation of reputation (free riding)” or “impairment of distinctiveness” of the plaintiff’s well-known trademark.

Conclusion: Interim injunction upheld (the lower courts' grant of the plaintiff's application was maintained)

2. Points in the Austrian Court's Determination
From the perspectives of both trademark law and unfair competition prevention law, the court strictly rejected "parasitic exploitation" of a well-known trademark.

A. Trademark Law Aspect (§ 10 Abs 2 MSchG)
No Risk of Confusion Required: For a well-known trademark, protection is available if there is sufficient similarity for consumers to make a "mental connection (association) between the two brands."

Criterion of Similarity: If any one of the three aspects of appearance, pronunciation, or concept is similar, infringement is likely to be found.

Burden of Proof: In principle, the infringer (defendant) bears the burden of proving that there is no unfair use.

B. Unfair Competition Prevention Law Aspect (§ 1 UWG)
Unfair Exploitation of Reputation: Going beyond mere imitation of a design, free riding on the reputation as a "premium brand" built by the plaintiff over many years is an unfair commercial practice that undermines fairness of competition.

Aggressive Imitation: In particular, the use of brand elements highly popular among young people in a cartoonishly modified form was held to be an "aggressive act" damaging the reputation.

Item	Japan	Austria
Scope of protection	Extends to dissimilar goods and services	Extends to dissimilar goods and services
Standard of distinctiveness	If a certain degree of fame exists, the distinctiveness threshold is low, and protection is available through proof of use and the like	Strict
Three-dimensional marks and shapes	Readily registered and protected if a certain degree of distinctiveness exists	High hurdle for registration and protection
Determination of similarity	Emphasizes consumer perception	Similarity found in any of visual, aural, or semantic aspects
Purpose of protection	Protection of goodwill and reputation; prevention of confusion	Strong protection of goodwill and reputation; prevention of unfair use

[Article / Customs] Customs Expert Advisers (磯貝克臣, Patent, November 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%a8%8e%e9%96%a2%e3%80%91%e7%a8%8e%e9%96%a2%e3%81%ae%e5%b0%82%e9%96%80%e5%a7%94%e5%93%a1%ef%bc%88%e7%a3%af%e8%b2%9d%e5%85%8b%e8%87%a3%e3%80%81%e3%83%91%e3%83%86%e3%83%b3/

Publication date on list page: June 12, 2026

[Article / Customs] Customs Expert Advisers (磯貝克臣, Patent, November 2025)

For each case, three customs expert advisers are selected (for example, a mixture of a university professor, an attorney, and a patent attorney).
Customs makes its determination respecting the majority opinion of the expert advisers unless there are special circumstances such as a clear error of fact.
The list for the term current when the article was written (a two-year term ending December 31, 2025) registered four university professors, 20 attorneys, and 20 patent attorneys.

<Actual Working Process of Expert Advisers>
1. Receipt of Materials and Individual Review

2. Advance Meeting of the Expert Advisers (Web Conference)
An introductory meeting of the three expert advisers and customs officials. Rather than reaching a conclusion here, they discuss whether to make a “request for additional materials” to the parties.

3. Hearing of Opinions (a Setting Similar to an Oral Hearing)
This is an extremely important occasion at which the parties appear in person and make presentations and rebuttals.
Proceedings take place in the order of statements of opinion by the applicant and interested parties, mutual rebuttals, questions from the expert advisers and customs, and final statements.

Through questions, the expert advisers have each party supplement its arguments and clarify the reasoning leading to the ultimate conclusion.

4. Preparation and Submission of Written Opinions
Based on the discussions at the “hearing of opinions” and supplementary written opinions, an expert adviser opinion is prepared in the form of an expert report. Where the opinions of the three members are divided, the majority opinion of two to one is adopted.

[Article / Intellectual Property in General] Patent Attorneys as Judicial Research Officials (髙村和宗 and 岩永勇二, Patent, November 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%9f%a5%e8%b2%a1%e5%85%a8%e8%88%ac%e3%80%91%e8%a3%81%e5%88%a4%e6%89%80%e8%aa%bf%e6%9f%bb%e5%ae%98%e3%81%a8%e3%81%97%e3%81%a6%e3%81%ae%e5%bc%81%e7%90%86%e5%a3%ab%ef%bc%88/

Publication date on list page: June 5, 2026

[Article / Intellectual Property in General] Patent Attorneys as Judicial Research Officials (髙村和宗 and 岩永勇二, Patent, November 2025)

1. Legal Position of Judicial Research Officials
They are court officials provided for in Article 57 of the Court Act, and under Article 92-8 of the Code of Civil Procedure, upon order of the presiding judge, they have authority to question parties on matters of fact and law and to ask questions directly during the examination of evidence.
Many have experience as trial examiners at the Patent Office, but one person is assigned to the Intellectual Property High Court (mechanical field) and one to the Tokyo District Court (chemical field) in patent-attorney positions. The term is three years.

2. Specific Duties of Judicial Research Officials
①Advance Research: Based on the plaintiff's arguments, submit materials organizing technical terminology and the logic of the trial decision to the judges.
②Attendance at Hearings
③Preparation of Research Reports

3. Points to Note for Advancing Litigation Advantageously from the Viewpoint of Research Officials
①Actions for Cancellation of Trial Decisions (Intellectual Property High Court)
Opportunities for argument and proof are limited. It is necessary to present all grounds for cancellation in the plaintiff's first preparatory brief and assemble the evidence.

One should identify errors in the reasoning of the trial decision that affect the conclusion, and not develop an independent line of reasoning excessively.

②Patent Infringement Litigation (District Courts)
Close Examination Before Filing Suit
Reliability of Experimental Proof: It is desirable to have analyses of allegedly infringing products and reproduction experiments conducted by highly reliable external institutions.
Responses to Questions: Questions from judges and research officials at technical explanation sessions and the like are often central questions affecting the outcome of the judgment; it is therefore necessary to grasp their intent accurately and respond.

Table 1 Assignment of Judicial Research Officials

	IP High Court: 11	Tokyo District Court: 7	Osaka District Court: 3
Mechanical	4 (one is a patent attorney)	3	1
Electrical	3	2	1
Chemical	4	2 (one is a patent attorney)	1

Source for the table: The body of the article by 髙村和宗 and 岩永勇二, p. 18, gives four mechanical, three electrical and four chemical research officials at the IP High Court. Table 1 in the original article gives two chemical officials. The table here follows the body text, whose breakdown is consistent with the stated total of 11. These are the figures published in the article, not a statement of current staffing. Article, p. 18

[Article / Intellectual Property in General] A Note on the Prohibition of Abuse of Rights in Intellectual Property Infringement (森本晃生, Patent, December 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%9f%a5%e8%b2%a1%e5%85%a8%e8%88%ac%e3%80%91%e7%9f%a5%e7%9a%84%e8%b2%a1%e7%94%a3%e6%a8%a9%e4%be%b5%e5%ae%b3%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b-%e6%a8%a9%e5%88%a9%e6%bf%ab/

Publication date on list page: June 5, 2026

[Article / Intellectual Property in General] A Note on the Prohibition of Abuse of Rights in Intellectual Property Infringement (森本晃生, Patent, December 2025)

①The Ricoh Case and the Appropriate Form of “Compulsory Mediation”
The first-instance judgment also rejected damages in their entirety, but as long as the implementer actually enjoys the benefits of the patented invention, a solution that does not grant an injunction but allows payment equivalent to a reasonable license fee (royalty) (in the line of the 1968 Supreme Court judgment) is desirable from the perspectives of legal consistency and equity.
This also accords with the purpose of “compulsory licensing (an award)” and prevents excessive favorable treatment of implementers who neglected license negotiations.

②Use as “Substantive Fair Use” in Copyright Law
The Goldfish Telephone case (Osaka High Court judgment, 2021) — Functional Constraints: Where there are few alternative choices of expression because of purposes such as attracting tourists or sustaining living organisms (aeration), there are situations in which the creator’s “freedom of expression” and “freedom of business” should be protected.
⇒Rather than forcing a finding of non-infringement through the determination of copyrightability (the elements), flexible and equitable solutions become possible

by using the abuse-of-rights doctrine (Type ④) to make an adjustment that does not grant an injunction or disposal but allows only damages (equivalent to a royalty).

権利濫用の類型と知財法の事例（森本論稿の整理）

類型	内容	知財法の該当例
① 不法行為型	加害目的のみの権利行使（シカーネ）。	古典的な濫用例。
② 権利範囲明確化型	法の欠缺を埋め、権利の限界を画定する。	ポパイ・マフラー事件、エマックス事件、キルビー事件（論者の最終整理）。
③ 法変化・限界設定型	社会情勢の変化に伴い権利を縮小させる。	キルビー事件は③とも解し得るが、論者の最終整理は②である。特許法 104 条の 3 へ結実。
④ 強制調停型	権利同士の衝突を調整し、衡平な解決を図る。	リコー事件（再生トナー）、やっぱりブスが好き事件。

English translation

Type	Content	Examples in Intellectual Property Law
① Tort type	Exercise of rights solely for the purpose of causing harm (chicane).	Classical examples of abuse.
② Clarification of the scope of rights	Fill gaps in the law and fix the limits of rights.	Popeye Scarf case; Eemax case; Kilby case (the author's final classification)
③ Legal change and setting of limits	Reduce rights in response to changes in social circumstances.	Kilby case (also interpretable under this type; the author's final classification is Type ②; now reflected in Article 104-3 of the Patent Act)
④ Compulsory mediation	Adjust conflicts between rights and seek equitable solutions.	Ricoh case (recycled toner); Yappari Busu ga Suki case

Note on classification: 森本晃生's article, p. 105, states 「③の法変化による権利の新たな限界設定事案と解することもできるが」 ("it can also be interpreted as a case of setting new limits on rights through the change in law under ③, but") and then 「②の法規欠缺の場合の権利内容の明確化を画する事案といえる。」 ("it can be said to be a case that delimits the clarification of the content of rights where there is a gap in the statutory law, under ②."). In summary, the author ultimately places Kilby in Type ② while also recognizing Type ③ as a possible interpretation. The table presents the author's final classification and the alternative interpretation. Article, p. 105

[Article / Patents] Research and Proposals on Lack of Unity of Inventions Expressed as Alternatives (Biotechnology and Life Sciences Committee, Patent, December 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%89%b9%e8%a8%b1%e3%80%91%e9%81%b8%e6%8a%9e%e8%82%a2%e3%81%a7%e8%a1%a8%e7%8f%be%e3%81%95%e3%82%8c%e3%81%9f%e7%99%ba%e6%98%8e%e3%81%ab%e5%af%be%e3%81%99%e3%82%8b%e5%8d%98/

Publication date on list page: June 5, 2026

[Article / Patents] Research and Proposals on Lack of Unity of Inventions Expressed as Alternatives (Biotechnology and Life Sciences Committee, Patent, December 2025)

1. The Japan Patent Office (JPO) “First Alternative” Principle
In the chemical and biotechnology fields, compounds and sequences are commonly expressed as alternatives (Markush form), such as “R is A, B, or C” or “any of SEQ ID NOs: 1–4.”
Under Japan’s Examination Guidelines, in determining unity (Article 37 of the Patent Act), the “first-listed alternative” is, in principle, the subject of examination. If the first-listed alternative is found to lack novelty, an amendment to a later alternative may be disallowed as a “shift amendment (Article 17-2(4)),” even where that is the alternative for which the applicant truly seeks rights, necessitating a divisional application at additional cost. However, adding or arguing a common special technical feature (STF), as discussed below, may enable later alternatives to be examined.

Note on the circumstances: Case 1 on p. 88 of the source article states 「2 番目以降のすべての選択肢を審査対象にできた。」 (“all alternatives from the second onward could be made subject to examination”). In summary, circumstances requiring a divisional application because amendment is disallowed must be distinguished from circumstances in which the measures described below enable examination to continue. Article, pp. 85 and 88

2. Comparison of the Systems of Japan, the United States, and Europe:
There is a decisive difference in operation between Japan and the United States

and Europe regarding the “selection of the subject of examination,” and the U.S. and European systems are user-friendly.

3. Types of Responses to Lack of Unity

①Addition of a New STF: Add an unexamined “new special technical feature (STF)” as a configuration common to all alternatives, thereby leading all alternatives to be examined together.

②Argument for a Common Structure: Demonstrate in a written opinion that the first alternative and the other alternatives have a common structure (STF) that has not been recognized in the examination.

③Amendment to an Inclusive Relationship: By making the first alternative an “essential configuration” and the other alternatives “additional configurations,” substantively include them within the subject of examination.

[Article / Agriculture, Forestry, and Fisheries] Protection and Use of Intellectual Property through an IP Mix with Overseas Expansion in View (Agriculture, Forestry, and Fisheries Committee, Patent, January 2026)

1. Branding by Vegetable Producers
Separation of Plant Breeders' Rights and Trademarks: Because a registered variety name becomes public domain after the protection period expires, also obtain trademark rights.
For a brand with strong regional ties, strategically distinguish between use of the GI system and the regional collective trademark system.

2. Specific Examples of Use of an IP Mix
①Trademark Rights × Plant Breeders' Rights: Examples include "Ruby Roman" and the trademark registration of the brand name "Beni Madonna" for the variety name "Ehime Kashi No. 28."

②Patent Rights × Trademark Rights: "Soratobu Pumpkin," which combines a patent for the cultivation method with a brand name.

③Patent Rights × Trademark Rights × GI: "Zentsuji-san Shikaku Suika," protected by a three-part set of a patent for the cultivation container, a trademark, and a GI.

④Trademark Rights × GI (Overseas): In the "Kobe Beef" case, the framework of mutual GI protection with Europe and other regions was used to successfully

remove false indications within Europe based on a geographical indication registration in Japanese.

3. Geographical Indications for Alcoholic Beverages and Management of Know-How

①GIs for Alcoholic Beverages: Administered by the National Tax Agency, they protect the characteristics of the place of origin (natural and human factors). Established approximately 20 years earlier than the GI system for agricultural products, the system first designated “Iki,” “Kuma,” and “Ryukyu” on June 30, 1995.

②Management of Know-How: For technologies such as cultivation techniques where disclosure through patenting is to be avoided, it is important to ensure thorough confidential management as trade secrets in the agricultural field.

[Article / Designs] An Overview of Court Decisions on Employee-Created Designs (藤本一, Patent, January 2026)

Of the seven cases discussed in the article, consideration was claimed in five. Of those, only the Clothes-Drying Device case involved consideration claimed solely on the basis of an employee-created design; within the cases covered by the article, no published decision granting such a claim is identified.

Compared with patents (employee inventions), the following differences and points to note can be identified in the calculation process for “reasonable consideration.”

①“Proportion of Excess Sales”: For designs, because it is easier to choose alternative designs (other designs that do not share the same aesthetic impression) than for patents, the exclusive advantage in the market tends to be estimated lower.

②“Hypothetical Royalty Rate”: The cases examined in the article include assessments of approximately 1.5%–2.0%, about half the royalty rate for patent rights. These examples consider the substitutability of designs, but caution is needed in generalizing them as royalty rates for designs overall.

③“Employee’s Contribution”: The article’s reference to approximately 5%–10% concerns employee inventions and does not state a general range for employee-created designs. Because designs more readily express the creator’s individuality, there is room for a higher assessment depending on the case.

However, cases in existing court decisions in which a high contribution has been recognized involved special circumstances, such as an extremely high degree of dependence on the individual plaintiff.

Note on sources for case numbers and calculation examples: 藤本一's article, p. 147, states 「⑥〔物干し器〕のみが、原告がデザイナーで、職務創作意匠のみに基づいて相当の対価が請求された事案」 ("only ⑥ [Clothes-Drying Device] is a case in which the plaintiff was a designer and reasonable consideration was claimed on the basis of an employee-created design alone"). In summary, the five consideration cases must be distinguished from the single design-only claim. Case-specific calculation rates should not be generalized. The table below includes all seven cases discussed in the article, including case ② [Sluice Gate] (Osaka High Court decision of September 13, 1990). In addition, the entry "Excess sales attributable to the design portion denied" for the Infusion Container case reflects, according to p. 146 of the article, the first-instance judgment (Osaka District Court, October 16, 2012) (「⑤〔輸液容器〕の一審判決は、…職務創作意匠による超過売上の発生を否定したと理解される」, i.e., "the first-instance judgment in ⑤ [Infusion Container] … is understood to have denied that excess sales arose from the employee-created design"). Article, pp. 144–147

[Article / Patents] Cases and Issues in Patent Protection of Biopharmaceuticals (Biotechnology and Life Sciences Committee, Patent, December 2025)

1. “De Facto Patent Linkage” in Japan

Under the practice described in the article based on the Ministry of Health, Labour and Welfare’s former “Two Division Directors’ Notification,” a biosimilar (BS) is not approved where a patent on the active ingredient of the originator product prevents manufacture of that ingredient itself, and, where a patent exists for some indications of the originator product and manufacture of a product claiming the other indications is possible, the patented indications are not approved. The article states that, for this reason, even after the re-examination period expires, approval of a BS is effectively difficult as long as a substance patent or use invention remains in force.

Note on use patents and the updated notification: The Ministry of Health, Labour and Welfare’s notification of October 8, 2025, on pharmaceutical patents in approval examinations and reimbursement listing for prescription generic medicines and biosimilars repealed the former Two Division Directors’ Notification. Section 1(2), in line with the former Two Division Directors’ Notification, permits approval where manufacture or marketing for other indications is possible despite a use patent covering some indications, and states 「この場合、特許が存在する効能効果等については承認しない。」 (“In this case, the indications, etc. for which a patent exists are not approved.”). In summary, the patented indications are not approved; a use patent does not always bar approval of the product for other indications. MHLW notification, p. 2 Article, pp. 40–41 and 54

2. Re-Examination Period

Japan’s distinctive re-examination system functions as a de facto regulatory data

protection period (RDP), and in some cases remains a barrier to entry even after patent expiration.

3. Considerations and Future Issues

The existence of the high-cost medical expense benefit system makes it difficult for patients to perceive the benefits of choosing inexpensive BS products. Going forward, in order to reconcile the sustainability of medical finances with protection of innovation, a highly transparent system design involving the judiciary and the development of a market environment that is predictable for foreign companies as well are indispensable.

https://jpaa-patent.info/patent/viewPdf/4745

有効成分（先発品）	日本の状況	主な障壁・特徴
デノスマブ（ランマーク）	BS未承認（2025年8月時点）	物質特許が2027年まで存続。欧米では「承認と特許の分離」や和解により既にBSが承認されている。
エクリズマブ（ソリリス）	BS未承認	2032年までの延長特許。高額療養費制度により、患者側にBSへ切り替える経済的動機が乏しい点も指摘される。
トシリズマブ（アクテムラ）	2025年後半に承認見通し	物質特許満了後も、高粘度化防止や安定化等の「製剤特許」が厚い網（パテントシケット）を形成している。
アフリベルセプト（アイリーア）	一部適応でBS承認	先発品上市後の「用途特許」に基づき一部適応が制限された。パテントリンケージの運用基準が争点となっている。
アダリムマブ（ヒュミラ）	BS承認済	米国では60件以上の特許による「パテントシケット」によりBS参入が数年遅延。戦略的和解が上市時期を左右した。

English translation of text in the image

Active Ingredient (Originator Product)	Situation in Japan	Main Barriers and Features
Denosumab (Ranmark)	BS not approved (as of August 2025)	Substance patent continues until 2027. In Europe and the United States, BS products have already been approved through “separation of approval and patents” and settlements.
Eculizumab (Soliris)	BS not approved	Extended patent until 2032. It is also noted that the high-cost medical expense benefit system gives patients little economic incentive to switch to BS products.
Tocilizumab (Actemra)	Approval expected in the second half of 2025	Even after expiration of the substance patent, “formulation patents” concerning prevention of viscosity increases, stabilization, and similar measures form a dense network (patent thicket).

Active Ingredient (Originator Product)	Situation in Japan	Main Barriers and Features
Aflibercept (Eylea)	BS approved for some indications	Some indications were restricted based on “use patents” after launch of the originator product. Operational standards for patent linkage are in dispute.
Adalimumab (Humira)	BS approved	In the United States, a “patent thicket” of more than 60 patents delayed BS entry by several years. Strategic settlements determined the timing of market entry.

Note on the table’s reference date and approval information: “BS not approved (as of August 2025)” for denosumab (Ranmark) in the reproduced table is a statement of the position as of that date. Fuji Pharma’s release of October 31, 2025, concerning its agreement for a denosumab biosimilar states 「2025 年 9 月 19 日に製造承認を取得した」 (“obtained manufacturing approval on September 19, 2025”) for Denosumab BS Subcutaneous Injection 120 mg RM “F”. In summary, that product obtained approval on September 19, 2025; note 8 on p. 54 of the article also contains a post-submission addendum to this effect. Approval, launch, and reimbursement listing are separate matters. Fuji Pharma release, p. 1 Article, p. 54, note 8

[Article / Patents] Points to Note When Filing Food-Use Inventions in Different Countries (Biotechnology and Life Sciences Committee, Patent, December 2025)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%89%b9%e8%a8%b1%e3%80%91%e9%a3%9f%e5%93%81%e7%94%a8%e9%80%94%e7%99%ba%e6%98%8e%e3%81%ae%e5%90%84%e5%9b%bd%e5%87%ba%e9%a1%98%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e7%95%99/

[Article / Patents] Points to Note When Filing Food-Use Inventions in Different Countries (Biotechnology and Life Sciences Committee, Patent, December 2025)

In Japan, protection for “food-use inventions” was strengthened by the 2016 revision of the Examination Guidelines, but in overseas expansion, there are significant differences in each country’s legal system and examination practice.

1. Permissible Claims
①United States: “Inventions directed to the use of a product” are not recognized and are described as methods. A use stated in the preamble often has no limiting effect.
②Europe: “Purpose-limited substance / use”; for therapeutic use, “Substance A for use in ...”; for non-therapeutic use, “Non-therapeutic use of ...”. Swiss-type claims are not permissible.
③China: Method / Swiss-type claims (use for manufacturing ...) are effective.
④South Korea: Product (food composition); similar to Japan, but novelty tends to be denied where the use does not create a difference in structure or form.

2. Difficulties in Obtaining Rights in the United States:
①INHERENCY — In the United States, even if an unknown use of a known substance is discovered, novelty is denied if it is considered “inherent” in the prior art.
②Laws of Nature — Effects within the body from ingestion are interpreted as being

governed by a “law of nature,” and even if new knowledge is merely added to the known step of “eating,” proof of a remarkable effect is extremely difficult.

3. Distinctions in Europe:
①Therapeutic Use: Where the use relates to treatment or prevention of a disease, employ a “purpose-limited substance claim” under EPC 54(4) or (5).
②Non-Therapeutic Use: For health-maintenance purposes such as “recovery from fatigue,” a use claim expressly stating “non-therapeutic” is effective in making clear that the use does not fall within therapeutic acts.
There is a dilemma in that an expression such as “improvement of ...” may be held unclear, while naming a specific disease may create a conflict with prior art (medical uses).

4. Strategic Conclusions
Rather than translating and filing unchanged a configuration that received a decision to grant a patent in Japan, amendment to a form appropriate for each country from the national or regional entry stage is indispensable.
In the United States, emphasize “structural differences” or “distinctiveness as a method” rather than use.
Reorganize claims into Swiss-type claims in China and purpose-limited substance claims in Europe.
Even broad rights at the subspecies level recognized in Japan (without limitation to a particular strain) are highly likely to require limitation to a specific deposit number (strain) overseas.

[Article / Agriculture, Forestry, and Fisheries] Protection and Use of Intellectual Property through an IP Mix with Overseas Expansion in View (Agriculture, Forestry, and Fisheries Committee, Patent, January 2026)

1. Branding by Vegetable Producers
Separation of Plant Breeders' Rights and Trademarks: Because a registered variety name becomes public domain after the protection period expires, also obtain trademark rights.
For a brand with strong regional ties, strategically distinguish between use of the GI system and the regional collective trademark system.

2. Specific Examples of Use of an IP Mix
①Trademark Rights × Plant Breeders' Rights: Examples include "Ruby Roman" and the trademark registration of the brand name "Beni Madonna" for the variety name "Ehime Kashi No. 28."

②Patent Rights × Trademark Rights: "Soratobu Pumpkin," which combines a patent for the cultivation method with a brand name.

③Patent Rights × Trademark Rights × GI: "Zentsuji-san Shikaku Suika," protected by a three-part set of a patent for the cultivation container, a trademark, and a GI.

④Trademark Rights × GI (Overseas): In the "Kobe Beef" case, the framework of mutual GI protection with Europe and other regions was used to successfully

remove false indications within Europe based on a geographical indication registration in Japanese.

3. Geographical Indications for Alcoholic Beverages and Management of Know-How

①GIs for Alcoholic Beverages: Administered by the National Tax Agency, they protect the characteristics of the place of origin (natural and human factors). Established approximately 20 years earlier than the GI system for agricultural products, the system first designated “Iki,” “Kuma,” and “Ryukyu” on June 30, 1995.

②Management of Know-How: For technologies such as cultivation techniques where disclosure through patenting is to be avoided, it is important to ensure thorough confidential management as trade secrets in the agricultural field.

[Article / U.S. Designs] Changes in the Methods for Determining Design Right Infringement in the United States (佐々木眞人, Patent, January 2026)

Original article URL: https://www.nakapat.gr.jp/ja/note/%e3%80%90%e8%ab%96%e7%a8%bf-%e7%b1%b3%e5%9b%bd%e6%84%8f%e5%8c%a0%e3%80%91%e7%b1%b3%e5%9b%bd%e3%81%ab%e3%81%8a%e3%81%91%e3%82%8b%e6%84%8f%e5%8c%a0%e6%a8%a9%e4%be%b5%e5%ae%b3%e3%81%ae%e5%88%a4%e6%96%ad/

Publication date on list page: June 5, 2026

[Article / U.S. Designs] Changes in the Methods for Determining Design Right Infringement in the United States (佐々木眞人, Patent, January 2026)

Determination of design right infringement in the United States originates in the “ordinary observer test” established by the 1871 GORHAM Supreme Court judgment.

Following the 1984 LITTON SYSTEMS judgment, the CAFC introduced the “point of novelty test” in addition to it. This test requires possession of a “novel design feature (point of novelty)” that distinguishes the patented design from prior designs.
⇒As a result, both substantial identity and appropriation of a novel point became necessary for a finding of infringement.

However, the “point of novelty test” was abolished by the 2008 EGYPTIAN GODDESS en banc judgment. That judgment reconfirmed that the ordinary observer test is the sole test for determining design right infringement. However, it clarified that the comparison in determining infringement should be made from the viewpoint of an “ordinary observer familiar with the prior designs,” and that the effect of differences on the overall design should be evaluated in comparison with the prior designs.

Subsequent judgments have indicated the following points.

①Consider the overall ornamental features after excluding functional aspects at the conceptual level.

②The scope of prior designs used for comparison is limited to those applied to the article identified in the claim.

③A logo affixed to the allegedly infringing product and its placement may also be considered as ornamental differences.

⇒Current determination of design right infringement in the United States is consolidated into the ordinary observer test, which emphasizes the “overall ornamental impression” after considering prior designs and separating functional elements, rather than simple visual similarity.

[United States] Focus Prod v. Kartri Sales (CAFC, 2025.9.30)

Original article URL:
https://www.nakapat.gr.jp/ja/note/%e3%80%90%e7%b1%b3%e5%9b%bd%e3%80%91focus-prod-v-kartri-sales%ef%bc%88cafc%e3%80%812025-9-30%ef%bc%89/

Publication date on list page: June 5, 2026

[United States] Focus Prod v. Kartri Sales (CAFC, 2025.9.30)

Where a particular species is elected without challenging the definition or limitation of “species” presented by the examiner, there is a risk that unelected species will be regarded as excluded from the scope of the claims.
⇒Regarding claim 73, because the patentee did not dispute the examiner’s withdrawal of the claim as drawn to a nonelected species (Species V), the features of claim 73 (a ring with a flat upper edge) were held to have been excluded.
—The summary judgment of infringement of the ’248 and ’609 patents reversed as to Marquis (the infringement findings against Kartri affirmed because Kartri waived its non-infringement arguments)

Note on the appellate disposition: Page 16 states “we reverse the district court’s patent infringement determination for the ’248 and ’609 patents.” In summary, “reversed” is the disposition concerning those two patents. For the ’088 patent, page 24 states “Although we agree with the district court’s construction of ‘projecting edge,’ its infringement analysis on this issue was, at a minimum, inadequate to sustain summary judgment.” Thus, while agreeing with the district court’s claim construction, the court vacated and remanded the summary judgment because the infringement analysis was inadequate. These dispositions concern Marquis; as to Kartri, the ’248, ’609, and ’088 patent infringement findings were affirmed because Kartri waived its non-infringement arguments (pp. 3 and 40–41). These outcomes must be distinguished. CAFC judgment, pp. 3, 16–27 and 40–41

Tokyo District Court, 2024 (Wa) No. 4142 [Portable Information Communication Device and Personal Computer System Using the Portable Information Communication Device] <Presiding Judge Kokubu>
(related case decided the same day: Tokyo District Court, 2024 (Wa) No. 70083, defendant SoftBank Corp.)

*The amount equivalent to consumption tax that had not been claimed in the prior actions was claimed in a separate action, but the action was dismissed as inadmissible for violating the principle of good faith.

The plaintiff argued, among other things, that ①the amount equivalent to consumption tax had not been the subject of examination in the prior actions and therefore the claim did not amount to rehashing the dispute, ②the loss from consumption tax arose from a cause different from the loss of royalties, and ③because the consumption tax rate is determined by the rate at the time the judgment becomes final and binding, it had been difficult to claim it in the prior actions.
⇒The court found that the amount equivalent to consumption tax had not been specifically examined in Prior Actions 1 and 2 and that this action did not go so far as to rehash arguments rejected in those actions. However, there are not a few

examples in patent infringement litigation in which amounts equivalent to consumption tax are claimed and awarded as part of damage or loss, and that fact is apparent to this court. Accordingly, it cannot be said that the plaintiff could not have recognized such practical circumstances. Moreover, the amount equivalent to consumption tax could readily be calculated merely by multiplying the amount equivalent to royalties by the then-current consumption tax rate (already 10% at the close of oral argument in Prior Actions 1 and 2, on December 19, 2022), and it cannot be said that it was difficult to assert the amount equivalent to consumption tax as a loss together with the amount equivalent to royalties in Prior Actions 1 and 2. Furthermore, the plaintiff had not expressly stated in the prior actions that it claimed only the damage or loss equivalent to royalties, nor indicated an intention to exclude the consumption tax portion from the subject of examination.
⇒The court assessed that, although the plaintiff could have made the entire loss, including the consumption tax amount, the subject of the court's examination in Prior Actions 1 and 2, or conversely excluded only the consumption tax portion, it deliberately did neither and made partial claims, losing as to part of them; it concluded that the claim for the remainder in this case contravened the defendant's reasonable expectation that the dispute concerning the entire claim had been resolved by the final and binding judgments in Prior Actions 1 and 2, and imposed the burden of defending twice.
Consequently, finding no special circumstances, the court held that bringing this action violated the procedural principle of good faith and was impermissible, and dismissed the action itself as inadmissible without reaching the merits of the claim for restitution of unjust enrichment.

(Excerpt from the Holding)
... A judgment rejecting all or part of a quantitatively partial claim is based on the results of the examination thus conducted with respect to the entire claim and indicates a determination that the claim does not exist at all or exists only in an amount less than that claimed as a part; in other words, it is nothing other than a determination that there is no portion that can subsequently be claimed as the remainder.

Accordingly, the plaintiff's bringing an action for the remainder after the above judgment becomes final and binding substantively rehashes claims and arguments not accepted in the prior action, contravenes the defendant's reasonable expectation that the dispute concerning the entire claim has been resolved by the final and binding judgment in the prior action, and imposes on the defendant the burden of defending twice.

In light of the foregoing, it is appropriate to interpret that, absent special circumstances, a plaintiff who lost an action on a quantitatively partial monetary claim is not permitted, as contrary to the principle of good faith, to bring an action for the remainder. (See Supreme Court, 1997 (O) No. 849, judgment of the Second Petty Bench of June 12, 1998, Minshu Vol. 52, No. 4, p. 1147 (the 1998 Supreme Court Judgment).)

...

There are not a few cases in patent infringement litigation in which claims for damages or restitution of unjust enrichment equivalent to consumption tax are made, and it is apparent to this court that amounts equivalent to consumption tax have been awarded as part of damage or loss; moreover, even in light of all the evidence in this case, no circumstances can be found such as the plaintiff's inability to recognize such actual conditions.

Furthermore, because the loss equivalent to consumption tax can readily be calculated by multiplying the loss equivalent to royalties by the prescribed consumption tax rate, it cannot be said that the entirety of the loss, including the consumption tax amount, had not been fixed at the close of oral argument in the fact-finding proceedings of Prior Actions 1 and 2; nor can any circumstances be discerned that made it difficult for the plaintiff, with respect to its unjust enrichment claims in Prior Actions 1 and 2, to assert, in addition to the loss equivalent to royalties, the amount obtained by multiplying that amount by the prescribed consumption tax rate as a loss equivalent to consumption tax, or any reasonable ground for not making that assertion.

Thus, it must be said that, although the plaintiff could have added the loss equivalent to consumption tax to the subject of examination and determination in

Prior Actions 1 and 2, or expressly stated that it would not be included in their subject matter, the plaintiff did not do so.
... This action is an action for the remainder brought by a plaintiff who lost actions on quantitatively partial monetary claims, and bringing this action is impermissible as contrary to the principle of good faith.
